"Also," adds Mr. Harsch, "it might have been something more sinister."

His readers are permitted to guess what he means by "something more sinister." Were the employees of the United States Government who were arrested in the Amerasia case protected by Communists in high positions in the Government? Or did the Administration fear the political consequences of their exposure? Either explanation could come under the classification of "something more sinister."

The first theory would not explain the Adminstration's present reluctance to explain the mystery. The Communists have had several American spy nets broken. Why not one more?

Neither does the second theory explain why a congressional investigation is now necessary to dig out the facts. Revelation of all the facts in the Amerasia case would not make the Soviet Union more hostile than it now is.

It seems, by the process of elimination that the "something more sinister" theory is the most plausible of the three advanced by Mr. Harsch.

We have long believed that the key to much of the mystery of Communist operations within the Government in Washington is the Amerasia case. And we think it should be fully explained, no matter what the consequences may be.

Security First, Economy Second—Secretary of Defense Louis A. Johnson Makes Supplementary Report on Defense Spending: "We Must Be Strong Enough to Deter Attack, Capable Enough to Defend Ourselves Against Attack, and Powerful Enough Ultimately to Defeat (Any) Aggressor"

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. ROGERS of Florida. Mr. Speaker, there is no greater need in the United States today than economy in the operations of the Federal Government; and

nowhere in the Government is true economy more necessary than in the Military Establishment.

Money spent on defense brings us no return except in security, and tax dollars appropriated for defense must be so spent in a way that can be justified to the American taxpayer. The maximum defense must be bought with every dollar spent. Defense is a business which must be operated with sound business methods.

A few weeks ago the Secretary of Defense published a report on 6 months of operations in 1949—specifically, the first half of fiscal year 1950 now drawing to a close. Only this week he has made a supplementary report in the form of an address before the 1950 convention of Kiwanis International at Miami, Fla. In view of the appropriations now under consideration by Congress, and matters of the gravest import with which we are faced on the international scene, Secretary Johnson's report is timely, informative, and encouraging.

In the first year of Mr. Johnson's tenure of office as Secretary of Defense he made notable strides in making unification, which was the intent of the National Security Act of 1947, a living thing. Often, in achieving unification, his more apparent success was in eliminating duplication. But all along, by taking corrective actions to eliminate rivalries, waste, and inefficiency, as well, in each of the three services he was achieving real unification of effort, effectiveness of operations, and true economy of result. He states of the three services:

> Now I can say without any reservation that with their loyal support tremendous progress has been made. Unification has become a fact. The combat efficiency of all of our forces has been increased. Hundreds of millions of dollars already have been saved. We are a team and we are working together to achieve our common objective of peace through strength.

Secretary Johnson, however, is not a man to rest on past achievements; nor can any of us, in these critical times, feel that any job has been completed until peace has been made more secure. Secretary Johnson continues:

> I am taking this occasion * * * to inform the American people and to serve public notice on the services themselves, that the achievements of the past are but a stimulus for more intense action, and that we will not be satisfied until we can stand up before the American people, the stockholders of our national defense enterprise, and say to them without any equivocation: "You are now getting the fullest possible defense out of every defense dollar you have entrusted to us."

Henceforth, therefore, we can expect even greater economy from Mr. Johnson's administration of the Department of Defense, because even greater economy is his announced goal. The emphasis will not be on the elimination of inefficiency so much as on more productive use of the defense dollar. By improved management techniques, money saved from administration will be applied to operations. In his address to the Kiwanis convention, Secretary Johnson cited among other examples the effect of one economy alone. By combining the service print shops of the three armed services, and placing that one print shop on a business basis, $118,000 has already been saved, and that $118,000 will buy the gasoline and oil for more than 1,300 flying hours of flying by a B–29 superfortress, the type of plane that dropped the atomic bombs on Japan.

Perhaps the achievements of the Military Air Transport Service, especially in conducting the Berlin airlift, are best known of all the examples of unification in the Department of Defense. But even in this organization new economies can be effected, and nonessential facilities, routes, and flights are already being eliminated. Economy, and experience will add greatly to the effectiveness of this aspect of combined military defense operations. Savings in fuel, parts, supplies, and personnel for this year are reported to be in excess of $6,000,000; but more important is the fact that the reorganization of MATS will increase current readiness for D-day, if D-day should come.

Secretary Johnson reports that from savings made out of fat and not out of muscle, we have been able to allocate to the Department of the Army an additional $24,000,000 for research and development of special weapons, without adding a dollar to the budget; Marine air combat squadrons have been raised from 12 to 16; combat strength of the Army has been increased by 4,400; and an aircraft carrier and other vessels have been added to the Navy.

President Truman's dramatic announcement, on September 23, 1949, that an atomic explosion had taken place in Russia, has increased our awareness of the need for effective defense, and has necessitated an increase in the defense budget. Secretary Johnson, acting on the advice of the Joint Chiefs of Staff, has within the last 15 days asked for $350,000,000 in contract authority and in cash, above the budget submitted in January for fiscal year 1951. It is heartening to know that this money, as well as all funds appropriated by Congress to the Department of Defense, are being handled by a Secretary so conscious of the necessity of economy and of his obligation, as steward, to the American taxpayers.

With such a report as Secretary Johnson has just made before the Kiwanis International Convention, we should have no hesitation in appropriating the requested funds. We know that the Department of Defense is battling continuously against waste, inefficiency, and unnecessary overhead; and we know that it is striving constantly for increased combat efficiency.

Budget making, as Secretary Johnson reminds us, is a continuous process. Needs and plans are predicated on world conditions and anticipated emergencies which are either anticipated or actually arise. Current events appraise us of the need for additions to the budget in the light of changing conditions; the American people will approve of the additions as they understand the conditions and have confidence that the administration handling the funds will eliminate wastefull practices without eliminating one jot or iota from our total defense.

Mr. Speaker, under unanimous consent to extend my remarks, I insert the text of Secretary Johnson's supplementary report on economies in the Department of Defense in the CONGRESSIONAL RECORD.

The address by Secretary Johnson is as follows:

THE BUSINESS OF DEFENSE

I want to speak to you today in the spirit of Kiwanis. It is my understanding that your interpretation of the combination of Indian words that are pronounced in English, kiwanis, mean, in the literal translation that you have placed upon them, "to make oneself known by his deeds." That is, indeed, a worthy aim. The corollary must follow that Kiwanis not only wants to be known by its deeds, but hopes to be judged by its works. That is fair enough. That is a solid test of promise and performance for any organization that looks to the American public for confidence and support. That is the test that I trust every American citizen will apply to the administration of the Department of Defense, which I have the honor, privilege, and responsibility to head at this crucial time.

When I took over my duties a little more than a year ago I promised the American people a business administration in the Department of Defense. I pointed out that national defense was the business of freedom; that it was the most important business enterprise in American life today; that it was a business that touches the life and pocketbook of every citizen and had to be run on a sound business basis. I called attention to the rivalries, duplications, waste, and inefficiency then existing among the services, and expressed my faith in the readiness of the Army, Navy, and Air Force to forget their differences and to make unification work. I knew that every one of them was as anxious as I was to get more defense out of every dollar entrusted to them by the American people, and I counted upon their cooperation.

Now I can say without any reservation that with their loyal support tremendous progress has been made. Unification has become a fact. The combat efficiency of all of our forces has been increased. Hundreds of millions of dollars already have been saved. We are a team and we are working together to achieve our common objective of peace through strength.

Less than 3 weeks ago in the semiannual report for the period ending December 31, 1949, I gave the American people a detailed account of our accomplishments and the extent of our readiness. The newspapers gave extensive coverage to the report, which I trust most of you have read. I shall therefore not repeat any part of the report at this time nor call attention to the specific economies we already have effected. I am taking this occasion, however, to inform the American people and to serve public notice on the services themselves, that the achievements of the past are but a stimulus for more intense action, and that we will not be satisfied until we can stand up before the American people—the stockholders of our national defense enterprise—and say to them, without any equivocation: "You are now getting the fullest possible defense out of every defense dollar you have entrusted to us."

The job of achieving even greater economy than we already have attained will not be easy. It will require special efforts and special techniques, and we shall fit our processes to what the situations may demand. Hitherto, the crash technique may have sufficed. The areas of possible savings were visible on the surface. We had been confronted with duplications in ports, and landing fields, overlapping hospital facilities, obsolete military posts, and camps and stations selected originally for outpost service against Indians and air bases and navy yards beyond

present needs. Here were inefficiencies that any intelligent citizen could have recognized. Now we must go after less obvious, but still equally important, blocks to the attainment of our economy goal. We must find more productive use for every dollar not contributing directly to the security of our country and put it into channels of defense where it will contribute to the better advantage of national security. For the shock strategy of the past year, we are now substituting the scalpel tactics of today. It will take a surgeon's delicate probing and a surgeon's skillful knife to find and remove any tissues malignant or otherwise that still retard the development of a healthy national defense program.

The management committee of my office, who were my shock troops in the economy campaign of the past 6 months, are now at work, literally on 100 different projects, in the effort to bring about better use of defense dollars through the elimination of nonessential expenditures and through the application of improved management techniques. Their primary objective is to make available funds with which to increase combat effectiveness. What the results will be in total dollars, I cannot yet foretell. What I do want to emphasize is that the fight for economy and efficiency still goes on, and I hasten to add that the services themselves have joined in the spirit, and are coming up with plans of their own to effect these purposes.

A notable example is the Military Air Transport Service, or MATS as it is more popularly known. MATS is probably the earliest and certainly one of the more successful ventures in unification. It is headed by Maj. Gen. Laurence S. Kuter of the United States Air Force, but represents a joint Air Force—Navy effort where differences of services origin have little or no effect on operations. They work together. They live together. At Hickam Field, the Air Force base in the Hawaiian Islands, for instance, the admiral in command lives in a house built for an Air Force general. General Kuter is assisted by two admirals, and the unification is so complete that the admirals sign their names with the title "Rear Admiral, United States Navy" and "United States Air Force" in parentheses following the title.

At the time the management committee indicated an interest in MATS and considered the advisability of establishing task forces to analyze its activities, the Department of the Air Force that has the primary responsibility for the operation requested permission to conduct the investigation using its air staff and Bureau of the Budget as task force members. This request was in line with management committee policy to utilize existing agencies or groups in carrying out its mission wherever possible. Approval was readily given.

The Air Force is doing a fine job in reorganizing MATS operations. As a result, nonessential facilities, routes, and flights are being eliminated. A new priority system governing materials to be transported by air is being established. Military personnel saved as a result of these curtailments are being released for other assignments. Savings in fuel, parts, supplies, and personnel are reported to me to be in excess of $6,000,000 this year and the amount will increase as this job progresses.

Even more important than the dollar saving, is the fact that the reorganization of MATS will now permit it to meet initial airlift requirements under emergency conditions. In other words, equipment, fuel, spare parts, and maintenance funds saved by the elimination of nonessential MATS activities will be used to increase current MATS readiness for D-day. Here is an example of improvement in operations, and reductions in expenditures, at the same time.

A similar field for savings has been developed in the maintenance and operation of administrative vehicles. By an administrative vehicle, we mean a passenger or cargo truck of a commercial type as distinguished from a military vehicle such as a tank. In the shock phase of the management operation we eliminated 34,000 vehicles which were uneconomical to operate and saved more than $10,000,000 this year in gasoline, oil, maintenance, and other expenditures. Moreover, we released 2,136 military drivers for assignment to duty with combat elements.

These deactivated vehicles we are now selling. With the proceeds of the sales we will buy new vehicles. This process enables us to get additional modern equipment without calling for extra appropriations. This procedure, so obvious to the businessman, was a long time in coming to the Armed Forces. Now with the shock phase completed we are in the scalpel process of reducing waste and in the slower and more difficult search for ways and means of getting more defense out of every defense dollar. We are improving shop lay-outs, inspection systems, working standards, administration, and organization. Nothing that promises any savings is being overlooked. For instance, front wheel bearings of commercial type vehicles are now inspected every 6,000 miles. We are conducting tests to determine the advisability of changing the routine to every eight, ten, or twelve thousand miles. If these tests indicate that front-wheel bearings can be inspected every 10,000 miles instead of 6,000 without increasing additional risks, savings to the Department from that simple change alone will total many thousands of dollars annually.

The business of getting a maximum of service of a military nature out of every member of our Armed Forces is, to us, a prime objective. One of our services today has 2,600 general court-martial prisoners whose sentences specify that they shall be discharged from the service on the completion of their sentence. Of the 2,600, about 700 have a possibility of rehabilitation and are being trained and encouraged to resume their places on the military team. The other 1,900, hardened criminals, are dead weight and not only do they contribute nothing to defense, but they serve as a drain on military personnel, facilities, and funds. Now we are working on a project to have them transferred to the Bureau of Prisons and thus gain room in our ranks for 1,900 recruits of potential useful military service; and with 1,900 men properly trained we can man two additional battalions of infantry, or a Navy carrier, or a medium bomb wing.

The most promising field of great economy and efficiency, we are finding in military and naval operations of an industrial or commercial nature—closely akin to what there is in civil life by way of automobile overhaul shops, print shops, coffee-roasting plants, and similar units. For the most part, establishments of this nature among our services were not run on a strictly business basis. In fact, there was little incentive to save or improve operations. Funds came by way of appropriations. Expenditures had to be accounted for but performance was judged only in a general way. Let us take, as an example, the business of printing which, of course, is essential to the operation of any going concern, particularly one that handles billions of dollars.

Not so long ago there were in Washington three print shops, one Army, one Navy, and one Air Force. They received annual appropriations for operations. They kept informal inventories. They did not charge for their work. Any agency that needed forms, charts, or pamphlets merely called up the print shop and ordered the job done. The print shops performed the work, paid their employees, used the paper and the ink, and provided the machinery. They had no capital. They did not have to show any profit or loss in their operations.

Today, we have in Washington but one service print shop. It is operated by the United States Navy for all three services. Instead of more than 400 employees between the three establishments, we now have less than 300 in one shop. The print shop has been capitalized at $1,700,000. All of its stock has been carefully inventoried. More than $70,000 worth of machinery has been removed from the floors of these plants and put in storage for reserve. Now when a unit sends in a request for a job, it is informed of the cost and when the job is done, the print shop takes credit on its books for labor, supplies, and overhead and charges it against the entity for which the job was performed. It is surprising how quickly demands have been reduced, and to what extent the number of copies of each job have been curtailed. Already this one operation in Washington has saved $118,000 or the equivalent of the cost of gasoline and oil for more than 1,300 hours of flying by a B–29.

There are 197 print shops in the services. We are experimenting with consolidations and combining operations wherever possible, saving a dollar here and there, confident that the sum total will be considerable, and that operations will become more efficient and more stimulating to those engaged in them. What has been accomplished in the print shops is possible in every other activity in our defense structure of a commercial nature. There is no doubt of the existence of gold in these hills, to be extricated by way of savings, and thus made available as more money with which to buy so-called military or fighting hardware, and organize and train more combat units.

It is out of savings such as these, made out of fat and not muscle, that we have been able to allocate to the Department of the Army an additional $24,000,000, which it had not counted upon, for research and development of special weapons, particularly in the antitank field and their procurement for the use of ground troops. Out of such savings as these we have accumulated enough dollars to raise our Marine air combat squadrons from 12 to 16; increase the combat strength of our Army by 4,000 and add an aircraft carrier and other vessels to our fleet.

Thus, on the one hand, we battle continuously against waste, inefficiency and unnecessary overhead, enabling us to effect a reduction in our civilian employees of more than 170,000. On the other, we fight for combat efficiency and strive to divert every possible dollar from administration expenditures to the procurement of up-to-date efficient fighting equipment.

Budget making is a continuous process. Our needs are under constant study. Our plans are under continuous scrutiny. They are predicated on world conditions and our need to cope with emergencies. It might be interesting to see the evolution of our procurement program as an example of this continuous process.

When we were working on our budget in July, the Russian atomic explosion that was heard around the world, had not yet been confirmed. There was still resistance to communism on the Chinese mainland. We thought in terms of $1,100,000,000 for aircraft procurement for the Air Force and $700,000,000 for aircraft for the Navy, or a total of $1,800,000,000.

But when the time came for the President to submit the budget to the Congress in January 1950, the impact of unfavorable international developments had caused us to ask instead for $2,000,000,000 for aircraft—one billion three hundred and fifty million for the Air Force and six hundred and fifty million for the Navy. By that time, the atomic explosion in Soviet Russia had become a matter of record. Chiang Kai-shek

had withdrawn to Formosa. Poland had surrendered control over its armed forces to its aggressive imperialistic neighbor. By that time, too, we learned more about the development of the Russian submarine menace and the Navy was given a $79,000,000 increase for antisubmarine warfare equipment.

It is important to note that although we raised by $200,000,000 our requirements for aircraft production, we did not ask for an increase in the total amount of the budget. We were able to stay within the budget because of savings in other activities. Moreover, the $79,000,000 for antisubmarine warfare equipment was realized without any request for an increase.

Today, in the light of even bolder threats to our peace we have found it necessary to ask for even more.

About three weeks ago, the Joint Chiefs of Staff, who are my military advisors, after a very thorough analysis of world conditions, reported to me that the time had come for a further augmentation of our strength, particularly our air power. As a result, it was concluded we needed one billion five hundred and fifty million for the Air Force and seven hundred and fifty million for the Navy for aircraft procurement. This was for contract authority for three hundred mil- future fiscal years and since the money could not be spent in 1950, we had to have contract authority therefor in the new budget. I lost no time in putting the matter before the President and appearing before the Congressional Appropriation Committee, I asked for contract authority for three hundred million above the budget submitted in January and fifty million in cash for conversion and operation of additional destroyers and small ships needed for antisubmarine defense. Fortunately, our January budget was planned so carefully and our savings in the meantime made so efficiently that the sum total of our added need can be accomplished by an increase of less than 2½ percent of our original figure.

These increased amounts that we have asked for in the last 15 days—the $350,000,000—will all be used for the procurement of matériel—two hundred million for aircraft procurement in the Air Force, one hundred million for aircraft procurement for the Navy, and fifty million in cash for conversion and operation of additional destroyers and small ships needed for antisubmarine defense. The need for these additions in the light of changing conditions I am confident are clear to the American people.

We must keep in mind always our primary mission—to be strong enough to deter attack, capable enough to defend ourselves against attack if it comes, and powerful enough ultimately to defeat our aggressor. To deter, to defend, to defeat continue to be our watch words. It is security first and economy second. We shall never deviate from these objectives. We shall always keep them in that order. I repeat—security first, economy second.

What we do now in our business of defense to achieve these objectives, and how we at this time protect the traditions of freedom bequeathed us by our forefathers will become the deeds by which we of this generation will be known to our posterity, and we are going to be proud to make ourselves known by our deeds because, in Kiwanis fashion, we are doing something constructive, vital, and durable. We are paving a road toward security and prosperity on a firm foundation of peace through strength.

We shall achieve it in the spirit of Homer, the immortal Greek poet, who expressed the faith that—

"By mutual confidence and mutual aid
Great deeds are done, and great discoveries made."

Call for Sacrifice

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. HAYS of Arkansas. Mr. Speaker, under leave to extend by remarks in the Appendix, I include the following excellent editorial appearing in the Nashville Tennessean on May 11:

CALL FOR SACRIFICE

What is peace worth to the free nations?

Secretary of State Dean Acheson posed the question in London on the eve of the three power talks, and then gave the answer.

Peace is worth the greatest possible sacrifices, even to the point of affecting purely national interests. This does not, as we see it, mean the yielding of national sovereignty, but it does mean that there must be occasions when the good of all must take precedence over that of any single nation.

In effect, Mr. Acheson has told Britain and France that the United States would be pleased with more signs of cooperation and less of self-interest. And he has implied that the United States will not be found wanting whenever there is a desire for unity of action that means definite progress in winning the cold war.

Without vainglory, he might have added that the United States at the present moment is sharing as never before its wealth and strength to support associated democracies in their fight for survival.

In the same connection, Mr. Acheson asserted that Western Germany would be welcome as part of our company. This is a virtual invitation to this republican government to join as equals with friends of liberty for survival.

When the alternative is considered, this is a sound decision. For though the risks of making an ally of West Germany are obvious, the danger of leaving its government and people in a position where they will be continual targets for Russian pressure is greater. Five years after VE-day, it becomes inexpedient to temporize further with the issue.

Once West Germany has joined with the Western Powers, the plans of Russian unity are wrecked beyond repair. At some distant time, it may develop that the German Nation will be united again, but if allied plans bear fruit, it will be under the banner of liberty.

Our foreign policy begins to unfold, and it reveals courage and statesmanship. If it becomes the policy of the Big Three also, the problem in Europe will be clarified and the prospects of success greatly increased.

The Outlook for the Future—Text of the President's Speech in Pendleton, Oreg.

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. JACKSON of Washington. Mr. Speaker, in view of the fact that the press is unable to report completely the texts of the President's speeches on his trip to the West, I am inserting in the RECORD the text of a speech made by the President at Pendleton, Oreg., on May 10.

I should like to call one aspect of the speech to the attention of the Members of this House. There is a great deal of discussion about the so-called devaluation of the American dollar. It is generally assumed that the progress we have made here in America—in increasing average incomes as well as the total of goods produced—means very little, because the dollar is not worth what it used to be.

But the President has taken pains, in this speech, to take into consideration the purchasing power of the dollar in describing the progress that has been made in the past 10 years. Our total production has increased by 60 percent, average income for each citizen is up 40 percent, and corporate profits, after taxes, are up 100 percent. These are real increases and not inflated money increases.

I commend this speech to my colleagues.

I am glad to be here in Pendleton today.

I am always happy to visit the Pacific Northwest. You know, I have come out here to dedicate Grand Coulee Dam tomorrow. On the way out, I have been reporting to the people on some of the problems that our Nation faces, and the progress we are making in solving them.

At different towns and cities, I have talked about world peace, and the farm program, and the development of our natural resources. All these things are tied together, because we need to build a strong United States—strong morally and strong materially—as the basis for our own expanding future, and as the basis for world peace.

Today, I want to talk with you about the economic progress of our country.

The growth of the Pacific Northwest is a symbol of the breath-taking economic progress of the United States.

In one century, you have grown from a few people pushing back the wilderness to thriving States with several million people. One hundred years ago, ox teams were the power for your covered wagons. Today, you use the energy of the Columbia River—and in a few years more you may be harnessing the tremendous force of the atom for peaceful work.

These changes did not come about by themselves. They are the result of the daring and independent spirit which has always characterized this area.

The people of the West have always looked ahead. In their private actions, and jointly through their local, State, and Federal Governments, they have been eager to take bold and imaginative steps toward a better future.

So long as we hold fast to the frontier spirit of the West, we need never fear the greatest danger that could overtake our Nation. That is the danger of timidity—of being satisfied with things as they are—of failing to seek ever higher goals.

Throughout our history, there have been timid people who have been afraid to move forward. They opposed all the progressive measures we now take for granted. These timid folk once tried to reverse the trend toward free education and political democracy. They called this trend "mob rule."

Today, the spiritual descendants of this timid group are afraid of bold, progressive measures to achieve an abundant and expanding economy and to distribute its products more fairly among all our people. They call these measures "statism" or "socialism."

The use of the powers of Government to achieve a higher living standard and a fair

deal for all the people is not statism and it is not socialism.

It is a part of the American tradition.

Every day, we should thank Almighty God that the progressive trends of American life and progress have never been stopped for long. We have moved steadily toward a higher conception of human needs and human freedoms, and a greater appreciation of the rights of the average man.

This progress in American life has not been accomplished without a struggle. It cannot be continued without a struggle. Repeatedly, the common sense of a majority of the American people has had to assert itself in the face of the opposition of those who wanted to cling to the past.

Much of this struggle has dealt with whether our vast country with its wealth of resources should be developed for the benefit of the many or the few. The issue has been whether we should stop trying to provide all our citizens with a good standard of living just because a few people already had more than enough.

The timid minority do not believe that prosperity for all our people is a goal that we should fight for. Many of them are sincere and well-meaning individuals. The trouble has not been always with their hearts; it has been with their eyes. Not only were they blind to the prospects of the future; they could not even see backward clearly enough to understand what had already happened.

Let us look at some of the recent progress of the United States.

Twenty years ago, we had entered upon the greatest depression in our history. We suffered huge losses for more than three long years. Then we began vigorous policies of recovery and reform. Our recovery was so successful that, by 1939, our total national output of goods and services was actually higher than it was in the last boom year before the great depression.

Since 1939 we have gone on to make further gains—tremendous gains.

I am going to give you some facts.

The calamity howlers don't like to look at the facts, because the facts prove how wrong they are when they tell you what a terrible fix the country is in. They have been saying over and over again, for years, that the country is being ruined. But the facts show that things have been getting better. So, what do they do? They just ignore the facts.

Well, we are not going to ignore them. We are going to keep the record straight. We are going to see what has actually been happening to our economy.

The best over-all measure of a nation's economy is its annual output of goods and services. In the United States the annual output of goods and services has increased in the last 10 years about 60 percent.

Now, how does this affect the individual citizen? You know, a favorite theme of the boys who are always trying to run our country down instead of trying to build it up is that the Government takes all our gains away by high taxes. But the truth is that the annual per capita income of our citizens—after taxes—has increased in the last 10 years by more than 40 percent.

And some of the people who are doing the loudest yelling are the very people who have got the biggest increases. Most of them are better off now than they have ever been before in their lives.

However—and for this I am very thankful—the increased incomes have not been confined to a favored few. Annual wages and salaries of employees increased almost 75 percent in the last 10 years.

The income of farm owners, although it has fallen off in the last 2 years—and has fallen off more than it should—is still more than 50 percent higher than it was in 1939.

You would think all this would be enough to convince anybody that the country is doing very well. But some people are hard to convince. They say this administration looks after labor and looks after the farmer, but that it just doesn't give the businessman a chance—that business is being taxed to death.

Let's examine that. The fact is that the annual income of corporate businesses, after taxes—I repeat, after taxes—has increased about 100 percent since 1939. That's right, 100 percent.

It seems to me that free private enterprise is doing pretty well.

I am glad that it is. I want business to be prosperous, and I am going to do all that I can to see that it remains prosperous.

There are some die-hard reactionaries who won't give up even when all the facts I have mentioned are pointed out to them. So they say, "Well, maybe so, but the dollars people have won't buy as much as they used to." That argument is just as phony as all the rest of the arguments the pessimists use.

In all the figures I have given you allowance has been made for changes in the purchasing power of the dollar. The increases I am talking about are real increases, not just dollar increases. In dollar terms, the gains would be even larger.

During the last 5 years, we have successfully met one of the greatest economic tests that can ever confront a nation: We have come through the adjustments following a great war without a depression. We have had depressions after most other wars and many people expected that we would have one this time.

Instead, we have weathered the readjustment period with relatively few hardships, and now we have good prospects for continued prosperity. Almost every newspaper you pick up gives new evidence of increasing business activity.

We have avoided the calamity of a postwar depression because our whole economy has been strengthened by a program of action which began 17 years ago. This program has been directed toward the humanizing of our economy and toward the humanizing of Government. This program has been marked by such measures as bank deposit insurance, regulation of the security markets, old-age and unemployment insurance, minimum wages, slum clearance and low-rent housing, resource development, and protective farm legislation.

We have had a Government that was—and is—working for the people, not for special interests.

These measures have helped to distribute buying power more widely among the people. They have provided larger markets for the increasing products of our factories and our farms. They have protected our economy against shock. They have provided business with a stronger banking structure and a more flexible credit system. They have helped to sustain farm income.

These results have not been achieved through public action alone. In private enterprise as well, employers and workers have placed more emphasis upon the human element. They have learned more about how our economy functions. They have constantly adopted more enlightened and progressive policies.

There is a great lesson to be learned from what we have accomplished. We have learned that it is within our power as a people to make full use of our tremendous resources of farm, and factory, and human skill.

We can use that lesson—and we must use it—to build for the future.

There are two conflicting schools of thought about the future of our economy, just as there are about its present condition. Those who can see nothing but evil in the present situation, can see nothing but gloom for the future.

They have been saying all along that our programs could not succeed—even though the programs were succeeding, at the very time they were denying it. Now they are saying the same old things—that the country is going bankrupt, that depression lies ahead, and that the only thing to do is to pull in our belts and save what we can from the wreckage.

I don't agree with them.

I believe that we know more now than ever before about how to keep our economy strong and prosperous. I believe that we can continue to rely on the programs that have served so well for the last 17 years—use them and improve them. I face the future with confidence that our Nation will continue to grow in freedom and in material and moral strength.

I am sure that the people of Oregon and all the Pacific Northwest share that confidence. It is the character of those of you who live in this region to dream big dreams and plan big plans. You will not join with the little men who throw up their hands and cry, "It can't be done" when we set up our goals for future prosperity.

I want to tell you about some of those goals—and I assure you that there is nothing fantastic about them. They are merely based upon the belief that we can improve as rapidly in the future as we have in the past. I am sure we can do that well and even better if we follow wise policies that are for the benefit of all the people and not just for the special interests.

Here are some of the things we can do.

In the next 10 years we can reach toward higher standards of living for all.

We can lift our annual output of goods and services to more than $350,000,000,000 by 1960—a one-third increase within 10 years. And I am talking about real output, measured in dollars of today's purchasing power.

We can increase real wage and salary incomes, and farm incomes, as our economy grows. We can increase the profits of business, not through higher prices or higher profit margins, but through increased volume in a growing economy.

I have said before, and I repeat, that by 1960 we can and should achieve a far better standard of living for every industrious family in the city and on the farm.

Now, I want to tell you about some of the things we must do to achieve these goals.

First. The efficiency and capacity of our industries must be increased. Despite the large investments which industry has made since the war, there is urgent need for further investment and improvement, to meet expanding markets and to take advantage of the rapid gains in technology.

This is a job for private owners and managers—in manufacturing, in power, in transportation, in many other industries. It is also a job in which the Government must participate—through resource development, sound tax policies, housing and small business programs, and many other ways.

Second. Purchasing power must be expanded to develop and maintain markets for our increased production of goods.

The final market for all products is the ultimate consumer. Our economy cannot expand as fast as it should as long as we have a large number of families with substandard incomes. One out of four American families now has an income of less than $2,000 a year.

Our goal over the next decade should be to lift every hard-working American family to an income of about $4,000 a year—not a mere dollar increase, but an increase in the real standard of living. We have the resources to do this by balanced national growth.

Raising the standards of our poorest families will not be at the expense of anybody else. We will all benefit by doing it, for the incomes of the rest of us will rise, too.

Third. We must maintain a sound balance in the programs of our Government, faced as it is with huge and unavoidable responsibilities.

Most people realize, now, that more than 70 percent of the Federal budget is required to pay for past wars and our work to prevent another war. However, they often fail to realize just how vital the other 30 percent is to our welfare and progress. The costs of sound programs to improve the Nation's health and education, to stabilize agriculture, and to develop resources, are sensible investments in a better future.

I want to balance the budget of the Federal Government, just as much as anybody else does. I would like to see taxes reduced. We will do both of these things just as soon as we safely can.

We must continue to strive for every true economy in national affairs. But I will not join in slashing Government expenses at the cost of our national security or national progress.

Fourth. We must continue to improve our economic relations with the rest of the world.

We must develop a larger flow of international trade and international investment, on a sound basis. This will result in larger markets for ourselves, and larger markets for other free countries.

Just as our Nation has grown through enlarged production and trade, from which all sections of the country have benefited, so the expansion of world production and trade can strengthen all the free countries. That is an essential step toward world peace.

We must not be turned aside or slowed down in our efforts to help the other free nations get back on their feet by those who would retreat into isolationism in order to save a few dollars. We would pay for that folly many times over. It would greatly increase the chances of a third world war.

As long as I am President, we are not going to put dollars above world peace.

These things that I have been talking to you about—the growth of our economy and the policies needed to make that growth possible—have a very definite meaning for you folks here in Pendleton, as they do for people all over the country. They are not just abstract theories. They are matters that will have a very important effect on your daily lives.

Your wheat and livestock growers cannot prosper without good incomes and high consumption in the rest of this country, and in other countries, too. The same thing is true of the Columbia River fisheries. Oregon's lumber industry will have good times only if our Nation builds the houses our people need.

And it works the other way, too. The Nation needs the products of your agriculture, forests, and fisheries. The whole country becomes stronger when Oregon and the Northwest grow and prosper.

We are a Nation that advances by cooperation and mutual benefit. We do not want any State, or any group, to grow at the expense of another. Our strength—the strength of free men—is in a society that works to bring better living to all our people.

We have demonstrated in our country that we can all move forward together. I believe profundly that this forward movement is going to continue.

I believe that ultimately it will extend to the farthermost corners of the earth, and that, with the United States as a shining example, we shall suceed in bringing greater welfare and freedom to all mankind.

Symington Energizes Resources Board

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, May 15 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I know the Congress and the entire Nation are very proud of the way in which Stuart Symington, former Secretary of the Air Force, and now chairman of the National Security Resources Board, has gone about revitalizing the work of that very necessary organization. Mr. Symington's activities in that connection are very well described in an article which appeared in the Washington Sunday Star of May 14, written by Raymond P. Brandt, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SYMINGTON ENERGIZES RESOURCES BOARD—NEW ADMINISTRATOR IS BORN SALESMAN, QUICK THINKER—DEFINITE ACTION TAKES PLACE OF CAUTIOUS FACE IN PLANNING

(By Raymond P. Brandt)

During the past 8 weeks the National Security Resources Board, the body that drafts plans for coordination of military, industrial and civilian war mobilization, has been revitalized by Chairman W. Stuart Symington of St. Louis, dynamic former Secretary of the Air Force and former administrator of the War Surplus Property Board.

Even the dark hallways of the old State Department building seem lighter and NSRB officials and employees walk faster now that the 48-year-old industrialist-turned-public servant has taken over the management of the powerful planning group that will advise the President on how American manpower, money and materials can best be switched from civilian to war production.

Under Reorganization Plan No. 25 which President Truman sent to Congress, Mr. Symington would have greatly enlarged power. The functions of the board would be exercised by the chairman, and the several cabinet members, supposed to direct the board's operations, would become advisers. The plan, which will go into effect within 60 days unless either House vetoes it, also provides for a vice chairman at $16,000 a year.

The reorganization proposal indicates that Truman and the present board have realized that the existing setup, first headed by Arthur M. Hill, transportation executive, as chairman and then by Dr. John R. Steelman, assistant to the President, as acting chairman, could not meet the demands of the cold war or plan for the possibilities of a shooting war.

POTENTIALLY POWERFUL GROUP

Mr. Truman said that "the tremendous responsibilities of the National Security Resources Board and the heavy workload on the chairman fully warranted" the appointment of a vice chairman.

Although President Truman in the past has persistently undervalued this agency, created by the National Security Act of 1947, it is potentially one of the most powerful groups in Government. Should there be a war, its recommendation would determine how much every American would eat, work and earn, and what percentages of every vital resource would be devoted to war and to civilian production.

Under the reorganization plan, Mr. Symington, as Chairman, would have the practical direction of the Board, composed of Secretaries Acheson, Snyder, Johnson, Chapman, Brannan, Sawyer, and Tobin. This, in effect, is a War Cabinet representing the State, Treasury, Defense, Interior, Agriculture, Commerce, and Labor Departments.

Mr. Symington will also be an active member of the top policy-making National Security Council, headed by President Truman and composed of Vice President Barkley and Secretaries Acheson and Johnson and himself. Other Cabinet officers and agency heads are called in when international problems affecting their jurisdictions arise. He will also attend Cabinet sessions on appropriate occasions, meaning when war questions are up for discussion.

He will work closely with the Defense Department's Munitions Board, headed by energetic Hubert Howard, Chicago industrialist, which has to arrange for the use of America's great industrial machine for war production in the event of an emergency. Since its creation, the Munitions Board has made far more detailed plans within its zone of operation than has the NSRB.

The extent of Mr. Symington's success will depend on how far he is supported by President Truman and how much cooperation he is able to get from the established departments, which have always jealously guarded against invasion of an outsider.

Immediately after his appointment, he declined to discuss his plans for his new assignment, saying that he wanted to case the joint before he started talking for publication.

This free and easy use of the vernacular was typical of Symington, the wealthy Yale man who was able to talk the same language as Communist Bill Sentner of St. Louis, when Symington's Emerson Electric Co. was having labor troubles while working on war contracts. It also endeared him to the Air Force flyers, whose budget battles he fought in Congress and before public forums. Behind his gum-chewing, smiling face, there is the quick mind of an experienced administrator and of a born salesman.

AIMS FOR GOOD STAFF

After 3 weeks, he could only give the broadest outlines of his plans.

"My first job," he says, "is to see that we have good staff men. For the most part we have good men and they have done an excellent job—far better than most people realize. But we have to get a few more men outstanding in their professions and then we have to get practical plans—not plans just for planning's sake.

"This job is necessarily advisory to the President, not an operational affair. Otherwise we would have to have many more than our 250 employees. Essentially, our recommendations will be concerned with allocations of power—who is to do what in event of war.

"After we get our staff in shape, we must reappraise the plans already made to see if they are practicable and fit existing and prospective situations. Then there must be a tremendous 'selling' job within the Government and among the people, especially in business, industry, and in labor organizations, so that all will know what is needed of them in the event of war."

TWO EXPERTS BEFORE HIM

Always the diplomat and discreet public official, Mr. Symington will not comment on

the records made in the NSRB by his predecessors, Hill and Steelman, or speculate on why Mr. Truman wanted his old senatorial colleague, Mon C. Wallgren, of Washington, in as chairman.

This writer, however, has observed the NSRB since its establishment under the sponsorship of the late Secretary of Defense James V. Forrestal, and can offer some comments of his own.

Mr. Hill was a transportation expert rather than an industrialist, and although he had served the Government well in wartime he was a novice when it came to dealing with established Government agencies, particularly the all-powerful Budget Bureau.

Without any specific direction or approval from the White House, he attempted to set up the NSRB as an "operational" rather than as an "advisory" organization, which meant that had his plan been put into effect he would have invaded the province of many established departments. After he made a few actual moves in this direction, he was stopped cold by Mr. Truman and several Cabinet officers. He resigned in a silent, dignified huff and refuses to discuss his differences with the White House.

The President revealed his underestimation of the board's importance by appointing his Presidential assistant, Mr. Steelman, as acting chairman. Steelman is a labor expert and an experienced career man who knows the intricacies of governmental bureaucracy but lacks industrial and management experience. He could talk with Cabinet members on an almost equal level. Mr. Truman further disclosed his own conception of the board's value when he tried to appoint former Governor Wallgren to the chairmanship. His major qualification was that he was a crony of the President and could talk with him on intimate terms.

DEALT WITH SMALL BUSINESS

Because of his business and Government experience, Mr. Symington appears to be the ideal man for this big job. Born of wealthy eastern seaboard parents, he was in World War I while in his teens and after his graduation from Yale, where he was in the exclusive clubs, he joined his family businesses as an executive. Leaving these establishments, he soon made a name for himself as a rehabilitator of depressed small businesses. It was in this capacity that he came to St. Louis in 1938 to be president of the Emerson Electric Manufacturing Co., which had been having serious trouble with CIO United Electrical and Radio Machine Workers of America. William Sentner, an avowed Communist, was a power in the St. Louis local, but Symington was able to work out an amicable deal with him so that Emerson became a robust small business that developed into a fairly large business during the war.

Before Pearl Harbor, Mr. Symington demonstrated his business acumen by going to England to study the latest airplane turrets and came back with orders for Emerson that eventually made it one of the largest airplane appliances plants in the country.

His success at Emerson and his work for the Office of Production Management prompted Mr. Truman to offer him the chairmanship of the three-man Surplus Property Board in June 1945. Here he began the disposal of almost a hundred billion dollars' worth of Government war properties. Shortly after he was confirmed for this position, Congress abolished the board setup to give him the sole direction of the organization.

He continued in this job until February 1946, when he was named Assistant Secretary of War for Air. There had been no scandals in the Surplus Property Board despite the billions that had to be supervised. In September 1947, he became the first Secretary of the Air Force under the unification plan.

BACKED 70-GROUP FORCE

As Assistant Secretary for Air and as Air Secretary he became the idol of the flyers because of his aggressive insistence for a 70-group Air Force as recommended by the presidential committee headed by Thomas K. Finletter of New York. Mr. Symington's choice as his own successor. Even now, with the defense budget down to less than $14,000,000,000, he is arguing that we should have the 70 groups as soon as the national economy permits.

Mr. Symington has demonstrated that he knows business and labor organizations, governmental procedures, including appearances before congressional committees, and has a global viewpoint of defense planning.

He has another intangible quality in greater degree than his predecessors—his ability to get along with people and make a favorable impression. Although he did not get along so well with Defense Secretary Johnson personally, he carried his fight for the Air Force to Congress and the public. He is on familiar terms with almost every high official in Washington.

As the functional head of the NSRB, he will have far more authority than his predecessors but probably will need more tact and salesmanship than they exercised.

The problems of the job are tremendous and intricate. One of his first objectives will be to get a definite war plan from the Joint Chiefs of Staff to enable him to plan the maximums and minimums for civilian and industrial mobilization. Here, because of his service in the Pentagon, he can talk the language of the military and make them be specific where, in the past, they have been general.

There is also the civilian defense program, which has recently been put in charge of Paul J. Larsen, formerly head of the Atomic Energy Commission laboratories in New Mexico. This program has been languishing and only a few of the governors, upon whom the responsibility has been placed for civilian defense, have done anything in their own localities to prepare for war. Mr. Symington promises to have a full-scale program drafted by September 1.

As examples of the details of coordination needed for civilian defense are the discoveries by the NSRB that various cities and towns have varying sizes of fire hoses and connections and that one atomic explosion over a single city would require all of certain medicines that are now available throughout the entire country. The problem will be to simplify fire hoses and connections so nearby cities can help each other in event of an attack or sabotage and to build up stockpiles of medicines required after an atomic explosion.

Another difficult problem is the drafting of legislation needed in the event of an emergency. The NSRB has made several detailed drafts for freezing of wages and prices and rents so that no one can profit from war and for allocations of materials. One of the subsidiary questions is whether to ask Congress to enact general legislation now, as strongly recommended by Mr. Baruch, to give the President power to act immediately on these items in the event of an emergency, or whether to have the detailed bill acted on at the serious threat or the actual outbreak of the emergency.

Mr. Symington belongs to the White House school that believes the tentative drafts should be continuously under revision for immediate introduction in the event of an emergency. He says that even general legislation would arouse special interest groups such as farmers, labor organizations, property owners and other businessmen who would combine to defeat the measure.

Under Acting Chairman Steelman the draft for the mobilization was classified confidential and not submitted to the Cabinet members on the Board for their rejection or approval. Mr. Symington promises that the latest draft will be circulating at the Cabinet level within 2 weeks and that after practical revisions he will have an approved copy by July 1.

Symington is not daunted by the size or the complexities of his new challenge. After all, he handled billions of dollars worth of property in the Surplus Property Board and supervised the spending of billions for the Air Force. He says the job is like the long-range budgeting and selling surveys of a gigantic business firm, such as Sears, Roebuck, where there must be planning of factories, transportation, acquisition of materials, consumer markets and continuous sales over long periods.

Loans for Small Business

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. ELLIOTT. Mr. Speaker, this country cannot afford to have a full-scale depression. We must continue to have a high level of employment.

To provide a high level of employment our economic system must continue to expand.

Small business will play a great part in this expansion.

Much attention is being given presently toward providing a practical system of loans for small business.

This is a matter of great and growing urgency throughout the country.

The situation in the Seventh Congressional District of Alabama is acute, because of the great unemployment with which we are afflicted.

I trust that this session of the Eighty-first Congress will give full consideration to the financial problems of small business, and work out a system of loans that will stimulate our economic system to provide more employment for our people.

I include an editorial from yesterday's Washington Post which deals with the problem at hand:

SMALL BUSINESS

At least three of the five major measures proposed by President Truman to overcome the financial handicaps of small business appear to us to meet long-felt needs. They are the recommendations for (1) Federal insurance of commercial bank loans up to $25,000 patterned after FHA-insured loans for home improvements, (2) establishment of national investment companies to provide equity capital and long-term loans for small business, and (3) a plan for setting up a clearing house in the Department of Commerce to collect and supply scientific, engineering, and managerial information to small concerns that cannot afford to employ expensive research staffs of their own.

There is a question as to whether the provision for limiting the maturity of the proposed type of insured loans to 5 years may not be too restrictive. The Federal Reserve officials, for instance, allege that the 5-year

limitation on industrial loans for working capital purposes that the Federal Reserve banks are authorized to make, or to underwrite when made by member banks, is too severe. The President proposes to repeal this Federal Reserve loan provision and substitute a self-sustaining system of loan insurance by private banks, subject to compliance with federally approved standards. Under proper safeguards this insurance plan would, in our opinion, strengthen, rather than weaken, the private banking system. For it would enable private commercial banks to grant loans to small businesses for working capital purposes that they would not dare to undertake in the absence of such protection, thereby reducing the pressure for direct Government loans.

The proposed national investment companies are designed to meet a different kind of need—provision of equity capital and long-term loans for small business. Our commercial banks are not in a position to assume the risks of financing the long-term capital requirements of small business. Moreover, it is virtually impossible for small or even medium-sized businesses to sell securities in the open market. The cost of loan flotations in small amounts is prohibitive, and the issues of small companies are hard to sell.

In the past small businesses have usually been financed out of the savings of owners and local people. But the so-called small business of today would have been considered a few decades ago a big business. Costs have mounted, too, thus increasing the capital needs of going businesses and the capital required to start a business. National investment companies would, therefore, fill a gap in the financing structure by providing a channel through which pooled savings available for long-term use could be more safely invested.

In the beginning such companies might not attract private investment support, since it will take a good deal of time to build them up, and the risks of loss, especially at the experimental stage, are considerable. For that reason, the initial capital of the new investment companies would probably have to be provided by public or semipublic agencies, such as the Federal Reserve banks. However, if successfully launched, commercial banks would doubtless find it to their advantage to invest in the new investment companies, even if the direct returns from their holdings were small, for they would benefit indirectly from the strengthening of the capital resources of local industries that are their customers.

There is slight danger that the plans would lead to further Government encroachment in the private banking field, if private banks actively cooperate with the new investment companies and if private funds, supplied by banks and other investors, are forthcoming. Admittedly the proposal is experimental and there is some danger of its being launched on an overly ambitious scale. Color is given to this fear by the emphasis put on the importance of the program for increasing the credit aids to small business as a means of insuring a steady expansion of the economy and providing increased employment for a growing labor force. The program is rather a long-range reform that should contribute to the ultimate attainment of those objectives by strengthening the competitive standing and ability to survive of small businesses. But it would not have much immediate effect on employment or afford any great immediate stimulus to business expansion. It is not a relief measure, but a means of providing more appropriate and more adequate types of financing for small-scale enterprise at all times through private banking channels, with a minimum amount of support and supervision by Government agencies.

Addresses of the President in Idaho

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. WHITE of Idaho. Mr. Speaker, the people in the State of Idaho recently had the great honor and privilege of hearing several addresses made by the President of the United States during his trip through our State. The following addresses were made by the President at Pocatello, Shoshone, and Glenns Ferry, Idaho:

REMARKS OF THE PRESIDENT AT POCATELLO, IDAHO

When I was here in 1948, along about early in the morning, I think it was 7:50, I remember they told me there wouldn't be anybody up; and they were darn sure there wouldn't be anybody up this morning, but you fooled them—and you fooled me, too, I don't mind telling you. You may have heard I am an early riser. I get up early every day—ask these photographers and newsmen about that. I am used to tackling problems no matter what time it is.

This morning, even though it is only 6 o'clock, I want to talk to you about the greatest scientific discovery of the century—or in history, in fact: atomic energy.

The first atomic explosion in history took place down in the deserts of New Mexico in July 1945. I was in Potsdam and had been in conference with Winston Churchill and Joe Stalin, and we had been discussing world peace programs.

When this notice came to me that the atomic explosions had taken place, I called a meeting of our military advisers—General Marshall, General Eisenhower, General Bradley, General Patton, Admiral Nimitz, Admiral King and several other able and distinguished gentlemen, including the Secretary of State and the Secretary of War at that time—and we discussed the situation and how we should approach the use of it.

And I informed those gentlemen at that time that I would do my utmost to see that this new discovery was used in a way that would make the world a better place in which to live.

I have been working at that ever since.

I had to issue the order for the dropping of the first two atomic bombs on our enemies. And I made that order after due consideration and in conference with all our military leaders. When they informed me that the landings in Japan would probably cost the lives of 200 thousand of the cream of our American soldiers and sailors, I made up my mind that the best way to save the lives of those young men—and the best way to save the lives of the Japanese soldiers, also—was to drop those bombs and end the war.

And I did it. And I would say to you I would do it again if I have to.

We have been making real progress in putting atomic energy to work. Already, atomic research has led to important discoveries in medicine, and there is real promise that it will lead to much better grains and livestock on our farms.

Up in Arco, the Atomic Energy Commission is now constructing a reactor testing station. From the knowledge we gain there, it should be possible to develop machines to generate useful power to drive ships and airplanes.

You know, nearly all the destructive weapons that have been discovered in times past have eventually been put to use for peacetime purposes. Now, if we are not ingenious enough and have not the sense to do that same thing with the most awful release of the atom, then I am here to tell you that we probably ought to be destroyed. And I am here to say to you that we are not going to be destroyed, we are going to use this great energy for the welfare and benefit of the human race and not for its destruction.

Arco is a truly cooperative venture. It represents the combined efforts of the Atomic Energy Commission, private industry, and universities and research institutions from coast to coast. We are pooling all the resources we have in this great undertaking to harness atomic energy for the beneficial use of mankind.

Throughout our history, scientists and scientific knowledge have contributed to our progress as a nation. If you want to keep up that progress, we need to stimulate scientific discovery and research, and train more young men and women for our laboratories and research centers.

To carry out these objectives, I have just signed the National Science Foundation Act of 1950. This act is of tremendous importance, because it will add to our knowledge in every branch of science.

I am confident that it will help us to develop the best scientific brains in the Nation. It will enable the United States to maintain its leadership in scientific matters, and to exert a more vital force for peace.

Whatever the future may hold, we must bend every effort toward our major objective, and that major objective is world peace and the welfare of all mankind, no matter what his race, creed, or color may be, no matter what part of the world he may live in.

Now I am making this trip around all over the United States to report to you as the President of the United States. I came out here in 1948 asking you for votes. I am back here now, as President of the United States, not running for any office but to report to you as I report to the Congress every year under the Constitution. I am making to you personally and giving to you personally a message on the state of the Union and what goes on, and what I believe, and what I am trying to do.

And if I tell it to you, it can't be garbled, because when you hear me talk nobody can transfer those remarks to mean something else.

When I come along later in the season, we will do a little politicking. But right now I am reporting to the Nation on its condition, on what it needs, and what I hope I can give it for its welfare and benefit, on what I hope to contribute to world peace, and what I hope to obtain for—as I said a minute ago—the welfare of all mankind.

I can't tell you how very much I appreciate this early turnout. It is surprising to everybody—I think it is surprising to yourselves, but I appreciate it most highly.

REMARKS OF THE PRESIDENT AT SHOSHONE, IDAHO

I got up rather early this morning and had a meeting at Pocatello at 6 o'clock, and I never expected to see that many people out at that time of day. And here it is 8 o'clock in this great city, and more than ever am I surprised—and agreeably surprised. And this will surprise some of my reporter friends, too, who are along with me.

I am glad to be in Shoshone, in this rich farming section of the Snake River Valley. I want to talk to you this morning about one of Idaho's great crops, potatoes.

I was up in Maine in the middle of the war, along about 1943, inspecting an air base at Presque Isle, and they were telling me about a boy from Idaho, a private in the Air Force there, that had been sent to the guardhouse because he refused to peel Maine potatoes. Of course, I didn't blame him much.

Idaho has good reason to be proud of its potatoes. Your growers have done a fine job

of growing high-quality potatoes and marketing them in an efficient manner.

The potato growers of Idaho and other States have been attacked a lot in recent months. There has been so much discussion all over the country about the potato situation and so much false information about it that I want to give you the facts.

First of all, it is certainly not right to make the potato growers "whipping boys" for the costly potato surplus when basically the trouble is due to the laws which were passed back in 1947 and 1948. They provided potatoes with a mandatory support price, but they gave no effective production and marketing controls. Instead, Congress said, "Try price supports without controls; give them a trial run."

Well, that is exactly what we have done for 2 years, and you know the result. I tried to get that changed just a short time ago and did not succeed in getting it done. It is just as we warned against.

The Government has been required by law to buy millions of bushels of potatoes in order to maintain prices, and most of the potatoes bought by the Government have had to be disposed of for uneconomical uses, wasting millions of dollars. That sort of program is not in the farmer's interest, it is not in the Nation's interest. It can lead to public repudiation of the whole farm price support program.

That is why the Secretary of Agriculture has pleaded with Congress to change the price-support laws on potatoes so that we could control production and marketing more adequately and thus avoid these big surpluses. Most of that surplus, of course, has to be destroyed. You can't safely drive a wagon or a car without a brake.

The Congress has recently passed a law providing that support prices shall not be in effect for potatoes after this year's crop, unless marketing quotas are also in effect. But marketing quotas for potatoes are not permitted under the present law. This is obviously only a partial solution.

I have been urging the Congress to authorize both marketing quotas and direct production payments, in order to support potato prices without accumulating wasteful surpluses. This will bring a fair return to the farmers and at the same time benefit the consumers and the taxpayers.

I hope you people of Idaho will rise up and demand that such action be taken by Congress. It is certainly in your interest to do so. You see, the situation as it developed is such that they could make a great big "bugaboo" out of potatoes. They are doing it with the idea of discrediting the whole farm program of the administration.

Now it is to your interest to see that we get the farm program which we are trying to get and which will work not only in your interest but in the interests of everybody in the United States—all farmers everywhere, not only the potato growers, but wheat growers and cotton growers and tobacco growers, and everybody else. I have been fighting for that ever since January 1, 1949. And if you will read my message on the state of the Union in January 1949, you will see there that I advocated a program that would have prevented all this talk about potatoes. That is entirely in your interest.

I came out here to tell you what the facts are. Nobody else will tell you what the facts are, because those people who control the methods of communication want to see the farm program ruined and put out of business. And I am out here to tell you what the facts are.

If you will use your head and your own judgment and work in your own interest, we will get this thing settled in such a way that the farm program will continue as it ought to.

Now it is a pleasure to me to be here with you this morning in this beautiful city. And I hope—I hope—that you will inform yourselves completely on just exactly what we are trying to do for a farm program that will work. When you know what the facts are, you can not help but go along with what I am advocating; and I want you to know the facts, that is the reason I am here.

I came out here to tell the people just exactly what I stand for, and why. I am not running for anything. I may come back a little later and try to influence you on what is to your best interests, but I will try to tell you the facts.

I have found in my long political experience—and it has been over 30 years—that when you know the facts, honest men have no trouble in agreeing on what the results should be.

Thank you all very much for this pleasure.

REMARKS OF THE PRESIDENT AT GLENNS FERRY, IDAHO

It is a pleasure to be here this morning, I can assure you. It is also a great pleasure to me to have warm weather again. When I left Washington it was 92 in the shade, and when I got out here to western Nebraska and Wyoming it was snowing. It is hard to tell what kind of clothes to wear in such changes of weather.

Since early this morning, I have been traveling across southern Idaho through this great Snake River Valley. Here it is, only a little after 9 o'clock, and I have already made speeches in Pocatello and Shoshone. Now I am glad to be able to stop here for a few minutes at Glenns Ferry and talk with you about some of the problems that this country faces today, problems in which you are vitally interested and in which I am vitally interested. The reason I came out here was to give you my viewpoint and to find out what your viewpoint is directly, so there can be no misunderstanding of what we are trying to do and what we are trying to say.

The biggest problem we have is that of maintaining world peace. We can build a peaceful world only if we remain prosperous and well off here at home.

There is a very direct connection between farm prosperity and world peace. Farm prosperity is the foundation of the national economy of the United States. That was certainly true 20 years ago when the farm depression of the 1920's led to the great depression.

I think that the farm home and the small country town are among the strongest bulwarks of our democracy. We have got to see to it that our farmers prosper on farms which they own themselves. We shall certainly go downhill if we ever have a large rural floating population who have to earn a living by working in the fields of a few large-scale landowners.

That is why I look with grave suspicion upon the development of the so-called industrialized agriculture, the operation of farms that are nothing but factories for the production of crops. What makes this a great Republic and a great country are the small landowners, men who have property of their own on which they live and make a living.

These farm factories depend for their prosperity upon a large force of landless and underprivileged workers. These workers have to migrate from place to place without any opportunity for a decent life for their wives and children.

The Federal Government has been doing a great deal in recent years to help men and women to own and improve their own farms.

You folks here in Idaho know all about the new farms that are opened up by reclamation projects in former sage-brush areas. One of the most important things to remember about our reclamation program is that it safeguards the family-sized farm, and does not give encouragement to the growth of these huge corporate farms I was talking about earlier. That is not all we have been doing.

In the State of Idaho alone, more than $34,000,000 has been loaned for agricultural and home operating needs, and for purchase and enlargement and development of farms.

We have also lent Idaho farmers over $1,000,000 to install needed irrigation and water facilities. The Farmers Home Administration is also helping hundreds of new farm families, a large number of which are veterans, to get started on new farms.

When we first started doing something to help farm tenants buy their own land, back in 1935, you should have heard the outcries coming from the opposition. In those days the reactionaries set up an outfit which they called the American Liberty League. They issued a long blast against the Bankhead-Jones Farm Tenant Act, calling it a socialistic experiment.

Those words have been used ever since we started to work for the farmer back in 1887. A fellow by the name of Hatch from the great State of Missouri got a bill through the Congress to appropriate $15,000 to each State that wanted an experimental station in connection with its agricultural college, and he was called a Socialist and a man who was going to tear down the Government of the United States. Yet nearly every agricultural college in the United States now works under that same Hatch Act.

They said the farm-tenant program was Russianization of agriculture. Well, you people know that our farmers' home program was and is nothing of the sort. Instead of being socialistic, it has been a real force in preserving and strengthening free enterprise. Now, I hope you didn't believe that silly nonsense about socialism in 1935. I know you didn't believe it in 1935, and I am very sure you don't believe it now.

No matter what such people say, we intend to go right ahead and improve the condition of agriculture, and carry out the whole Fair Deal program to secure good housing, good health, education, and social security.

These are measures which will help us to preserve world peace—our greatest objective; and if we are going to get world peace, we ourselves must be economically strong. We must be in a position where our people are better off, have more things, and live better than any other people in the world. They are that way now, and we want to keep that up.

It is my idea that if we can inform the people of those countries that are under tyranny of the facts of life as we see them here in these great United States, we will not have any more difficulty about getting a world peace that will last.

My one ambition has been, ever since I inherited the Presidency on April 12, 1945, to obtain world peace—a peace that will last, a peace that will help us all, a peace that will make all the peoples of the world happy.

Now, I know that is not beyond the bounds of possibility, and I know you believe me when I tell you that is exactly what we are working for. And we are going to keep working for it until we get it.

You know, I have been up against some very, very hard propositions. I think you remember back in 1948, it was said that it was an impossibility for me to go riding all over the country to convince the people that I was on the right track and for their benefit.

I did convince them, and we did win.

Now we want to convince the world in exactly the same manner that we are on the right track, and we will win—because I think God is with us in that enterprise.

I certainly appreciate the cordiality with which I have been treated in Idaho. I am out here—as I told you in the beginning—to tell you what I think, and what I am trying to do.

I tried to convince you of that while I was out here in 1948 running for President, and trying to get votes. I am not running for anything now. I am out here to report to you on exactly what I am trying to do, and I want your help to help me put it over. I may come back a little later and talk a little politics to you, but I am not doing it now.

Thank you very much.

Assistant Secretary of Interior William E. Warne Speaks on Public Power

EXTENSION OF REMARKS
OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. ENGLE of California. Mr. Speaker, under unanimous consent, I place in the Appendix of the RECORD an address made by Assistant Secretary of the Interior William E. Warne at the thirty-eighth annual meeting of the Chamber of Commerce of the United States here in Washington, D. C., on May 2, 1950, in regard to the Government's program and aims in regard to power development, which I am sure will be of general interest:

THE GOVERNMENT'S PROGRAM AND AIMS IN POWER DEVELOPMENT

Two weeks ago, the National Association of Electric Companies invited the Washington press corps to breakfast. Representatives of several large electric-power companies, in a series of speeches, accused the Federal Government, and more specifically the Department of the Interior, of all manner of crimes against the country in general and the utility industry in particular. It was charged that the Government's power policies were confusing and needed clarification; that public power programs were "contrary to the public interest"; and that these program were "leading the country into socialism."

I am glad indeed to be here today to clear up some of the confusion which seems to trouble the privately owned electric utility industry.

To appraise the problem of energy production and distribution in the United States in its true dimensions, we need some perspectives.

Consider first the enormous growth of electric power development in this country since the First World War. In 1920, electric utility plants had an installed capacity of about 13,000,000 kilowatts. By the end of 1949, capacity had increased nearly five times—to sixty-two and one-half million kilowatts. And while capacity increased fivefold during the 30-year period, the output of electric energy from the generators multiplied about seven times—from 40,000,000,000 kilowatt-hours in 1920 to 291,000,000,000 kilowatt-hours in 1949.

The plain fact is that, except during periods of severe economic depression, supply of electric power in this country has never caught up with demand. Today, in spite of the very large additions to generating capacity made both by private industry and by Government during and since World War II, we are still short of power.

This is so, despite assurances to the contrary. We were told that we would not live to see the day that the Government would market all of the power to be generated at Hoover Dam on the Colorado River, the first large-scale Federal hydroelectric installation. Yet the generators at Hoover Dam have been operating at top capacity ever since the first unit was installed in 1936. Still other dams and other generating plants have been required and provided in the area. We were told also that Grand Coulee Dam on the Columbia River would turn out to be a gigantic white elephant, and yet demands for power from Grand Coulee constantly have raced far ahead of supply.

The war effort of the United States would have been severely restricted had it not been for the large blocks of electric power generated at Hoover and Grand Coulee, at Bonneville, and at the dams operated by the Tennessee Valley Authority.

Since the war, while some utility executives have been assuring us that the power emergency is over, demand for electrical energy has continued its upward spiral. At hearings before the House Appropriations Committee in 1946, the president of the Pacific Gas & Electric Co. was asked whether there was any shortage of power in the Central Valley of California. He replied, and I quote: "There is none now; there has been none; and there will be none in the future." Less than 2 years later, while the Central Valley was experiencing one of the most acute shortages in history, P. G. & E. found it necessary to pull switches on its overloaded lines and to cut down deliveries to its customers. As most of you know, brown-outs have plagued many other sections of the United States in the last few years, and shortages still exist due both to lack of supply and transmission facilities.

The Federal Power Commission reports that in 1948, the last year for which complete figures are available, nearly half of the country's major utility systems had to make maximum-load curtailments—that is, to cut power deliveries to their customers below demands at peak periods. These curtailments occurred in every region of the United States. In total, they amounted to 2,571,000 kilowatts, or about double those of 1947.

Unfortunately, these figures by no means indicate the true dimensions of the country's power shortage. Our actual deficit of electrical energy is much larger than is generally realized. It is a concealed shortage, because it must be measured in demands that never develop because the power is not there to meet them.

In the Tennessee Valley and in the Pacific Northwest, abundant low-cost power supplies, by stimulating industrial and agricultural development and raising living levels, create power markets that never before existed. And they create these demands by creating business and industrial opportunities in large numbers for private citizens.

In addition, as electric power rates go down, the use of electricity goes up. In 1925, for example, with electricity selling at a little over 7 cents a kilowatt-hour, annual domestic consumption in the United States averaged only about 400 kilowatt-hours per customer. But by 1948, with the average rate down to approximately 3 cents domestic consumption per customer had quadrupled, amounting to about 1,563 kilowatt-hours a year. This means more comfortable and better living in millions of homes.

Considering all of the dynamic factors involved, the Federal Power Commission foresees the country's annual electric power requirements adding up to the enormous sum of 600,000,000,000 kilowatt-hours by 1960. Electrical output of this magnitude would require 134,000,000 kilowatts of capacity installed in both utility generating stations and industrial plants. This means that power plant capacity by 1960 must be expanded to twice its present size and three times its size in 1940.

Doubling the size of the country's power plant in the next decade and preparing for still greater future expansion is a task which calls for all of the ingenuity and resourcefulness which private industry and the Government can bring to bear upon it.

In World War II the Federal dams proved the key to large parts of our armament problem, and they provided the power for the atom bomb. Since VJ-day, they have been utilized and desperately needed in our national economy. In the future, which we hope will be peaceful, they and many more will be needed. If the cold war becomes hot, which God forbid, electrical energy supply will immediately become a crucial problem despite all that anyone is doing or planning to do now.

The private companies are planning substantial additions to the generating capacity of their plants within the next few years. But within the next decade they will be faced with the necessity of retiring about 10,000,000 kilowatts of existing capacity because of age and obsolescence. Net additions to plant by private industry in future years will fall far short of the amount needed to close the gap between power supply and demand. For this reason alone, and there are a number of others, the job of plant expansion can only be done by industry and Government working side by side.

The question is not whether public and private power agencies can live together, but whether public and private agencies, working together at top speed, can expand power output fast enough to sustain our dynamic American economy.

In the building of a national power plant adequate to meet future needs, the river basins of the country will play an indispensable role. The Federal Power Commission estimates that, if sound, multipurpose methods are applied to their development, our rivers can be harnessed to provide nearly 77,000,000 kilowatts of additional hydroelectric capacity. A large share of this vast potential is located in the West. The State of Washington alone has undeveloped hydro capacity amounting to more than 15,000,000 kilowatts. But there are substantial reservoirs of undeveloped water in other parts of the country as well. More than 3,000,000 kilowatts of capacity can be installed, for example, on the Androscoggin, the Penobscot, the Merrimack, the Connecticut, and other rivers flowing through New England. The rivers of the Middle Atlantic States have a potential capacity of more than 5,000,000 kilowatts, and those of the South Atlantic States nearly 7,500,000 kilowatts.

There are compelling reasons why we should put our rivers to work. Most of the power which energizes America today is produced by drawing upon fuel resources we cannot replace. Forty-six million kilowatts of our national capacity are installed in plants which feed upon coal, oil, or gas. Only 16,000,000 kilowatts of capacity make use of our renewable river resources. Of the 12,000,000 kilowatts added to national capacity since the recent war, 11,000,000 kilowatts have been installed in steam plants driven by fuel and only about 1,000,000 in hydro plants. To produce in steam plants as much electrical energy as we can develop by tapping our unused hydroelectric power resources would require on the order of 800,000,000 barrels of oil a year.

It was partly his concern for conservation of our dwindling fuel reserves that led Secretary of the Interior Oscar L. Chapman to say recently that with our peacetime economy expanding we should certainly install at least 25,000,000 kilowatts of additional hydro capacity within the next 15 years.

While development of our rivers will be important in our efforts to meet power requirements of the future, of much greater significance to the public even than this is that use of the hydro potential is important in the public development of the river basins.

Power production is the key with which we can unlock the priceless resources of our

river valleys for the achievement of other important conservation objectives—irrigation, domestic water supply, flood control, navigation, recreation, salinity control, fish and wildlife protection, and pollution abatement. Coordinated use of the water impounded in storage reservoirs enables us to meet all of these urgent needs, with revenues from power development paying a substantial part of the check.

No private enterprise can finance an integrated, multiple-purpose river basin development. This is the job of the Government, and it is inescapable.

In the West, many of whose citizens have had a chance over two generations to share in the manifold benefits of reclamation and related programs, the importance of basin-wide water and resource development is now well understood. The average westerner realizes that the Federal power and reclamation program is an integral part of the overall basin development program. This western program, as it is now developing in the Missouri, Columbia, Colorado, and Sacramento-San Joaquin Valleys, could not exist without the power features—and for the reason that power revenues pay an essential part of the cost. With the irrigation job in the West but half done, we are approaching the point at which we must undertake projects where the payoff will be smaller than in our earlier programs. In these circumstances, power production assumes crucial significance. Without power revenues, some of our future projects would be economically unsound and great developments serving many public benefits would be lost.

We need more, not less, planning and construction to make full use on an integrated basis for all purposes of our rivers, and we need it in the East as well as the West. Our water problem is no longer sectional and confined to the arid West. It is in the eastern city which is the pride of the whole Nation, New York, where today you must ask for a glass of water in a restaurant and are officially frowned upon if you take too many baths.

When spokesmen for some of the power companies opposing public power development raise the cry of socialism, they seek to obscure the real issue. The river resources of the country belong to all of the people. While the Federal Government is not proposing a public monopoly of hydro power nor proposing to prevent privately owned utilities appropriately to use these resources, the Government cannot permit private companies to skim the revenue-producing cream off our national water resources. Nor can it allow piecemeal, single-purpose river development to foreclose the opportunity to undertake bold, efficient, and truly economic multiple-purpose programs directed toward the whole range of our conservation objectives. We still have magnificent opportunities in this great country and we must not fritter them away by such narrow actions. The public interest clearly demands public developments.

For the reasons I have outlined, among others, public power is here to stay. But we in the Department of the Interior do not believe that the development of integrated river-basin programs by public agencies spells the doom of private enterprise. Recent history does not support the view that public power is pulling the props out from under the electrical-utility industry.

Thirty years ago public power made up only 4 percent of our total annual output of electrical energy. Last year public power's contribution amounted to 20 percent of the national output. Measured in relative terms, private power lost ground. But the industry's markets actually expanded more than six times over the years. The output of privately owned plants jumped from 38,000,000,000 kilowatt-hours in 1920 to 233,000,000,000 in 1949.

Since the Holding Company Act was approved by Congress 15 years ago, Government regulatory agencies have forced private-utility companies to write off $1,500,000,000 in inflated stock valuations, according to the Securities and Exchange Commission. Despite this, net income of private utilities in 1949 amount to $753,000,000. This was nearly 55 percent more than they earned in 1938. And this rise in profits took place during the period in which public power was making its most rapid growth. This is hardly a calamitous situation for the utility industry.

In 1940, with Federal power development on the Columbia River in its early stages, the Big Five companies in the Northwest—Pacific Power & Light, Washington Water Power, Puget Sound Power & Light, Portland General Electric, and Mountain States Power—showed a combined net income of $7,866,000. By 1948, public-power plants at Bonneville and Grand Coulee Dams were turning out 10,900,000,000 kilowatt-hours of energy. The output of the Big Five, excluding their large purchases of Federal power, had risen from 3,000,000,000 to 4,400,000,000 kilowatt-hours and their net income of $13,484,000 was almost twice their 1940 earnings. As compared with a return on capital and surplus of 4.8 percent in 1940, their investment paid off at the rate of 8.55 percent in 1948.

No wonder that the vice president of Pacific Power & Light told breakfasting Washington newspapermen 2 weeks ago, and I quote: "It is obvious that the (Pacific Northwest) region must have more and more power to support its growth. * * * That is why we of the private-electric companies of Oregon and Washington have been coming back here to Washington from year to year, urging the Appropriations Committee to keep the Government's power-plant program on the Columbia going forward on schedule. * * * It has been a little difficult for some of our associates in the electric industry to understand our position."

Less than a week after Mr. John Dierdorff made this statement, Pacific Power & Light made its annual report to stockholders for 1949. Net income of this company, operating in an area where more public power is produced at lower rates than anywhere else in the United States, was up 44 percent over 1948.

So, in the Pacific Northwest where the Government has its largest block of power and its most extensive transmission grid, instead of dissension and disagreement, we now find in that area an effective working partnership between the Government's wholesale electric system, the power companies, and the public distribution agencies, all of whom operate in a single power pool.

Viewed in this light, the long-standing opposition of New England utility companies to public-power development there has penalized not only the citizens of that region but the utilities themselves.

Look at some figures. Using the years from 1929 to 1947 as a yardstick, power-generating capacity in the New England States, owned entirely by private companies, increased 48 percent. For the country as a whole, the increase averaged 77 percent, for the TVA States 140 percent, and for the Pacific Northwest 146 percent. In this same period, total income in New England rose 91 percent while the increase for the country as a whole was 129 percent, for the TVA States 198 percent, and for the Pacific Northwest 202 percent.

These comparisons make plain why two New England governors have recently gone on record as favoring river development including electric-power production and why Senator GREEN, of Rhode Island, has introduced legislation in Congress which would establish a New England commission of Federal and States representatives to investigate available water-power resources in that region.

Let me turn now to Federal power policy, which has been reiterated by the Congress for more than four decades and is said to be confusing some of the utilities. This policy can be simply stated. Federal dams shall include, where feasible, facilities for generating electrical energy. Preference in power sales shall be given to public agencies and cooperatives. Power disposal shall be for the particular benefit of domestic and rural consumers. Power shall be sold in wholesale quantities at the lowest possible rates consistent with sound business principles. It should be noted that the Federal Government is not in the retail distribution business. Disposal shall be such as to encourage widespread use, and to prevent monopolization.

I find nothing confusing here. These principles are clear-cut. Their basic soundness is apparent.

Some of the utility companies, conceding only that the Federal Government can build great dams, would have the Government turn over to them at the bus-bar the power generated at public expense. But if control over public power were relinquished at the point of generation, many of the purposes I have stated could not be so well served.

To carry out the mandates of Congress, construction of Federal backbone transmission lines is required. Generating stations, for efficiency, must be tied together, and the responsibility of the Department of the Interior does not end until the power has been made available to the consumer, preferably through public agencies or cooperatives, under circumstances that encourage use and prevent monopolization, and at rates consistent with sound business principles.

In some instances the need for investment of Federal funds in transmission facilities can be obviated through the use of proper wheeling contracts. These are arrangements by which utilities agree to deliver public power over their lines to public distributors. Such contracts, several of which have been signed within recent months, help to integrate private and public power supplies for the benefit of consumers and give the power company a part in the continuing effort to serve the respective regions.

The guideposts I have enumerated are those by which the Department of the Interior, which markets Federal power outside the Tennessee Valley, conducts its business through the Reclamation Bureau, the Bonneville Power Administration, the Southwestern Power Administration, and the newly established Southeastern Power Administration.

Under these principles the program is carried out not just to produce kilowatts of energy, or to make the Treasury whole, important as these objectives may be, but in addition to aid the general economic business and industrial development of the regions where the power is produced and to benefit the people as directly as possible. I think we can report good progress in attaining these goals, which seem wholly desirable to me and in conflict with no American principle.

Chancelor of Great University Says Worth Thinking About—Education Not Repression Is Progress

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. DOYLE. Mr. Speaker, at Easter recess I again had the inspiration of attending church services in my home city

of Long Beach, Calif. The Pilgrim is the name of the church bulletin or calendar of events. The distinguished and beloved pastor is Dr. Stuart LeRoy Anderson, D. D. Quite regularly this church paper, the Pilgrim, also carries some short but appropriate words to think about other than just the local church events. The bulletin for Easter carried the following statement by Dr. Robert M. Hutchins, chancelor of the University of Chicago:

WORTH THINKING ABOUT

(By Robert M. Hutchins, chancelor, University of Chicago)

It is now fashionable to call anybody with whom you disagree a Communist or a fellow-traveler. So Branch Rickey darkly hinted the other day that the attempt to eliminate the reserve clause in baseball contracts was the work of Communists.

One who criticizes the foreign policy of the United States, or the draft, or the Atlantic Pact, or who believes that our military establishment is too expensive can be called a fellow-traveler, for the Russians are of the same opinion. One who thinks that there are too many slums and too much lynching in America can be called a fellow-traveler, for the Russians say the same. One who opposes racial discrimination or the Ku Klux Klan can be called a fellow-traveler, for the Russians claim that they ought to be opposed. Anybody who wants any change of any kind in this country can be called a fellow-traveler, because the Russians want a change in this country, too.

The Constitution of the United States guarantees freedom of speech and the right of the people peaceably to assemble. The American way has been to encourage thought and discussion. We have never been afraid of thought and discussion. The whole educational system, and not merely the University of Chicago, is a reflection of the American faith in thought and discussion as the path to peaceful change and improvement.

The danger to our institutions is not from the tiny minority who do not believe in them. It is from those who would mistakenly repress the free spirit on which those institutions are built. The miasma of thought control that is now spreading over the country is the greatest menace to the United States since Hitler.

There are two ways of fighting subversive ideas. One is the policy of repression. This policy is contrary to the letter and spirit of the Constitution of this country. It cannot be justly enforced, because it is impossible to tell precisely what people are thinking; they have to be judged by their acts. It has been generally thought that the widest possible latitude should be given to freedom of speech and publication, on the ground that the expression of differing points of view, some of which are bound to be unpopular, is the way to progress in the state. Hyde Park Corner in London, where anybody may say anything, has long been a symbol of the confidence of the Anglo-Saxon world in the ability of democratic institutions to withstand criticism, and even to nourish itself upon it. There are numerous laws already on the books which provide for the punishment of subversive acts.

The policy of repression of ideas cannot work and never has worked. The alternative to it is the long, difficult road of education. To this the American people have been committed. It requires patience and tolerance, even in the face of intense provocation. It requires faith in the principles and practices of democracy, faith that when the citizen understands all forms of government he will prefer democracy and that he will be a better citizen if he is convinced than he would be if he were coerced.

Pacific Northwest Growth Has Solidity

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. TOLLEFSON. Mr. Speaker, we of the Pacific Northwest are proud of its rapid and substantial growth. We feel that our part of the United States has a great future in store for it which will redound not only to the people of that area but to the people of the entire Nation. I include herein an article written by Mr. Hal Boyle, Associated Press staff writer, entitled "Pacific Northwest Growth Has Solidity." This article appeared in the Seattle Daily Times, May 11, 1950. It follows:

PACIFIC NORTHWEST GROWTH HAS SOLIDITY

The great Pacific Northwest is beaver busy today.

It feels it is the promised land of the American future. But it is something like a young boy reaching the weed stage, who is growing right out of his clothes.

The area is developing so fast it is finding it difficult to keep up with the demands of its postwar expansion. It is still building like mad.

Almost everywhere you look, you see trees going down and homes going up, as the cities reach out into the woods. And new factories are springing up to serve a mushrooming population.

The power supply is already strained in some sections, and dozens of dams are being built, or are in the planning stage, to tap fresh might from the Northwest's roaring mountain streams.

To a casual visitor there appears to be no let-up in the postwar boom. But it is curiously unlike other booms in United States history. There is an unmistakable solidity about it.

You get the feeling there are almost as many real-estate offices about as there are filling stations. But the land salesmen aren't serving free lunches or hiring jazz bands to lure the customers in, as was customary in Florida during the hectic boom there in the 1920's.

It's a high-priced area and the wages generally are high. I found this out when I got a shoeshine at the Seattle-Tacoma airport, and the boy said: "Two bits please." That didn't include a tip, either. But they don't tip as much out here as they do in the East.

There are short cuts to keep down the costs. People in the Northwest seem to know how to do more things for themselves than they do in some other sections. At one small party I attended, for example, two of the men were building their own homes. They didn't see anything unusual about it—and they were white-collar workers.

Even in Portland, the city of lovely homes, they will tell you—without envy—that Seattle probably will be the real metropolis of the west coast.

"Seattle is sure to pass Los Angeles and may even in time outrank New York," said one man, who has made a study of the region's resources.

"It has unlimited water and power supply to draw on—Los Angeles hasn't. And Seattle is the nearest big port to the Far East, a trading area with 800,000,000 people. That's a potential market much bigger than Europe."

Such bright visions don't thrill as many residents here as you might think. The booster attitude isn't particularly strong in the Pacific Northwest.

Those who live here like it because the recreational facilities of seashore and mountain and forest are unspoiled—and uncrowded. They fear that if millions of other Americans move out here to enjoy the mild climate—who minds if it drizzles on many, many days?—they themselves will be engulfed. Their attitude is that of a family which settles down to enjoy a fresh picnic site, only to have six other families come whooping up to share it, too.

"The real trouble is so many people are coming out here it's hard to adapt them all to our western way of life," sighed one lady. "They're beginning to swallow us—and we were here first."

But it is doubtful if that will slow the boom in the Pacific Northwest. It has a crowded time a-coming.

Resolutions of Thirty-fifth Convention of Kiwanis International

EXTENSION OF REMARKS
OF
HON. GEORGE H. WILSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. WILSON of Oklahoma. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a copy of the resolutions adopted by the Thirty-fifth Convention of Kiwanis International which has just been concluded at Miami. I believe the first eight of these resolutions to be of such general interest to merit the study and consideration of Members of Congress as well as the people as a whole.

They are as follows:

RESOLUTIONS BY THE THIRTY-FIFTH ANNUAL CONVENTION OF KIWANIS INTERNATIONAL

1. THE HOME, THE CHURCH, AND THE SCHOOL

Whereas the home is the cradle of our liberties; and

Whereas the school is a complement of the home, and shares the responsibility of perpetuating the ideals of a free people; and

Whereas the church is the tabernacle of truth and faith and the greatest force for the promotion of the moral welfare of all the peoples and the fostering of true brotherhood: Now, therefore, be it

Resolved, That Kiwanis International reiterates its most sincere belief in these institutions and recommends to all Kiwanians, their families, and friends, that their continuing wholehearted support be pledged to the end that they may always be fundamental in our way of life.

2. YOUTH SERVICE

Whereas Kiwanis International recognizes its obligation of training young people so that they are better prepared to take over the responsibility of leadership of tomorrow; and

Whereas it is the belief of Kiwanis International that the education of youth in the principles of our way of life is a means of better preparing them for their future responsibilities: Now, therefore, be it

Resolved, That Kiwanis International does hereby reaffirm its belief in character, leadership, and moral training engendered by such youth organizations as Key Clubs, Circle "K" Clubs, and all other similar organizations: and be it further

Resolved, That Kiwanis International does hereby pledge its support to promote and

assist all youth activities which strive for the education, training, character building, and leadership training of the youth of today.

3. STATEHOOD FOR ALASKA AND HAWAII

Whereas Kiwanis International in convention assembled at Los Angeles, Calif., in June 1948, did by proper resolution, petition the Congress of the United States to give prompt consideration to the admission of Hawaii and Alaska as States of the Union; and

Whereas we believe statehood for these Territories would be mutually beneficial: Therefore be it

Resolved by Kiwanis International in convention assembled, That we urge the Eighty-first Congress to take immediate favorable action on their petitions for statehood.

4. INDIVIDUAL ENTERPRISE

The peoples of Canada and the United States are by birth, tradition, and training, believers in the basic concepts of a free society of freemen. Thousands of men and women of both nations have given their lives to insure the continued blessings of liberty to those of us who cherish it and who, too, are willing to fight and die for it.

Linked inseparably with individual freedom is our system of free, competitive enterprise—a system that has brought our two nations to world leadership, economically and industrially, and has raised the living standards of our peoples to where we are the envy of the world.

Free enterprise has carried our Nation through two world conflicts. It furnished not only food and materials of war for our allies but is now rehabilitating our former enemies as well.

We are proud of a system that is responsible for keeping the torch of liberty burning in most of the nations of the Western World.

Gradually, but inexorably, we are being led, perhaps unconsciously, toward the socialized state. Witness the growing power of government over the people; the expansion and waste in government; the increasing tax burdens; the substitution of an artificial economy for a natural economy; the assumption by the state of financial responsibility for the health and welfare of every human being; the arraying of economic and social groups, one against the other; and the continued inroads of government into the fields of private enterprise: Therefore be it

Resolved by the delegates assembled at the thirty-fifth annual convention of Kiwanis International at Miami, Fla., That we vigorously emphasize our belief in and support of the free enterprise system, and that we condemn the efforts of individuals and groups that would have us substitute state socialism for our present system and form of government; and be it further

Resolved, That we express to our duly elected representatives in the Canadian Parliament and the Congress of the United States, an emphatic protest against any effort toward the socialization of any industry or profession or groups of workers.

5. ECONOMY IN GOVERNMENT

Whereas efficiency in Government and balanced budgets are now major concerns of our peoples; and

Whereas no individual, private corporation, or Government can long continue to spend more than its income without a collapse of his or its business structure; and

Whereas a large portion of the Government tax collections is being spent, and a larger portion thereof is proposed to be spent for more and bigger Government and extended Government controls and operations: Now, therefore, be it

Resolved by Kiwanis International, in convention assembled at Miami, Fla., That a major objective of Kiwanis International shall stress efficiency in Government, and balanced Government budgets.

6. HOOVER COMMISSION REPORT

Whereas the Congress of the United States has, after exhaustive study by the Hoover Commission, adopted the Reorganization Act as recommended by said Commission; and

Whereas certain sections have been implemented by order of the President of the United States, and there are many provisions which have not as yet been acted upon: Now, therefore, be it

Resolved by Kiwanis International in convention assembled, That the President and the Congress of the United States be commended for the action heretofore taken and it is recommended that further action be taken which will result in greater efficiency and economy in the administration of the executive branch of the Government.

7. COMMUNISM

Whereas the United States of America and the Dominion of Canada as the world's great bulwarks of freedom are confronted with the menace of communism which ideology is foreign to our way of life; and

Whereas its influence seeks to undermine free enterprise, destroy individual initiative, deny the right of free speech, and banish religion; and

Whereas communism is seeking among other things to distort the mind of our youth and to destroy righteousness, patriotism, and good will which are fundamental to the growth of liberty-loving peoples; and

Whereas the proponents of communism are engaged in seeking to corrupt the education of the youth of America, basically affecting the moral precepts of the ennobling objects and objectives which we of Kiwanis International cherish and promote; and

Whereas we hold sacred those great human and inalienable rights vouchsafed unto us, and upon which solid foundations our governments have progressed and found favor in the family of nations; and

Whereas communism does present a real challenge to the peoples of the United States and Canada: Now, therefore, be it

Resolved, That Kiwanis International reaffirms its belief in and support of a representative form of government and our way of life and we denounce communism as opposed thereto; and be it further

Resolved, That we enlist the aid and assistance of all patriotic citizens to the end that through eternal vigilance, liberty may be preserved and the forces which seek to undermine and destroy us as a free people, be not permitted to exist anywhere throughout our great nations.

8. WORLD PEACE

Whereas history shows that peace is the product of law and order, and that law and order are the products of government; and

Whereas disarmament and world peace can only be achieved by world order, under international law; and

Whereas the peoples of the United States of America and Canada, while now enjoying peace and security under the laws of their local, State, provincial, and Federal Governments, deeply desire the guaranty of world peace; and

Whereas the United Nations is an organization in being, and its Charter is capable of amendment so as to make it an effective instrument for the maintenance of world order; and

Whereas the United Nations, as presently constituted, though accomplishing great work in many fields, lacks authority to enact, interpret or to enforce world law and under its present Charter is incapable of restraining any major nation which may foster or foment war: Now, therefore, be it

Resolved, That this thirty-fifth annual convention of Kiwanis International in Miami, Fla., reaffirms its confidence in the purposes of the United Nations and gives wholehearted support to its constructive work; and be it further

Resolved, That Kiwanis International calls upon the leaders of government in the United States and Canada to initiate such amendments to the United Nations Charter as will strengthen the United Nations and make it capable of enacting, interpreting, and enforcing international law to insure world peace and guarantee to all peoples their right to maintain their own domestic, political, economic, social, and religious institutions; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the Prime Minister of Canada and all members of the Federal legislative bodies of both countries.

Presidential Veto of Kerr-Harris Amendment to the Natural Gas Act of 1938

EXTENSION OF REMARKS

OF

HON. TOM PICKETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 15, 1950

Mr. PICKETT. Mr. Speaker, on the 15th day of April 1950 the President vetoed the Kerr-Harris amendment to the Natural Gas Act of 1938. In his message vetoing the amendment the President made certain assumptions and advanced certain arguments which are refuted by a critical examination of the facts. Below is a statement of each of his principal reasons for vetoing the bill and of the facts to show that the veto was not in the public interest.

First. The President stated that the bill would preclude the Federal Power Commission from regulating sales of natural gas by independent producers and gatherers to interstate pipeline companies for resale in interstate commerce. This is a correct statement of the principal object of the bill. However, the bill would in no wise change the original intent of Congress in passing the Natural Gas Act in 1938 or the interpretation the Commission has heretofore placed upon the act. The Commission has not undertaken to regulate a single sale of natural gas by an independent producer to a natural-gas company. Indeed, in its order No. 139 of 1947 it disclaimed any power, authority, or intention to do so. Despite this fact, the Commission states with obvious satisfaction that the price of gas to consumers has decreased 12 percent since the act went into effect in 1938. It appears conclusively, therefore, that experience has demonstrated there is no necessity for regulating the price at which producers sell their gas to interstate pipelines in order to prevent price increases to consumers.

There is a good and sufficient reason for this decrease in price to consumers, even though the demand has greatly increased and the average field price, now only about 6 cents per thousand cubic feet, is considerably above what it was when the Natural Gas Act was passed. The transportation of gas yields to the

economies of large-scale operations. With increased volumes, the unit cost of transportation has materially decreased. The pipeline companies have been able to install larger lines, more compressors, and to operate their lines at close to 100 percent capacity. Since the Commission regulates the rates at which the pipeline companies sell gas to most of their customers, these economies in transportation are passed on to the ultimate consumers.

To illustrate the effect of volume upon domestic consumers prices: According to a statement filed by Mr. Leland Olds with the Senate Interstate and Foreign Commerce Committee when he testified during the hearings on the Kerr bill in the Senate, the average cost of 1,000 cubic feet of 1,000 b. t. u. gas to consumers in the city of Washington, D. C. on sales of 2,000 cubic feet per month is $1.355 per thousand, but if the customers' consumption increases to 20,000 cubic feet per month, the price drops to $1.079 a thousand. Bear in mind, Mr. Speaker, that the independent producer receives an average of 6 cents per cubic foot at the well. Volume, not well-head price, is the controlling factor in the determination of consumer prices.

There is every reason to believe that if producers were left free to sell their gas at competitive prices, abundant supplies would be forthcoming and the pipelines could continue to buy and transport gas in increasing volumes, thus further reducing the unit cost of transportation. The field price of gas is only a fraction of the price paid by the ultimate consumer; and economies realized in handling increased volumes of gas should more than offset any probable increase in field prices incident to augmented demands.

Second. The message asserts that authority in the Commission to regulate sales by independent producers is necessary in the public interest, because pipelines are not able readily to find new sources of supply, thus creating an inflexibility which ties the pipeline down rigidly to a limited number of suppliers.

This argument completely misconceives the factual situation which exists in the great gas-producing areas in the Southwest. There close to 175 trillion cubic feet of gas are available largely in Texas, Oklahoma, Kansas, and Louisiana. Vast reserves are found in the Hugoton-Panhandle area and others in Carthage, Katy, Pledger, and all up and down the coastal area in Texas and Louisiana, to say nothing of the enormous volumes of gas produced with oil in these States. Furthermore, there are thousands of gas wells in Texas alone which have no market outlet; although most of them are readily available to pipelines. General Thompson of the Texas Railroad Commission is authority for the statement that there are over 3,000 of such wells in Texas alone. The pipelines running from Hugoton to the north and east, from west Texas to California or from southwest Texas through the Gulf coastal area to the north and east will be able to tap almost unlimited supplies of natural gas; and it is pertinent here to state that natural gas is being discovered several times faster in these areas than it is being utilized. Many trunk lines constructed as indicated, as many of them already are, can, by making relatively short extensions of feeder lines, have available to them abundant supplies of natural gas.

The necessity for laying such short feeder lines offers no impediment to the gas companies in obtaining an abundant supply of gas. They could and would lay these lines if conditions were such as to induce producers to sell their gas. There are two great obstacles which discourage producers from selling gas. One is the insistence by FPC that interstate pipelines show supplies available for operations over 15 to 20 years before granting certificates of convenience and necessity, and by gas companies that the producers sign long-term contracts. Producers hesitate to sign such contracts, largely because they are unable today to know at what price they would be willing to sell 10, 15, or 20 years from now, in the face of increasing costs, mounting tax burdens, and possible inflation. If they sell on long-term contracts, prudent producers will wish to insert provisions, such as inflation and price escalation clauses, which will protect them against these hazards. The other obstacle, the threat of regulation by the Federal Power Commission, is a real deterrent to the sale by producers of their natural gas in interstate commerce. The burdens incident to FPC regulation are so onerous and the risk of confiscation so great, as will be shown below, that many producers simply are afraid to sell their gas to interstate pipelines.

Third. The message states that competition is further limited by the degree of concentration of ownership of natural-gas reserves, and that a relatively small number of producers own a substantial majority of the gas reserves. It reasons that "there is a great possibility that competition will not be effective, at least in some cases, in holding prices to reasonable levels," and that to remove the authority to regulate does not seem to be a wise public policy.

The ownership of gas reserves is widely dispersed in the hands of multiplied thousands of operators and royalty holders. While only relatively few companies and individuals sell to the natural-gas companies, this is only because most of the gas must be processed before it is taken into the pipelines. The gas is purchased from the owners by the operators of the processing plants, and in turn is sold by them to the pipelines. All of these producers, large and small, are competitors in the sale of their gas; and while a considerable amount of gas reserves are held by some 20 or 30 producers, they are in stiff competition with each other and all other producers in making sales.

Competition has been very effective in holding down the price of gas in the past. As is stated above, the average field price of gas today is only about 6 cents per thousand cubic feet, which is the equivalent of 36 cents per barrel of oil when comparative heat units are considered, and is only a small fraction of parity with coal.

If the obstacles to free competition mentioned above in point 2 are removed, it will continue to be effective in the future. The price of no other commodity which enters interstate commerce is now regulated by the Federal Government. OPA controls have long since been abandoned under the pressure of public opinion, and Congress has refused administration requests for stand-by authority to impose such price controls. The wisdom of this policy has been amply demonstrated, because under the spur of competition adequate supplies of all commodities entering interstate commerce have been forthcoming. This is the way our competitive free economy works. It has supplied natural gas at low prices in the past and can be depended upon to supply it at reasonable field prices in the future, unless arbitrary bureaucratic price controls are imposed or threatened by the Federal Government.

Fourth. The message argues that standby authority in the Commission to regulate field prices of natural gas will not discourage exploration and development of new reserves, because the Commission can be depended upon to apply price controls only to such extent as will prevent the producers from making unreasonable increases in their prices. The message concedes, however, that the Commission has not found it necessary to regulate prices charged by independent gas producers and gatherers, that producers' prices have risen and that this process of adjustment should properly continue "if held within reasonable limits." It concedes that producers and gatherers are finding strong incentives to search out new sources of natural gas, and asserts that power in the Commission to regulate sales of gas by independent producers offers no danger to continued growth of sales of gas in interstate commerce. It expresses the opinion that the Commission, if clothed with this price-fixing authority, would apply standards of regulations which would take account of the peculiar circumstances of natural-gas production.

These statements are based upon the assumption that any regulation by the Federal Power Commission would be a simple matter, that it would be benevolent, that producers of natural gas would have no fear of the consequences of such regulation and that they would continue to produce and sell gas in interstate commerce despite threatened or actual price regulation by FPC.

Producers and royalty holders who sell natural gas are numbered in the multiplied thousands. They are ready and willing to sell their gas under reasonable terms and at fair prices under competitive conditions. They have risked their capital in a very hazardous business, and have no desire to subject themselves to regulation upon utility principles. To discover a gas field it is necessary on the average to lease vast areas, to incur great exploration costs, to drill at least four dry holes for each discovery, and otherwise to invest great sums of risk capital.

Gas producers know they cannot stay in business if their operations are subjected to regulation by FPC on utility principles. There are several reasons for this.

Each producer and royalty holder would be required to keep complicated books of account as prescribed by FPC. He would be required to make numerous and burdensome reports to FPC. FPC would be in a position to prescribe the price at which each producer or royalty holder would sell his gas to an interstate pipeline. In order to determine this price FPC would have to hold a rate hearing, and the producer or royalty holder would find it necessary to employ an attorney and accountant to go with him to Washington and attend a long, detailed and complicated hearing.

Furthermore, if he desired to invest in new leases or to drill additional wells, he being a utility, would find it necessary to obtain from FPC a certificate of convenience and necessity before making the investment. How in the world could he hope to compete with others not subject to FPC regulations under these conditions? There would be thousands of other producers and royalty holders in the same situation, and a long jam of hearings would be created causing maddening delays.

Furthermore, each seller would be regulated on utility principles by the FPC yardstick which would allow him a 6-percent return on the depreciated cost of the properties placed in his rate base. There is no assurance that he could recover the cost of bonuses and rentals paid on wildcat leases and exploration costs incurred in other areas. His 6-percent return on depreciated cost of producing properties would not recover risk capital. The cost of gas produced with oil under the Commission's formula could be thrown largely, if not completely, upon oil. Under these conditions the producer would be required virtually to give his gas away. He would face bankruptcy; and in disgust, if not despair, he would be driven out of the producing business.

All of this would result in chaotic prices among producers and royalty holders, for the Commission's formula would result in fixing a separate price for each of them. Only by accident would the price of one seller be the same as the price of another seller under FPC regulation. Some prices would be very high, so high in fact that the pipelines would no doubt refuse to take the gas; while prices of most of the sellers would, while variable, be so low as to deter them from making sales at all.

There is no warrant for believing that FPC regulation would be benevolent. If the future is to be judged by the past, the foregoing presents a true picture of what would happen. Furthermore, the experience with price control by OPA after the war cannot justify any such assumptions.

While many producers have sold their gas to interstate pipelines in the past, they have done so in reliance upon the belief that FPC had no authority to regulate them, and upon FPC's Order No. 139 made in 1947 which expressly stated that it did not have the right and would not undertake to exercise control over independent producers. The Commission in specific cases has repeatedly held it has no jurisdiction over arm's-length sales by independent producers to pipelines. Naturally, under these circumstances many producers were willing to sell. But conditions now are quite different, in that a majority of the Commission have announced that if Congress does not amend the Natural Gas Act so as expressly to deny to them authority to regulate field sales by independent producers, they will regulate such sales.

In some of the debates in Congress great resentment was shown when it was suggested that producers would be unwilling to sell their gas to interstate pipelines if subjected to FPC regulation. Producers of gas are only human. They have no desire to be subjected to confiscatory regulation. They have risked their capital in finding gas reserves, and may be pardoned if they object to having their gas reserves partially or largely confiscated by a Federal agency.

No other producer of raw materials who ships them in interstate commerce is subject to Federal price controls. A producer of natural gas wonders why he should be singled out and branded as a culprit if he objects to Federal price controls which he honestly believes will be ruinous to him.

He cannot justly be criticized if he too desires to live in a competitive free economy, and to let the price at which he sells his product be determined by the interplay of forces of supply and demand. This sort of economic freedom has been sufficient to bring forth the present supplies of natural gas, and if allowed to continue, can be depended upon to maintain future supplies. If prices should temporarily rise beyond a reasonable level, new exploration and development will be encouraged to such an extent as to cause the discovery of new supplies and the readjustment of prices to desirable competitive levels in a free economy. With thousands of producers of natural gas anxious to sell their product and with the enormous untapped gas supplies readily available under competitive conditions, the consumers have no basis to fear runaway prices. But they should entertain grave fears of shortages in supplies of natural gas if FPC price controls are inaugurated or threatened.

The Kerr-Harris bill would only have continued conditions as they have existed in the past. Gas producers have been able to find supplies sufficient to maintain field prices for natural gas at a comparatively low figure, far and way below the well or mine price of competing fuels. The public may safely place their trust in competitive free economy to continue to produce adequate supplies if economic forces are permitted to have full play in the gas-producing industry.

Fifth. In the message reference is made to "imaginary fears" and to the Commission's record of accomplishments thus far in administering the Natural Gas Act.

As I have illustrated, the fears entertained by producers are by no means imaginary, and again it must be pointed out that the record of accomplishments made by the Commission thus far has been made by abstaining from any effort to regulate the price at which the independent producers sell gas to natural gas companies. If this condition has brought about such desirable results, there is every warrant that it should continue. If the Kerr-Harris bill had become a law, it would only have maintained these conditions which have produced what the President calls very desirable results.

The President Reports to the People

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD copies of speeches made by President Truman in the State of Montana.

From Paradise in the west to Fort Peck in the east, the President was received by large and enthusiastic crowds. The people liked him and they appreciated the fact that he was reporting to them directly in his official capacity.

We, of Montana, feel honored that he came out to see us, and we are proud of a leader who calls his shots as he sees them.

Come back to Montana again, Mr. President. The latchstring will always be out for you, Mrs. Truman, and Margaret.

The speeches follow:

REMARKS OF THE PRESIDENT AT PARADISE, MONT., MAY 11, 1950

Governor, I appreciate that introduction very much, and I hope that every governor in the country will feel the same way about the way they are treated.

I always like to come to Montana. The people of Montana were very kind to me when I was out here 2 years ago and gave me a fine welcome. From the looks of this crowd here tonight in Paradise, it seems to me that you are going to outdo the welcome of 1948. And that is what I like.

You live in one of the most beautiful parts of the United States. I wish I had time to go up to Glacier National Park. I spent a great many summers in the national parks. When I lived in Missouri, I used to drive to the Rockies every summer with my family.

This time I am not out here on a vacation. I have been making a cross-country trip to talk to the people, and to tell them the facts and give them a report on the state of the Union. You know, the Constitution requires the President to give a report on the state of the Union once a year to the Congress. I do that, but I don't think it is enough. Not very many people get a chance to read that message to Congress, so that is why I like to come out and let you take a look at me and let you hear just exactly what it is that I am working for.

In my speeches, I have described the kind of farm laws we need that will put farm prosperity on a permanent basis. I have described the work we need to do to make better use of our natural resources—our rivers, our forests, and our minerals.

I want a small-business program, the kind of laws that will help businessmen get the financing they need so that they can compete with the big, rich corporations.

All these things are of real importance to you people here in Paradise. We can be well off only when all parts of the country are

well off, and all groups of people in the country are doing well.

When we are all prosperous, we shall be able to keep the United States strong enough to maintain world peace—that is certainly the most important thing in the lives of all of us.

It has been a wonderful thing to see you here at this time of night. I was told that there wouldn't be anybody out here. I have been told that at nearly every place I have been, but people always fool the prophets. I found that out in 1948.

Now, I have a telegram here from the senior Senator from Montana, which says:

"Deeply regret that Mrs. Murray's critical illness prevents my being on hand to extend in person a cordial and warm welcome to the State of Montana. On behalf of all the people of our great State, I wish to express the sincere hope you will enjoy Montana's traditional friendliness and hospitality during your visit. You may be sure that the people of Montana fully support your leadership in the never-ending struggle to keep America strong and free.

"Kind regards and cordial best wishes.

"JAMES E. MURRAY."

I appreciate that telegram, and I am sorry that Mrs. Murray is ill. I hope that she will be all right, and I hope it isn't fatal.

Now I am ready to present to you Mrs. Truman.

REMARKS OF THE PRESIDENT AT MISSOULA, MONT., MAY 12, 1950

After that introduction, I will have to deliver the goods, won't I.

This is a grand reception, and I appreciate your willingness to come out at this hour of the day—of course, we farmers think this is pretty late in the day—but I do appreciate the fact that you were willing to come out at this hour of the day to listen to what I have to say.

I was glad to meet your Governor yesterday at Grand Coulee. It has been a pleasure to see Mike this morning, and I am extremely sorry that Senator MURRAY's wife is sick so he can't be here.

I am told that this is one of the wonder cities of the great State of Montana, and looking at this crowd, I am inclined to believe it. One reason I like this city is because it has given me one of the finest men I know in public service, and that is my good friend MIKE MANSFIELD. Mike works not only in the interests of his district in Montana, but Mike has a national outlook that is for the welfare of the country as a whole. He is not sectional. There are few men in this country, in the Congress or out, who can equal him in the farseeing grasp he has of the country's international and domestic problems.

You know, some people will take a look at an acorn and all they can see is just an acorn. But people of MIKE MANSFIELD'S type are something different. They can see into the future. They can see a giant oak tree, with its great limbs spreading upward and outward coming from that acorn.

In Washington there are some men, no matter how hard they try, who can only see little acorns. I don't have to call any names, you know who they are. Even give them a magnifying glass or even a pair of spyglasses or even a telescope, they just shake their heads and all they can say is, "I'm sorry, I can't see anything but an acorn there."

Let me give you an example of how this little mind works. Down on the Colorado River, there is a structure of which you are all proud—Hoover Dam. Here is an interesting thing. When that dam was being planned back in 1928, it was violently fought by special interests. One Congressman from the same political party as the gentleman after whom the dam is named, had this to say about it in Congress: He said it would damage industry, it would waste the taxpayer's money, and it would lead us into communism. That's real acorn thinking, I think.

Hoover Dam was built. I don't need to tell you that this democracy of ours is the world's greatest bulwark against communism, and it is stronger because of the great reclamation, irrigation, and power and flood control projects like that dam, and like the one I dedicated yesterday.

Not so far north of Missoula, up near Glacier National Park, we are building another great dam—Hungry Horse. It will be one of the largest concrete structures in the world. They told me yesterday that Coulee was the largest in the world, so you have got to make a pretty big one to make it larger than Coulee. And it will provide vast new benefits to this entire region.

Hungry Horse Dam will produce 285,000 kilowatts of power itself, and we will begin getting that power just 2 years from now. This is a key project in the long-range program for harnessing the great water power of the Columbia River Basin. It is a major step toward the full development of Montana's water resources, much of which now lie idle and unused.

Hungry Horse Dam will be valuable not only in bringing cheap power to this area, but it will aid in the production of additional cheap power at some of the present and proposed dams farther downstream. It will be helpful in cooperating with them in giving cheap power all over this whole district. Its beneficial effects will snowball all the way along.

I am interested in seeing some of this power used to develop the important phosphate industry, that will bring new jobs to this State of Montana, and it will be a great boon to farmers all over the Western States. Hungry Horse will also be valuable for flood control.

When I was out here in 1948 I could see that the big floods on the lower Columbia River were really started by the upstream tributaries. We shall be able to control some of these streams by dams like this at Hungry Horse.

Like Hungry Horse, these dams have many values. And they are paying propositions for the taxpayer. The investment in power and irrigation are repaid direct, and the entire investment is repaid over many, many increases in the national wealth.

People don't take into consideration that the construction of public works such as Hungry Horse and Grand Coulee and Hoover Dame create industries, which create new jobs, which create prosperity for immense numbers of people.

Many people who talk loosely about the size of our national budget forget that many of our expenditures are investments which will make a stronger and a better country.

I often think that projects like this must make the Communists wonder. They must wonder how it is possible for free men, in a democracy, to plan and develop a vast country, and do it in ways which increase the liberty and the welfare of all the people. The Communists think the only way to run things is from the top down. Our system proves that it is much more effective to run it from the bottom up.

We will never be in danger from communism in this country as long as we keep looking forward and doing things to increase the welfare and freedom of our people.

I hope the country never gets into the hands of little men with acorn minds. Let us keep it in the hands of men who can see the trees and who will work for a nation and a world at peace.

You people have been grand to me here in Montana, and I appreciate it, and I hope that on this trip I can persuade the people of the Nation that it is their welfare we are working for.

I am out here to make a report to you, just as I would make a report to Congress, and I think you have a perfect right to that report. And I know you are interested in it, or you wouldn't get up this early in the morning to hear what I have got to say about it. And I thank you very much.

REMARKS OF THE PRESIDENT AT GARRISON, MONT., MAY 12, 1950

I am so happy to see all you school children out here this morning. I imagine you must have had a holiday today, didn't you? We have been traveling around over the country meeting people and explaining to them various aspects of the Government, because we believe that people are really interested in the Government.

I am more than happy this morning to have the Governor of the great State of Montana and MIKE MANSFIELD, the Congressman from the First Montana District, here with me.

We have some tremendous problems facing us in the operation of the Government of the United States. The Government, as you know, is your Government. The President is your President. He is the only national official besides the Vice President who is elected at large by the whole country.

I deem it my duty, and it is a constitutional necessity for me to make reports to the Congress once a year on the state of the Union. This time I am going around over the country trying to make a report on the state of the Union to the people themselves.

I am glad to see you all this morning. I have been discussing the farm problems, reclamation, the national resources of the country; and yesterday I dedicated Grand Coulee Dam to the uses of the people. That is one of the greatest projects in the history of the world. When it is finally finished, it will create more than 2,000,000 kilowatts of electricity. That is a wonderful thing. It was running yesterday at the rate of 1,580,000 kilowatts, and there were all sorts of gadgets for us to look at.

Not only does that dam create power for use in that section of the country, but it will also eventually lift water into the desert and put a million acres into cultivation. Sometime beginning in 1952, I think, the first irrigated farm will be opened up.

Now you have projects like that in Montana. Hungry Horse is one of them. That great dam will create 2,285,000 kilowatts when it is finished. It will create jobs. It will create cheap power. It will help this part of the world go into industry, and you can't lose anything by it, and neither can any of the rest of the country.

I explained yesterday that we have a northwest power construction, and a southwest power construction, a southeast power construction, and we hope to have a northeast power construction, if we can ever get the St. Lawrence development as it should be.

Then we have the Mississippi, Missouri, Ohio River Valleys which can be developed in exactly the same way. All that will create wealth, create jobs, create industries; and it helps the country.

There are some people who think that these things ought not to be done, because they like to have things stay just as they are. I am not one of them. I believe in progress, and I am happy to say that your Congressman, MIKE MANSFIELD, believes in progress, too. He is one of our ablest public officials in this country, and I depend on him a great deal, because I know he has good judgment. I know his heart is right, and I know he believes in doing things for the benefit of all the people.

It has been mighty nice of you to come out here this morning. I am more than happy to see all of you, and I am glad I got

this 5-minute stop here, so that I could get a chance to say a few words to you.

Thank you very much.

REMARKS OF THE PRESIDENT AT HELENA, MONT., MAY 12, 1950

Governor, Congressman MANSFIELD, and ladies and gentlemen, I appreciate very much this fine reception which the people of Helena have given me today. I certainly am glad to be here on Vigilante Day. I wish I could have seen that parade. I was glad to get a chance to see those floats alongside the train on each side. I think my family has enjoyed them as much as anything they have seen on the trip.

I appreciate also the introduction from Governor Bonner. I think he has given me a little too much credit, but I appreciate it just the same.

The Governor was with me yesterday at Grand Coulee, when I had the privilege of dedicating Grand Coulee. Today that dam is just about the biggest man-made structure in the world; it is generating more power than any other power plant in existence, and in a few years it will be providing water for hundreds of thousands of acres.

Grand Coulee is a product of the vision and farsightedness of the people of the Northwest, people who can make bold plans for the future, and who not only can make the bold plans but who have the courage and the energy to carry them out.

I am glad that Canyon Ferry Dam is being built not far from here. While Canyon Ferry Dam is not as big as Grand Coulee, it will be of tremendous importance and benefit to all this area. It should provide water for nearly half a million acres, and the power from Canyon Ferry will mean low-cost electricity for farms, city homes, and new industries.

Projects like Canyon Ferry benefit everybody in the country. They are a real investment in the future of the Nation as a whole.

You only have to travel across the country, as I have been doing this week, to realize what a wonderful future is ahead of us. Everywhere I have been, I have seen encouraging evidence of expansion and growth, and preparation for future prosperity.

Of course, I have met a few skeptics who have been saying that the country is going to the dogs. They say that we are going bankrupt, or that we are headed straight for socialism. But the fact is, these calamity howlers have been saying the same thing for years. They have always been wrong in the past, and they are just as wrong now as they were in the past.

Let us take a look at some of the recent progress we have made—progress, by the way, that we have made in spite of those same skeptics. Twenty years ago, we were at the beginning of a terrible depression that lasted over three long years. Beginning in 1933, we began a vigorous reform. By 1939 we were producing more goods and services than we had in the last boom year before the depression. Since 1939, we have done even better. Since 1939 the annual per capita income of our citizens, after taxes, has increased by more than 40 percent.

The income of farm owners, although it has slipped some in the last year or so, is more than 50 percent higher than it was in 1939. And annual wages and salaries of employees have increased about 75 percent. And, despite terrible howlings from some quarters, the annual income of corporate businesses, after taxes, has increased 100 percent since 1939. Doesn't look very much to me like the country is going to the dogs.

I am convinced that we can do just as well in the future as we have done in the past. I am convinced that we can lift our annual output of goods and services to more than $350,000,000,000 by 1960. This will be a one-third increase, and that increase will be good for everybody. Farmers and workers and businessmen can and should all prosper together.

I am convinced that by 1960 the standard of living of every industrious family in the country will be far better than it is now. I wish I had time to give you some statistics that come to me each month. I know, if you had a chance to study them, you would be just as optimistic and enthusiastic about our future as I am. Every month, and then quarterly, I receive an economic report from the economic advisers to the President of the United States, and that report goes into great detail on the situation as it develops in the country each monh.

The reason I am optimistic, this report shows that employment is on the rise, that income is on the rise, and that prices are holding steady. It shows that unemployment is far less than it was at the beginning of the year. It shows that the output of goods and services is far greater than it was at the beginning of the year.

This report is a combination of all the reports in the country, made up from reports by the Securities and Exchange Commission, reports of the Department of Labor, reports of the economic experts, on the Board of Trade, on the New York Stock Exchange, reports by the Chicago Board of Trade, reports from all the departments of the Government—the Department of Commerce, the Treasury Department—the reason I was delayed a little bit, the Secretary of the Treasury had to call up and talk to me about some business that had to be transacted over the telephone; but the report gives the complete picture of the economic situation in the United States every 30 days.

And I know what I am talking about when I talk to you optimistically about what the future holds. And don't let anybody tell you anything different but that this Republic, the greatest in the history of the world, is on the road to becoming greater and greater. And when we do that, we will get peace in the world.

Of course, this won't all happen by just sitting down and waiting for it to happen. You have got to do something to make it happen. We must work toward the kind of farm program that will put farming on a permanently sound basis.

We need to expand and extend our social-security laws; we need a housing program that will enable low- and middle-income families to own their own homes.

We must conserve and develop our national resources to better advantage, and that must be developed in the public interest and not for the greed boys.

We must see that our children get a good education.

If we have these measures, and others like them, then the United States will continue to grow and to prosper, and our Nation will continue to exert a strong force for peace in the world.

Since September 2, 1945, my whole time has been spent in an effort and an endeavor to get a lasting peace for the world. One of the first decisions I had to make when I was sworn in as President of the United States on April 12, 1945, after President Roosevelt had died, was the decision as to whether we should hold the San Francisco Conference and form the United Nations. I said "Yes, we will go forward with it," and we were successful in organizing the United Nations, and we are going to be successful in making it work for peace.

To do that, we must have the wholehearted support of the people of the United States for that purpose. That is the reason I am going around over the country reporting to you on just what conditions are, and what is necessary to obtain the world objective for which we work and pray.

I hope that you will inform yourselves completely on all the issues. I hope you will find out just exactly what is meant by the messages which I send to the Congress. I hope you will find out just exactly what the debates in the Congress mean. And I hope you will study very carefully those people who are trying to overturn our interest in the United Nations, and who are trying to put us back in the 1890's.

We are not going back—we are going forward, to 1960, and 1970, and 1980, and 2000. We are going to be better after each decade than we were when we started on that decade.

We can do that, if you will wholeheartedly help to do it, and work to do it—and that is what I am asking you to do. And that is the reason I am out here.

Washita Agricultural Flood Control Program

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. WICKERSHAM. Mr. Speaker, the Washita drainage area was authorized for an agricultural flood control program about the beginning of the war but due to the war work was not prosecuted extensively until the last 2 or 3 years. Since that time, the Soil Conservation Service in cooperation with organized soil conservation districts, have constructed a considerable number of small projects, which have amply demonstrated the importance and value of the program. For example in Washita County on Cloud Creek, some detention structures have been built which are amply demonstrating that the program of the Soil Conservation Service in cooperation with the local farmers can control soil erosion and floods. The Department of Agriculture has selected two watershed areas in the Washita drainage basin to concentrate their work on during the next 2 or 3 years. One of these is Mill Creek in Johnston County and the other is Sandstone Creek in Roger Mills and Beckham Counties.

It was determined after the general Soil Conservation Service flood-control program was initiated that additional authorizations should be made by Congress in order to allow detention reservoirs to be constructed on the tributaries down stream to the point where the Army engineers take over with their flood-control program. Senator KERR and Senator THOMAS submitted an amendment to the rivers and harbors and flood-control bill to accomplish this purpose but were unsuccessful in securing the adoption of the amendment. Congressman TOM STEED has introduced H. R. 8404 and I have introduced H. R. 8531, which bills are identical to the Thomas-Kerr amendment and these have been referred to the Public Works Committee. If passage of these bills can be secured, it will allow considerable expansion on the Washita program.

The work planned by the Soil Conservation Service on Sandstone Creek is estimated to cost $1,568,552 but the benefits to be derived from this expansion are

equivalent to two and one-half times that amount. The structures to be constructed are 21 detention reservoirs, 15 drop inlets with fills, 1 mile of channel improvement, 1.3 miles of floodwater diversions, 5,783 acres of seeding retired area, 48.7 acres of farm waterways, 432.9 miles of terracing, 17.1 miles of farm diversions, 125 farm ponds, 48.7 miles of farm fencing, and 65,013 acres of farm and ranch planning and application. The total cost of these structures is estimated to be $1,568,552; $195,046 of this amount will be borne by the farmer.

The present rate of appropriations for the agricultural flood-control program on the Washita is approximately $1,000,000 per year and at that rate is expected that it will require 15 or 20 years to complete the program even with the efforts of the individual farmer and the soil-conservation districts; however, it is anticipated that the Sandstone Creek watershed will be completed as one of the first units in order to thoroughly demonstrate the value of a completed watershed program. The Washita River drains a portion of five counties in the Seventh Congressional District of Oklahoma. I have been one of the outstanding proponents for the project, even before I became a Member of Congress and while I was connected with the State of Oklahoma in an official capacity. Having been raised in western Oklahoma and having observed drouths, floods, and sandstorms, I naturally was intimately acquainted with the waste each year and the destruction of the farmers' crops; therefore, I determined that if there were a means by which this waste and destruction could be stopped, I would pursue it to a successful conclusion. I have been outspoken at every opportunity before the Appropriations Committee and before the Agricultural Committee in favor of the type of program now being carried out by the Soil Conservation Service. As proof of the benefits that can be derived from this program, I point to the annual estimates of the Soil Conservation Service for the Sandstone watershed:

Flood-control benefits:	
Reduction in flood damages	$57,461
More intensive land use	11,019
Total	68,480
Conservation benefits	88,039
Total	156,519

The farmers and landowners of Sandstone Creek and the Washita River know that I will be fighting their battle for adequate appropriations to carry on this program at every opportunity.

American Policy Toward Israel

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. WIER. Mr. Speaker, under leave to extend my remarks, I include a resolution expressing concern over the policy of our country in the Middle East.

Day by day, over a long period of time now, this Nation has been sitting idly by with full knowledge of England's action in arming and preparing Egypt and the Arab States for a shooting war.

The resolution was prepared and is supported by thousands of good, peace-loving citizens in my district.

The resolution is as follows:

RESOLUTION ON THE ARMING OF THE ARAB STATES BY GREAT BRITAIN

We are deeply concerned over the American policy with respect to the rearmament of Egypt and the Arab States by Great Britain, and we are greatly disturbed because of the threat to the peace of Israel implicit therein.

The United Kingdom insisted that any supply of arms sent by her to those middle-eastern states would be for the internal security and defense requirements only.

However, the purchase by Egypt of 100 jet planes, 10 Centurian tanks, and 260 Sherman tanks, as well as pocket submarines and torpedo boats from Britain, Belgium, and Italy, far exceeds armament necessary for the purpose of maintaining internal law and order.

Estimated figures cited by the Royal Institute of International Affairs show that Egypt's budget for armaments for 1 year actually exceeds total estimated costs of resettling all the Arab refugees.

The fact that it is Britain which is extending this aid to the Arab States should not obscure the fact of indirect American participation, for it is American Army equipment that is being used in many cases, and it is thus that the United States is providing arms for countries which divert their stocks to the Near East.

We respectfully urge our Government to reconsider the problem in the light of the facts herein set forth. We ask that it use its great influence to avert the dangers to the peace of Palestine involved in the situation which is being created; and that the United Kingdom be requested to discontinue this extensive shipment of arms to the Arab states, while imposing an embargo on the supply of arms to the State of Israel.

We also submit that this critical situation is greatly aggravated by the fact that our own State Department also refuses Israel's request for arms for its defense.

We urge that in the name of justice and peace Israel be permitted by our State Department to purchase arms from the United States, as, in the face of strongly armed Arab States, arms for Israel are essential for the maintenance of peace in the Middle East.

The Recent Bus Ride

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. KEATING. Mr. Speaker, as I think back over the passage of the omnibus appropriation bill, I cannot refrain from pondering how appropriate is the title "omnibus." The bill just passed reminds me of a nice, new, shiny bus. This omnibus, jet propelled and steam heated, started out with the brave legend, "Economy or bust," stenciled on the side. At the end of last week, it limped back into the Senate garage covered with dust and amendments, and all you could read was the bust.

The weary taxpayers, who had been taken for this expensive ride, were astounded at the fare which the driver demanded. They had had been told that this year they were going to get the economy size ride and had been promised that the fare would not be more than they had in their pocketbooks. It had been explained to them that the bus had been very expensive to operate in wartime, what with shortages and high operating costs, and that the bus company had come nowhere near breaking even, but they had been told that was a temporary condition which would now be corrected. They had understood that the stop at the Pentagon would still be very costly, but, outside of that, the gentleman from Missouri who scheduled the tour promised that every effort would be made to cut corners on spending.

The start was promising. The first stop was at the Nation's Capital where 10 percent was cut from the estimated cost. The riders were elated and applauded, and even when Capitol Hill itself was reached, the driver remained economy-minded. Things were looking up. But then as they rolled down Pennsylvania Avenue toward the Government departments, the riders seemed to sense that the driver was feeling more expansive, and had read the travel posters and promises issued by the agencies.

All of a sudden, with a whoosh, the bus roared off, heading south and west. The trip out West was a mad whirl of parks, reclamation, irrigation, and power projects. The sales talk at each project was terrific, and the taxpayers heaved a sigh of relief when the bus turned its nose east again.

At the very last minute the driver relented and scaled down his estimates of the gas necessary to visit all the Government departments and agencies. Somewhat relieved, the passengers settled back and counted the dollars they had saved.

But they were still overburdened with subsidies, pet projects, and other mementoes of their trip. Thus, they had come to the end of their bus ride. The trip had cost less than they had feared, but much more than they could afford. And they still ran the chance that after they thought they were safely home, they might get an added bill for repairs from the Senate garage. Every passenger ought to sit down and write to the repairmen at the other end of the Capitol that they hope, when the bus is overhauled, it will be found that riders have a refund, rather than a further charge, coming to them.

Slow Down Resolution on Ireland

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following article from the Boston Post of May 10, 1950:

SLOW DOWN RESOLUTION ON IRELAND—ACTION RUNS INTO JAM IN HOUSE FOREIGN AFFAIRS GROUP

WASHINGTON, May 9.—Resolutions to put Congress on record as opposed to partition of Ireland have run into a jam in the House Foreign Affairs Committee that could block action this session.

WIDE SUPPORT

The antipartition move, which had vociferous support at a hearing April 28—particularly from Irish-American groups from Massachusetts and Rhode Island—has been put aside temporarily while the committee considers international trade organization proposals.

A committee aide said today that when the hearing on the ITO legislation is completed the committee probably will turn to measures dealing with military aid for participants in the North Atlantic Treaty.

This activity, the committee spokesman said, has prevented the committee from considering any action on the Irish resolution.

DORCHESTER SPEAKER

The testimony given April 28 led House Majority Leader MCCORMACK, of Massachusetts, to tell the chairman of the Foreign Affairs Committee, Representative KEE, of West Virginia, that he would seek quick House action should the committee approve a resolution denouncing partition of the "gallant little island."

Support for the proposal to have Congress advise Great Britain that it favors unification of Ireland came from Representatives LANE, of Massachusetts; FOGARTY, of Rhode Island, and KENNEDY, of Massachusetts.

Other supporting witnesses before the committee hearing included Daniel Doherty, of Dorchester, Mass., representing the Central Council of Irish Country Clubs; and Thomas H. Buckley, Massachusetts commissioner of administration and finance, representing Gov. Paul A. Dever.

Home of Credit Union National Association

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, 2 days ago, Sunday, May 14, the people of Wisconsin and of all America rejoiced in the dedication of the new international home and headquarters of the Credit Union National Association, an inspiring building dedicated as a living memorial to its founder, a great American, Mr. Edward A. Filene. The President of the United States was on hand to dedicate the building, and it was my pleasure to have received an invitation to the ceremony. While I was unfortunately not able to be on hand because of a previous commitment for the dedication of the Rock County Airport in the southern part of Wisconsin, I was indeed happy to send my greetings to the Credit Union National Association and its many friends.

Naturally, we of the Badger State were particularly glad that the capital city of Wisconsin should have been honored by the location of this vital headquarters. Madison is more than just the capital of our State, the seat of our great State university, and the county seat of Dane County. It is a symbol of the productive, agricultural, industrial, social, and intellectual wealth of Wisconsin.

With the exception of the huge, sprawling area of Los Angeles County on the west coast, Dane County produces more milk than any other county of the more than 3,000 counties in the United States. This renowned county also rates as one of the highest of all American counties in the annual value of its agricultural products. But Madison is not only a great dairying center. It is founded on a prosperous, stable variety of wholesome industries, over 110 different plants, most of them of medium size. The distinct cultural leadership of the city consists, of course, in major part from the presence there of the great University of Wisconsin, with its esteemed faculty and its student body of over 18,000, a university which has made magnificent contributions in every phase of American life. One of the vital features of Madison research is the great Forest Products Laboratory housed in a million-dollar plant and radiating scientific research and demonstrations in forestry and forest products to all the world.

Madison is these things and many more. It is an insurance center and a convention center which is reputed to entertain more conventions than any other city of its size in the United States. It is a great transportation hub, a major wholesale and distributing center.

Enhancing all these features is its beautiful geographic location, lying on a scenic isthmus between two lovely lakes, Mendota and Monona. Supplementing the natural beauty of the location is the great park and playground system and the beautiful capitol grounds, all of which contribute many reasons which justify Life magazine telling the world, as it recently did, the opinions of countless folks that Madison is the best city in the United States in which to live.

Progress in Madison is sparked by the live wire Madison and Wisconsin Foundation, which is always ready, willing, and able to cooperate in the constant improvement of that great center. In the latest bulletin of the foundation there is a very interesting lead article on how the civic-minded folks of Madison carried on a continuing effort to locate and keep the headquarters of the credit union movement there. I believe that this article will be of interest to all friends of the credit union movement and of the vital cooperative movement of Wisconsin.

It lends a fascinating historic footnote to the memorable event of Sunday, May 14. I ask unanimous consent, therefore, that the text of this article published in the May 12 issue of the bulletin of the Madison and Wisconsin Foundation be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

There occurs in Madison this Sunday, May 14, 1950, an historical event that deserves recording in the saga of Wisconsin's capital and university city. The Credit Union National Association (CUNA) dedicates its international home and headquarters as a living memorial to its founder, Edward A. Filene, distinguished merchant philanthropist of Boston.

A great humanitarian, Mr. Filene believed he could help his fellow men most by enabling them to help themselves. Knowing that almost all employees must borrow money to pay for illness, new babies, household furnishings, living expenses, or other needs, he conceived the plan for CUNA. His purpose was to enable worthy borrowers to secure the money they needed at lowest interest rates and on repayment terms they could meet. To set up the program throughout the country Mr. Filene contributed a million dollars. Came the time to establish a national office for the organization he created. Since Wisconsin was the first State to enact legislation favoring credit unions, it had strong appeal to him as a desirable location.

In 1934 word came that Madison was being considered. The late Paul E. Stark, one of Madison's foremost builders, went east to investigate. Later, Roy F. Bergengren, Mr. Filene's representative, came here. A site was tentatively selected—the old Boyd home on Wisconsin Avenue. While negotiations were being carried on at long distance, others made a cash offer for the Boyd property. Conditions made it necessary to accept that offer. The CUNA people were greatly disappointed and almost gave up Madison because they thought no other place as suitable could be found. The old Carl A. Johnson home on Langdon Street adjoining the governor's mansion was accepted as even better for them than the Boyd property. But CUNA was on the march, and within a few years outgrew those quarters.

Then Mr. Filene died. The battle to keep the headquarters at Madison began. Again and again it became necessary to sell and resell Madison as the best location. CUNA had spread throughout the United States and Canada, which made Madison the geographical center of their entire membership. The old Fuller and Johnson office building on East Washington Avenue was up for sale and with a good bit of team work, it was acquired for the CUNA headquarters. And it was soon outgrown.

Then came plans for a new building—a living memorial to Edward A. Filene. Again flared the battle to take it from Madison. Again Madison rallied to its support. The CUNA board of directors—100 men from over the North American Continent—came for what was hoped to be the final decision. They were shown a dozen sites and agreed that if Madison was to be the city, the old Malt House property on Sherman Avenue was the spot on which to build. Thereupon Madison proposed to buy that sight as an outright gift to CUNA—a rather large undertaking as the price was $20,000. Madison responded nobly. Men in all walks of life—including local members of CUNA—joined forces. The money was raised, the property was purchased, and tendered to the international organization. Again, the old battle for removal flared up, but eventually it was accepted.

Then began the campaign to raise the building fund of $350,000. Fortunately for all concerned, our Joseph R. Rothschild was selected as one of three trustees to manage that building fund. When everything appeared set to go, the old fight to move it from Madison blazed once more. But fireman Joe put it out—for keeps.

Today CUNA has 6,000,000 members in 13,000 credit unions in every State and in every Province of Canada. Forty-six Madison credit unions have 12,305 members and $2,000,000 resources. They loan $2,000,000

annually, and have loaned over $12,000,000 to their members. From its modest start here in 1934 CUNA has grown to such a gigantic force, with a billion dollars of resources, and $452,000,000 insurance in force, that the President of the United States and the Premier of Canada came to Madison to dedicate its memorial home. All's well that ends well, but when Madisonians contemplate this splendid asset let them realize it represents a tremendous amount of time, thought, energy, and $20,000 devoted to its creation. To that the Madison and Wisconsin Foundation contributed 16 years of constant work.

Government Spending

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Paterson (N. J.) Evening News of May 15, 1950:

HIGH TIME TO STOP WISHFUL THINKING AND TO VIEW THE FACTS REALISTICALLY

Congressman B. W. KEARNEY says he's worried over the attitude of the American public as a whole toward present day excessive Government spending. He said in Washington, "I can only conclude that most of us, for tolerating such mammoth expenditures, have taken leave of our senses." Regarding the bills introduced every day for more and more reckless expenditures, Mr. Kearney said, "My way is clear: On each and every unnecessary proposal I shall vote "no."

We're happy to see PAT KEARNEY among the ranks of those who believe a halt must be called and who are willing to help in halting it. It is not a desire for penny pinching that prompts such demands. All of us realize it takes billions of dollars to run the country. But some of us have thus far been unwilling to face the fact that a nation cannot spend more and more without producing more and more and the trend in recent years has been to spend recklessly without regard for capacity to produce for revenue.

In this matter, Congressman KEARNEY is no doubt well aware that it's not enough to reel off a lot of enormous figures in effort to impress the voter and taxpayer. The word "billions" no more impresses the man in the street today than "millions" did 20 years ago. Somehow, the citizen has to be shown in words of one syllable what it will mean to him and his family if the United States spends itself into economic collapse. The people are willing to be led.

Civil Service Survivorship Benefits

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. TAFT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "S. 878 Should Be Enacted Into Law," published in the Postal Record of May 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

S. 878 SHOULD BE ENACTED INTO LAW

Retired letter carriers recalling the valiant part that Senator TAFT played in the enactment of Public Law 426 will hail the following statement as a rainbow in the legislative sky.

The statement of Senator TAFT follows:

"I favor the enactment of S. 878 which provides that survivorship benefits shall be paid to the survivors of retired civil-service employees, in addition to the cost-of-living increase in their annuities. These employees will thereby receive a somewhat greater amount from the Treasury than that contemplated in the payments made during their service. The change in the value of the dollar, however, and the great increase in the cost of living made the original pension wholly inadequate and unfair. We are raising the payments under the Federal old-age and survivors insurance fund, for the same reason, to millions of citizens over 65. Surely the Government has a special obligation to its own employees.

"I might point out that the surviving spouse of a retired civil-service employee is one of the few widows in America today who does not receive some sort of an annuity. Social Security provides annuity for all wives of employees covered under the Social Security Act on reaching the age of 65.

"In February 1948, the Congress passed Public Law 426, a very fine bill modernizing the civil-service retirement system, and I was proud of the part I played in the enactment of that legislation.

"That law did recognize the increase in the cost of living but did so by providing that civil-service employees then on the retirement rolls could either accept an increase in their annuity of 25 percent, not to exceed $300, or turn down this increase and establish survivorship rights for their wives. The average annuity of the civil-service employee then on the rolls was approximately $900. Through stark necessity, 80 percent of these retired employees were compelled to take the increase.

"It is my opinion that, when these old people were given the difficult choice of deciding whether they should have a little bread-and-butter money, or whether they should gamble on the future and provide an annuity for their wives, they were given too hard a choice.

"Last year S. 878 was held up on the unanimous-consent calendar because there was a dispute as to the amount of the cost, and because the retroactive policy under the Social Security Act had not been determined. There is no longer any reason for delay. I hope we will have an opportunity to vote on it in the near future."

Selling American Farmers Down the River

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Selling American Farmers Down the River," written by my colleague the junior Senator from Indiana [Mr. JENNER] and published in the May 1950 issue of the National Republic, of Washington, D. C.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SELLING AMERICAN FARMERS DOWN THE RIVER

(By WILLIAM E. JENNER, United States Senator from Indiana)

In the highly productive American agricultural area of which my own State is an important part, there is grave concern today over the general farm outlook. But it is not the farmers alone who are worried. We all have learned through bitter experience that what affects agriculture affects every one of us.

Farm income in 1949 dropped alarmingly below the high level achieved during 1947 and 1948—the years of the Republican Eightieth Congress—and it is continuing to move lower. This is happening at a time when the income of other sections of the population remains at or above the rate of earlier years.

There is no quick or easy solution to the farm problem, but I believe it is becoming abundantly clear that it will not be solved either through the free-trade policies of the Truman administration or such panaceas as the Brannan plan.

Speaking at Dexter, Iowa, during the 1948 Presidential campaign, Mr. Truman said:

"Today farmers are faced with the threat that markets will fail to keep up with their production. * * * But the Democratic Party has a constructive way of preventing such a collapse. We are reaching out to develop world markets which will absorb production above America's own needs."

Despite this promise, administration trade policies are fast making the United States a dumping ground for foreign agricultural commodities and at the same time we are subsidizing exports of foreign producers in direct competition with American farmers.

For example, since ECA began functioning in 1948, this international give-away organization has supplied Great Britain with $529,000,000—more than half a billion dollars—just to buy wheat. American wheat, you might think, American wheat which is currently glutting our markets to a point where domestic producers have been ordered to curtail their acreage sharply this year. It would seem reasonable that this wheat should have come from the United States. It didn't, however. It came from Canada, where farmers are free to grow as much wheat as their lands will produce. More than half a billion American dollars spent for Canadian wheat in just 2 years. That is one major contribution of the Truman administration toward the solution of the American farm problem.

In Washington, D. C., today, even in the Senate's own dining room, when I order American fried potatoes, the chances are they'll be Canadian fried instead. While our own Department of Agriculture is dumping surplus potatoes for livestock feed and industrial alcohol purposes, Canadian spuds are flooding the country. Some 7,000,000 bushels already have moved in and it is expected that a total of 15,000,000 bushels will arrive during the current marketing season.

If you want potatoes for livestock feed you can buy the American variety from the Government for 1 cent per 100 pounds. If you want potatoes for human consumption, you can buy the Canadian-grown variety in Washington today for about $4 per 100 pounds.

The Henry Wallace followers who still infest the Department of Agriculture may be able to explain this successfully to each other—but I am sure the American people will not understand the explanation.

In my own State of Indiana and in the surrounding States farmers produce many millions of bushels of oats, barley, and rye. The prices of all of these commodities are currently well below parity and all are being supported through loans and purchase agreements by the Department of Agriculture. Nevertheless, during the 6-month period, July 1, 1949, to December 31, 1949, we imported from Canada 9,500,000 bushels of oats; 8,000,000 bushels of barley and 7,500,000 bushels of rye. Little wonder then, American farm prices are moving lower in spite of the hundreds of millions of dollars which are being spent by the Government in a vain effort to bolster domestic prices.

Now, of course, Canada has a surplus of virtually the same grains that we do. But do you know what would happen if we attempted to dump any of our surpluses there? They would halt the importation of even as much as 1 bushel of wheat, oats, rye, barley, or potatoes by the simple expedient of refusing to permit payment for the goods. They would not allow the money to move out of Canada and consequently our grains could not move in. I believe we might learn something from our neighbors to the north.

Just a year ago, when legislation to extend ECA operations was pending, I attempted to write into the basic law an amendment which would have prevented such deals as the expenditure of $529,000,000 of American funds for the purchase of Canadian wheat. My proposal would very simply have directed ECA not to authorize the purchase off shore of any commodity which had officially been declared surplus in the United States or which was currently selling below the parity price. It seemed to me this would only insure simple justice for American producers and taxpayers. I don't suppose I need to tell you what happened when that amendment came to a vote on the Senate floor. The Fair Dealers beat it down.

But I see a ray of light breaking through the clouds. The American people are awakening to the dangers we face.

I can see the time coming soon when they will realize they cannot entrust the future to those who have betrayed the past and they will take the destiny of this Nation back into their own hands.

I am firmly convinced that so far as America and the world are concerned, there is just one basic thing wrong now. Somebody has sent Uncle Sam into exile. He has become a man without a country, and what the American people must do now is to send out a searching party to find him and bring him home.

I believe Uncle Sam is coming home from his wanderings sooner than many of us believe, despite the fact that President Truman has promised to campaign again this fall as he did in 1948, making every whistle stop to promise the American farmer a continuance of wartime prosperity prices if he were only elected to the Presidency on his own. This promise has borne bitter fruit and the taste still lingers. Victory will take a lot more fruit-selling on Mr. Truman's part this year. And I am one of those who believe that the unexpected 1948 result was due not so much to Mr. Truman's political effectiveness as to Republican overconfidence and lack of political effectiveness during the campaign.

Out in the grass roots one may sense a rumbling of the people against the continuous whirligig of fear, crises, high taxes, and high prices, of hot wars and cold wars in which they have lived for 17 years—a determination on their part to throw off a government that pioneers in the manufacture of the atomic bomb and the only government in the world that ever dropped it—and at the same time, works assiduously to keep its own people in the deadliest fear of it.

Despite Mr. Truman's apparent cockiness at this time I believe you are going to see a great awakening on the part of the American people come next November. And this, in spite of Mr. Truman's proposed talks at the whistle stops; despite the promise of the Fair Dealers that we are to see a much bigger man this time, a man grown in stature and very likely the Indispensable Man of 1952, a man who understands the Marshall plan, the Brannan plan, and the A and H bombs, one who has become acquainted with foreign diplomats.

As a closing reminder let me advise the readers of the National Republic, if there could be any doubt in your minds that the Fair Deal program, if completed, would spell bankruptcy and extinction of our form of government, consider the Spence bill under which, by a single stroke of a pen, the President would be able to achieve totalitarian powers which it took Hitler years to wrest from the German people, and would permit nationalization of industry and complete control of our economic system. Study this one carefully.

Statement by John J. O'Connor, Concerning Reorganization Plan No. 21, Relating to United States Maritime Commission

---

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement made by John J. O'Connor, former acting majority leader of the Democratic Party in the House of Representatives and former chairman of the House Rules Committee, dealing with Senate Resolution 265, disapproving Reorganization Plan No. 21, relating to the United States Maritime Commission, in which statement Mr. O'Connor favors the adoption of the resolution.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My name is John J. O'Connor. I am a lawyer, with offices in the Washington Building, Washington, D. C., and at 29 Broadway, New York City.

I represent Isbrandtsen Co., Inc., of New York, the largest independent, nonconference, nonsubsidized American-flag steamship owner and operator. I also appear here, today, on my own account, as a citizen and a lawyer, and because of my interest in such matters, over the past 20 years.

We support this resolution to reject Reorganization Plan No. 21, but only on these particular two grounds:

First, while the United States Maritime Commission, as presently functioning and performing, should be subjected to a major operation, to rid it of its festers and malignancy, this, in our opinion, is not the way to do it; and

Second, this particular Reorganization Plan No. 21 is invalid and inoperative, because it does not comply with the precise provisions of the Reorganization Act of 1949.

1. The Maritime Commission deserves reorganization or other drastic treatment, but not this particular prescription. Mr. Edward P. Tastrom, an editorial writer on shipping, in the New York Journal of Commerce has written, "Reorganize the Maritime Commission, if necessary, and certain changes could very well be made in the present setup."

As typifying the atmosphere surrounding this particular agency of Government, is the belated and amusingly circumlocutory approach toward fixing (and I use that word advisedly) to scuttle this plan. On March 13, and in every minute of every hour since then, everybody connected with shipping, officially or industrially, have been dead set against this plan, but not until nearly 2 months later, were any of those chiefly concerned, courageous enough to stand up and be counted, in the open, as being in opposition. Instead double-talk representations have been made to the White House, to officials of the Commission, and to Members of Congress, as to the attitude of the ship-operating companies, for instance, especially the Big Twelve, and their so-called "leaders," and perennial and interminable lobbyists. For some reason, they have had an agueish cringing against speaking out in town meeting, while in every club, alley, back room, and cafe, here and in New York, they have denounced the plan in words which could not be reported in your official records.

Mr. Walter Hamshar, one of the country's leading writers on matters maritime, correctly wrote in the New York Herald Tribune of May 3, 1950:

"Whether ship operators will actively assist in the opposition drive (against the Reorganization Plan No. 21) was uncertain yesterday. Although the majority of this phase of the maritime industry is privately opposed to the Commission's relegation to being a minor bureau of the Department of Commerce, the National Federation of American Shipping, representing a majority of the operators, announced in March it would not oppose the reorganization."

This resolution has one merit, at least—that it has smoked out some of those interested, into the open glare—and if this distinguished committee did have the time and the patience, it could get to the bottom and discover the timorous but factual attitude of all parts of the possibly affected industry by subpenaing their "leaders" and omnipresent lobbyists and putting them on the spot.

I forcibly stress this point because it is so inseparably tied in with the influences which have brought the Maritime Commission to the low estimate in which it is held today by many, including the Chief Executive, the Comptroller General, congressional committees, and courts.

Its deterioration can be debited against the exploiting perversion practiced by the "big shots" of the maritime industry, especially the subsidized lines, generally referred to, especially within the four walls of the Commission, as "the twelve apostles." I apologize for the sacrilege—they themselves revel in the impious grouping.

These favored few to whom operation subsidies have been practically restricted have elbowed out of fair entree to the Commission the other 40 or 50 American-flag operators. This "knot, a baker's dozen," as Rabelais counted, have mouthed much and long about promoting an American merchant marine, while, at the same time, they have accomplished the reverse—the increase in foreign merchant marines—and this partly by their subservient submission to these foreign lines, which overwhelmingly dominate every one of the 100 or more steamship conferences, or cartels, to which they all belong.

One truly anomalous situation is, that one of the favored few, probably the most active operator in opposition to any independent line, is none other than a company now controlled by the Commission, itself, and headed by a former treasurer of a national political party. Not only has this ownership control put the Government in

business—shipping—without any authority in law, but the chief contribution (?) of this political steamship line to the development of an American merchant marine is to afford world-round cruises, of 3 months or more, on lush ships, at rates of $4,000 and up to the few of our citizens who can afford such extravagances—after taxes—another example of how the whole maritime structure has collapsed—as the Comptroller General has pointed out—and more than once.

The influence which these presently subsidized lines possess, within the agency, confirms a statement made some years ago by the distinguished former Senator, Burton K. Wheeler, who said, in effect:

"It seems to almost invariably happen, that when Congress attempts to regulate some group, the intended regulatees wind up doing the regulating."

Let it be understood at the outset, however, that any remarks herein of a critical nature are not directed personally against any one of the present five Commissioners.

The sty was, as is, when they took over. The present Chairman and some of the other Commissioners have attempted to accomplish some disinfecting. Their heritage acquired its tarnish, however, back over 15 years, as I personally know. In the thirties, even before the Merchant Marine Act of 1936, meetings were held before the Rules Committee of the House of Representatives, of which I was then chairman, at which officials of the then Shipping Board, the predecessor of the present Commission, and later, after 1936, the Commission officials, were questioned as to certain practices and proceedings of their agency and of themselves. As I recall, those meetings were held in executive session, because of the nature of the matters under inquiry.

COMING OR GOING

Over the years one has not been required to have a very extended contact with the Commission and its offices to become aware that much of its personnel has either come from the big operators whose affairs are subject to the Commission's regulation or are going to those shipping companies when they quit or retire from the Commission, all as per prearrangement, for favors delivered. Subsequent happenings have often corroborated the latter end of this route. Again, the Commissioners cannot be included, at least as to the beginning of these journeys, because they have been practically ineligible for appointment if they came from the industry. As matters have worked out, however, in some instances, the practical benefits of this disqualification have, at times, been at least dubious.

LIKE UPROOTING A TREE

To dig out this Maritime Commission, however, and replant it—bodily, personnel, and what not—except that two of its five principal roots are sawed off—is like transplanting a badly tainted tree, merely to some new location, without even spraying it, or pruning it. It will still be the same old eyesore. The jungle of the Commerce Department will be penetrable to all who needs approach the new Maritime Board of three, merely reduced from five. They will not even leave the building they're now in—or even the corridors, now cluttered with the bowing and scraping contact men of the chosen.

No improvement, over the present objectionable situation will result, since the new maritime board, of three members will have sole jurisdiction, and final say, concerning the most important, fundamental questions involved, the granting of subsidies and the regulation of conferences and their practices. As the plan clearly states, and as the Secretary of Commerce has so interpreted it, in his recent letter to Senator MAGNUSON, he, the secretary, will have no voice, or even influence, in the determination of these vital questions.

The Big Twelve can remain in the saddle with only three targets to shoot at, instead of five.

There is also a serious question, whether the world-flung Department of Commerce is not already top heavy enough, without absorbing new responsibilities and supervision, as it would clearly, over the acts of the new maritime administrator.

The recommendations of the Hoover Commission (No. 2, Rept. No. 10 on Department of Commerce) have some features preferable to this plan No. 21. As pointed out, in the CONGRESSIONAL RECORD of March 21, 1950 (p. 3702), by this committee's distinguished chairman, who was a prominent member of the "Hoover Commission," that extraordinarily capable group "did not recommend establishment of a maritime board within the Department of Commerce."

That Commission's recommendations were most important in providing for a real separation of the ordinary administrative features from the quasi-judicial functions of the Agency.

A transportation Department, newly created, within the Cabinet, as often suggested, might well afford a more appropriate department of Government, in which to set up some maritime agency, or bureau, in succession to the present Maritime Commission.

In surveying all possible solutions, of course, one always comes back to the first obvious vehicle, an independent agency of Congress, separate from the executive department, such as the present Commission, after of course, it is thoroughly overhauled and regenerated.

Until there is some such approach to the vexing problem, however, this particular plan No. 21, should not be permitted to become effective, and Senate Resolution 265 should be reported favorably by this committee and adopted by the Senate.

The second reason we advance for the rejection of the plan is:—

2. Reorganization Plan No. 21, of 1950, is invalid and inoperative, because it does not comply with the provisions of the Reorganization Act of 1949. That act, in the parts material to this point, provides, in section 2 (a), "The President * * * shall determine what changes * * * are necessary to the following purposes" (six in number), and in section 3, "Reorganization plans: Whenever the President * * * finds that" (any one of six purposes) "is necessary to accomplish one or more of the purposes of section 2 (a), he shall prepare a reorganization plan for making of the reorganizations as to which he has made findings and which he includes in the plan, and transmit such plan * * * together with a declaration that, with respect to each reorganization included in the plan, he has found that such reorganization is necessary to accomplish one or more of the purposes of section 2 (a) * * *. The President, in his message transmitting a reorganization plan, shall specify * * * the reduction of expenditures (itemized as far as practicable) which it is probable will be brought about."

The "Message from the President * * * transmitting Reorganization Plan No. 21", states:

"To the Congress:

"I transmit herewith."

On page 5, in the second paragraph, it is stated, in said message:

"After careful investigation I have found and I hereby declare that each of the reorganizations contained in this reorganization plan is necessary to accomplish one or more of the purposes set forth in section 2 (a)."

In the last paragraph on page 5, of the message, it is stated:

"While it is impossible to estimate in advance the savings which will be brought about by this plan, the improvement in administrative efficiency resulting from it should produce substantial reductions in expenditures for the programs transferred by the plan."

The plan is invalid for the following reasons:

While the President finds the necessities, his findings are set forth in his message (not in the plan), which message may, possibly meet the requirement of a declaration, to be sent to Congress, together with the plan, but the President has failed, entirely, to comply with the strict requirement of the act, that the findings, which he has made, be included in the plan—and which he includes in the plan, being the language of the act.

The plan is completely devoid of any findings whatsoever. It merely prescribes the operation of the reorganization—with no reasons given.

This is a fatal defect, that is not curable by this committee, or by Congress, except by legislation, and questions might well be raised in court, against action taken under the reorganization. Many proceedings are pending before the present Commission.

It should also be noticed that the President has not followed, at least, the spirit of the act, in that he has not complied, in his declaration (his message) with the requirement with respect to each reorganization—he has found that such reorganization is necessary to accomplish one or more of the six purposes of section 2 (a).

In his message (p. 5) the President merely states the language of the act:

"I have found that each of the reorganizations contained in this reorganization plan is necessary to accomplish one or more of the purposes set forth in section 2 (a) * * *."

Which one? If more than one, how many, and which? Or all six?

Nor is it any justification that practically identical, blanket language, quoted from the act, is used in all 21 reorganization plans, submitted to Congress on March 13, 1950.

Surely Congress is entitled to expect some specification rather than this sextet generality.

Like criticism can be directed against the President's failure to comply with the directive of the act (sec. 3) that he "shall specify * * * the reduction of expenditures (itemized as far as practicable) which it is probable will be brought about."

Instead of "specifying," and with no "itemization," whatsoever, the President assumes, under advice, of course, to comply with this precise requirement, to "specify," by stating in his "message," as in connection with all the 21 plans—

"While it is impossible to estimate in advance the savings which will be brought about by this plan, the improvements in administrative efficiency resulting from it should produce substantial reductions in expenditures."

Congress should not be satisfied with this generality, as constituting even a partial compliance with the extraordinary, drastic privilege, lodged in the Executive, to reorganize the branches of Government, which have been duly set up by legislation enacted by Congress, itself.

We respectfully submit that this criticism of the President's method of reference to the "purposes" of the plan, or the "reductions in expenditures" to result, is not hypercritical quibbling. One recalls Disraeli said, "It is much easier to be critical than to be correct," but at least Congress, itself, is entitled to approximate correctness, in such consequential matters, and Congress should not countenance any evasion of that reasonable requirement.

In any event, however and beyond question, the complete failure of the President to include "findings" in the "plan," is irremediably fatal, and in itself should compel

this committee, and Congress, to reject this Reorganization Plan No. 21.

It is not asking too much, even of the Chief Executive, that he exercise his prerogatives, in accordance with the law which Congress has enacted, and which he, himself, has approved.

The President Reports to the People

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. MANSFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following addresses made by the President at Great Falls, Big Sandy, Havre, Fort Peck Dam, and Glasgow, all in the State of Montana:

REMARKS OF THE PRESIDENT AT GREAT FALLS, MONT., MAY 12, 1950

Thank you, Congressman MANSFIELD. It is a very great pleasure to have had the opportunity to ride across the great State of Montana with your Governor and with Congressman MANSFIELD. The Congressman is one who really knows what it's all about, and who works at it. I like him very much.

I appreciate this welcome very much in this largest city in Montana. It seems to me that this great city knows how to do things. I have had a most successful and satisfactory trip across the country during the past week, and now I am on my way back to Washington.

On this trip I have been giving a first-hand report to the people of the great Northwest and the Middle West about the problems this country is now facing, and what we are doing about them, and what we need to do in the future.

Here in Great Falls you are fortunate in having a fine newspaper, the Great Falls Tribune. I wish there were more Great Falls Tribunes around the country so the people could get the truth.

In the past few days I have been describing the great work we have been doing in conservation, irrigation, reclamation, electric power, and flood control. We have been building some magnificent structures like the Grand Coulee Dam, the Hungry Horse Dam, and Canyon Ferry Dam here in Montana. But these are only the beginning of the coordinated development of all of our national resources. We need to speed up the development of our resources, if we are to keep our economy prosperous and expanding.

Down in Butte this morning, I explained what kind of labor-management laws we need on the books, and I explained why it is necessary to extend our social security system, and to expand and increase our systems of old-age insurance and unemployment compensation.

We have done some fine work in the housing field since the war, but we are still far short of our goal of having a decent home for every family in the country. Here in Great Falls, a city that has grown so rapidly in the last few years, you can certainly appreciate how badly we need a long-range, low-income, and middle-income housing program.

In Lincoln, Nebr., the other day, and at a number of other towns since then, I have explained the kind of farm legislation we need to put on the books. Our present price support laws have kept farmers' incomes from dropping as badly as they did after the First World War. But they are not good enough. In the last 2 years, farm income has dropped substantially.

One of the main improvements we need to make in our present laws is to provide for a system of production payments. This would help us make sure that the incomes of farmers would stay at prosperity levels, that we would get greater amounts of the kinds of foods we need, and we would avoid huge surpluses.

You know, to read some newspapers, you would think that no one supported the system of production payments to farmers that I just described. But the fact is, more and more people all over the country are realizing that production payments are exactly what we need.

For example, after my Lincoln speech the other day, I got a telegram from the master of the Ohio State Grange, and he told me that he was very much in favor of the system. I have the telegram right here, if anybody has any doubts about it.

Also, at the Minnesota State Fair last fall, they held a—what you might call a poll, but this was an actual poll, the people were there, and they voted themselves; and it came out nearly 2 to 1 for production payments, but they didn't say anything about it in the papers that were against it.

The American people support the programs I have been discussing, when they learn the true facts about them. When the people understand these measures, they realize that they are vitally important to the future growth of this great country.

It is just as important to see that people in other countries learn the facts about the United States, and what we are doing for world peace.

We face a great problem these days: the menace of Communist aggression. The Communists want to take over all the world, and they are trying to win converts to their side by telling preposterous lies about the United States.

Out of one side of their mouths they say we are weak and that we are going to collapse. Out of the other side they say we are strong and we are getting ready to wage an imperialistic war. These lies are dangerous because there are millions of people in the world who don't have accurate sources of information, and who simply don't know the truth about the United States. And there are a lot of people right here in the United States that don't know the truth about their own country, and I am trying to teach them.

That is why I have been urging a great campaign of truth. I would like to see our newspapers, our magazines, our radios, and our motion-picture companies join with the Government in spreading the truth to Europe, Asia, and Africa about what we are really like in this country.

I think that when the people know the truth about the United States they will turn to our side, not the side of communism. The Communists are an organization which do not believe in morals or ethics or truth. They work with lies, and they try to mislead people, and when they get control they are just a plain police state. You can't go anywhere or do anything or talk to anybody without permission from those up above. That is not the kind of country we fought for and worked for since 1776.

I think we have got the greatest government in the history of the world, and I am trying to support that Government with everything I have. I have sworn to support and defend the Constitution of the United States, and that is what I am doing as President of the United States.

I am out here telling you the facts as I see them. That is my job. Every year I make a report to the Congress called the message on the state of the Union. I have made a trip around the country this time, giving the message on the state of the Union to the people themselves, so they will understand what I am trying to do, and I believe they do understand it.

Thank you again for this wonderful reception. I appreciate it more than I can tell you.

REMARKS OF THE PRESIDENT AT BIG SANDY, MONT., MAY 12, 1950

You know, I have been reading a lot of stories about Big Sandy, Mont., and most of them were most interesting. I have always wanted to see this location in the United States that was once one of the most famous cow towns in the country. I also heard from the brakeman on this train that this town during the war bought more bonds per capita than any other town in the United States, and I congratulate you on that, too.

Everywhere I have stopped on this cross-country trip of mine, large crowds have come out to see me. I appreciate that very, very much.

I think it means that the people are interested in their Government, and that they want to learn what the facts are about, what our Government is doing, and what I am trying to do, and what I am fighting for.

One of the subjects in which I am vitally interested, and which concerns you people here in the West very directly, is reclamation and irrigation.

Here at Big Sandy, you people are in the area which will feel the direct benefits from our construction of Tiber Dam, west of here on the Marias River. We have got a river of that same name in Missouri, also—named by the same Frenchman, by the way, too.

I understand that actual construction of Tiber Dam will begin this summer. Great reclamation developments like this all over the country seem to cost a lot of money, but they bring back big returns. They are investments, not expenditures.

Tiber Dam will mean better incomes for the farmers now here, and opportunities for new farmers to come. It will help you build a bigger and more prosperous community.

By carrying out the projects like Tiber Dam, we are building a stronger and more prosperous country. We are laying the foundations for lasting farm prosperity. I am very much interested in seeing farmers well off. I grew up on a farm myself, and I know how hard a farmer's life can be. But a farmer's life these days is nothing like the life I had to spend. I have got a couple of nephews running the old farm together, and they do most of their farming sitting down. I used to stand up and walk to do mine.

We have been doing a lot in recent years to make farm life easier and happier. Bringing electricity to farmers has made them much more productive, and it has certainly made life on the farm much more pleasant.

Fifteen years ago, when the REA started, only 10 percent of the farm houses had electricity. Now 80 percent of farm homes have electricity.

Congress is authorizing a program—a Federal program—to extend rural telephone facilities. I am very pleased to see that, because I know how much telephone service means to people who are isolated, especially in areas where there are long and severe winters.

Government money spent to help improve rural life is one of the best investments we can make in the future of the United States. Better farmers mean a stronger Nation, and a strong United States is the best hope of a lasting peace in this world.

What I want to see is a balanced economy in this great United States of ours. I want the farmer to have a fair share of the national income of this country. I want to see labor receive good wages so that they can buy farm products, and I want to see business, both big and little, prosper and able to carry on

the necessary distribution of the things that we need.

That is what makes a great country—a country in which all the people can share alike in its wealth. If we do that, then we are in a position before the world to say that our system of government is the best in the world—is the best in the history of the world.

If we can do that, eventually we will get a world peace without the necessity of having our young men slaughtered as they have been in the past.

Thank you very much for coming out here tonight. I appreciate it. It has been a pleasure.

REMARKS OF THE PRESIDENT AT HAVRE, MONT., MAY 12, 1950

Thank you very much, Governor, for that cordial introduction; I appreciate it most highly. It is a pleasure to have the Governor and Congressman MANSFIELD on the train today in the trip across Montana. I had thought at nearly every stop that all the people of Montana were there, but apparently they weren't, because most of them are here tonight.

Of course I am more than happy to be here this evening, and to see so many musicians in the audience. I understand that you are going to have a musical festival tomorrow. My only regret is that I can't stay over. Maybe you have heard that I like music, too. The fact is that my whole family is musically minded.

As I have traveled across the country in the past few days, I have been deeply impressed with the new opportunities that are opening up for the young people of this country.

Many of you can't remember the days in the early 1930's, when young men and women were roaming the streets, looking hopelessly for jobs which never turned up. Those were days of despair, when the future looked black for everybody.

I hope you never have to go through a period like that, and I don't believe you ever will. We know now more about how to keep our country prosperous than we did in those days.

The young people who are growing up in this country now have many advantages that their parents did not have. All of us want our children to have a better life than we had, and it should be the constant aim of each generation to make things better for the next. It has always been a part of the American dream, and I think we have been successful in accomplishing it to a most remarkable degree.

However, I am very much afraid that we are in danger of losing ground in one field which is of greatest importance, and the one where we have taken great pride in our past accomplishments. That is the field of education.

You know, there is no person has more influence on the life and outlook of the young—besides his mother—than his teacher. His teacher usually has a lasting influence on how he conducts his life after he is grown.

I can remember my first-grade teacher, and my second-grade teacher, and my high-school teachers, and the ideals they tried to instill into me I still remember and try to live up to.

Our schools are already in difficulty in many parts of the country, and the greatly increased number of young children who will be reaching school age during the next few years will place such a load upon them as to bring on a real crisis.

At the present time our schools are bursting at the seams. Buildings are at times too old, or too crowded, and we do not have enough teachers, and those we have are overworked and underpaid. Educational opportunities in rural areas do not measure up to those in the cities.

We urgently need to construct more schools, and to provide the transportation necessary to bring the children to the schools.

We also need to expand our vocational education program. Last year only one-half the high schools in the country were able to provide a vocational education program for their students.

The plain truth is that the cost of providing adequate school systems has long been beyond the financial resources of many of our States.

I have proposed to meet this crisis through a program of Federal financial aid to the States and Territories.

The Senate has already passed such a bill, and I hope that the House will press forward to enact a law to aid education at this session.

Some timid people have raised the false bugaboo of Federal control over education. I do not believe in Federal control, and I do not want Federal control in the schools. I am wholeheartedly in favor of continuing State control over education.

The right way to meet this crisis is for the Federal Government to provide financial assistance to the States, and let the individual States decide how the money shall be spent.

This country has always been a land of opportunity, and I intend to do my part to keep it that way. The American people are deeply devoted to the ideal of universal free education. We must make sure that each boy and girl does get a good education.

Money spent for education is a valuable investment in the future of this country. We should move forward and secure a brighter future for the generations in the coming years that will guide the Nation. There is nothing that could be more important to our country's welfare.

You know, the next generation will either face the greatest age in history, or it won't. And it is up to that generation itself to decide on the course it will pursue.

I think we are on the threshold of an age that will make the past 50 years look like the Middle Ages. I want to see this country go forward to the ideal condition which I know it is capable of. And I know that you young people can take us to that goal, if you go ahead with the proper education, if you learn to be the right sort of citizens of the greatest Republic in the history of the world.

There is nothing in the world to keep us from doing all the great things that are now before us—to work for peace in the world, and eventually we will get that peace, because it is right, and we are on the right side in trying to get it.

Thank you very much.

(A little later:) I forgot to mention the fact that Senator MURRAY'S wife is exceedingly ill. He hasn't been able to be out here today because she has undergone a very serious operation. And I have had two telegrams from him stating that he would have been here had it not been for the illness of Mrs. Murray. I am certainly sorry about it.

(As the train pulled out, 9:25 p. m.:) Thank you all again. I appreciate those bands and the drum corps very much. I want to thank the Chief for that bonnet and that peace pipe. I hope we can always smoke the peace pipe with the rest of the world.

REMARKS OF THE PRESIDENT AT FORT PECK DAM, MONT., MAY 13, 1950

Governor Bonner, General Pick, ladies and gentlemen: I have known General Pick for a long, long time. I knew him when he was engineer in charge down at Omaha. I knew him when he went to Burma and built the Lido road, and I had the privilege of making him chief of engineers when he came back. I think he is one of the ablest men in public service.

We have paid a visit to the greatest concrete structure in the world—the greatest concrete dam that ever has been built, over in the State of Washington.

I made up my mind that I was going to come by and see the greatest earth construction in the flood control business that has ever been constructed in the world. I was in the Senate when this proposition was first considered, and there have been just as many misstatements and garbled stories about Fort Peck Dam as there have been about any of the other constructions for the welfare and benefit of the people of this part of the country.

I made up my mind I would come by and see just exactly what it looked like so I could understand the statements that are sometimes made about it, and that is why I am here.

I should like to congratulate the Corps of Engineers and all the people who worked on this project on what has been accomplished here. Projects like Fort Peck have contributed to the welfare of the entire Nation. Fort Peck itself has helped prevent floods, has helped navigation downstream, and is producing great quantities of electricity.

We don't have enough Fort Pecks, however, to give us the protection that we need. We still have serious floods in many sections of the country.

I am deeply concerned with the reports I have received about the floods in North Dakota and Minnesota, and about the recent floods in southeastern Nebraska. We need a great many more flood control projects before we can be safe from catastrophes like these.

In the 13 years since Fort Peck Dam was first put into operation, the benefits from its flood control features alone have been estimated at $50,000,000. I am told that this figure is the damage which the Missouri River Valley would have suffered from the floods if this project had not been built. Flood heights have been reduced as much as three feet downstream at Omaha.

Fort Peck has also helped navigation. During the war years, for example, the Fort Peck Reservoir supplied enough water to float landing craft, built at inland shipyards down the Mississippi.

Two years ago, when there was record low water on the Mississippi River, Fort Peck Dam made it possible to continue navigation on the river. Otherwise, river navigation might have been seriously hampered for several months.

Fort Peck is supplying power in North Dakota, Montana, and South Dakota. All told when tied in with the other main stem projects now under construction, I understand that we can get 185,000 kilowatts from Fort Peck.

In addition, the reservoir behind the dam is becoming a great recreational center for this whole region. I am told that 90,000 people visited here last year, and camps for Boy Scouts and Girl Scouts and other groups are being built.

This is an example of how we get many different kinds of benefits from sensible planning and development of our natural resources. This shows that the funds we spend on flood-control, reclamation, irrigation, and public-power facilities are not expenses. They are investments in a bigger and better country.

People who criticise the Federal budget often overlook these facts.

When a manufacturing corporation builds a new factory, that is not just an expense, it is a capital expansion. The company may have to float a bond issue and go temporarily into debt. The board of directors of the company are willing to go into debt, because they

know that they will more than get their money back as the company grows and produces more products.

Projects like Fort Peck are investments in the future of our country, just as a new factory is an investment in the future of a corporation. You should keep that fact in mind when you examine the Federal budget.

We need more projects like Fort Peck.

I just want to say a word to you about this great Valley in which we landed yesterday—I guess it was about the time we left Butte and came over the Divide—we came into the drainage area that is known as the Missouri Valley.

The Missouri Valley is a tremendously rich valley, and in connection with the upper Mississippi Valley, north of Cairo, and the Ohio Valley from Pittsburgh down, it is the greatest bread basket in the world. It has difficulties to face in the form of flood control, communication, and transportation.

I have been exceedingly interested in the proper development of all these great river valleys. I was in the Columbia Valley the other day, and made some suggestions about proper procedure for developing that valley. I have made some suggestions about the Central Valley of California. I have made some suggestions about the Connecticut Valley in New England, and I have made some suggestions about some of the southeastern rivers, and the Arkansas and Red Rivers in Texas and Oklahoma and Arkansas.

This Missouri Valley development is a three-way proposition. It is radically different from a great many of the other rivers in the country, for the reason that it has navigation to consider, it has flood control to consider, and the other power facilities, such as are at this dam. The flood-control dam, can also be used as a power facility, as you can see.

The difficulty with the Missouri River is from Sioux City to St. Louis. It is a mud river—carries more silt than any other river in the world. Even the Yangtze doesn't carry any more silt than the Missouri. Mark Twain once said that in a wet season you could pour the water of the Missouri from one vessel to the other, if you pushed it and stirred it around enough.

I have seen dust storms rise up right out of the water of the Missouri River. You can't understand that, but the reason is there is a sand bar out in the middle of the river, and when the wind blows, it comes right up out of the middle of the river.

What I want to do is create a situation for the development of the Ohio, Mississippi, and Missouri Valleys on the basis of the great Tennessee, and what I have suggested for the Columbia, but it has to be done in a different way, for we have a different project and proposition to look at.

Flood control is of vital importance to the Missouri River, from Sioux City to St. Louis. Now, in 3 years in that valley, due to floods, some $500,000,000 worth of crops were destroyed. Five hundred million dollars properly spent would prevent that flood situation in the whole Ohio, Mississippi, and Missouri Valleys, and twice that much would accomplish the purpose which we have in view. And there have been in the last 10 years enough crop losses to have paid for the development of all three of those valleys.

I think I understand the situation, to some extent, for I spent most of my life on the Missouri down in Kansas City. Independence, rather—Kansas City is a suburb of Independence. I know something about how it happened, and I know something about what ought to be done to cure it.

Now, there is a reclamation proposition in the thing. There is a flood-control proposition in the thing, and there is a navigation proposition in the whole set-up. And Reclamation, and the engineers, and all the other departments of the Government interested in this sort of development ought to cooperate to get it done. And if I can succeed in getting all those agencies to cooperate, and then get about 15 or 20 governors of the States in the frame of mind to look after their interests, I think sometime or other we will get this job done as it ought to be done.

This is the first step out here. This is only the first step. Now let's go ahead and finish the job, because it means the proper development of the great Mississippi Valley, and if the great Mississippi Valley doesn't wake up and do its proper development, all these great developments in the other parts of the country are going to take the population, they are going to take all the industries, they are going to take everything we have.

And if we do the valleys of the Mississippi, Ohio, and Missouri on the basis that they should be, we can look forward to the ability to support the immense populations which we will have in the year 2000 and 2050. That is what this generation should be looking after, and that is the idea I am trying to put over on this trip around the country.

I want to thank you very much.

REMARKS OF THE PRESIDENT AT GLASGOW, MONT., MAY 13, 1950

We have a very short time to spend here; I am sorry, but I do appreciate this wonderful welcome we have had here.

I also appreciate most highly the privilege of having seen Fort Peck Dam, with the man who is in charge of it, the Chief of Engineers.

I have a recollection of this town of Glasgow, along about 1906 or 1907. I came up and registered for a claim on the Rosebud Indian Reservation. I didn't get the claim—my number was about 59,000—but I enjoyed the trip, anyway.

I am glad to be back once more.

I appreciate again very much the cordiality of your reception here.

A. F. of L. Union Industries Show

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the text of a brief article entitled "Big Fair Here Is Tribute to United States System," written by Sylvia Porter, and published in the Philadelphia Inquirer of Wednesday, April 12, 1950. It concerns the mammoth A. F. of L. union industries show which was recently held in Philadelphia, Pa.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG FAIR HERE IS TRIBUTE TO UNITED STATES SYSTEM

(By Sylvia Porter)

Early next month the greatest display in American history of what United States management-labor cooperation can produce in goods and services will open in Philadelphia—in the form of the mammoth A. F. of L. Union Industries Show.

Over the week end I learned the details of the show, the tremendous business-union preparations that are going into it.

After hearing the story it seems to me this event is more newsworthy and holds more significance for our future than a dozen-and-one strike headlines.

For this unique show, staged voluntarily by hundreds of leading corporations in association with over 100 unions, is a dramatic illustration to us and the world of what free cooperation between management and unions is achieving.

More, it is a challenge to all segments of our economy to think in the exhilarating terms of what can be achieved.

As President Truman put it to the A. F. of L.'s Matthew Woll, "it'll be one of the finest demonstrations of the value of teamwork between management and labor, a good object lesson in democracy and tangible evidence of the economic progress that is fostered in our free-enterprise system.

This unique industrial carnival, highlighting the value of the union label as an emblem of decent working standards and industry-labor harmony, is propaganda for the American system that will dwarf truckloads of high-sounding speeches and pamphlets.

And as Woll put it, "our continued prosperity is based on the increased production of American workers plus their ability, through high-wage purchasing power, to buy what they produce."

Almost always, the emphasis these days is placed on management-labor conflict, its causes, pro and con.

And this is understandable, of course. There's plenty of conflict and a good fight usually makes a better headline than a continuingly cordial friendship.

But at least now and then, a reminder of how much management-labor cooperation does exist and what that cooperation is producing is imperative for our own perspective.

The fair will smash all records in every direction. It'll take over Philadelphia's huge Convention Hall and its Commercial Museum, too, will run for 8 days from May 6 through May 13.

Glass blowers are set to blow fine glass objects. Expert meat cutters are preparing to turn prize steers into scientific cuts. New gas and electric ranges are to be put together on an assembly line. A complete sanitary laundry is to be in operation.

And garment workers will show ladies' styles, bakers will bake cakes, the Allied Printing Trades will produce a tabloid newspaper, cigar makers will manufacture cigars, potters will cast china, bricklayer apprentices will compete in a bricklaying contest, the Armed Forces will show union-made weapons, etc.

There'll be more than 700 exhibits stretching over a mile and a half of booths. Quite a spectacle indeed.

But this is just the superficial aspect of the show. The fundamental story lies in the fact that the fair is designed solely to illustrate what management-labor harmony can produce.

The provocative angle lies in the fact that it is an entirely voluntary effort.

In no other country has anything like this ever been attempted. Fairs usually are put on to sell specific products or specific services or entertainment—not to pay tribute to an economic system and to the essential components of that system.

In no other country actually could anything similar to this be staged. America's industrial know-how, labor skills, and living standards have no parallels.

In enlightened, voluntary cooperation between management and labor lies the key to America's industrial strength.

In this strength lies the key to world stability and peace. With a strong, prosperous economy, we still have a real chance for global peace. Without it, America is sunk—and the world is sunk with us.

Perhaps I am whistling in the dark as I seize upon this coming event as an instance of growing enlightenment on both sides.

But I'm inclined to think it's more than a frightened whistle. It's a song of hope.

The President's Western Tour

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me from Chicago on May 13, 1950, dealing with the President's western tour.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We have been hearing Mr. Truman brag and tell about himself and his type of government on his present political trip.

Now, it is up to you and me to ask ourselves:

Can we afford Truman socialism?

In order to answer that question you will have to have more facts than Mr. Truman has seen fit to give to the American people in his nonpolitical talks.

You must know, first of all, what his Brannan farm program is going to cost you.

The farmer already knows that it will cost him a good share of his liberty and freedom.

In fact, it will cost him all of his freedom if he violates any one of the scads of regulations to be set down by a bureaucrat who will run the farms of the country.

How much will it cost the taxpayer?

Mr. Truman can't tell you.

Mr. Brannan can't tell you.

They like to have you believe that everybody is going to get something for nothing.

Let me give you some idea of how consistent and trustworthy Mr. Truman has been in the past about the farm program.

From this record, perhaps, you can better evaluate his promises on many things.

In his Lincoln, Nebr., farm talk last Monday he criticized the present farm program which was passed by his own Eighty-first Democrat Congress.

Well, we can have a little laugh over that criticism.

You see, back on May 14, 1948, Mr. Truman wrote a letter to the Republican Eightieth Congress in which he said:

"Many shifts in production will have to be made and flexible price supports will help us make them in orderly fashion."

The Eightieth Congress went ahead to adopt the Hope-Aiken farm bill, a long-range measure based on flexible price supports.

In the fall of 1948 Mr. Truman campaigned in the farm States on a platform calling for rigid price supports and said a Democrat Congress would repeal the Hope-Aiken Act before it ever became effective.

What happened, Mr. and Mrs. Farmer?

You remember that Mr. Truman turned right around and told his Democrat Eighty-first Congress he was for flexible price supports.

I am not just telling you this. It is in the record.

He said it in his budget message to his own Democrat Congress.

We know, of course, the Hope-Aiken Act was repealed and the Democratic Congress enacted its own farm program.

Now, Mr. Truman is for neither flexible nor rigid farm price supports.

He is for the socialistic Brannan plan.

Why has he been so consistently inconsistent about a farm program?

Mr. and Mrs. Farmer, can you afford to believe anything Mr. Truman says about a farm program?

Can you afford socialized farming?

Why is your Government spending millions to flagrantly lobby for socialized farming under the Brannan plan?

Why is your Government spending millions to flagrantly lobby for socialized medicine?

You know about the great paid meeting in St. Paul, Minn., where Mr. Brannan and Senator HUMPHREY, who likes British socialism and says so, spoke so eloquently about the Brannan farm program.

You know, too, that many of the more than 2,700 publicity and public relations workers on the Federal payroll are daily spreading propaganda in support of these two particular socialistic programs.

Mr. and Mrs. America, can you afford to let these changes be made in the American system?

President Truman has also been talking on his nonpolitical tour about the great prosperity under his administration.

He hasn't mentioned, of course, that despite this great prosperity your Government's financial situation is the worst in history.

And he didn't mention, either, that he has no plans for improving that financial situation in the near future.

Let's look behind his nonpolitical words and get the truth about this prosperity we are having.

We'll take our information from Mr. Truman's own Labor Department reports.

Back in 1939 when we still had 9,000,000 unemployed after 8 years of Democrat depression, the average gross weekly earnings of production workers in the United States was $23.86.

On the basis of 1939 dollar buying power that left a worker with three children a weekly spendable total of $23.62.

Now, 11 years later we find that the average gross weekly earnings for production workers is $56.33, more than double what it was in 1939.

But, the Labor Department reports show that the index of spendable earnings has jumped from 100 in 1939 to 236.1 in January of 1950.

So, that leaves the spendable earnings today of a production worker with three children at $32.60.

His weekly earnings increased $32.47 in those 11 years, but his spending power increased only $8.98.

The buying power since 1939 has only increased $3 for school teachers; a little more than $1 for retail workers; $3.50 for automobile workers; less than $1 for railroad workers; less than $4 for steelworkers.

These figures were arrived at after Federal taxes were deducted.

After all, the production worker has been helping to pay for a very expensive Government.

He has helped to pay for a Truman spending program that cost more than $191,000,000,000 in 5 years.

That is $12,000,000,000 more than was spent by 32 Presidents in 156 years up to 1940.

Mr. and Mrs. Production Worker, can you afford that type of Truman Government?

On this nonpolitical tour Mr. Truman has given no indication whatever that he would practice economy in government so that some of that real wage increase for the workers could be turned into spendable income.

On the contrary, he has criticized the Republican Eightieth Congress for giving the production worker some tax relief.

He has also contended that the failure to collect enough money from the people in taxes has been the reason for an unbalanced budget and deficit spending.

The Eightieth Congress balanced the budget in addition to cutting taxes. In fact, it created a surplus.

Why can't the Eighty-first Congress do as well?

Speaking of Mr. Truman's criticism of the Republican tax reduction and blaming that reduction for creating the latest deficit brings to mind an interesting action which Mr. Truman does not like to mention for a couple of good reasons.

The incident was the 5-percent tax reduction voted by the Democrat Congress in 1945.

The next year the country had a deficit of more than $20,500,000,000.

First reason Mr. Truman neglects to mention it is because the administration was guilty of using the tax reduction for political purposes and gave no consideration to the financial status of the country.

Second reason he neglects to mention it is because the reduction was a flat 5 percent which gave the big-income groups the greater benefits.

He was President at the time, of course.

Now let's take another look at the record and see just what has caused the deficit which may run as high as $5,000,000,000 this fiscal year which ends next June 30.

In the first year of the Republican Eightieth Congress expenditures were held to $39,000,000,000 and the income totaled forty billion, which left a surplus of nearly one billion.

The second year of Republican control, 1948, the expenditures were cut to less than $37,000,000,000 and the income rose to over forty-two billion, leaving a surplus of more than $5,000,000,000.

The 1949 fiscal budget, the last over which the Republican Congress had any control, was held to $37,000,000,000 and even with the tax reduction limiting income to $38,000,000,000, the country was solvent for the year with more than one billion surplus.

But in the 1950 budget Mr. Truman's Democrat Congress expanded the spending program to more than $43,000,000,000 and the income remained at thirty-eight billion, accounting for the anticipated $5,000,000,000 deficit.

There, Mr. and Mrs. America, you have the actual figures and you have the actual cause for the deficit under Mr. Truman and his Democrat Congress.

I ask you:

Can you afford to permit this type of spending and financing to continue?

Can you afford to go along with the Truman program?

In his nonpolitical talks, Mr. Truman was extravagant in his use of the word "isolationist" in castigating those who do not agree with his international policies.

It is quite interesting to note the change that comes over a man when he assumes domineering power.

I recall a very significant speech Mr. Truman made as a United States Senator in 1942.

His speech was in defense of Senator Burton K. Wheeler, who had not seen eye-to-eye with President Roosevelt's foreign policy in the 2 years prior to the recent war.

Mr. Truman felt that Mr. Wheeler was being made the victim of unjustified criticism.

These are the words of Mr. Truman—as a Senator—with respect to the right to take exception to foreign policy.

Listen closely:

"There are still some in this country who feel bitterness against Members of the Senate and House of Representatives and against others who do not hold public office, who were opposed to any aspect of the President's foreign policy during the last 2 years."

Mind you, now, this is Senator Harry S. Truman speaking. I continue the quote:

"I was gratified to observe that Winston Churchill, when he was in this country, took a far different attitude.

"I know that many Members of the Senate who supported the President's foreign policy throughout deem such recriminations unwise and unjust."

Now, get this next line from Mr. Truman's talk. This is good—coming from him.

"I have throughout supported the President's policy, and I also believe that recriminations of the nature referred to are unwise and unjust."

Then, Mr. Truman referred to Abraham Lincoln as follows:

"It should be borne in mind that even Abraham Lincoln criticized the entrance of our country into the Mexican War in 1848; yet no one doubts his patriotism."

Yes, he spoke in different tones before he assumed imperious powers.

Let me continue with the last two sentences of this same speech made on the Senate floor on February 3, 1942:

"It is time that men cease to challenge the patriotism and loyalty of some of their fellow Americans simply because on some issue of the present day there happens to be some difference of opinion and an honest difference.

"It is to preserve the right to hold differences of opinion that we are entered upon the mightiest effort of our national career."

Those are the words of the same man who today, as the would-be creator of all opinion on foreign affairs, chastises and belittles and ridicules those who do not agree with his dictates.

Mr. and Mrs. America, can you afford to go along with a man who—by his own words—is unjust and unfair?

I have had time to discuss only a very few of the vital issues which Mr. Truman has placed before the citizens of this country in his nonpolitical talks on his present nonpolitical trip.

However, in each of these instances I have used the record for the basis of my discussions.

I have not resorted to assumptions and coincidences as Mr. Truman has done.

Had I been of the mind to follow Mr. Truman's tactics I could easily have called to mind his Pendergast connections; his infamous red herring application to the Alger Hiss case; his continued disrespect for the efforts of some to protect our country from subversives within the Government, and the many cases of gratuities for the privileged few.

But I am willing to stick to the record and from that let you get your answer to this question:

Can you afford to go along with Truman socialism?

Investigation of Interstate Crime

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Kansas City Stares at the Kefauver Committee," which appeared in the Courier-Journal of Louisville, Ky., on May 14, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KANSAS CITY STARES AT THE KEFAUVER COMMITTEE

Senator KEFAUVER and his special committee to investigate interstate crime are now ready to go to work. The task that awaits them is involved enough in its own right. But it is at the moment unfortunately enmeshed in politics to a degree that must tax all the patience and ingenuity of the membership.

Republican members of the Kefauver committee are the amiable and well-mannered Senators WILEY, of Wisconsin, and TOBEY, of New Hampshire. The Republicans had wanted either their ace investigator, FERGUSON of Michigan, or Missouri Senator DONNELL who faces reelection this year. There is no reason to suppose that the committee as now constituted will pull any punches or shy away from delicate areas, but the problem of Kansas City will haunt it from the very start.

Kansas City represents the political headquarters of President Truman. It has been the scene of an extended grand jury investigation of rackets and their political influence, an investigation requested by President Truman. But the successive juries have unearthed little that is concrete in the slimy mystery of Missouri's politico-criminal alliance, and five jury witnesses have met sudden and violent deaths. These deaths are included in a total of 22 unsolved gang murders within the city's jurisdiction, and the latest of them were the spectacular slayings of Charles Binaggio and Charles Gargotta in the First District Democratic Club.

Furthermore, as Republicans have not failed to point out, the theft of evidence bearing on the Kansas City ballot frauds of 1946 was a Federal crime which has never been solved and in which prosecution will be barred by the statute of limitations on the 27th of this month. In all of these cases the Federal Government is open to a charge of slow and reluctant action. In the ballot fraud theft months went by before the FBI was even instructed to investigate. It has never been told to intervene in the murder situation in Kansas City, although the murder and sudden deaths of witnesses before a Federal grand jury surely constitute sufficient excuse to replace the inefficient and reluctant local police with trained Federal investigators.

Whether the Democrats like it or not, the unsavory Missouri picture will be a factor in congressional elections this fall. Republicans are already wheeling up their choicest guns for the campaign. The Democrats may have the situation for themselves, not by soft-pedaling a national scandal or trying to hush up further investigation, but by pushing the sternest effort now toward a clean-up and prosecution of all guilty individuals, whoever and wherever they are. The FBI should long ago have been ordered into the Kansas City picture; there is ample precedent for its interference in a case which involved Federal witnesses and the theft of evidence in a Federal investigation.

It may be that every effort has already been made behind the scenes to get at the truth in the Kansas City story. But the average man does not think so, and it is difficult to see why, if this were the case, the Department of Justice would continue to shrink into its shell whenever reporters for the Kansas City and St. Louis newspapers ask pertinent questions.

Kansas City is certainly not an ideal starting point for the Kefauver committee, and it is one that the Senator himself would probably rather pass up. But it cannot be passed up or ignored, even temporarily, if its political implications are not to become ammunition for the Republican campaign. No committee, however zealous, can be expected to enter a community as heavily involved in a criminal-political conspiracy as Kansas City and to dig out the truth in one shining nugget within a couple of weeks. There is probably nothing it can do at this late date to spark a last-minute investigation of the ballot-box thefts in time to bring its participants to trial. But it can show that a senatorial committee, when manned by able and conscientious men, can rise above partisanship and serve the truth, however unpalatable.

Effect of Strikes on the Democratic Party

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent that there may be set forth in the Appendix of the RECORD an article entitled "Wave of Crippling Strikes Hurting Democratic Party," written by David Lawrence, and published in the St. Louis Globe-Democrat on May 12, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WAVE OF CRIPPLING STRIKES HURTING DEMOCRATIC PARTY

(By David Lawrence)

WASHINGTON, May 11.—President Truman had better hurry back home. An absentee leadership is a leadership in a vacuum. What votes Mr. Truman may be gaining for his Congressmen in the West may be offset by large losses in the Midwest and East. For the Democratic Party is bound to suffer in the congressional elections this autumn because, as the party in power, it has been in a position to discourage strikes, but has failed to do so.

The wave of crippling strikes which has been inflicting almost as much damage on innocent bystanders as on the disputants themselves is due primarily to the ingrained belief of labor-union leaders today that President Truman doesn't really care if they exercise a monopoly power.

The constant reiteration by the President and by his Cabinet that the Taft-Hartley Act must be repealed, together with sabotage of the act itself by governmental agencies through indifferent enforcement, has bred a spirit of irresponsibility among labor unions. They feel they have virtually bought the administration with political support and with campaign contributions and that the Democratic Party must do the bidding of the union chiefs. There is heard even the blackmail threat of a third political party to be formed out of labor-union membership if the administration doesn't hew to the line.

The railroad strike is an example of the breakdown of the Railway Labor Act, which up to now has been hailed as a splendid piece of labor-management legislation. But with the encouragement that comes from a labor-union-dominated administration, it is natural that the findings of all boards and tribunals recommending settlements will be disregarded by the unions. The issue in the rail strike—whether a third man should be required on the Diesel engines—has been passed upon and the proposal rejected again

and again by boards appointed under the procedures of the Railway Labor Act.

Then why do the firemen insist on a strike? The answer is that economic power as exercised by unions today knows no limit. There is a prevalent feeling of self-assurance in going to extremes because of a belief that the Truman administration will not dare to ask Congress to stop such tactics. It is significant that the presidents of the Pennsylvania, the New York Central, and the Santa Fe Railroads have all told a congressional committee this week that they no longer have faith in the Railway Labor Act and that they favor the bill introduced by Senator DONNELL, of Missouri, Republican, which proposes compulsory arbitration of disputes on railroads.

This means that collective bargaining has broken down among the railroads, just as it has broken down in the steel, coal, and motorcar industries, respectively. The Nation has suffered incalculable economic losses.

It is plain to see that legislation regulating and restricting labor union power to damage the public interest awaits only the election of a Congress courageous enough to stamp out monopoly. The Supreme Court may be expected to declare such legislation constitutional. Clearly the labor union chiefs are overreaching themselves and making anti-Democratic Party votes every day, particularly among the families of the workers themselves.

Background on FEPC

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter published in the New York Times this morning, written by one of the most distinguished citizens of my State of Connecticut, Mr. Walter White, whose recent reelection as executive secretary of the National Association for the Advancement of Colored People assures the people of the United States of his continuing leadership of those great causes with which the people of the United States associate his name.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BACKGROUND ON FEPC

To the EDITOR OF THE NEW YORK TIMES:

I ask permission to submit some first-hand evidence in support of Senator BENTON'S assertion that we need legislation to lessen violations of civil and human rights and thereby take away from Soviet Russia and other critics their most valuable ammunition against us in areas such as Asia, Africa, and Latin America, which contention Arthur Krock derides in his column of May 11.

On a recent tour of the Caribbean, on a trip around the world last year, on a European tour in 1948, and on two trips overseas as a war correspondent, I witnessed tragic evidence that both nonwhite and white peoples believe less and less we are telling the truth about our devotion to freedom and equality as long as racial and religious discrimination continues here at home. American Ambassadors and other officials overseas told us everywhere that this is the $64 question with which we are confronted all the time.

Even less explicable is Mr. Krock's statement that "according to available records, a detailed demand for the FEPC and other antidiscrimination laws in behalf of Negroes first appeared in the Communist Party platform of 1928 * * *."

This is a McCarthyism if ever there was one. I was present at the White House conference in 1941 when for the first time a Fair Employment Practices Committee was created and named. It came into being as a result of a threatened march on Washington which was conceived by that most anti-Communist trade-unionist, A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters, an AFL union.

Such aims were voiced 19 years before the Communists did so in 1928 in the call which resulted in formation of the National Association for the Advancement of Colored People in 1909. Negro churches and other organizations have cried out against denial of the right to work by employers and labor unions long before the October revolution and even before Marx and Engles began to write. Mr. Krock does a dangerous disservice to accuracy and reason when he states that Negroes and other Americans opposed to job discrimination aped the Communists instead of its being the other way around.

WALTER WHITE.

NEW YORK, *May 11, 1950.*

Big Gas Companies Real Scuttlers of Kerr Bill

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Colorado. Mr. President, an honest fearless militant Progressive clears up the Nation's $65 puzzle. Eugene Cervi, a fighting crusading liberal Democrat puts the finger on the opposition to the Kerr gas bill which was vetoed by the President last month. In an editorial in Cervi's Rocky Mountain Journal whose publishers have the nerve to call a spade a spade when he sees a spade, says the big pipelines who own large gas reserves plus the pipelines serving them "were directly responsible for the request of 18 mayors to the White House to veto the measure." It is a serious charge to say that the 18 mayors of our great cities were yes-men for the big natural gas companies in seeking a veto, but I believe Eugene Cervi is absolutely right when he accuses them of doing so. I ask unanimous consent to insert the Cervi editorial in the Appendix of the RECORD where it may stand as a rebuke to the greedy gas companies and their too willing helpers.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BIG GAS COMPANIES REAL SCUTTLERS OF KERR BILL

It's all over—at least until next year—but the key fact in the fight over the Kerr-Harris natural-gas measure never was reported to the press.

The chief opposition to the bill came from a few big natural-gas companies engaged in producing and transporting natural gas who would have gained no benefits from the measure.

Led by Pan Handle Eastern Pipe Line Co., and United Gas Pipe Line Co., these segments of the industry inspired much of the opposition to the measure that led to a Presidential veto. They were directly responsible for the request of 18 mayors to the White House to veto the measure.

The veto came only because the storm of opposition mounted into a widespread clamor for rejection of the House and Senate passed proposal.

The opposition of the big pipe-line companies sprang from the fact the Kerr-Harris measure would have stymied legislative plans of their own. When they produce their own gas, it is under price ceilings, giving their producing and transporting operations as a whole a certain percentage of profit—generally about 6 percent. By defeating this bill, they hope for a broader measure in a year or two, that will take off FPC controls from gas sales by their own integrated production operations.

Transfer of Watson Laboratories

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a news story appearing in the Rome Daily Sentinel of April 29, 1950, under the title "Foster Urges Lab Transfer in Nation-wide Broadcast," which refers to the transfer of the Watson Laboratories from Eatontown, N. J., to the Griffiss Air Force Base at Rome, N. Y.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOSTER URGES LAB TRANSFER IN NATION-WIDE BROADCAST

The Watson Laboratories transfer situation was carried to millions of listeners yesterday over the Nation-wide hook-up of the Mutual Broadcasting System.

In his 1 p. m. broadcast, Cedric Foster, Mutual news commentator, speaking from WKAL, said a tour of Griffiss Air Force Base left no doubt in my mind as to why Watson Laboratories should be moved from New Jersey to this up-State New York city * * *. In the interest of economy and efficiency it is the logical thing to do.

TOURED BASE

Mr. Foster told his listeners from coast to coast:

"Here in Rome, N. Y., I visited Griffiss Air Force base, which is one of the outstanding Air Force bases in the world, in a tour of inspection which left no doubt, in my mind, as to why Watson Laboratories should be moved from New Jersey to this up-state New York city.

"Griffiss Air Force base was originally constructed as an aircraft maintenance and supply depot at a cost of about $36,000,000. The replacement cost is estimated at sixty-six million.

"The base comprises an area of five square miles. The buildings are of permanent construction and they are in excellent condition.

They are air-conditioned, centrally heated, and extremely well-lighted. They are surrounded by excellent concrete highways and the base is amply served with rail and truck terminals.

"IN POOR BUILDINGS

"In addition to this, the base has a first-class airport with runways and aprons. The air base is complete with administration building, signal tower hangars which can be used in connection with the type of work done at Watson Laboratories. The hangars are right now being used and they are housing the experimental type of aircraft which are necessary to the work of the Watson Laboratories which are in New Jersey.

"The Watson Laboratories in Eatontown, N. J., are housed in temporary quarters built during the last war, made out of wood siding and tar paper construction. There is no landing strip at the Watson Laboratories so you have to drive 40 miles to McGuire Air Force base * * * if you want to engage in active test work.

"It is no wonder the majority report of the House Armed Services Subcommittee recommended that Watson Laboratories be moved to the Griffiss Air Force base here in Rome, N. Y.

"In the interest of economy and efficiency it is the logical thing to do.

"What will be the work that is done here * * * electronics. At this magnificent field the Air Force can concentrate its electronics experimentation work and it is to be hoped that the Congress will see to it that this work is carried out at Rome, N. Y."

The Railway Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent that there may be set forth in the Appendix of the RECORD the lead editorial of today in the New York Times entitled "The Railway Strike," the concluding four sentences of which read:

The present strike may be said to represent the logical culmination of a labor trend that has been in progress on the railroads now for a decade. More and more the unions have moved in the direction of abiding by the decisions of fact-finding boards only when those decisions were favorable. But if the enactment of the Taft-Hartley Act in 1946—

That should have been 1947, Mr. President—

proved anything it was that sooner or later labor legislation catches up with trends of this kind. If the railroad unions will not accept decisions which are not legally binding, then nothing could be more certain than that ultimately they will have to reconcile themselves to a labor-management policy under which decisions will be binding.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RAILWAY STRIKE

On May 23, 1946, two of the big railroad brotherhoods—the trainmen and firemen—walked off their jobs in protest against a decision of a fact-finding board awarding them a wage increase of $1.28 a day instead of the $2.50 they had demanded. In a Nation-wide radio address the following evening President Truman appealed to the membership of the unions over the heads of their leaders. His strong speech won immediate support from the Nation and broke the back of the strike. Among those who were outspoken in support of the President in his appeal to "get transportation moving" was the head of another of the Big Four railroad brotherhoods. This union leader was David B. Robertson, chief of the railroad firemen. Interviewed by newsmen, Mr. Robertson publicly denounced A. F. Whitney, leader of the trainmen, and Alvanley Johnston, head of the engineers. They were, said he, two men who were "grasping for power."

Ironically, it is this same David B. Robertson who has now called members of his own union off the job in open defiance of the decision of a Presidential fact-finding board and of the public welfare. True, in the case of the 1946 strike the Government had seized the railroads 5 days before the walk-out took place. So in that case it might be said that technically the two brotherhoods were striking against the Government. But the "seizure" of the railroads in cases such as this—as the brotherhoods themselves have frequently protested—is essentially a legal device employed for the protection of the public. In his radio appeal to the Nation 4 years ago the President denounced the walk-out as a challenge to the Government, but his principal stress was on "the specter of starvation and death that will result from the course which Mr. Johnston and Mr. Whitney are following."

It may be argued also, that in contrast with the walk-out of 1946 the strike of the firemen which began last Wednesday is not Nation-wide in scope, but is confined to four railroads. That argument, however, does not stand even the most casual scrutiny. In the first place, the only reason that all the railroad firemen have not been called off the job is that, as their leader knows from earlier experiences, such as that of 1946, such action would automatically bring the Government into the picture. Mr. Robertson apparently is convinced that he has discovered a new and clever technique which, like John L. Lewis' 3-day week, will enable him to put the squeeze on the railroads, industry, and the public without precipitating an immediate country-wide crisis. In this he is no doubt counting to a considerable extent upon the negative support of the administration, which, as we have seen in the case of Mr. Lewis, is notoriously slow to recognize the symptoms of a national emergency. But the four roads against which the strike was originally directed (it has now flowed over into a fifth, the Union Pacific) are the Pennsylvania, the New York Central, the Atchison, Topeka & Santa Fe, and the Southern. And it is hardly necessary for the public to be told that, in the words of the Chairman of the Interstate Commerce Commission, "You can't strike on these four railroads without demoralizing the entire industry."

Meanwhile, if there are differences of degree of irresponsibility among strikes entered upon in a defiance of the public and the constituted authorities, then in one respect this strike of the firemen surpasses any of its predecessors. Hitherto, major railroad strikes have been resorted to only when debatable differences of opinion existed over such issues as wages and hours. What sets the present walk-out apart more than any other thing is that the issue is not even arguable. The union has struck because the railroads will not assign two firemen to every Diesel electric locomotive, although Presidentially appointed fact-finding boards have ruled flatly, not once, but twice, that there is no earthly justification for this brazen proposal for "featherbedding."

The present strike may be said to represent the logical culmination of a labor trend that has been in progress on the railroads now for about a decade. More and more the unions have moved in the direction of abiding by the decisions of fact-finding boards only when those decisions were favorable. But if the enactment of the Taft-Hartley Act in 1946 proved anything it was that sooner or later labor legislation catches up with trends of this kind. If the railroad unions will not accept decisions which are not legally binding, then nothing could be more certain than that ultimately they will have to reconcile themselves to a labor-management policy under which decisions will be binding.

The "Economy Brands" Make Their Case

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 16 (legislative day of Wednesday, March 29), 1950

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The 'Economy Brands' Make Their Case," dealing with the subject of a tax differential for economy cigarettes, published in the Richmond News Leader of May 10, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE "ECONOMY BRANDS" MAKE THEIR CASE

In voting 13 to 12 last week in favor of reducing the Federal excise tax on "economy brand" cigarettes, the House Ways and Means Committee struck a blow for fair play that has been 16 years in coming. Since 1934 the makers of Dominoes, Wings, Marvels, and other low-priced cigarettes have been fighting for an equitable readjustment in tobacco taxes that would permit a more wholesome price competition in the cigarette industry. Their battle still is far from being won.

All cigarettes now carry a flat Federal tax of $3.50 per thousand, or 7 cents a package. The bill approved by the committee last week would retain this tax level for the dominant brands that sell ordinarily for 17 or 18 cents, but would establish a tax of only $2.45 a thousand, or not quite 5 cents a package, on the "economy brands." In short, the bill would apply the familiar ad valorem basis to cigarette taxation, and thus would bring cigarettes into the same tax structure under which most other commodities now are taxed by the Federal Government—fur coats, for example, and cigars, theater admissions, railway tickets, telephone bills, and night-club checks. It manifestly is unfair for the cheaper cigarettes to carry the same dollar burden of taxation as that carried by the more expensive brands. Under the pending bill, their tax rates would be the same—some 41 percent of the retail price.

At the peak of their popularity, in 1939, the "economy brands" claimed only 14.8 percent of the total United States retail cigarette market. Now they have less than 1 percent of the market. Unless tax relief is provided, some of the remaining 18 manufacturers may "give up the ghost" and let their brands go the way of Richmond Straight Cut and Melachrinos. The Treasury Department, which suddenly reversed its favorable view of this bill last February, has a strange notion that the tax cut might result in the "economy brands" taking 25 percent of the

market, with a resultant tax loss of $90,000,000 a year. This sounds like pipe-dream forecasting to industry observers — they reckon the loss at $10,000,000 at most—and from one standpoint is irrelevant, anyway: If the tax is unjust and regressive, if it tends to protect the status quo under which five companies claim 95 percent of all sales at the expense of smaller companies, then the tax should be adjusted to a more equitable figure. Some brisk competition among the "economy brands" would have a healthy effect on the cigarette industry's "big three" or "big five," and might well result in greater sales for the industry as a whole with corresponding benefits to growers and a gain in revenue, instead of a loss, for the Treasury. This is a good bill, aimed at correcting an ill-advised tax discrimination. We commend it respectfully to our readers and to the Virginia Congressmen who are concerned, not only with fair play but also with the good health of an industry that means so much to this State.

For a Free and Independent Slovakia

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. PRICE. Mr. Speaker, at the request of Mr. John Sedlacek, chairman of the Southern Illinois Slovak Federation, 1321 North Thirteenth Street, East St. Louis, Ill., and under leave to do so, I herewith extend in the Appendix of the RECORD an article which appeared in Jednota, largest Slovak Catholic weekly in the United States, published in Middletown, Pa., by the First Catholic Slovak Union.

I am personally well acquainted with Mr. Sedlacek. I know of his high standing in his home community and the fine character of this man. He is among the Americans of Slovak ancestry who would like to see their countrymen rid themselves of the communistic yoke. I have the feeling that men like Mr. Sedlacek and those who work with him in this country, through their encouragement to their relatives and friends in the old country, will provide the spark that will give these people the courage to continue their resistance to communism and eventually gain real freedom for their native land.

The article follows:

FOR A FREE AND INDEPENDENT SLOVAKIA—THE ORIGIN AND AIMS OF THE SLOVAK NATIONAL COUNCIL ABROAD

(By Peter Pridavok)

I

Prior to the Munich crisis in 1938, there existed—as is commonly known—a very strong autonomist movement in Slovakia, aiming at home rule within the framework of a dual Czech-Slovak state, as it had been originally conceived by the great majority of Slovaks, and also by many Czechs. But for a long time there was nothing that could be called an open mass-movement among the Slovak population for the complete separation of their country from the former Bohemian crown lands to which it has been annexed as a result of the dismemberment of Austria-Hungary in 1918. The attitude of the racial minorities, especially of the Magyars, was, of course, different. They had never completely given up their hope for a reunion with Hungary, their mother country, and even if they did adopt an autonomist attitude for immediate practical purposes, their long-term policy was separatism.

One can hardly speak of a unity of purpose between the Slovak autonomists and the Slovakian Magyar separatists—but in one thing they certainly were united, in their intense dislike and resentment of the strongly centralistic rule of the Prague administration which looked upon Slovakia as a Czech colony and under which the autochthonous Slovaks and Magyars suffered equally, though their grievances were not always of the same order. Had it been possible to coordinate the basic policies of the two discontented racial groups (the German minority played only a minor role in Slovakian political life prior to 1938), Czech centralism and unitarism, i. e., the false ideology of a united Czechoslovak nation, could not have survived for very long in its guise of a democratic government. It would have been forced either to yield to the overwhelmingly anticentralist vote or else to discard the mask of democracy altogether and to resort openly to sheer coercion and dictatorship. A glance at a few election figures will show how hopeless would have been the position of the Czech Government in Slovakia, had her autochthonous inhabitants been able to find a common platform. The anticentralist (autonomist and separatist) political parties, such as the Slovak People's Party, the Slovak National Party, the Christian Social Party, the Magyar, and the German National Parties, plus the Communists who, until 1935, when the Czechoslovak-Soviet Pact was concluded, were vociferously separatist, denouncing the Slovak autonomists as traitors for having only demanded a home rule, and not a separate Slovak state—in all parliamentary elections, with the exception of the 1920 ones which, however, cannot be regarded as normal democratic elections, received an overwhelming majority of votes (though not of seats)—owing to clever gerrymandering.

	Total of valid votes recorded	Autonomist and separatist votes
Election year—		
1920	1,341,191	378,958
1925	1,425,595	918,995
1929	1,434,926	801,931
1935	1,625,549	[1] 991,551

[1] This figure includes the number of votes cast for the Communist Party [210,785] which, on Moscow's orders, joined the centralist camp, after Dr. Benes had signed a treaty of alliance with Stalin in 1935.

The progovernment (centralist) vote would have been even much smaller but for the more than 200,000 Czech colonizers settled in Slovakia by the government for the purpose of Czechizing the Slovaks, and for the intimidation (or bribing) of voters dependent on the government, such as civil servants, teachers, etc.

The homesickness of the Magyars was quite understandable from their point of view. But it necessarily became the main, if not the only reason for the slovaks' refusal to join forces with them against the odious Prague centralism. The resentment of the Slovaks against the betrayal by Masaryk and Benes of the Pittsburgh Agreement and of numerous other Czech-Slovak compacts between various bodies and individuals abroad during the war years 1914–18 was great, and anti-Czech feeling ran, at times, deplorably high. But their fear and anxiety, lest Slovakia should once more become a dependency or province of Hungary, was even greater. Thus, although they were far from feeling happy in the new, diminutive Czechoslovak replica of the former Austria-Hungary, they considered it a lesser evil than the possible return to Hungary, and accepted the Czecho-Slovak State as a temporary expedient, created without their active consent by the Paris peacemakers, but regarded as necessary while the peace settlement prevailed.

This temporary acceptance of Czecho-Slovakia (supposing it would have more far-reaching changes in its constitutional structure) did not mean, of course, that the Slovaks were prepared to give up their aspirations for a fully free and independent nationhood within the limits compatible with a wider federal organization comprising as many of the central European nations as possible; it only meant acquiescence in a postponement of the realization of their ultimate national ideals, for no nation renounces its freedom and independence voluntarily and forever. The Pan-Czechs, such as the Czech politicians who tried to increase the numbers of the Czech nation by a simple arithmetical operation, namely (by the addition to it of 3,000,000 Slovaks), did their utmost to convince the Slovaks—and the world at large—that it would have been for their own good, if they had assented to national extinction, but without any success. The Slovaks did not forget that once upon a time, more than 1,000 years ago, their ancestors had had a State of their own (the Nitra Principality) which, in its later development (as Great Moravia) was—although only for a short period of about one century—the most powerful State in central Europe, comprising besides modern Slovakia also the greater portion of modern Hungary, a good slice of Poland, the whole of the modern province of Moravia, which then extended into Austria, and had, for a brief period, conquered also the Czechs of Bohemia.

Nations, like the proverbial elephant, have long memories, which are even strengthened when adversity befalls them. It is therefore understandable that the Slovaks, after the downfall of Great Moravia, circa A. D. 906 have never ceased to dream and to sing about the glory that was Nitra, Prince Pribina, and King Svatopluk.

The memory of a once free Slovak nation appealed to them even throughout the eight centuries during which their national consciousness was being reduced to an almost thanatoid state in the feudal kingdom of Hungary, the official language of which was Latin. And when the French Revolution roused the sopite national feelings of the until then, almost amorphous masses of central European humanity, the Slovaks, too, began to return to national life. At that time their popular leaders did their best to revive and to strengthen the Great Moravian tradition. It was in this sense Juraj Fandli (1754–1810) wrote in his popular works on husbandry, and it was these past memories the poet Jan Holly (1785–1849) glorified in his epic poems modeled on Homer's Iliad.

The memory of the past national greatness also prompted the army of Slovak insurgents against Magyar domination, in 1848–49, and the political leaders who demanded from the Emperor of Austria the setting up of a Duchy of Slovakia as an autonomous province of his dominions. This same idea was expressed in a memorandum submitted to the Emperor Francis-Joseph in 1861, pleading for the "recognition of our national individuality on the territory inhabited by our people," the creation of a (Slovakian) province of upper Hungary and the division of the country into counties readjusted on nationality lines.

Even the Slovak emigrants who had left Hungary to become citizens of the New World where there was more freedom and more bread for them, nurtured the idea of a free Slovakia in their newspapers and other publications, and at the beginning of this century founded an organization (the Slovak League of America) whose aim was—and still is—the liberation of the old country. Toward the end of the First World War,

when the edifice of the Habsburg monarchy was crumbling, Dr. F. Juriga, then the only Slovak representative in the Hungarian Parliament, voiced the true sentiments of his people when he declared before angry Magyar deputies (October 19, 1918), that the Slovak nation wished to establish a national state of their own on the tradition of the Great Moravian Empire of Rastislav, Svatopluk and Cyril and Methodius.

These ideals fell short of realization at that time, mainly because of the machinations of Masaryk, Benes, and their associates who had succeeded in convincing the Entente Governments, on the one hand, that the Czechs and Slovaks were in fact two branches of the same nation (cf. Masaryk's fallacious assertion: "The Slovaks are Bohemians in spite of their using their dialect as their literary language," in his memorandum submitted to Sir Edward Grey in April 1915), and, on the other, the Slovaks, that the creation of a Czecho-Slovak state was their only chance and the only way of release from the Magyar bondage.

At first the Slovaks accepted this Czecho-Slovak solution, but only on the supposition that Slovakia would be a fully self-governing part of the dual Republic. When, however, they became acquainted with the real aims of the Czech ruling group (amalgamation of the Slovaks with the Czechs in a single national unit), and when they saw the colonizing policy of the Prague administration, they grew more and more convinced that Czecho-Slovakia promised as bad a prospect for the future of the Slovak nation as Hungary had before. Andrej Hlinka, the most popular national leader, from a Czech prison, foretold the fall of Czecho-Slovakia as early as 1920. The shortsighted and extremely selfish policy of the Prague rulers precipitated the complete disruption of the brotherly links between the two kindred nations, so that already in 1933, when Slovakia celebrated the one thousand one hundredth anniversary of the Slovakian Prince Pribina, Czecho-Slovakia was morally finished, insofar as the Slovaks were concerned. Only their fear of Hungarian revisionism prevented them at that time from shaking off the Czech overlordship. But from that year onward the dissolution of the unhappy Czech-Slovak marriage was a foregone conclusion—it was only a question of time and of circumstances. An opportunity presented itself in the troubled months between September 1938 and March 1939, and the Slovaks seized it, as would any nation in a similar predicament.

II

It was a misfortune for the young Slovak state, that it has come into existence on the eve, and not on the morrow, of a great war that was bound to reshape the map of the world, and a tragedy that Hitler had been its godfather. The cause the Slovaks had been fighting for was as just as any great national cause in history. But the circumstances in which its temporary victory had been brought about, were sufficient to discredit it in the eyes of the western democratic world, ignorant of the plights of the Slovak people in the "model democracy" of Czechoslovakia. This the Slovak leaders, and even the people at large, knew only too well. But they could neither halt nor alter the course of events, for after Munich, the smaller nations of central Europe were left without any alternative to determine their actions. And so the joy of the Slovak people at the rebirth of their nation after more than 1,000 years was mixed with great anxieties with regard to the future.

Perhaps other people in central Europe were in such a bad predicament; they had been fighting for their freedom and independence, yet the democratic West, which was engaged in a deadly struggle in the defense of freedom, had turned deaf ears on them, while Hitler, the self-confessed destroyer of freedom of all non-Teutonic nations, as well as of Christianity to which they were deeply attached, had—for his own, and only temporary reasons—adopted the championship of their freedom. They had no illusions whatever that if Hitler had won the war, their independence, such as it was, would have been destroyed in the same way as the independence of Poland was destroyed. On the other hand, they were being told, day and night and in and out of season, that if the Western Allies won the war, Benes and his following would be given a free hand to take their revenge on the Slovaks for having dared even to dream of freedom, for which the former purported to have been fighting.

And Benes (with all his following) was seething with revenge. When the author of these lines—who had left his country immediately after the outbreak of the war, in order to work for the freedom of his people on the side of the Allies—arrived in Paris on October 15, 1939, he was greeted thus by the commanding officer of the Czechoslovak military units which were then forming in the southwest of France: "Well, I hope you have come to join our ranks and that you will have nothing in common with that autonomist scum. For I must tell you, that after the war, we are going to settle the so-called Slovak problem very thoroughly and for good: we'll shoot or hang some thirty to forty thousand Slovak separatists, and the question of Slovak autonomy or independence will be rid of forever." Although Benes was then not yet recognized as President of a nonexistent Czechoslovakia by any of the western governments, this democratic attitude, voiced by one of his lieutenants, was surely alarming enough, and for good reason, for later, when Benes had succeeded in establishing his position with the western governments, the anti-Slovak tone became frequent in the Czechoslovak press and radio propaganda.

In the evening of the same day, the present writer met Dr. Milan Hodza, the former Prime Minister of Czechoslovakia, himself a Slovak, and told him about his experience with that liberating hero. Of course, he was outraged and disgusted, but did not think that the time was ripe for starting a separate Slovak political action as had been suggested to him by the present writer.

A few months later, however, Dr. Hodza himself initiated the formation of a Slovak National Council, which was duly established at the beginning of January 1940, with Dr. Hodza as President, and the present writer as General Secretary. At that time it was not possible to inaugurate in France a political action for a separate Slovak state, for several reasons. First, there were very few politically minded and educated Slovaks in France. Second, Dr. Hodza, though after his long experiences with the pan-Czechs was quite favorably disposed to the idea of a free Slovakia, felt that as a former Cabinet Minister of long standing, and later Prime Minister of Czechoslovakia, he could not well engage himself in an action that would have belied his political past. And last, but not least, Dr. S. Osusky, who since the disintegration of Czechoslovakia was continuously recognized by the French Government as Czechoslovak Minister, warned Dr. Hodza, the present writer, and the handful of the Paris Slovaks, against any separatists Slovak action, asserting—quite falsely, as he himself confessed later—that the French Government would review it with the utmost disfavor and hostility.

The Slovak National Council therefore restricted its political postulates to the October program, that is to the wide political autonomy within a federal Czecho-Slovak Republic which has been achieved in October of the previous year. It therefore joined up with the preparatory committee for a Czech National Council constituted in the meantime by a Czech group disapproving of the policy of the Benesites, which had accepted this Slovak program, and the two bodies acted henceforth as the Czecho-Slovak National Council in Paris, each of them retaining its distinct individuality in matters concerning their respective nations. At that stage the council considered its task was mainly to counter—with the very limited means at its disposal—the authoritarian and violently anti-Slovak activities of the Czechoslovak National Committee formerly under the auspices and actual headship of Dr. Benes. Considering that in the given circumstances and in the atmosphere which then prevailed at the Quai d'Orsay, the only possible way of fostering its ends would be to play an active part in the national committee, which in the meantime had been recognized—thanks to the efforts of Mr. Osusky—by the French, and consequently by the British, Governments. It therefore announced its establishment to the national committee (Dr. Osusky was informed beforehand), as well as to the French Government, and demanded an adequate representation on it. By a letter dated January 16, 1940, Msgr. Sramek, the nominal head of the committee, refused, on consulting Dr. Benes, to recognize the council and to deal with it, but—characteristically for the mind of the whole group—invited Dr. Hodza personally to join the committee which he declined.

The Czecho-Slovak National Council in Paris could not develop any large-scale activities, mainly because the Benes committee, being recognized by the French Government as an allied quasi government (though not on the same footing as the Polish Government of President Raczkiewicz), made use of this situation and of the various wartime regulations restricting political activities, and by denouncing the council as disruptive and even pro-Nazi, succeeded in checking and isolating it almost completely. The following little incident illustrates the situation which then prevailed in Paris. Some time in February or March the council had agreed to issue a proclamation to the Slovaks and Czechs residing in France. Its text was sent to the printers, where it was confiscated and the setting up destroyed by the French police on the instigation of the committee who had somehow got wind of the proclamation through one of the spies in the printing works.

After the collapse of France the council ceased to exist. Only one of its members, the present writer, succeeded in escaping to Britain (Dr. Hodza was living in London), and he was interned on his arrival by the British authorities, who had been told by the Benes committee that he was a Nazi agent, and was held in detention for 10 months. Some of the members of the Czech National Council were treated similarly.

Russia—and Alaska Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1950

Mr. BARTLETT. Mr. Speaker, the Senate Interior and Insular Affairs Committee has completed hearings on the Alaska statehood bill following passage of that measure by the House on March 3. Under leave to extend my remarks in the RECORD, I wish to include a statement which Julius Epstein of the Friends of Democracy, Inc., of New York City, had planned to submit to the Senate committee in support of the issue

which is so important to the Nation, as well as to Alaska. That statement was not submitted as the hearings had closed, but I am particularly anxious to have it made available because it contains information not previously brought together as to the views of Soviet Russia regarding Alaska:

Mr. Chairman, I greatly appreciate the opportunity to testify before your committee. I am here to testify in support of granting full statehood to Alaska.

Alaska is our direct frontier with the Soviet Union. Only 4 miles of water, which is ice the larger part of the year, separate Little Diomede Island, which belongs to Alaska, from Big Diomede Island, part of the Soviet Union. The International Dateline which is also the border line between the Western Hemisphere and Asia, runs between these two islands.

Today, I do not want to dwell on the rather well known strategic importance of Alaska. As long as more than 30 years ago, the prophetic Gen. Billy Mitchell predicted that the nation that holds Alaska, can rule the world if it chooses. He also called Alaska the Achilles heel of America.

I do want to call the attention of this committee and the public to the rather forgotten fact that there is evidence for the existence of a Soviet campaign for the recovery of Alaska.

Time and again the greatest American newspapers which are well aware of their responsibility referred to this campaign. From my big file on Alaska, accumulated during the last 10 years, I just want to quote a few—and there are many more—examples.

On June 29, 1940, the New York Herald Tribune carried an article written by its staff correspondent Ansel E. Talbert. The article appeared under the date line Nome, Alaska, June 28. Its title was "Alaska Puzzled by Reds Moving to Nearby Isle." I quote:

"On Tuesday, in Juneau, the Alaskan capital, Gov. Ernest H. Gruening told this correspondent that the reason for the sudden Russian activities on Big Diomede, of which he had been told by Nome residents, constituted one of the greatest mysteries in the north. Prof. Cecil F. Robe, of the University of Alaska, a noted student of Alaskan and Russian history, also expressed surprise, but pointed to a recent story in Pravda, the official Communist newspaper. The story, Professor Robe said, asserted that the sale of Alaska to the United States was illegal and a robbery because the Russian Czar did not consult the people about the transaction."

A few weeks later, to be accurate, on August 11, 1940, the New York Times published an article by its famous correspondent and writer Hallett Abend under the headline: "Threat to Alaska seen in red force." After dealing with the military preparations on the east Siberian coast, some 50 miles from Alaska proper, Hallett Abend continued:

"The United States does not threaten Russia's position in the northeastern part of Asia, and the region is far from Japan's plans for Asiatic mainland expansion. In the opinion of military and naval men here, this vast and secret military development can mean only a Soviet design against sparsely populated and poorly defended Alaska, which was Russian territory before the United States bought it.

"Soviet newspapers and magazines have been devoting much space to Alaska and its riches while articles extol the deed of Czarist generals and admirals of a century ago. There is an intensification of the campaign for 'recovery of rich lands that once belonged to Russia but do not belong to the USSR because they were ineptly lost or corruptly sold later when the dynasty became decadent.'

"Since the only territory that Czarist Russia ever sold outright was Alaska, the implications are plain.

"The thousands of young Russian men and women who are being settled in northeast Siberia are all representatives of the 'younger generation' that has matured entirely under Soviet control. They are said to be carried away with the idea that they are to be the glorious conquerors of the world, that they must sow the seeds of revolution everywhere, and that, to quote from a Vladivostok newspaper, their mission 'first of all is to get their hands on Alaska which idiotically was sold to capitalist America by the Czarist Government.'"

Six years later, in August 1946, the Scripps-Howard newspaper chain sent its staff writer Jim G. Lucas to Alaska in order to make a thorough inquiry into the political and economical problems of the country with special stress on Soviet-Alaskan relations.

Jim G. Lucas did an excellent job. He wrote a series of six articles under the headline, "Alaska—First Line of Defense." In New York, Lucas' articles appeared in the World Telegram. Publication started on August 26, 1946.

It is right in the first article that Lucas states, I quote:

"The Soviets never have conceded the Czar's right to sell Alaska. Russian airmen and seamen stationed in Alaska during World War II openly referred to it as Russian territory.

"Along the Siberian coast, Russia has hastened completion of at least one major air and naval base.

"Her patrol planes fly daily over American bases in the Aleutian Islands, while at the same time our planes are denied the air over Siberia.

"At Umiat, where the United States Navy is drilling for oil in its 35,000 square-mile Barrow Basin, trouble may be brewing. The discovery of high-grade petroleum in commercial quantities conceivably can arouse the cupidity of other nations."

In his third article, appearing on August 28, 1946, Lucas has the following to say:

"Navy's discovery of a 'second Iranian oil field' in its 35,000 square-miles reserve around Point Barrow and Russia's stubborn refusal to admit legality of the Alaskan purchase in 1867 may soon bring tension to a new high."

Lucas' fourth article which appeared on August 29, 1946, deals with the attitude of the many Russians who came to Alaska during World War II. He has this to say:

"Native Alaskans have been told for many years that the U. S. S. R. does not admit legality of the Czar's sale of Alaska in 1867. An authority who spent 3 years at Cold Bay supervising the transfer of lend-lease ships to the Russians said he failed to contact one Russian officer who did not refer to Alaska as Soviet territory."

Latest reference to the Soviet refusal to admit legality of the United States' Alaska purchase of 1867 can be found in the March 19 issue of this year of the New York Journal-American and the other Hearst papers. I mean an excellent article by Gov. Ernest Gruening. This article by the present Governor of Alaska was inserted in the CONGRESSIONAL RECORD of March 20, 1950, by the Honorable E. L. BARTLETT, Delegate from Alaska. I just want to quote four short paragraphs from Governor Gruening's article. Here they are:

"We are in grave peril of losing another year. We are inviting attack through our back door, left conspicuously ajar.

"It is left ajar for invasion by an enemy who does not acknowledge the validity of the sale of Alaska by the Tsar.

"It is, from the Soviet standpoint, still 'Russian America.' They mean, if we will let them, to hold that part of America physically, permanently.

"Statehood—the full incorporation of Alaska into the Union—is the one clear answer America can make to this oft-uttered threat of annexation following invasion."

The quotations quoted in this statement represent only a very small part of my file on Alaska. However, they suffice to illustrate the point that there can be no reasonable doubt whatsoever that the Soviets carry on with their campaign for recovery of Alaska. Since Stalin is certainly more intelligent than Adolf Hitler, his ally of 1939, he did not yet register any official claim to the Territory of Alaska. But, as the quotations contained in this statement indicate, Stalin obviously not only permits such a campaign but wants it carried out, at least for inner consumption.

America could pronounce no clearer "hands off Alaska" than by granting full statehood to Alaska, and by granting it now.

Resolution on Germany

EXTENSION OF REMARKS
OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1950

Mr. HOLIFIELD. Mr. Speaker, the other day the newspapers carried a news item that was an insult to every free man and woman. A dispatch from Bonn revealed that 13 out of 14 newly appointed diplomatic officials of the West German Government were former Nazi diplomats. Thirteen faithful servants of Joachim von Ribbentrop, who was hanged for conspiring to make Germany rule the world, are going to represent what is considered the democratic Bonn government.

The fact that such appointments are being made by the Germans is in itself sufficient reason to appoint an investigating committee such as my resolution envisages. Actually, the case of the diplomats merely highlights the degree to which Nazis have infiltrated into German political, judicial, economic, educational, and cultural life, obtaining in many cases the most important positions. It would literally take days to only read to the House the names of Germans whose membership in the Nazi Party has proved an asset rather than a liability in their postwar careers.

Over a year ago a high Bavarian official reported that 90 percent of the judges in Bavaria are former Nazis. An on-the-spot investigation by Dr. Joseph Mire, American trade-union official, disclosed that 50–70 percent of all Bavarian government positions were being held by former Nazis. On the one hand, 32,744 Bavarian officials were former party members; compare these figures to the 1,095 officials who had been persecuted during the Hitler regime.

In almost every section and sphere identical Nazi infiltration obtains. Three presidents of denazification courts in Germany denounced the travesty of justice that goes under the name of denazification whose result has been, they pointed out and I quote, "That many state offices have become restricted

Nazi organizations." Almost 600 mayors in Hessen are former Nazis. Or, to take another typical case, the mayor of Schwaebisch-Gmuend who was elected with a plurality of 75 percent is a former SA Oberfuehrer. In the field of education many thousands of ex-Nazis have returned to their old teaching jobs. One of them, according to Dr. Alonzo G. Grace, former Director of the United States Education Division in Germany, teaches the alphabet as follows, "A is for Adolf, H for Hitler, G for Goebbels."

In the great industrial center of the Ruhr, most of the managers of the giant iron, steel, and coal enterprises are former Nazis. They represent the interests of the very same industrialists who put Hitler into the saddle as they have powered Germany for three wars through their alliances with various nationalist and militarist groups. Some appointments have been so shocking that Germans have struck in protest, as when former SA Obersturmfuehrer Grewe became a member of the Ruhr Board of Transportation. With the approval of American occupation authorities top experts who helped Hitler run his war economy now run the economy of the West German state—as if men like Maltzan, Dinkelbach, Abs, Albert, and Puender were trustworthy allies and guardians of a peace-loving, democratic, and spiritually rejuvenated Germany.

Can anybody doubt that the mass return of the Nazis presents as great a challenge as a major military defeat? To leave that challenge unanswered would be a calamity of the first order and completely nullify our victories on the battlefield. I for one propose, in concert with the Members of this House who are cosponsoring this resolution, that an investigating committee be sent to Germany at the earliest convenience of the President of the United States.

Welcomed to Nebraska

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. MILLER of Nebraska. Mr. Speaker, the President is returning to Washington today from a "nonpolitical" trip made at the expense of the taxpayers. While it was a costly junket and ended up in a political rally in Chicago, I am hoping that President Truman and his advisers learned what the people think about the free spending, Government-do-all policy he is promoting, which is throwing the Federal Government further and further into the red during a period of prosperity in which we should be paying off our huge debt. If they learn this lesson the money for the junket may not be ill spent.

The President had a good opportunity to learn their thoughts as he traveled through my State and district. We are a thrifty people and still believe in the old-time virtues of thrift and individual initiative in the solution of our problems. We believe in matching the things we would like to do against our ability to pay for them. But let the editorial in the Alliance (Nebr.) Times-Herald of May 9 tell the story:

GOP WELCOME MESSAGE TO TRUMAN IS MASTERPIECE

The National Republican Committee can take a leaf out of the book of the Nebraska wing of the party in confronting the Truman "nonpolitical" tour. Instead of waiting for the President to make some slip, such as: "I like Ol' Joe Stalin," the Nebraska committee used the Truman visit to Nebraska to go on the offensive. Heading an advertisement: "Welcome Mr. President to Nebraska * * * the State with no bonded debt * * * no sales tax * * * and the lowest per capita tax in the Nation," the President was greeted in eastern Nebraska Monday with the following message from the State GOP committee that rings the bell of politics, propriety and hostship:

"The founding into the Constitution that Nebraska could have no bonded debt, aside from $100,000 in case of emergency.

"How wise they were. It made the voters tax conscious. 'Pay as you go' has been our policy of government.

"Look about you! The artistically beautiful and practical Capitol costing $10,000,000 was paid for when finished. The outstanding State University and Teachers Colleges accommodating 15,000 students annually have been built and maintained on a cash basis. Same with the penal and charitable institutions. The State has paid its share in cash for a 9,500 mile highway system that compares with neighboring States.

"And, Mr. President, all of this has been and continues to be done with the lowest per capita State tax of any State in the Nation. It was $35.92 for 1949 compared with a national per capita State average of $57.43, and that includes a 1.1 mill levy for a $25,000,000 program to improve the physical plants of our mental institutions, university, teachers colleges, and other State activities.

"Nebraska is a progressive State; progressive in the sound economic sense of working, saving, and living within its means. It accepts wholeheartedly the philosophy expressed by Franklin D. Roosevelt in 1932, 'Any government, like any family, can, for a year, spend a little more than it earns, but you and I know that a continuance of that habit means the poorhouse.'

"It is a young State, admitted in 1867, and continues to be young by giving to each generation the assurances of a divine providence that 'as a man soweth so shall he also reap.' The young people as they go out on their own know that the minimum of their income will be taken in taxes for running the State.

"Yes, sir, Mr. President, Nebraska was so founded and has lived and progressed that her people never need fear being robbed or deprived of their cherished liberties. They know by experience that independence for themselves is not born of dependence upon the State.

"You find here a forward-looking people whose love of personal freedoms and independence has not shorn them of the vision so essential to the welfare of their fellow man. They look beyond the boundaries of the State and Nation with charity for all. Never forgetting, however, that charity begins at home.

"So, Mr. President, we ask of you and all of your successors, the preservation of those rights inherent in our form of government—to do our best for ourselves, and run our State within the all-wise plan that was intended when the Union was founded. That is the basis upon which we have prospered and progressed. It is the basis upon which we have been able to make our contributions to the Nation and all others.

"In all earnestness and sincerity, Mr. President, we welcome you to our Commonwealth. We want you to know from being among us that our interest is uppermost in preserving here and throughout America those principles of government upon which we have been privileged to live and build, not for ourselves alone but within the precepts and teachings of a mighty Prince of Peace who went before.

"May God attend you on your journey."

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the twenty-second article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

Stealing the atom bomb is by no means the main accomplishment of the Soviet agents in America.

Long before that, they had stolen something far more important.

The thing they stole, of course, was the attention, intelligence, and loyalty of American school and college teachers, who in turn delivered into communism all they could of a generation of American youth.

When the history of our times is finally written, this story of communism's influence in the American educational system from 1920 to 1950, and its consequences, will be the undoubted climactic chapter.

How did it happen? Why did it happen? What is the cure?

That it happened, all of us know. The waves of sickly pacificism, internationalism, the youth movements, and the denials of American factual history, the blushing at the facts of American successful life, the groveling submission to mass slogans, and the parroting of these as gospel, all can be clearly identified as Moscow-made.

Never in our country's history had anything like it occurred before. And never was there such a catastrophe of lost personality, lost moral and intellectual stature, and lost time.

Never did a generation suffer such ravages of alcoholism, insanity, suicide, divorce, and dissipated character.

I am speaking, now, of the generation that got into college about 1925 and of those in the 10 years or so following. Other generations I know only at second-hand and can judge only by examining the literature and visible behavior of their time.

But the generation that passed through college between 1925 and 1935, I have lived in, and all who have lived in it with me know what it has lost at the hands of the Marxists.

Karl Marx taught that religion, any religion, is the enemy of enlightened intelligence. He described the family as a degrading evil, represented individual initiative, enterprise, and ownership of wealth as the total enemy of human welfare, and taught the destruction of religion, family life, capitalism, and every other institution of civilization as we know it.

Furthermore, that they must be destroyed not in words, but in bloody action.

There is nothing new in such a demon suggestion. It is a line of thought that has

lived in the dark side of man's nature always, in some form or other.

But until the Communists who claimed Marxism as their philosophy fell by accident and unprepared, into control of the government of Russia, never did this dark and dirty instinct hold the reins of actual government over a great empire of human beings.

And so a group of educators in America abandoned their duty to stand against the destroyer, but instead delivered into its power the best-fed, best-clothed, and most envied young people in all the world.

No wonder the victims lost their way, and turned so frequently to self-destruction.

School and college classes of present times cannot begin to imagine what they have escaped. For that they can thank Stalin, not anybody else.

For Stalin, by his actions, has proved the lie that was always at the bottom of the Marxist story of the world.

Russia, today, with atom bombs in one hand and germ bombs in the other, calculating with icy logic just when it would be most profitable to make the final assault, does not square with the fairy tale.

And a President of the United States who says one day "I like Joe Stalin" and the next sends his Secretary of State screeching around the earth in search of alliances while at the same time frantically clawing at the poison fleas other people spot on his own shirt front—he, too, gives away the truth behind the scene.

As this story runs on, I have to tell the facts of a degrading and humiliating episode in American history. The names and the dates and the actions, as I promised in the beginning, are all coming from the public record.

The Federal theater project, for instance, that mocked and ridiculed the very taxpayers whose money paid the authors and actors living off it—that was no secret.

It was a project of the United States Government itself, the government that Washington and Franklin and Jefferson and Adams built for us, that Lincoln preserved, and that millions of Americans down through the generations had revered and lived by and for which many a one had died.

But as I tell these facts, I hope for one accomplishment, to move the reader to a determination that the past does teach the present and guide the future. The influence of Marx on the United States of America has to be broken or we are a finished people.

The Postal Service

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

NATIONAL FEDERATION OF
POST OFFICE CLERKS,
Washington, D. C., May 15, 1950.

Hon. A. F. TAURIELLO,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I am herewith transmitting a statement adopted unanimously by the National Executive Committee of the National Federation of Post Office Clerks which met in the city of Washington, D. C., on May 10 and 11, 1950.

Very truly yours,

WILLIAM OTTE,
Secretary-Treasurer.

NATIONAL FEDERATION OF
POST OFFICE CLERKS,
Washington, D. C., May 13, 1950.

The executive committee of the National Federation of Post Office Clerks, having considered the release of the Postmaster General, the Honorable Jesse M. Donaldson, under date of May 11, 1950, relative to the curtailment of service by the Post Office Department, makes the following observations:

While it is true, as the Postmaster General states, that the report of the Committee on Appropriations of the House of Representatives does not carry the usual statement indicating that if the Department's business continued to increase, "consideration would be given to supplemental appropriations," it is also true that nowhere in the report of the House committee is there any statement indicating that such supplemental appropriations will not be granted, if the facts justified such action. Certainly the statement by the Appropriations Committee that "this amount should suffice to render adequate service without requiring the Department to come in later for deficiency requests" is not to be construed as a prior rejection of supplemental appropriations.

While it may be futile for critics to claim that the Post Office Department can make savings by administrative action in any other way than by curtailing existing services and reducing the number of people employed, it nevertheless is true that the Congress has never at any time in the history of the Post Office Department determined that the Post Office Department was anything but a service organization, primarily designed to serve the American people efficiently. Many of the services performed by the Post Office Department could never be expected to become self-supporting, regardless of any rate likely to be established by the Congress. However, it is interesting to note that the program for curtailment of service, which the Postmaster General has outlined, does not reduce the services in those areas where no reasonably conceivable postal rate would make them self-supporting, but rather reduces the services in the metropolitan areas which, by and large, actually pay their own way. There can be no doubt that service on rural routes, services at post offices of the fourth class, and services at most post offices of the third class, not only are at present unprofitable but could never be made profitable, no matter how high postal rates might be set. The Postmaster General has called attention to the fact that almost one-fourth of the population receives its mail on rural routes and, according to the latest available report of the Postmaster General, more than 30,000,000 individuals receive their mail on such routes. It should be obvious that the volume of mail originating on rural routes and the volume of mail delivered to patrons of such routes could not under any circumstances, or any rates likely to be established by the Congress, pay the cost of service rendered. If the Post Office Department "must readjust its affairs on a businesslike basis," as the Postmaster General states, he would not eliminate service at the points where the revenues were produced but would eliminate the service at the points where actual losses occurred.

In the establishment of city delivery the Congress refused to authorize the establishment of such service unless the revenues of a particular office would pay for it. However, in the establishment of rural delivery which was opposed on the floor of Congress by many Members on the grounds that it would be a costly operation and that it would bankrupt the Government, such rural delivery service was established, despite the fact that it was well known that it could never pay its own way. In other words, the Congress knew it was spending money for a service which would never produce anywhere near sufficient revenue to pay its own way. For the current year that loss is figured at not less than $150,000,000, or more than twice the amount necessary to be saved, according to the Postmaster General.

The statement by the Postmaster General that the curtailment of collections from street letter boxes will not cause any serious inconvenience to the users of the postal service, appears to be extremely wide of the mark. Actually, the average citizen now may attend to his correspondence after having finished his dinner and take the letter out to his street letter box with every assurance that before morning that same letter will either be ready for delivery in his own city or will be well on its way to delivery in a city many miles distant. By restricting collections from street letter boxes to those reaching the main office not later than 8:30 p. m., practically all mail posted after 6 o'clock p. m. will lie in the street letter box until sometime the following day, causing an initial delay of from 12 to 20 hours in every instance. This is certainly far from the ideal of an expeditious service.

With the rapid development of air transportation, the American public has been turning in increasing numbers to air mail service. At the present time, air mail service is reasonably fast and a letter mailed practically anywhere in the country with air mail postage affixed will be delivered at any other address in the continental United States within not more than 36 hours. With the restricted collections and the restricted deliveries required by the orders of the Postmaster General, air mail letters may be initially delayed for 12 or more hours before even reaching the post office, and if such letter reaches the office of address anytime after 7 o'clock in the morning it would be further delayed a minimum of 24 hours before being delivered to the addressee.

While the Postmaster General has based the necessity for the order on an alleged failure of the Congress to appropriate sufficient revenues, it is interesting to compare his statement now with his statements on the same subject one short year ago. At that time (February 10, 1949) the Postmaster General in a statement to the House Committee on Appropriations stated "over the years we have had to obtain deficiency appropriations because of understatement in our estimates and I am satisfied that if this committee gives us the amount that we are requesting here today, and the increased volume of mail that we originally estimated materializes, that we will always have the kind ear of this committee as we have had in the past and I have no fear of failure to obtain sufficient funds to operate the postal service."

However, in the most recent statement of the Postmaster General, he is trying to convey the impression that the curtailment of service has been forced by the refusal of Congress to provide the funds necessary to maintain satisfactory service. The most casual study of the facts would prove this to be untrue. The Post Office Department will not begin to operate on the appropriations that he makes reference to in his statements until July 1, 1950. It is true that some action toward reducing the amount of appropriations originally requested by the Postmaster General has been taken by the House. However, when appropriations for the Post Office Department have been considered by Congress in past years, the amounts have invariably been jockeyed up and down. The present curtailment order was issued prior to the final determination of the amount to be appropriated for the maintenance of the postal service for fiscal year 1951. The Postmaster General certainly has not helped to secure the appropriation which he claims he needs by cutting the service below the minimum required.

It should be made clear that the work performed by the so-called temporary employees was necessary labor that should have been performed all along by classified civil-service employees. Yet, the Postmaster General has

admitted that even the earnings of many present classified employees will also be reduced as the result of these orders.

The Postmaster General has stated that it is the temporary employees who will be affected to the greatest extent by any reduction in force. Based on our observations and past experience, in many instances classified employees will be entirely without work opportunities over long periods of time. At a time when the volume of mail is the highest in the history of the postal service, it ill becomes the Post Office Department to reduce the number of employees, thereby greatly increasing the work load on those who remain. According to the Postmaster General's own statements, while the revenues increased more than 110.72 percent and the number of pieces handled increased 64.70 percent, the increase in the number of employees was less than 48.43 percent. This indicates that the employees have over the years gradually increased their efficiency all out of proportion to the increased volume of mail and are today rendering even greater service than at any time in the past. The increase in the volume of mail, together with the elimination of proper pick-up and delivery, combined with the reduction in the number of employees below the minimum required to handle the mail and give adequate service, will cause a congestion and delay that will decrease the efficiency of the postal service and will contribute to increasing costs rather than effecting economies.

Texas in Our Blood

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. KILDAY. Mr. Speaker, as a part of the recent Fiesta San Jacinto in San Antonio, Tex., the Battle of Flowers Ororotical Contest for 1950 was held. Mr. Jack Yonge, of Abilene, Tex., was awarded first place for his oration, Texas in Our Blood. He has given us a beautiful outline of the history of Texas and some famous Texans. I include his oration, as follows:

TEXAS IN OUR BLOOD

There are over 7,000,000 people in Texas, people of all occupations, all trades, farmers, ranchers, business wizards, laborers; people of varied character, of high and low ideals. But from El Paso to Texarkana, from the borders of Mexico to the upper reaches of the Panhandle, from Sabine Pass to the battlegrounds of San Jacinto, no matter what the difference in the people, if they live within these boundaries, there's Texas in their blood.

A true Texan can't disguise his feelings when thousands in the Cotton Bowl or Memorial Stadium rise and in one tremendous voice sing The Eyes of Texas slowly and magnificently. Or when a friend is buried on the side of a Texas hill and sand blows across the grave before the funeral is over. Or when he rides across the sun-drenched Texas prairie and his chest swells with pride at its vastness. Or when he passes the red-granite capitol and sees the Lone Star flag being lowered to half-mast in mourning for one of its citizens. A true Texan simply has Texas in his blood.

And the vitality of the State has a life-blood all its own. At the Texas borders, instead of a port of entry, there's a mat reading "Welcome." Texas, with friendliness as its heartbeat—vast, hospitable, full of euphoria, and blushing with beauty—its vitality can be expressed historically, geographically, in terms of politics, economics, raw materials, folklore, and education.

In the files of the Texas saga, in the not-long-bygone days when the territory was without definable limits, when the homesteaders were restless, straining to become a republic—in this atmosphere our land was conceived and made a reality. This reality was only a potentiality to the men who first sacrificed their lives so that it might come into being.

It came into being in a little chapel in old Mission City on a spring morning in 1836. As dawn and the attack approached, the sky glowed crimson; the Mexicans' eyes, sanguinary, and the blood of Texans ran cold.

Bowie, the Louisiana backwoodsman, had the roughness of a frontier fighter, yet a love for his friends which compelled him to remain and fight with them for his bed.

Crockett, the Tennessee scout, tall, handsome, a crack shot, defended the open part of the wall.

Travis, the soft-spoken colonel; his sincerity equaled only by the tenacity for what he knew was his duty.

Bonham, the dauntless adventurer, with a white handkerchief around his neck, thundered wildly back through Santa Ana's cutthroats to die for the reality.

They listened for the hoofbeats of relief, but there was no relief; there was only death. With almost superhuman effort, they slaughtered one Mexican after another before their lives were expended in defense of the Alamo. They had real Texas in their blood. They contributed in those last hours enough bravery and fortitude into the bloodstream of Texas for all mankind to be proud.

The Raven, 6 feet 6, his massive shoulders clad in buckskin, a hard-living, hard-drinking, hard-eating chieftain who had big tawny hands and big worries, worries big enough to make wrinkles in his forehead that spelled misery for Santa Ana, he was the undisputed boss of the Texas revolution. Charging to shouts of "Remember the Alamo," "Remember Goliad," and to the strains of a flute playing Won't You Come to the Bower? he led 740 Texans to victory over twice as many Mexicans at San Jacinto. President of the Republic and governor after statehood, a shrewd judge of men, he could be a lion or a fox and was as occasion demanded. So came our champion to fill the needs of the time. And when he passed in 1863, we lost a full-blooded Texas son.

The roll call of those who lived and died for the reality of the Republic includes thousands from Capt. Dick Dowling to the cattlemen—Charles Goodnight, Sol Weat, Charles Moss; to the settlers who cleared the Brazos River bottom, and the countless who forged a link in the chain to greatness. Always among those and often unremembered are the Texas women. Their part of the story is as important and colorful as the battles, the diplomacy, the bloodshed. We're hunting for the lady represented by the statue of the pioneer woman on the capitol grounds.

Perhaps it's the mother of Texas, Jane Wilkenson Long, wife of the famous doctor and partner to him in the fight for independence.

Or perhaps it's Sarah Cannon, who held off the Comanches all afternoon with only a flintlock before an arrow stopped her.

Or it's the devoted mothers of the first 300 families that came into the new frontier under the empresario system—women of steadfast purpose, of infallible morals, of high ideals.

Probably it's significant of everyone of them, for it was the women who inspired the heroes to come to Texas, clear the land, plant the crops, mold an empire from a forest or a desert; the women who were the eyes of conscience testing every cause to determine its worthiness in building a Christian civilization. And the women who mothered the sons and instilled in them the virtues of honesty and fidelity.

The personalities of a colossal past have been diverse, and we remember:

O. O. Henry, the writer.

Elizabeth Ney, the sculptress, making immortal the features of Texans with the tediousness of Michelangelo carving the face of Christ.

H. Y. Benedict, who fought against the three P's: Politics, prejudice, and poverty, so that a dream might come true—the dream of a university of Texas.

Anson Jones, last President of the Republic, who toiled assiduously for a goal and when it came, arose with tear-brimmed eyes to tell the crowd gathered around the cabin-capitol in deliberate and solemn tones, "Gentlemen, the Republic of Texas is no more."

History fades and materializes into today and tomorrow.

We are beginning the second century of statehood. The brawn that cleared the timber, fought the Indians, established settlements like Nacogdoches and San Antonio is constructing skyscrapers, doing the big shoulder work of the oil fields, quarrying gravel for the highways. The brains of men like Cameron, Fannin, Fisher, and Austin are transplanted as if by blueprint to form the structure of our own minds. The simple inventions and mechanisms of the pioneers are transformed into dynamos of sizzling progress.

Our symbols are as varied as ranch brands, the Buckhorn Saloon, smokestacks, braggarts, cowboy hats, oil derricks, cotton, cattle, millions of acres, and the bristling energy of the people. And you can throw in Florida's winters and California's sunshine and a list of other things long enough to cover the 1,000 miles from Brownsville to Dalhart, and you haven't begun to show our thousand faces. There's more good humor and common sense packed into our veins than could ever be measured by inventory or conceived by foreigners.

Our landmarks are as obvious as if there were a giant "T" embroidered with pecan trees and mockingbirds and a chorus of a trillion voices singing Texas, Our Texas in the blue skies over every town—where we have our Will Rogers, our Lincolns, the sons of our Crocketts, our Travises, our Houstons. We have our tycoons, our executives, our publishers, our professional men, and most important, our little people, who claim none of the glory but who are the pulse of our Texas civilization 24 hours of every day.

Foreigners marvel at the fortuitousness with which wealth has accumulated. In 1884 there were $84,000,000 in bank deposits; in 1949, over three and one-half billion. Some people think the land of the Texas wealth is a dollar sign with a halo over it. But it's red-blooded men—working, sweating, figuring in a world of finance and industry—striving to better themselves and their State. For this is a place where a milkman, a farmer, or a Houston dry cleaner can become a millionaire overnight; where the Texas blood of a ponderous oil tycoon still tingles at the sight of a gusher spiraling toward the heavens, where the languid beauty of the piney woods is matched only by the waving wheat of the plains, where one city can be a baby Manhattan, a genuine metropolis packed with glitter and charm, another city only 33 miles away—a cattle annex—a meat-packing town, a town of smiles and windy streets, where the Gulf wind makes the nights cool, where copper, sulfur, petroleum, barbed wire, synthetics, grain, lumber, natural gas, and railroads are products that emerge from throbbing industry, where sleek Herefords or slate-colored Brahma bulls flourish on the King Ranch, the world's largest beef factory, where a valley of oil, roses, and rain make life beautiful and people happy, where a bow in the legs, adventure in the soul, and a canter off into

the sunset are all ingredients that make Texas a paradise.

Men sacrificed on the Texas frontier. They traded part or all of a lifetime for the land that gives Texans pearl-gray Stetsons, hand-tooled boots, Cadillacs, the right to work, and freedom from oppression. The loyalty of a people to their State is equaled only by the size of the Texas moon, by the heritage of an illustrious past.

It's a real thrill to see a dust storm at Amarillo, a cattle auction at Abilene, a fruit harvest in the Rio Grande Valley, or an old-settlers' reunion in Buffalo Gap. But the biggest thrill of all is after visiting foreign States to come across that Texas border; if the air smells fresher, if the sun shines brighter, if your soul feels friendlier, if you long to see the sun rising on a hill smothered in bluebonnets with dew in each bloom sparkling like a diamond, then you're home, pardner, and you've got Texas in your blood.

Discrimination in American Universities

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. KLEIN. Mr. Speaker, on last Washington's Birthday I issued a statement denouncing discrimination and coercion at the George Washington University, and was in turn criticized by one or two well-meaning innocents.

A short time later I inserted in the RECORD the findings of the Anti-Nazi League in regard to discrimination at City College of New York, and again was subjected to criticism.

On Friday, May 12, 1950, the Washington Post printed an editorial headed "Bias in colleges" in which, with its usual clarity and economy of expression, the Post says precisely what I was saying, and specifically points to the failure of the George Washington University to take part in a conference here to combat discrimination in colleges. Under leave I am inserting that editorial in the RECORD. I am also inserting a news story from the Washington Evening Star of April 25.

I expect to have more to say about discrimination, wherever it occurs, but especially in educational institutions, from time to time.

The individuals, or groups, who believe in a hush-hush policy on discrimination will get little aid or comfort from me.

The matter referred to follows:

[From the Washington Post of May 12, 1950]

BIAS IN COLLEGES

Delegates from 28 colleges located in Maryland, Virginia, Delaware, and the District of Columbia meeting here recently for a regional conference, took an unequivocal stand against discrimination in higher education on grounds of race, creed, or national origin. Every major institution of higher learning in Washington was represented—with the single conspicuous exception of the George Washington University. The attitude expressed by the educators seems to us extremely heartening and significant on two counts.

It reflects, in the first place, a recognition that scholars have a responsibility for leadership in their communuities. The academic function is not fulfilled by a mere acceptance of prevailing mores; the plea, too frequently advanced in the past by timorous educators, that they must abide by unjustifiable prejudices out of deference to local opinion, is an outright abdication of responsibility. It is precisely to its institutions of learning that a community is entitled to look for guidance in sloughing off outworn and invalid patterns. The examples set by such institutions constitutes a powerful educative force.

The action of the regional conference reflects, in the second place, a recognition that discrimination on account of race, religion, or national origin is indefensible so far as the universities themselves are concerned. It runs directly counter to what they teach. The educators called for repeal of State laws requiring segregation at the college level. The indication that the teachers themselves are ready to initiate this process—instead of waiting until they are forced to do so by the Supreme Court—is most encouraging. Their view should carry weight with the State legislatures and will serve, we hope, to accelerate a trend toward genuine equality in educational opportunity which has already gained great momentum.

[From Washington Evening Star of April 25, 1950]

COLLEGE PARLEY URGES BAN ON DISCRIMINATION—LAWS TO OPEN SCHOOLS TO MINORITIES ASKED BY REGIONAL GROUP

Representatives of 28 District, Maryland, Virginia, and Delaware higher education institutions have gone on record opposing discrimination against any minority group in college admissions.

The conference of educators and students, meeting at American University yesterday, advocated repeal of any laws requiring segregation in colleges and universities. The group added that "positive" laws forbidding schools to turn down applicants on grounds of race, creed, or color "may be one of the desirable means of ending discrimination."

Both Virginia and Delaware require segregation of races in education.

Dr. Walter E. Hager, president of Wilson Teachers' College, who was chairman for the day-long session, told the conferees, "You have faced the problem squarely."

EIGHTY-FIVE ATTEND PARLEY

"We have gone on record much more vigorously than I anticipated we could at this conference," he asserted.

The conference was sponsored by a group of Washington area educators to consider problems of discrimination in higher education. It was the first regional conference of its kind, advocated last fall by the American Council on Education. About 85 educators, students, and others connected with schools were sent to the conference by the heads of their institutions.

The elimination of a qualified college applicant on grounds of race, creed, or national origin "is unjustified and un-American," a majority of the conferees agreed.

They urged institutions in this area to reexamine practices and policies regarding admissions with a view to ending discrimination.

Dr. Hager, in a summing-up talk, said the conferees recognize it may take a long time to accomplish their ideals. It will be necessary, he said, to lead up to the ideals through education.

STEPS SUGGESTED

Some of the steps suggested to carry out the program are interracial workshops at colleges, opening of more college activities to the community, exchange of students among various institutions, and leadership training of students.

It was felt the major barriers to ending discrimination exist among boards of trustees, residents of a college community, and others outside of the student body.

Dr. Hager was authorized to appoint a committee to plan with national organizations how discrimination in education can be combated.

The conferees felt they did not have enough information to consider discrimination in hiring teachers. They suggested colleges could experiment by placing representatives of minority groups in important faculty positions under conditions carefully planned to assure success of the experiment.

The recommendations adopted at the closing general session were prepared by four groups that had met separately earlier in the day. Dr. Hager explained the group reports represented a majority opinion and were not necessarily unanimous. The full meeting adopted the reports by a voice vote without much discussion.

CALLED DANGEROUS WEAPON

In the opening address, a University of Maryland dean described racial and religious hatred weapons as more dangerous to America than those of steel, flame, or nuclear fission.

Dr. Harold Benjamin, dean of Maryland's College of Education said "these shadowy enemies can do tremendous things to our people. They can take differences in color, magnify them until we have a whole system of economic and social barriers. They can transform good men into cruel monsters."

Dr. Benjamin said dynamic education was necessary to combat the fear and ignorance which lead to hatred. He added that "divisiveness stares me in the face" at the University of Maryland, but did not elaborate. Negroes are not admitted at College Park.

NINE DISTRICT OF COLUMBIA SCHOOLS REPRESENTED

Heads of the four group sessions were Dr. M. Weldon Thompson, of Lynchburg (Va.) College; Dr. Allan P. Colburn, president of the University of Delaware; Dr. F. Wilson Shaffer, of Johns Hopkins University; and Dr. F. G. Livingwood, acting president of Washington College, Chestertown, Md.

Nine District schools were represented, 15 Maryland, 3 Virginia, and 1 Delaware. George Washington University was the only major Washington university that sent no delegates.

The planning committee which sponsored the conference was composed of Dr. Hager and Dr. H. F. Cotterman, University of Maryland; Dr. Roy J. Deferrari, Catholic University; Dr. Donald Derby, American University; Dr. Hugh G. Price, Montgomery Junior College; Dr. Edwin H. Sponseller, Hood College; Dr. Charles Thompson, Howard University; and Alex Weinstein, of the Washington office of the Antidefamation League.

Dead Animals on Our Public Highways Dangerous to Public Health

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. RANKIN. Mr. Speaker, on January 30, I made some remarks on the subject of dead animals on our public highways, in which I pointed out their dangers to the health of the Nation. Those remarks were published in the April issue of the American Highways magazine,

with the result that I am receiving letters from all over the country relative to this matter.

While the medical profession, and especially the Public Health Service, seem to have succeeded in conquering, or eliminating, at least to a large extent, certain diseases, such as yellow fever, typhoid, and malaria, we are still plagued with many other maladies, some of which are probably more devastating, such as tuberculosis, cancer, heart disease, polio, paralysis, hydrophobia, and so forth.

Let me call your attention to the fact that smallpox was never controlled, and it is doubtful if it ever would have been controlled even by vaccination, if it had not been for the installation of waterworks and sewerage systems in the great cities of the world.

On May 10 I received a letter from Mr. S. W. Jackson of Franklin, Pa., district engineer in district 1–0 of the State highway department of that State, showing the number of dead animals removed from the public highways in his district of seven counties during each month of the year 1949, and also the total for the year, and showing the total of dead animals found on those highways during the years 1941 to 1949. District No. 1–0, contains seven counties—Crawford, Erie, Forest, Lawrence, Mercer, Venango, and Warren.

I am inserting Mr. Jackson's letter in the RECORD and also that portion of his annual report showing the total number of dead animals, both wild and domestic, removed from the highways in his district. You will note that for the year 1949 in these seven counties they removed the bodies of 20,081 wild animals and 3,569 domestic animals—making a total of 23,650.

In this connection, let me call your attention to the fact that a statement in the same issue of the American Highways magazine, on page 14, shows that during the first 4 weeks of this year there were 4,417 animals killed on the highways in Virginia.

Pennsylvania and Virginia are not exceptions to the rule. The same condition prevails in every State in the Union.

Every automobile that rolls over one of these dead animals picks up whatever disease germs it may contain, and probably exposes to that malady every individual who touches the tire that comes in contact with that carcass—to say nothing of the rest of the car.

The letter of Mr. S. W. Jackson, district engineer for the seven counties in Pennsylvania, reads as follows:

COMMONWEALTH OF PENNSYLVANIA,
DEPARTMENT OF HIGHWAYS,
Franklin, Pa., May 10, 1950.

Hon. JOHN E. RANKIN,
House of Representatives,
Washington, D. C.

DEAR MR. RANKIN: I have noted with interest the article in the April 1950 issue of American Highways covering your remarks before the House relative to the removal of dead animals from highways.

I have, as district engineer of the Pennsylvania Department of Highways, made a study and hobby of collecting data on this particular subject for the past 9 years, and I have sent out copies of our annual reports covering this matter to the Game Commission of Pennsylvania and several other States, as well as to conservationists and sportsmen's associations. So far as I know, no other record of this kind has been collected by any agency in this country.

I have charge of State highway work in seven counties in northwestern Pennsylvania with a State highway mileage of 4,100 miles, and this data is furnished to me monthly by our highway caretakers, who make from two to five trips per week over each highway, and among their responsibilities is the removal and disposal of the bodies of wild and domestic animals and birds killed by the operators of motor vehicles. This report is an actual count of the bodies removed and is not an estimate.

You will note the main part of the report shows the details according to species of animals involved in each county for each month, and at the end of the report is shown the totals for the year 1949. I have also appended to the report the totals for each of the years from 1941 to 1948, inclusive. You will note there was a decrease in the wild animals killed during the war years and until 1948, since when a material increase has been shown probably due to increased traffic and increase of some of the species of animals, especially opossums.

Possibly you might be interested in referring a copy of this report to your conservation department or local sportsmen's association, and I am enclosing a couple of extra copies for your use.

I trust this information may be of interest and use to you.

Sincerely yours,

S. W. JACKSON,
District Engineer, District 1–O.

Here is an excerpt from Mr. Jackson's report, showing the number of dead animals removed from the public highways of his district, by counties, in 1949, and also showing the totals. It also shows the number removed from the highways in that district every year since 1941.

The report referred to follows:

Record of dead animals and birds removed from State highways, District 1–0, Pennsylvania Department of Highways, Franklin, Pa., S. W. Jackson, district engineer

Species	Total for year by counties							District total for year—								
	Crawford	Erie	Forest	Lawrence	Mercer	Venango	Warren	1949	1948	1947	1946	1945	1944 [1]	1943 [1]	1942 [1]	1941 [1]

Horses					2			2	2			1	1		2	5
Sheep									1			6	3	2	1	3
Cows					1			1	1	3	5	3	6		4	5
Pigs				1	1	1		3	1	4	9	7			2	3
Mules									1						1	
Goats									2		2					
Total	586	834	29	543	928	410	239	3,569	3,205	1,950	2,259	2,026	1,536	1,747	1,982	2,111

[1] District totals for years 1941 to 1944 inclusive do not include Lawrence County.

As I pointed out, there were 20,081 wild animals and 3,569 tame animals, removed from the highways in those seven counties in 1949, which is almost double the number removed from the highways in the same district in 1941.

This is a very serious matter, one that affects the health, even the life, of every human being in the United States.

I trust that the rest of the Nation will follow the example set by Pennsylvania, and see that these dead animals are promptly removed from the Nation's highways in every State, as well as in the District of Columbia.

Addresses of the President at Boise and Nampa, Idaho

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. WHITE of Idaho. Mr. Speaker, it is a privilege, under leave granted to extend my remarks in the RECORD, to insert two further addresses by the President of the United States on his recent trip through Idaho. Following are the addresses made by the President at Boise, Idaho, and Nampa, Idaho:

REMARKS OF THE PRESIDENT AT BOISE, IDAHO

I am very glad indeed to be here this morning. I certainly appreciate your most cordial greeting. It is very impressive to come into this rich valley. Here you have an empire which is made possible through the miracle of reclamation. It all comes from having water. Your great program of irrigation in this area has brought prosperity to your farms and your cities. I am told you have some 350,000 acres irrigated in this section. This is a tremendously valuable addition to the economic well-being of the whole country.

I think there is a deeper significance in what you have achieved here than you people may realize. A relatively small amount of Government money for reclamation has brought rich returns to the whole area and to the whole Nation.

When people talk about the size of the Federal budget, they forget that when we set aside money for things like reclamation, it is just like investing money in gilt-edge securities. The money invested for the development of this valley is an investment, it is not an expenditure.

Reclamation means richer farm lands, more prosperous cities and industries, cheaper power, and healthier opportunities for a better standard of living in this whole area.

The penny pinchers who want to cut off funds for reclamation simply do not understand good business principles.

The future has in store rich potentialities for the Boise area, for Idaho, and for the whole Northwest. We have done a great deal of good pioneering work in resource development, but we need more power dams to develop mineral resources, and to bring cheap power to all the communities of this area. We need more sound reclamation projects, we need better soil and forest conservation.

To do these things right, we need a coordinated program for the development of the entire Columbia River Basin, including the Snake River Valley.

In order to harness the mighty resources of land, water, forests, and minerals, we must tackle all phases of this development simultaneously.

There is a direct relation between what we do in all sections of the Columbia Valley, if we are to get cheap power, flood control, rich soil, and all the other benefits which flow from a balanced program.

I am convinced that the only way to get such a balanced program is through the establishment of a Columbia Valley Administration, which will treat the region and its resources in a way which will bring greater benefits to every section.

Don't let anybody tell you that the Columbia Valley Authority I have recommended would be socialistic. It would not have a bit more authority than the present Federal agencies have. It would specifically prohibit interference with anybody's water rights, or any other rights you may have already established.

The Columbia Valley would be firmly under the control of the Congress—the elected representatives of the people—just like all other Federal agencies are now.

Instead of moving in the direction of more centralized Government, the Columbia Valley Authority would move in the direction of less centralization. The Columbia Valley Authority would have its headquarters right out here in the Columbia Basin, where the people can deal with it first-hand. In such a situation, the State and local governments can participate much more effectively in resource-development work. The experience of the Tennessee Valley proves that conclusively. And we had a lot of old mossbacks that did everything they possibly could to tear down the Tennessee Valley Authority.

Without a Columbia Valley Authority we will continue to have a scatter-shot approach to resource development, with one phase emphasized at the expense of another. You can see that by what happened to the rivers and harbors bill the Senate passed a couple of weeks back. They put in part of a program, and left out other parts, like Hells Canyon Dam, which are just as important. The results of such a policy are wasteful and uneconomic, and I hope you will join me in working for the Columbia Valley Authority. This will stop all the fuss between Reclamation and the Army engineers and all the rest of the bureaus in Government, by having it right out here where you can keep your finger on it.

Above and beyond the immediate benefits to this area, the success of projects like these will aid in strengthening the entire country.

I want to say to you that if we hadn't had the power projects in the Tennessee Valley, if we hadn't had the Bonneville and Grand Coulee Dams and other power projects, it would have taken us much longer to win the war. But, having these projects and plenty of power, we were able to set up those great establishments which contributed to the immediate winning of the war, and the saving of young American lives.

Now, I want to see a Northwest power development, a Southwest power development, a Northeast power development which will include the St. Lawrence Seaway project and the Bay of Fundy project and the Connecticut River project, and we will have the great networks in the Southeast, the Tennessee Valley project now being built in South Carolina and Georgia.

I want to say to you that if we get that done, if we get the proper development of the Missouri Valley, the Ohio Valley, the Mississippi Valley, nothing in the world can prevent this country from accomplishing its purpose. It will mean an economic development that will keep us the most powerful nation in the world, and a nation which works entirely for peace and not for any selfish purpose.

That is what I have in mind. That is what I am out here to tell you. That is what I want you to understand: that I am working for world peace on a basis that will make our economic set-up the greatest in the history of the world, as it is right now. I want to keep it that way. I want to keep on developing it.

Now with your help we can do just those things.

I can't tell you how very much I appreciate this turn-out. I am more than happy you have been so kind to me and so very cordial. I am out here to let you know what I am thinking; I am not running for office, I am on a nonpolitical tour now, but I may see you a little later on that subject.

REMARKS OF THE PRESIDENT AT NAMPA, IDAHO

I can't tell you how much I appreciate this reception. This is a wonder; it gets better and better as I go along through Idaho. I got up this morning at 6 o'clock, and I have been going ever since, and it seems as if the crowds get bigger and the weather gets better and the welcome more cordial. And I appreciate it.

I understand that today the Boy Scouts are sponsoring the dedication of a replica of the Statue of Liberty here in Nampa. That is a wonderful thing; that is a wonderful thing.

In this fortieth anniversary of scouting in America, it is certainly fitting that the Boy Scouts are carrying on a crusade to strengthen the arm of liberty.

You know, I am the honorary national president of the Boy Scouts of America, and I congratulate you on your enterprise that you are putting on here.

I can think of no more important task than to strengthen the arm of liberty.

There are many ways in which we must work to strengthen that arm. We have to maintain a strong defense organization, and above all we need to stay strong in our desire to preserve peace in the world.

One very important element in the strength of the United States is the high standard of living we have established for the people of this country. Through our social-security program, farm legislation, fair-labor standards laws, housing acts and other progressive legislation, we have helped to make this country the richest in the world. We have made it possible for our people to live decent, worth-while lives, to live them without undue interference.

With the world in a troubled state, it is even more essential that this country continue to grow in strength. Our national strength depends on our keeping all groups and sections of the country prosperous. I want to see farmers, businessmen—both big and little—and the working men and women all well off.

I am greatly encouraged by the reports I have been hearing about the expanding industrial prosperity in the great State of Idaho. Despite some recent downturn in farm income, the average income of each person in the State of Idaho increased over 170 percent between 1940 and 1949.

Even more important, the average per capita income in this State increased at a much faster rate than the average increase throughout the country. Now, isn't that remarkable? That is remarkable—I don't think you appreciate what that means.

I am glad to see that Idaho is showing the way.

That is the goal toward which I am working all over the country—toward a balanced

prosperity for all the people. If the farmers have good incomes, and labor has good incomes, and business is prosperous, then that makes the whole country prosperous, and gives us a chance to continue our position in the world, as the leader of the whole world, working for peace.

Never again will we go back to the days when the robber barons stuffed themselves with riches and the little people got just a few crumbs. Those days are gone forever—and I am glad of it.

We are strengthening the arm of liberty in our country economically, militarily, and spiritually. Let us never forget that when we strengthen liberty at home we strengthen peace in the world.

We stand for something. We stand for the moral well-being of the world. We have a system of morals which believes in honor and ethics and upright living. We are in a controversy with a country that has no ethics and no morals. Because we have the ethical standards that we have, I am just as sure as I stand here that in the long run Almighty God is going to give us an opportunity to get peace in the world.

We don't want to conquer any nation; we don't want to exploit anybody. We want everybody in the world to be happy, just as we are.

I hope you Boy Scouts will keep up the good work. This is a fine step you are taking here today. I hope it will be possible for me to attend the National Jamboree at Valley Forge next month. I am counting on it. But the President never can tell where he is going to be or at what time. He has to meet conditions as they come up. But I hope I will see some of you at that jamboree.

Thank you very much.

Resurgent Nazism and Communism in Germany

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the General Court of Massachusetts:

Resolution memorializing Congress to study and review the problem of resurgent nazism and communism in Germany

Whereas there are growing reports of the resurgency of nazism and communism in Germany: Therefore be it

Resolved, That the General Court of Massachusetts urges the Congress of the United States to institute a thorough-going study and review of the resurgence of nazism and communism in Germany; and be it further

Resolved, That copies of this resolution be sent forthwith by the State secretary to the President of the United States, to the presiding officer of each branch of Congress and to the Members thereof from this Commonwealth.

In house of representatives, adopted April 26, 1950.

LAWRENCE R. GROVE,
Clerk.

In senate, adopted in concurrence May 8, 1950.

IRVING N. HAYDEN,
Clerk.

Saving the "Lost" Wartime Immigration Quotas for the Desperate War-Impoverished Peoples of Europe and Nonquota Status for Parents of Citizens

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. KLEIN. Mr. Speaker, my sympathetic interest in all immigration matters is so much a matter of public interest that Commissioner Watson B. Miller jokingly calls me his best customer.

It was, therefore, that I discovered in an editorial from Il Progresso Italo-Americano, the largest and most influential Italian-language daily in the United States and perhaps in the world, warm endorsement of two of my favorite proposals—throwing open to use the "lost" wartime national immigration quotas, and permitting parents of American citizens to enter as nonquota immigrants.

Only 3 weeks ago I introduced H. R. 8209, which would, if enacted, amend the Immigration Act of 1924, as amended, to add to the definitions of nonquota immigrants "the mother or the father of a citizen of the United States."

Under leave, I am inserting the editorial, which follows:

AN URGENT AMENDMENT

For some time we have been urging that our Government take the necessary legislative steps to permit the entry into our country of a number of immigrants equivalent to the quotas unused during the war. We always felt and continue to feel today that in advocating this measure we are asking for nothing more than simple justice and a warm human approach in the execution of our law as it is on the statute books today. In short, we have not been pleading for a fundamental revision but for a fundamental humanization of our execution of the existing law.

Here we hasten to add that the response in Congress to our proposals has been rather receptive. We did not look forward to unanimous acceptance. Of course, we did not expect to arouse the narrow-minded or bigoted. We realize that there are still some Members of Congress whose social-economic vision is yet to grow out of and beyond the pale of their own district. We understand that it takes time to grow out of the narrow limitations of local community politics, narrow neighborhood interests and approach. But fortunately for Congress and the American people, there is still hope for an equitable and practicable decision to be made in the not distant future in regard to our appeal. In its handling of the entire question of immigration, the House of Representatives is to be commended and congratulated on having as the chairman of its special subcommittee the capable, earnest, and farsighted legislator from Pennsylvania, Congressman FRANCIS E. WALTER.

IN THE RIGHT DIRECTION

Though we are hopeful of the future and will continue to work untiringly for the admission into our country of a number of immigrants equivalent to the number in the immigration quota unused during wartime, yet we realize that there are certain lesser phases of the entire present immigration law which need speedy attention and basic revision. We approach all such phases in the same spirit as we approach the major issue of using up the unused immigration quotas. We cannot repeat too often that it is our firm belief that America's best interests and ideals would be most served vis-à-vis Europe if we were to use up the unused quotas.

In the same sense and spirit do we now propose for immediate enactment the following provision as an amendment to our present Immigration Act: "The parents of children now residing in the United States should be accorded the same preferential status for entry to our shores that children living overseas now have. These parents are to come in to the United States as nonquota immigrants." Of course, as with children coming from overseas, those bringing their parents will have to assume full responsibility for their support so that they will not become a public charge.

Arithmetically speaking, the number of parents who would thus be enabled to come to the United States on the basis of the above amendment to our present Immigration Act may not be large. But the entire question is far more than a problem of numbers. It is much more than a question of arithmetic which confronts us here. It is a human issue that we face. We must meet it in a humanitarian manner. No matter how comparatively few may be the number thus admitted or how little the misery thus eliminated, our country's demonstration of generosity of spirit and humanitarianism in action can only aid greatly the enhancement of America's moral prestige abroad.

WILL HELP AMERICA

Moreover, such an amendment to the present Immigration Act will also have a wholesome effect on the morale of our citizenry directly involved in and affected by the bringing in of their parents now abroad. There can never be too many humane ways in which the Government can and should lift the morale of our own people. A little consideration by our Government for even a limited number of its citizenry will go a long way toward raising the contentment of all the people in our land.

We sincerely urge every Member of Congress to heed our appeal. We urgently plead with Congressman WALTER to lose no time in introducing a bill which will amend the Immigration Act to provide for parents the same preferential status as nonquota immigrants that children now have. This amendment is to operate in all other respects in the same manner as the present provision covering children does.

We cannot emphasize too strongly that prompt favorable action on our proposal will serve as a timely, positive factor for improving the attitude and deepening the friendship of many peoples in Europe for our country and our Government. In this critical hour when our Nation is battling against the poisonous propaganda of barbarous and despotic communism, the enactment of such legislation will not only increase the number of our friends and augment the already existing friendship for America, but will at the same time also strike a hard and telling blow at the Communist slanderers of the American people.

Mr. Speaker, Il Progresso Italo-Americano is, of course, the newspaper brought to its full flower of circulation and influence by the late Generoso Pope, my good friend and adviser. His place has been ably taken by his son, Generoso Pope, Jr., who is obviously emulating his father's policies of enlightened assistance to Americans of Italian derivation.

I would, if I could, go much further than is proposed in this editorial. I would like to throw open to use all the unused immigration quotas which lapsed during the war years, without regard to national origin. By following that policy, we could have avoided the necessity of enacting the Displaced Persons Act; but, since that could not be done, I have thrown my full support behind the enlightened amendments contained in the House bill to amend the Displaced Persons Act of 1948.

On January 23, 1947—3 years ago—I introduced a bill which would have provided, if passed, for using all unused immigration quotas for all nationalities to the end of the fiscal year of 1947, to be used for admittance to the United States of victims of war displacement without regard to nationality.

Obviously, this would primarily have benefited those victims of the Hitler madness defined as displaced persons; but it also would have benefited Italians, Greeks, Turks, and Spaniards, with their pitifully small annual quotas.

On the same day I introduced two other bills differently worded, but having the same ultimate effect, which would have been to make the unused "lost" national quotas usable for the relief of those who most needed relief; on March 11, I introduced a bill which would make the treatment of illegal entrants—stowaways—less harsh and less similar to the brutal methods of Nazi Germany or Soviet Russia; and on March 29, 1948, I introduced House Joint Resolution 434 to suspend the operation of section 401 (e) of the Nationality Act of 1940 as to American citizens who lost their citizenship by participating in the Italian elections.

In the present Congress I continued my strenuous efforts to effect a liberalization of immigration laws and of administrative policy.

It is clear that there is a great deal of doubletalk in the executive agencies chiefly involved in immigration matters, which are the Department of Justice and the Department of State.

While our policy-making officials from the President down are proclaiming the welcome we should give to new citizens and visitors, officials at lower levels are doing their utmost to frustrate the official policies.

As an example, the visa division in 1949 circulated to consuls a letter written by a Republican Member of Congress in 1948, and is using that letter as a basis for denying visitors' visas to Catholics and Jews. Greeks, Italians, Spaniards, and Jewish and Catholic refugees from Nazi and Communist persecution in central Europe are the chief victims of this discriminatory closed door policy, which has been encouraged by influential Members of Congress.

Accordingly, it has been my satisfying duty during the last 18 months to protest and argue against this un-American attitude both on the administrative and the legislative levels.

Since the beginning of the Eighty-first Congress I have introduced the following public bills, all intended to ease the plight of the intending immigrant to the United States:

House Joint Resolution 372, to suspend the deportation of all persons who have filed form 500, under section 4 of the Displaced Persons Act, until the Senate has finally disposed of the pending bill.

House bill 2027, to amend section 3 of the Immigration Act of February 5, 1917.

House bill 1234, to authorize the admission into the United States of persons indigenous to Indonesia, to make them racially eligible for citizenship, etc.

House Joint Resolution 30, to suspend the operation of section 301 (e) of the Nationality Act of 1940 in certain cases.

House bill 1915, to amend the Nationality Act of 1940.

House bill 1649, to repeal section 342 (h) of the Nationality Act of 1940.

House Joint Resolution 239, to suspend the operation of section 404 of the Nationality Act of 1940 in certain cases.

House bill 8209, to admit parents of citizens as nonquota immigrants.

House bill 8266, to repeal section 404 (c).

In the same period, I introduced 46 private bills in behalf of aliens; some of these are duplicative, and some were withdrawn; but the fact remain that, in the effort to be helpful to distressed people of foreign birth in the United States, I have introduced more private bills in this Congress than any other Member but one.

In normal times I might not regard this as a favorable distinction; but in this postwar era when so many people are suffering through no fault of their own, I believe that anything I can do, without impropriety, to help those who need help is worth while.

The World State

EXTENSION OF REMARKS
OF
HON. RAYMOND W. KARST
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. KARST. Mr. Speaker, the following print, which was delivered in April 1930 by Joseph P. Donovan, C. M., J. C. D., now rector of Kenrick Seminary, in my district in St. Louis County, is today very timely. So far as logic goes his argument for world state is flawless. When this speech was made in 1930 his remarks were probably considered fantastic. Today it will provoke thought and sound thinking as a foundation for everlasting peace.

THE WORLD STATE

(By Joseph P. Donovan, C. M., J. C. D.)

The strange thing that strikes us as we consider the widespread and honest efforts of the present day for international peace is the fact that every method but the most obvious one has been advocated and to some extent employed to bring about the reign of peace foretold by the prophet Isaiah 2,700 years ago—and he spoke in a literal sense—"They shall turn their swords into plowshares, and their spears into sickles: nation shall not lift up the sword against nation, neither shall they be exercised any more in war." The poet has sung of the parliament of man, the federation of nations; and statesmen and peoples are actually engaged in perfecting a league of nations. But an international or world state, in the strict sense of that term, is not thought of. Reliance is placed upon agreements that in their nature are private, although the parties thereto are sovereign nations.[1] At the same time an assumption is entertained that law, emanating from genuine public authority, as a remedy for the evils nations are beginning to groan under, is not only nonexistent but also nonexistible.

Yet does it not behoove us Catholics, with our high traditions of juridical achievement in public as well as in private law, to inquire into the likelihood of the contrary assumption? Is it not time for us to ask ourselves if the day is not approaching, perhaps is already here, when conditions will exact that nations begin to do what families have long since done? For thousands of years now families have been gathered into state or governmental units in order to obtain a temporal good otherwise impossible, namely, the administration nationally of civil and criminal justice and the promotion nationally of the common welfare. Therefore, may not the time be already ripe for those national units formed by the necessary union of families to coalesce in turn under a second compulsion of the law of nature into a larger form of civil society, into a society springing from secondary though absolute needs and empowered to administer internationally civil and criminal justice and to promote internationally the common temporal welfare of nations and, as a subsidiary function, to supply the deficiencies of individual nations and groups of nations?

This counterassumption of ours first calls for clearing up of the confusion that prevails on the notion of society. The well-known definition—a union of persons pursuing one end by a community of means—signifies to one group of thinking and nonthinking people that such a union can do anything the component persons want done. To another group of thinkers and nonthinkers, the same term "society" connotes a gathering that can accomplish nothing in practice but everything in theory. Yet the truth is that society is truly mighty while not all powerful. Here it is well to remark the fundamental distinction that public jurists have always made between the various unions that individual man can or does enter into. Amicable and juridical, according to those publicists, are the basic kinds of society; but these kinds are worlds apart. The amicable society, association, or union of persons is from below; the juridical society, from above. Man enters amicable society of his own initiative in order better to use gifts or endowments of nature or grace at hand. The entrance into amicable society confers no new right. It merely enables him to use that previously possessed right jointly, and thereby gain accidental advantage over what would have been the use of that same right singly. Amicable society is verified at the one extreme in the white man and the black man who went in cahoots to hunt possums. It is verified at the other

[1] When I prepared the above paper I was unaware of the striking proposal put forth by the Reverend Father Delos of the University of Lille at the French Social Week of 1926. That distinguished churchman proved the need of an international state from the existence of a distinct international good. He proceeded in an inductive way, whereas I proceeded deductively from the notion of perfect society through apparently international facts to the need of a world state. I am aware that noted publicists try to make out that both Victoria and Suarez taught a community of nations, but a close scrutiny of their respective contexts indicates that they spoke in a racial, and not in a juridical sense.

extreme in the merchant princes who enter into a partnership to trade on a national or international scale. Of amicable society only is the adage, in union there is strength, literally true. For it increases strength but gives no new source of strength.

The latter, the other grand division, juridical society, does do. And because juridical society does give new strength, does confer new rights, it has to come from above and be a creation of law, and not proceed solely from the will of man. Even where amicable society has a personality distinct from the persons composing it, that personality it owes to law. The business corporation differs from the business partnership because law has intervened in the first case and not in the second. Yet this giving of legal personality doesn't essentially lift the group enjoying it out of the category of amicable society; for this personality is granted only to serve the pooling of individual rights.

But where juridical society is entered, social rights and duties, or social privileges straightway spring up. Conjugal society, marriage, is our first instance of juridical society in time and in growth. For conjugal society expanded into the family acquaints us with the initial form of juridical society in the temporal order and becomes the occasion of the second form of juridical society taking on actual existence. The individual man by entering conjugal society acquires a new character. He becomes husband. The individual woman by getting married is no longer just woman. She is wife. Through the marvelous creation of natural law perfected by divine positive law, two persons seeking individual perfection suddenly find themselves promoting social perfection. They are, in consequence, forthwith clothed with new rights and new responsibilities. They who were and still are personally equal have at once become socially unequal. Since there is a true union, a real society, here, there must be authority to rule. And by the very necessity of things the headship has to lodge in one and the subjection in the other, yet always are the obedience exacted and the obedience yielded measured by the needs of this actually little but potentially great society. The husband is authorized to command only for the common good; the wife is enjoined to obey only for the common good, and that as appraised by a human and not an abstract standard. The union has been entered into by way of contract, yet the union is no mere contract, but a natural institution deriving the laws of its life from the purpose the Creator has revealed in His necessary and free legislation on conjugal society. Because the modern de-Christianized state and the modern de-Christianized individual overlook this juridical phase of marriage, they see no contradiction in dissolving it for cause, contract like. They make marriage only amicable society in practice, therefore in morals no less than in logic are debarred from punitively distinguishing between the use and the usurpation of conjugal rights. For the society that the individual can legislate for is in the very nature of things of his own creation, is an amicable society, a union of persons all but infinitely removed from the inviolability of juridical society, whatever may be the rank of the latter's righteously sacred grouping.

God provided, we may say, that the human race would physically live by society just as the individual physically lives by food and air. But as the families multiplied a new juridical creation in the temporal order was disclosed. There was discovered a need for what might be called, continuing the food and air figure, a hygiene service for the race. For it was seen, as the families began filling in the vacant spaces of the world, that another social instrumentality would have to be requisitioned to insure a food supply commensurate with the increase of population, a thing that in the beginning the family seemed clearly sufficient for. The earth's surface would eventually have to be scientifically cultivated, and the families by themselves could not bring this about. But instantly imperative was an authority for regulating interfamily relations. Where all were equal, no one commanded. Where affairs pertained to everyone, no one discharged them. Unsettled disputes and unprevented or unpunished crimes would alone be the black death of the race. So there was evinced a juridical need for a public society to do for the family what the family could not do for itself. This gives us the juridical origin of civil society, God's authorization of the state. That authorization was incidentally bestowed by the Creator when He constituted man capable of earthly perfection and put him under obligation to pursue that perfection, without however jeopardizing his heavenly perfection. The grant of civil powers was enfolded in the needs of the race. Historical events would do the unfolding.

The juridical origin of civil society, then, is clear. But the historical origin, owing to the lack of human records, remains hidden in obscurity. When Abraham came out of Ur of the Chaldees, he left behind him a people among whom civil society was fairly evolved. When he went down to Egypt to sojourn, he came in contact with a state that had long since passed out of its childhood. But even up to the late day of Roman development the ruling power of civil society imitated the personal authority of the father rather than the public authority of the commonwealth. Territoriality was slow to enter into the composition of the state as an essential element. And some will have it that the Greeks and Romans required that power be fixed to the soil by a people before that people could be called civilized. Yet the potestas patria long bore traces of the precivil era when self-defense sometimes justified the father in exercising the right of life and death over the unruly son, and when more often a half conscious intimation of the public society to come was the urge that brought about the wielding of the jus gladii.

No great flight of imagination is required to picture the vicissitudes that the race went through from the time that single families living in isolation experienced no need for necessary association with other families until closely mingled families found themselves merged into a larger and inseparable unity that philosophers afterward called the State. Still the pre-civil stages of the family have cropped out in subsequent history as often as the accidents of colonization or political transition have thrown families on the fringe of civilization. Abraham himself, hot in the pursuit of the marauding kings, was an example of families leaguing together to safeguard life and property. Even the people of Israel under the Judges might be said to have lived a family rather than a civil existence. And in feudal days private warfare was much the rule and public warfare the exception. Feudalism itself in giving way to popular monarchy seemed hardly more than the theory of civil society yielding to the fact of civil society. In other words there was always an appreciation of a need of public authority before the tangible instrumentalities of that authority were evolved. Coming events cast more than shadows, they cast part realities before.

And are not things much the same in the international order? Heretofore in the world's history national contacts were moral rather than physical. Distances were enough to make the clash of interests only occasional, even if these occasions did occur periodically. Now the distances have disappeared. The contacts are physical. Accordingly, the conflict of interests is constant. As a result nations have begun to put more energy in protecting their life than in living their life. They want peace. To secure it they are by turns soft spoken, blustering and bullying. But peace itself is a negation, and were it attainable by either Sunday school methods or rowdy methods the positive element in international life would still be missing. And that positive element of progress is a sufficient promoting of the common good to insure adequate temporal welfare. Who in the intrastate sphere would rely upon private arbitration to settle disputes, cooperative effort to prevent crime and self-defense to ward off attacks? Yet with the interstate sphere growing into a like complexity, we are loath to think we require the voice of authority to determine and the arm of authority to execute in matters equally beyond private control. When disarmament is suggested to the nations now, they naturally take the attitude that the early families would have taken had some primitive pacifist pointed out how beautifully deadly brawls could be avoided, if only each family would cease to arm itself. Those families would not have understood how this new condition could save them from armed robber bands. With Russia ready to range amuck over the world and other untoward contingencies equally probable, modern nations cannot be persuaded to go defenseless. But were the menace of war to disappear by some stroke of magic, there would still be the artificial barriers of commerce to tear down. What private efforts, what amicable society among nations would be sufficient for the accomplishment of this greatly desired end? The only juridical form of society conceivable in the premises is a public society perfect in the international jurisdiction as the nation is perfect in the national or domestic jurisdiction. And that form of perfect juridical society can be aptly called the world state. Our only abhorrence of such a necessary society is what might be called our perverted innate fear of lawful authority. If the families had not found themselves in civil society before there was any prevision of their incorporation, they too would have been most eloquent in conjuring up the tyrannies that the great superfamily could be guilty of. Yet their prematurely mourned loss of liberties would for the most part have consisted of rights altogether beyond the original domain of the family.

To acknowledge the right of a world state is comparatively easy; but to bring about the fact of a world state will be a task of the most delicate statesmanship. Alliances, treaties, the present league, are all so many points of departure. International trade, international finance, and other economic activities are attempting to solve problems as intricate in their department of human life. What at the outset must be remembered is that the world state will start from the actual and work toward the ideal. By the time it reaches its permanent status, there will be a true equality in the coalescing nations. In its provisional status, however, it will move from present inequalities toward the aimed at equality. The same happened in our own Union. We went from minority white suffrage to universal manhood suffrage and then to universal equal suffrage. We progressed from a Nation of 13 States and Federal territory through States and territories to a Nation with one unbroken stretch of States. Civil society itself everywhere came into existence under numerous kinds of inequality. If things had been otherwise we would have witnessed an unreality.

The timid Catholic, of course, will be fearful that his advocacy of a world state would bring him in conflict with the claims set up for the Pope as the head of a Christian ethnarchy. Yet no loyal Catholic has any intention to abridge either the direct or indirect prerogatives of the Pope. Let the seceded nations return to Christian unity tomorrow and the pagan and moslem nations

embrace the faith, and a Christian ethnarchy we shall have with the Pope as the active subject of authority. But this ethnarchy would have authority in international affairs, barring a real relation of faith or morals, only by way of devolution. And substitutes suppose the absence, not the presence of native authority. The Pope, as well as churchmen in humbler stations, prefers to be left alone that he may be able with undivided energy to conduct the affairs of that kingdom which is not of this world. He does not wish to be drawn away from spiritual affairs to become engrossed in unfinished temporal affairs. Merely because the church's organization has taken over the duties in times past of temporal rule where civil society failed, no one has thought that the church should therefore bear the double burden of sovereignty as a normal condition of things. Because the church, like her Divine Master, has gone about doing good in the way of giving relief from evils that otherwise would have remained unlifted, it does not follow that she countenances human laziness. When human ailments knew no scientific remedy, she counseled people to pray for their cures. But now with medicine and surgery developed, she would charge with superstition the person who would want to forego the aid of science in order to exalt the power of prayer. A juridically undeveloped world the church hastened to help. She had been uncharitable or even unjust, if she had not, but she doesn't proclaim a juridical Sabbath, so that she may still have scope for her international ministrations.

Perhaps when Pope Alexander VI drew his line of demarcation between the Spanish and Portuguese fields of future discovery, he was consulting for the higher good of Christendom, therefore exercising distributive justice in the spiritual order. In that hypothesis even there was only a devolutive and not a direct duty, for the spiritual problem was caused by a deficiency in the temporal order. Had the nations already had a true juridical tribunal before which their international difficulties were justiciable, the Pope would have had no occasion to intervene. In that case only an outraging of faith or morals by the International Society would have given the Pope jurisdiction. It is no objection, then, to a world state that its emergence would diminish the Pope's rights by devolution. That very diminution would spell an intensification of the native rights of the Pope, and be an indication that nations and individuals were coming by moral health. The Pope would be the first to rejoice that he was no longer called upon to mediate between nation and nation; for in this he would behold the wider truth of the inspired utterance, "He hath made of one blood all the nations of the earth." And he would understand that in the state, too, there is neither Jew nor Gentile, bond nor free.

And what an illustration our own national experience affords of the international consummation that soon may be. On the morrow of independence gained we were, as our constitutional philosopher, the illustrious Brownson, will not let us forget, "A Nation of States." But there was only a dim consciousness of our nationhood. Each of the former Colonies continued to administer its intrastate affairs; but the interstate affairs were either not administered at all, or they were inadequately administered by a Continental Congress based on the assumption that the States formed only an amicable society, or worse yet, there was an attempt on the part of several States to administer them severally, a pure usurpation of authority, just as that of the families in the precivil days who would have tried to regulate interfamily affairs. There was the right and fact of nationhood; yet there was practically no distinctive exercise of national sovereignty. As far as appearances went all but the domestic phase of sovereignty had been vacated. The new Nation was quiescent. The high powers of sovereignty might be thought absent. But, lo, a faint consciousness begins to develop. The conviction grows that the States together can and must do what pertains to the good of each and all, a thing that singly they were powerless to achieve. Only an agreement is needed on how this Nation is to act. A genius has already sketched organically a form of government. Common counsel gives it political perfection. It is put into operation. So instantaneous is its success that a people who were shortly before at the edge of political and private disaster begin wondering why an engrossed parchment can work such an unbelievable transformation. But a parchment had not wrought the change. The recognition of a fact had brought order where before there was chaos. Thirteen States made a Nation one and inseparable. That was the fact. The adoption and the carrying out of the Constitution was the recognition. The unexampled success of the endeavor established the fact if the establishment was necessary.

The nations of the world for upward of 4,000 years have been doing what the enfranchised Colonies of America were perilously trying to do for 4 years. God by His creative act has seemed to give the bond of world union. Has not the experience of those unhooped staves been long enough and bitter enough to result in a call for the adoption of a written constitution in order to give expression to the natural constitution long ago bequeathed by the providence of God in a wondrous succession of historical events?

Time for Action

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial written by Tommy (T. W.) Thompson, president of Ford local 600, UAW-CIO. This article appeared in Ford Facts, the official organ of local 600:

TIME FOR ACTION

A little over a week ago a renegade took the witness stand at a Senate investigating committee meeting.

He was Senator JOSEPH R. MCCARTHY'S chief witness in his attempt to smear President Truman by attempting to show that Owen Lattimore, a high State Department adviser, was a top Soviet espionage agent and a Communist.

I don't know whether or not Owen Lattimore is or was a Communist or a Soviet agent, as Senator MCCARTHY has charged. But I do know that some very important and reliable Americans have said that he is not. It is also common knowledge that the FBI and Army Intelligence have cleared him as a loyal American.

And what about Louis Budenz, Lattimore's accuser?

He was born and raised a Catholic. He forsook his religion and left the church. In 1945, after 10 years out of the church, he got religion and returned to the Catholic faith.

He was born an American in Indianapolis, Ind. Yet in 1936 he became the international editor of the Communist Daily Worker. In 1945, at the same time, he reembraced the Catholic faith, he suddenly became a good American again.

Apparently Mr. Budenz could be anything or stand for any kind of principle which suited his own best interests at any particular time. He can turn it on or off at will.

Since his reformation, Louis Budenz has written a book and numerous magazine articles; another book is to be published in May 1950. A very lucrative bit of writing in these congressional crusading days.

Despite these facts indicating Budenz' unreliability as a witness under ordinary standards, and the bias that becomes apparent when we remember the publication date of his new book, that august committee of the Senate allowed Senator MCCARTHY to conduct his circus (with cameras, microphones, and news reporter) and do irreparable damage to the reputation of Owen Lattimore, an American who has brought his great talents to the services of his country.

But the greatest travesty of justice is that the Senate committee permitted Budenz to clutter up the committee's record with common gossip. Somebody said that Lattimore was a Communist agent is the extent of the Budenz testimony. "Hearsay" evidence is what lawyers call it. No court in the land would permit this gossip into evidence in any case tried under sound and tested rules of law.

Why should we as workers and union members be concerned with what is happening to a man named Lattimore in far-off Washington?

Simply this: Certain committees of the Congress of the United States have been conducting "witch hunts" for many years.

Up to the present it has been the Communists in Government; soon it could be the Communist among labor-union officers and membership; later it could be Socialists: and still later anybody who would dare raise his voice to speak out for the workers.

And that's where you and I come in.

You may be inclined to think that a little remote.

A CASE IN POINT

But the Ferguson one-man grand jury in Michigan is a case in point.

If you recall, former Circuit Judge HOMER FERGUSON slid into the United States Senate and his special appointed prosecutor became a Wayne circuit judge on the publicity resulting from their one-man grand-jury activity in convicting grafters in public office.

While the Ferguson one-man grand jury ran roughshod over the politicians and other grafters, we all sat snugly by and smiled. When defense attorneys shouted to the high heavens concerning the violation of the grafters' constitutional rights by the one-man grand-jury system, we paid no attention. The fact that no other State in the Union had sanctioned such arbitrary power in one man bothered us not a bit.

We overlooked one significant fact. The one-man grand jury was an innovation of the Republican Party in Michigan. It was spawned by a Republican legislature—attained its greatest impetus under a judge who was Republican and a Republican special prosecutor right here in Detroit.

That infamous one-man grand jury system would still be with us, except for two incidents.

The first was that a one-man grand jury was set up to investigate Michigan sales tax frauds in 1948.

The first dip of the net brought up the biggest fish. The automobile dealers who had reaped the grand golden harvest from a car-hungry public after the war.

But the car dealers of 1948 happened to be the financial angels of the Michigan Republican Party. Five dollars from the sale of each car since the end of the war found

its way into the treasury of the various dealer associations. How much of that went to the Republican Party only the Republicans know.

In 1948, as today, the strongest and most effective Republican political group in Michigan was and is the organized auto dealers.

They were astounded to learn that their books could be seized by a one-man grand jury; that their constitutional rights meant nothing once the one-hand grand jury swung into action.

But unlike the politicians and grafters who had been forced through the one-man grand jury wringer before them—the auto dealers could do something about it. Wasn't the legislature controlled by the Republican Party and didn't they have a strong hand on the purse strings of the Republican Party?

Then came the second incident. A one-man grand jury case from Pontiac was appealed to the Michigan Supreme Court, which followed the pattern it had established and upheld the power of the one-man grand jury. The case was appealed to the United States Supreme Court, which reversed the Michigan Supreme Court in March 1948.

The United States Supreme Court said: "Michigan's one-man grand jury * * * combines in a single office the historically separate powers of grand jury, committing magistrate, prosecutor, trial judge, and petit jury. This aggregate authority denies to the accused not only the right to a public trial, but also other basic protections secured by the Sixth Amendment (U. S. Constitution)."

Armed with this United States Supreme Court decision, the auto dealers (aided by Michigan liberals, who had fought against the one-man grand jury for years) prevailed upon the 1949 Michigan Legislature to restore the constitutional rights of Michigan citizens by taking the teeth out of the one-man grand jury law.

For years we sat idly by while the cancerous one-man grand jury law whittled away our constitutional rights.

Shall we continue our do-nothing attitude while infinitely more dangerous Republican unconstitutional practices whittle away our constitutional liberties by congressional committee action?

No one can deny that committees of Congress should be permitted to investigate into matters of legislative concern.

But where does the legislative concern end? Shall the legislative branch of Government be permitted to take over the executive powers of Government under the guise of investigating for legislative purposes?

What about the constitutional rights of citizens involved in congressional investigations? Is the Congress above the Constitution which created it?

Yes, we can all agree that the Congress should be permitted to investigate matters of legislative concern but it should be done in an orderly manner, under established, tested rules which will protect citizens from being unjustly accused and unfairly held up to public ridicule and sworn.

Since the days of Martin Dies, a super-duper American Gestapo has been superimposed upon us under the guise of congressional committee investigations. All they lack is the secret police and the power to condemn to death or they may have made Himmler's Gestapo seem like a Boy Scout troop by now. We can assume that from the reckless disregard of the rights and reputations of American citizens under their present procedures.

If the American Gestapo gains full maturity, you can bet that it will be used by the money barons to destroy the labor unions and again impose the industrial tyranny that existed prior to 1932.

Is what is happening to Owen Lattimore in far-off Washington of importance to you and me as union members?

You can bet your life that it is.

We dare not sit idly by and permit these witch hunts to continue.

What happened to the auto dealers under the one-man grand jury could happen to us in Washington.

I was most interested in what staid, conservative Atlantic magazine had to say about the McCarthy investigation in its May 1950 issue which came out last week:

"The atmosphere in the Capital, in consequence of this parading of names in loyalty investigations, is becoming unhealthy. Little heed is paid to the fact that the victims of the name-calling, unless they are eminent enough, are damaged in their lives and positions. Congressional immunity is a shield for the reckless accuser. For an analogy to these times, historians are turning back to the days just before the opening of the nineteenth century when the alien and sedition bills were under discussion. The warning raised by Edward Livingston that we should not 'excite a fervor against a foreign aggression to establish a tyranny at home,' can be stressed again with some justification. The tyranny today is the tyranny of the legislature."

Then again, under Mood of the Capital, Atlantic magazine concludes with:

"Soon if we don't watch out, Congress will foster a secret police on the citizenry on the worst totalitarian model, and it will be done over the head of the FBI itself."

To all of which I say a loud "Amen."

When the stench of what is happening in Washington becomes unbearable to conservatives, it is long past the time for liberals to swing into action.

It is time that all union members and other liberal-thinking Americans began demanding that the Congress adopt rules for its investigating committees to end the witch hunt type of investigations; to protect Americans from false, unjust, and unfair accusations by publicity-seeking committee members and book-publishing and magazine-article-writing witnesses.

It is about time that the Congress of the United States began practicing a little of that American democracy that they love to talk about.

Spence Bill for Rent-Control Extension

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include the following editorial from the Washington Star of May 8, 1950, supporting the Spence bill for the extension of Federal rent control which is now the subject of public hearings in the Banking and Currency Committee:

FUTURE OF RENT CONTROL

If national rent control is extended once again after June 30, the extension is apt to follow the lines of a compromise suggested by Representative SPENCE, of Kentucky. Under his plan, Federal rent control would automatically end after 1950, except for those communities that in the meantime took the positive step of asking that it be continued.

The compromise seems reasonable and carries a persuasive appeal. That Federal rent control is still very much in the picture is shown by current estimates that some 29,000,000 people, living in nearly 4,000 incorporated cities, towns, and villages, including 63 out of the 92 cities of 100,000 population, are still protected by Federal rent control. Only 4 States and a relatively small number of towns and cities have chosen to end rent control. Two States have adopted rent control laws of their own, which are superseding Federal law. But if failure throughout the country to end rent control indicates anything, it would seem to be that control is still needed in many localities. That control, under the Spence plan, could be retained by any city or town that asked for it.

The District law, of course, is entirely separate from the national rent-control law. If Congress ended national rent control by failure to extend it, the same thing might be expected to happen with the local law. But the wiser way of reaching a decision on extending or ending local rent control is to rest that decision on what the facts may show. It would be well if hearings were begun soon on pending House legislation to extend local rent control and every effort made to obtain through testimony an accurate picture of things as they are.

Few cities of the country, if one includes metropolitan areas, have exceeded Washington in the amount of new construction in relation to population. Last year alone 16,989 new units were completed here. Rentals in this new construction are far above those in controlled buildings. Those who favor it argue that control for another year will tend to bring down the rents in new construction; those who want to end control argue precisely to the contrary, claiming that only when rents in new construction are subject to competition from rents released from control will the level of new-construction rentals begin to fall. Nothing is proved one way or the other by such opinions, and a congressional hearing could at least obtain pertinent facts on the need for continued control.

Bullitt Says Dupes in State Department Do Soviet Agent Job

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following newspaper article from the Washington Evening Star of April 1, 1950:

BULLITT SAYS DUPES IN STATE DEPARTMENT DO SOVIET AGENT JOB

A former Ambassador to Russia charged last night that dupes of Soviet propaganda are doing the work of Russian agents in the State Department.

The critic was William C. Bullitt, who told a Georgetown University audience in Gaston Hall that the United States cannot expect to win its struggle for survival against Russia until the State Department rids itself of Communist sympathizers.

"These naive Government officials entered the Department through improper screening during the war," Mr. Bullitt asserted. "They remain there now," he said, "because Secretary Acheson and his closest associates and friends have a vested interest in their own mistakes."

The former diplomat declared that the Secretary had been pursuaded by his counselors, befuddled by Soviet psychological warfare, to cease economic and military aid to China. "In any European parliamentary democracy, a minister of foreign affairs who had tossed a great ally like China into the

hands of Stalin, would have been dismissed from his post," he added.

He said he regards Indochina as the most critical area in southeast Asia and urged the immediate dispatch of arms aid to that country. He also proposed increased American support of a western European federation and of resistance forces in satellite countries.

Turning his fire on President Truman, Mr. Bullitt said:

"Our President has not understood that an over-all plan for defense, not only of our own country, but also of those countries which still remain outside Stalin's domain, is essential. The President has not yet found within himself the intelligence and spirit to take the offensive effectively against Soviet expansionism."

Report on President Truman's Visit to Pacific Junction, Iowa, on Monday, May 8, 1950

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. O'SULLIVAN. Mr. Speaker, at this time I wish to call the attention of the House of Representatives to a very revealing news item and editorial dealing with President Truman's recent visit to Pacific Junction, Iowa, which is just across the Missouri River from Plattsmouth, Nebr., and the congressional district which I now represent in the Congress of the United States, to wit, the Second Nebraska District. This news item and editorial appeared on May 11, 1950, in the newspaper known as the Farmer-Labor Press of Council Bluffs, Iowa. Its verbally hard-hitting and most able editor, the Honorable George Woodward, Sr., is a tried and true Democrat of the old school, who garnered his full share of political and other wisdom as he traveled along the journey of life. His fair and fearless journalistic estimate of our greatest President is well worth his time and effort put into same, and is well worth the careful consideration of true Americans, not of the "help Joe Stalin type," who now are encased in the ignoble lower bowels of reactionary republicanism, which has nothing left to talk about but unfortunate sexual misfits in the departments of Government, Reds who are not Reds at all, and Fascist economy which will, if put into effect, give bloody Joe an advantage in the cold war which he never expected or ever deserved.

Years ago when I was a cowhand we met and treated in our own very proper and most convincing way these same kind of fellows who were always soiling normal thoughts of decent men and women with sex perversion subjects.

This is the way we handled their cases. You see we felt always that these kind of fellows should be watched very closely, because we believed in the old saying that what was closest to the mind was dearest to the heart, so consequently we made those kind of talking fellows always ride sidesaddle with their pants on, so that people would meet and know them as they really were.

In Omaha there is the greatest saddle-making firm the wild and woolly West ever knew or saw. It is Alfred Cornish, 1306 Farnam Street, Omaha, Nebr., and they still make the sidesaddles which the proper females of yesteryear were wont to use. I would suggest that all reactionary Republicans get their orders in before the rush. From my casual observations, and I am a pretty good judge of hindquarters, it will take a pretty big saddletree to fit some of these fellows' ponderous midsections, but Alfred Cornish will, I am sure, take care of their riding needs no matter how big they come. Remember this please, when we get you riding sidesaddle, the way you really should go, you will never fool anybody any more. Just remember that when you point one finger at the other fellow there are always three of your own fingers pointed at you. Self-protection is always the first law of nature so please get natural in every way before you unfortunately expose yourself.

I now present the news item and the editorial.

The news item:

TRUMAN BACKS NEW DEAL ON CURRENT TRIP

President Truman has come out swinging in behalf of his Fair Deal, the major portions of which have been accepted and endorsed by organized labor. In the Iowa portion of his current cross-country tour, the Chief Executive left little doubt that he considered his own program an extension of Franklin D. Roosevelt's New Deal and perhaps that is the way the President would really like to have his efforts described—that he is endeavoring to carry on where F. D. R. left off.

At Creston, the President assured a crowd of seven to eight thousand who braved the rain and cold to hear him speak that the Federal Government was not trying to take everything over. He also noted that Iowa seemed to have plenty of water and that good use was being made of it. The President also declared that the REA, one of the rather early New Deal measures, was still bringing needed power to Iowa farms where there was none before this agency came into being.

At Pacific Junction where the President was met by a considerable delegation from Council Bluffs and southwestern Iowa, and the crowd numbered over 3,000, the President reminded his listeners that bank failures were practically unheard of these days and that this healthy condition had existed since the creation of the Federal Deposit Insurance Corporation, the Government agency which insures bank deposits. He said at the time of the establishment of the FDIC dire predictions were made that the plan wouldn't work but that this was around the time also that Iowa farmers were in pretty bad circumstances, in fact, the President recalled, an Iowa judge was almost hung because he ordered foreclosures on certain farms where the farmers had been unable to make their payments.

The President concluded his Pacific Junction talk by saying that he was the same fellow who came around 2 years ago looking for votes and that he still considered himself a "servant of the people."

Prominent among those welcoming President Truman at Pacific Junction was Democratic senatorial candidate Otha Wearin, former Congressman from this district, who also chatted briefly with his old congressional colleague, former Washington Governor Mon Wallgren, Tom Keleher, local druggist and Democratic candidate for State representative, and Democratic County Chairman Dave Burrows and Vice Chairman Dora Sowden, did the honors in presenting the President with a huge ice cream birthday cake. Other candidates including Jim Hart, who is running for Congress on the Democratic ticket, shook hands with the Chief Executive.

The editorial:

PRESIDENT TRUMAN VISITS OUR PART OF IOWA

Like him or not, the President of the United States is a very human sort of fellow. He is not stuffed shirt and he talks and acts like a down-to-earth person his intimates say he is and yet there is a quiet dignity about him. Despite the many cares of his office, the most important governmental post in the world, the President impresses you as the type of man who would always have at least a couple of minutes to listen to your own personal problems and offer a friendly bit of advice.

In fact, we are pretty certain that the Chief Executive has one quality that perhaps has generally escaped his admirers and foes alike and that is this: At any given time, he would be talking to average Joe Doakes he would be giving Joe the same attention and treatment that he would give, say Joe Stalin or Winston Churchill, at a high level conference involving the fate of nations. Call this the common touch or what you will, it undoubtedly has won the President friends and supporters among all the Joe Doakes and to tell the truth he seems mainly interested in the average Joes.

Personally, President Truman is the picture of health and even his most bitter foes, if they are honest about it, would have to agree with his Pacific Junction statement that although he was 66, he didn't look it.

On the cross country tour the President is making, he evidently is going to remind the Nation of where it now stands in comparison with 18 years ago and offhand we would say that a lot of us need reminding. President Truman, like his peerless predecessor, is continually being attacked by the special interests who yearn for a return to the good, old days. These good, old days, of course, were also the days of low wages, low farm prices, and low income for the small-business man.

Labor, of all segments of the population, is perhaps most familiar with what happened prior to the New Deal and maybe before it is too late, all of us had better take stock and see if we hadn't better heed the President's warnings. If we do, then we'll vote for a Congress this November which will be pledged to the maintenance of economic conditions as they are and not as they were in 1932.

State of Our Defense: An Audit and Appraisal

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following article by Hanson W. Baldwin,

which appeared recently in the New York Times:

STATE OF OUR DEFENSE: AN AUDIT AND APPRAISAL—STRENGTH OF ARMY, AIR FORCE, AND NAVY FOLLOWING REDUCTIONS FOR ECONOMY

(By Hanson W. Baldwin)

The state of the Nation's defenses came into the congressional spotlight last week as General of the Army Dwight D. Eisenhower suggested the addition of about half a billion dollars to the 1951 defense budget. General Eisenhower's concern with our "disarmament"—which he heavily qualified, however—was immediately discounted by President Truman, who categorically but politely denied that any of our defenses had been reduced below the safety limit. At the same time, the President expressed the opinion that there was no fundamental difference between himself and General Eisenhower, who, as temporary presiding officer of the Joint Chiefs of Staff, has been generally credited with having prepared the military budget.

The continuing debate about our security program, which has been in the headlines ever since the Navy-Air Force differences last fall, centers around armed forces that now total about 1,490,300 officers and men. The Army has more than 600,000 men, organized in 10 divisions, plus smaller units; the Air Force has some 414,000 men, with 8,800 operating planes; and the Navy and Marines have about 460,000 men, operating 652 ships of all types; 5,900 active planes, and two marine divisions.

BACKED BY RESERVE UNITS

These Regular forces, far larger than in any prior period of our peacetime history, are backed up by Organized Reserve and National Guard units that also are larger than ever before and that are being increased in strength in the next fiscal year.

The Regular forces—and particularly the Navy and Marine Corps—have been in the process of contraction for some time, however, and cuts scheduled for the 1951 fiscal year (starting July 1)—the budget for which Congress is now considering—were particularly severe, and were one of the reasons for the Navy's resentment as expressed last fall in congressional hearings. Secretary of Defense Louis Johnson has lightened somewhat the reductions scheduled then, but the bulk of them have gone through, or are scheduled to.

The Navy is to operate fewer carriers than last year; 30 fewer destroyers, vital in submarine warfare, and fewer submarines. A major cut also has been scheduled in naval and marine aviation. The Army anticipates that the reductions will "of course, have an influence on our over-all combat effectiveness, but we are endeavoring to minimize the impact on our immediate combat potential." The Air Force remains at about the same size next year as this, but its hoped-for progress toward the 70-group goal, recommended some years ago, has been frozen under the prospective budget to 48 groups.

IMPROVED TRAINING

The state of training, organization and equipment of these forces is far better than it was in the postwar demobilization period, and there has been definite modernization and improvement in the past year. But there are, of course, many weaknesses. Nearly all units are well below strength. Only part of the Strategic Air Command, the First Division, and Constabulary in Germany and the Eighty-second Airborne in this country, and the Navy's Mediterranean and far eastern task forces could be considered approximately ready for war. The Army has virtually no new postwar tanks or antiaircraft guns; only a relatively few ships and naval planes are equipped with the newest radar and sonar, vital in combating submarines; and the close-support tactical and troop-carrier planes of the Air Force are relatively few in number, somewhat deficient in training, and perhaps not entirely satisfactory in quality.

One of the greatest weaknesses, the effects of which will be felt most seriously only some years in the future, is the current and projected rate of aircraft procurement—about 2,048 to 2,200 military and naval planes of all types per year. This rate is so low that unless it is increased it will not be sufficient to replace old aircraft, and by 1954 or 1955 or even earlier, a sizable part of our Air Force and Navy planes may be obsolete.

The necessity of peacetime economy has imposed certain other weaknesses on the Armed Forces. The virtual withdrawal of the Navy from Midway and from the outer Aleutians is part of the calculated risk that any peacetime defense budget must assume, but there is no doubt that both positions—particularly the Aleutians, which tend to neutralize one of Russia's most important submarine bases, at Petropaviovsk—would have to be reoccupied and strengthened in case of war.

EISENHOWER'S RECOMMENDATIONS

These and a great many other weaknesses have been pointed out by various critics of the administration's defense policies. General Eisenhower last week added his voice, though moderately, to those of the critics. He cited particularly the need for the procurement of more planes for the Air Force, and suggested a 3-year program for strengthening Alaska, more expenditures for antisubmarine warfare, and a strong economic and industrial mobilization program and a better intelligence service. His testimony was immediately followed by a plan advanced by the House Armed Services Committee to add $647,000,000 to next year's budget to strengthen Air Force and Navy and Marine Corps air arms and to help to provide a radar fence for the country.

These attacks upon the administration's defense program have a considerable foundation in fact, although some of the attacks undoubtedly have exaggerated our weaknesses, and have been overly critical of Secretary of Defense Johnson's economy program. The cuts in our defense funds have resulted in the sloughing off of some service "fat," but when some 20 percent of our troop strength can be allocated to housekeeping duties to replace civilian personnel who have been dismissed, it is hard to substantiate Mr. Johnson's contention that our over-all combat effectiveness has been increased. In fact, there is no doubt but that our total active military strength is less today than a year ago and will be less still a year from now if the projected 1951 military budget goes through without change.

REMEDIAL MOVES

But the cuts in combat strength that are being made are not so important—except perhaps in the naval and Marine Corps air arm—as other definite and continuing weaknesses. These weaknesses include: The intelligence services, economic and industrial mobilization planning, civilian-defense planning, aircraft procurement, antisubmarine radar and sonar, a radar "fence," tanks and antiaircraft guns, tactical and troop-carrying aircraft, Alaska, and Okinawa.

Even before General Eisenhower's testimony, work had been started to remedy some of these deficiencies; to take care of them all would cost much money, and in peacetime there never is in a democracy what any military man would consider a truly adequate defense. The peacetime military budget must always represent an accommodation between economy and security, and unless we are to become a bankrupt state or a garrison state we can never even attempt to buy absolute security.

A defense budget, moreover, must be flexible and relative to the world situation and the Nation's economic condition. The budget for 1951 is based upon an assumption of continued prosperity in this country and upon the estimate that war in the foreseeable future—the next 2 years or even 5 years—is unlikely.

A Hearty Welcome to You, Mr. President

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1950

Mr. O'SULLIVAN. Mr. Speaker, a number of persons and business institutions of Lincoln, Nebr., ran the following full page advertisement in the Lincoln Star of Lincoln, Nebr., which was headed by a large sized picture of our President and the greeting extended to our Chief Executive, in spite of the rainy weather, was tremendous:

A HEARTY WELCOME TO YOU, MR. PRESIDENT, AND A HAPPY BIRTHDAY

The people of Nebraska and the people of Lincoln are happy that the Chief Executive of the United States has chosen these spring days to visit a section of the great American breadbasket, whose broad fields of grain feed hundreds of millions of people.

The Midwest—and no region is more typically midwestern than Nebraska, which contains the geographical center of the United States—its cities, towns, farms, and people are a part of the heart of America where since the early settlements the common aspirations of freemen and freewomen have been held in high esteem. Its people have built fine homes, fine business institutions, fine communities. They know that these days immediately ahead will be a source of inspiration to you in your travels because here the spirit that has been consecrated in American thought flourishes.

The people of Lincoln are happy that you have chosen the capital city of Nebraska for one of your major stops that you may visit with them and they may visit with you. In the spirit of democracy, the strength of free institutions rests upon the opportunity of men and women of all political beliefs to meet and talk. It is to the glory of America that since the very beginning a nation that has fulfilled the hopes of destiny continues to be an example of comfort and strength to the world. Here in a community which takes its name from one of America's immortals, freedom of conscience and mind continues to be man's greatest heritage, a life of dignity and purpose.

This is your sixty-sixth birthday.

In the spirit of the hour, the people of Lincoln and of Nebraska extend to you, and to the high office which you occupy, neighborly felicitations.

American Stores Co., Lincoln Packing Division; Ben, Your Hairdresser; Best Laundry & Cleaners; Consumers Public Power District; The Famous, by Phil Byron; The Gas Co.; A Friend; Hompes Tire Co., H. The Lincoln Journal's Account of President Truman's Visit to Lincoln, Nebr., on May 8, 1950

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. O'SULLIVAN. Mr. Speaker, the Lincoln Journal, of Lincoln, Nebr., a liberal Republican newspaper, edited by Hon. Ray McConnell, had this to say concerning President Truman's visit to the capital city of Nebraska:

TRUMAN, GOOD RAIN GET ENTHUSIASTIC WELCOMES—PRESIDENT URGES BRANNAN PLAN WAY TO PROSPERITY

(By Dean Pohlenz)

ABOARD TRUMAN TRAIN.—A Nebraska cloudburst and grinning, friendly President Harry S. Truman arrived in Lincoln at the same time—and both received an equally enthusiastic welcome from the State.

Standing partly unsheltered in the face of a driving downpour, the President again and again expressed to his audience his appreciation for their lasting out his Nation-wide major address plugging for the adoption of his administration's Brannan farm plan.

A crowd first estimated by Lincoln police at about 8,000 gradually dwindled to 3,000 to 4,000 on the invitation of the President that he would not be offended if the rain-spattered audience left.

He said he himself must stay and make the speech, since it had already been given to the newspapers.

Many took him at his word and left.

Some of the Presidential party and the press corps were in grumpy mood as they boarded the train for the jump to Grand Island.

A White House staffer acknowledged that the crowd had been inattentive because of the rain, but hoped that the newspaper and radio coverage would offset this to a large degree.

Although the President studiously avoided labeling the advocated farm program as the Brannan plan, he urged its doctrine as the way toward well-being and abundance and the only way to assure peace and prosperity for ourselves and for the world.

The President stressed the importance of the welfare of the farmer to the economic stability of the Nation needed to insure the success of our program for peace.

The President asserted:

"The plain fact is that the production-payment plan is the best plan yet proposed for getting an abundant production of perishable crops consumed without knocking the bottom out of the farmer's income.

"It is in the farmer's interest. It is also in the consumer's interest. I firmly believe it should be made a part of our national farm program."

Mr. Truman's speech was the first of a series of nine major addresses scheduled for his 6,400-mile cross-country stumping tour.

The trip has been generally recognized as the opening of an administration campaign to pick up additional strength in the November congressional elections.

The Brannan plan is one of a number of Mr. Truman's Fair Deal proposals which the present Congress has pigeonholed.

He scolded that the same charges of socialism and regimentation now being leveled at the Brannan plan had been hurled at the New Deal's AAA farm program in the 1930's.

Instead of being communistic, these previous farm programs, he said, strengthened the foundations of democracy by making the farmer more secure in the ownership of his land.

They also allowed the farmer to regain control over his own destiny and enjoy more liberty and a better life than ever before in history, said the President.

The President based his plea for the Brannan plan on four ideas:

1. Fair income to the farmer.
2. Increased food to the consumer at lower costs.
3. Increased conservation.
4. Maximum benefits to the family-size farm.

In responding to the Lincoln welcome and a 50-pound, red, white, and blue birthday cake presented to him, the President spoke of Lincoln as the center of the Nation where the Corn Belt merges with the Great Plains.

He said Lincoln was typical of a city's dependence upon greatness and the importance of American agriculture.

"This is the pattern all over our country," he said.

He said that Lincoln is also directly affected by what is happening in Berlin, Paris, and Singapore.

As President Truman descended the presidential train about 5:05 p. m., he was met by a welcoming committee of State, city, and democratic officials and escorted to a specially constructed speaking platform at Seventh and Q.

He was tightly guarded by police and secret-service men to the disappointment of autograph enthusiasts.

Lincoln's Mayor Clarence Miles introduced the President. Lancaster County Chairman Willard Townsend congratulated the President on his sixty-sixth birthday upon presenting the cake on behalf of the people of Lincoln and the State.

Mr. Truman was also welcomed by Democratic National Committeeman James C. Quigley and Nebraska's Republican Governor, Val Peterson.

Earlier a gala parade of welcome moved down O Street from Fifteenth Street to the station.

President Truman's address emphasized the relation of falling farm prices to depression dangers. Although net farm income dropped 50 percent after World War I, he said that after World War II prices have dropped only more than 20 percent in the last 2 years.

He emphasized that the present farm-price support program is failing to provide a satisfactory basis for dealing with perishable crops. Terming the potato situation "shameful," he said that it is foolish for the Government to buy and store or buy and destroy food that people want to eat now.

After conceding that the Brannan plan would require crop production limitation, he lashed out at critics calling this regimentation. He said this principle is at least 20 years old and incorporated in all the major farm support programs in recent years.

He singled out for special criticism the calculation of support levels on data of some out-of-date historical period. His reference was to the 1910–14 farm price index. The administration is asking for a reference period of 1939 to 1948.

He said the farmers had to approve production controls by a two-thirds majority and asked how this could be called regimentation. Rather, he said, this is in the full tradition of self-government.

He emphasized the Brannan plan advantage to the consumer.

As to the cost of the plan, he said those people making fantastic estimates just don't understand how it would actually work. He made no estimate of the plan's cost, but prophesied that the plan would cost no more than the present system.

He said the plan also would shift food production from crops to livestock and stimulate better conservation practices.

Although he said we should not ignore the welfare of the large farms, he added "it is only sensible where public funds are involved to provide a higher degree of protection for the family farm."

He punctuated the end of his speech with the unscheduled statement:

"Now, my friends, in farewell, that's a farm program that will work, and I welcome your support."

It also said the following editorially on May 9, 1950:

MEMO TO THE PRESS CORPS

A memo to the newspaper correspondents and columnists aboard the President's train:

Gentlemen and Miss Fleeson, the last time a large number of you were here covering a political event, one of the more enterprising of your calling hired a cab and drove out south of town to the first farm he came to (I trust it wasn't the State pen farm), interviewed a nonplussed man in blue jeans, then wrote an elaborate analysis of farm sentiment.

We call this technique in political writing "catching a farmer" or "pulling a grass root." It is a great improvement on your interviewing each other at the bar. But you are here so short a while you may not have time to shoot out to the grass roots at the city limits and back, so we thought a few tips from us as to what we think folks are thinking, etc., might help you pad out your pieces a little.

First, a word of caution. When you write about farm sentiment, to which President Truman is making an appeal, don't make the mistake of thinking there is any such thing in one lump. There are farmers and there are farmers. There are farmers and ranchers who are well fixed, who are sitting on their piles, whose property is all paid for, and who want no part of price supports of any sort. At the other extreme are farmers who are struggling to get a start—young fellows, some of them—who will lose their shirts (to the well-fixed ones) if the bottom drops out of the market. Roughly, very roughly, reaction to any Government agricultural program tends to divide along those lines, and that goes for the Brannan plan.

HILL AND VALLEY FARMERS

It is a tendency, no more, because farmers are not just economic robots any more than you are—or are you? Still, the saddest mistake you can make in writing about the way the President's advocacy of the Brannan plan is received, is to generalize on farm sentiment by listening to one or two farmers and forgetting to inquire as to their economic status.

A friend put it another way, reporting that, roughly, in his rural locality, the valley farmers are against the Brannan plan and the hill farmers are for it. This is another way of saying that the administration's greatest appeal among farmers tends to be to the little fellow, the marginal farmer. That is a fairly obvious point, but, oh, well, I guess the President has been reminding you of that enough.

REPUBLICAN, BUT—

Nebraska as of now is predominantly a Republican State, but it was among these less-well-fixed farmers of Nebraska—more than among the farmers of any other Midwestern State—that the Republican Party lost the most heavily in the 1948 election. This is according to Elmo Roper's post mortem. This newspaper is highly critical of the Truman administration on any number of points. We are deeply troubled by the drift toward more and more Government enterprise. We are deeply troubled, and so are many, many of our readers, by the ghastly size of nondefense Federal expenditures. We want Senator MCCARTHY to press to the utmost his effort to ascertain the extent of Communist infiltration in Government, and we can't accept the proposition

the President asked the public to accept in his speech to the Federal bar—that there was nothing to worry about on this score. We are appalled, sometimes, by the apparent evidence that the White House doesn't know what its own administration advisers and leaders are doing in Congress, particularly with reference to the cold war, and we said so last week in an editorial headed, "Does the White House know the score?" And so on—we don't want to spoil the President's birthday.

Nevertheless, to be honest, this newspaper recognizes both more sense in the Brannan plan than its more vocal opponents will admit, and, as we get out among farmers, a greater readiness among many farmers to consider it than some of their spokesmen would have us believe.

We talk about the cost of the Brannan plan, but has anyone ever figured the cost of the present price-support program, if something went haywire, say, in wheat, instead of in potatoes? From our point of view the greatest danger is that the cost of any price-support program will be misinterpreted to the consuming public by eastern publications lacking much idea of the midwestern farmers' problems, whipping up sentiment against any Government farm program. Maybe the Brannan idea to let perishables seek their market level offers some insurance against this. At any rate, Republicans haven't yet come out with anything better.

"Cleveland Is One of the Most Enlightened and Appreciative Library Communities in the World; Experts Agree That the Cleveland Public Library Is a Live, Dynamic Force, Offering a Great Variety of Books, Services, and Information to Everyone"

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1950

Mrs. BOLTON of Ohio. Mr. Speaker, these words I have just spoken appear in a most provocative article, What's Wrong With Our Public Libraries, written by Jack Harrison Pollack and appearing in the current May issue of the Woman's Home Companion.

These words of praise about the Cleveland library system, our handsome main building in the heart of the city, with its 34 branches conveniently located throughout the community, have particular meaning because they are in vivid contrast to library conditions as they have been found in most parts of our country.

The public library inquiry, soon to be released, is an exposé of the true conditions of our 7,500 libraries in America. Sponsored by the eminent Social Science Research Council and financed by the Carnegie Corp., this thorough study will have some startling critical conclusions, and reveal not only that too many of our libraries—metropolitan and rural—are musty, ill-run, poorly stocked nineteenth-century mausoleums, but some of the reasons why millions of Americans have not been inside a public library since they left school, and why today only 1 in 10 adults uses a library more than once a month.

I commend to every Member in this House the reading of this very enlightening article, and I should like also, to extend to each of you the invitation proffered by Mr. Pollack to his readers: "Come visit the modern Cleveland Public Library, which experts agree is one of the best in the country."

The article from the May 1950 issue of Woman's Home Companion follows:

WHAT'S WRONG WITH OUR PUBLIC LIBRARIES?

(By Jack Harrison Pollack)

How long since you visited your local public library? If it has been a long time, you have plenty of company. But is it because the library location is too inconvenient? Hours too limited? Chairs too hard? You can't smoke there? The new books you want are never available?

Or is it because you're a lowbrow—and don't care about libraries?

To hear the cynics talk, it's the last reason. We have the libraries, they argue, but the libraries don't have the customers. Conclusion: People are lowbrows.

But the cynics' whole argument is based on the false assumption that all our 7,500 libraries are what they ought to be—useful and efficient. It's high time the depressing truth was known about America's horse-and-buggy libraries.

A lot of eyes should be opened by an authoritative new study of libraries all over the United States—the public-library inquiry—soon to be released. Some of its startling critical conclusions are now reported for the first time in a popular magazine. This thorough study, sponsored by the eminent Social Science Research Council and financed by the Carnegie Corp., which has built nearly 1,700 American libraries, reveals unmistakably that too many of our libraries—metropolitan and rural—are musty, ill-run, poorly stocked, nineteenth-century mausoleums.

No wonder millions of Americans haven't been inside a public library since they left school. No wonder, as the inquiry reveals, only 1 in 10 adults uses a library more than once a month. Perhaps going to the library may not be your idea of a good time. Yet it can be that—and a whole lot more—as you'll see later in this article.

The men and women who intensively investigated America's libraries for 2½ years were recruited from leading universities. Dr. Robert D. Leigh, the inquiry director, is one of the country's top political scientists, a former college president, Government administrator, and director of the famous freedom-of-the-press inquiry released several years ago.

"A handful of our libraries are magnificent institutions," Dr. Leigh told me. "But the overwhelming majority fall far short of what they could be."

The American Library Association, the national organization for librarians, admits, "More than half the available service is substandard." Other authorities declare, "Today 9 out of 10 American libraries are inadequate."

Even worse, 35,000,000 Americans living in 600 of our counties have absolutely no library service. This is true in rich urban North, East, and West, as well as in the poor rural South. In wealthy Iowa and Nebraska, for example, 44 percent of the population lack any kind of library service. In only a few States do all of the people have at least some library facilities.

Other studies at the Universities of Michigan, Chicago, Denver, and elsewhere tell the same shameful story—poor public relations, old books nobody wants to read, lack of funds and trained personnel, unattractive quarters. And my recent visits to numerous libraries throughout the United States confirmed this.

I was appalled, for example, at how many libraries are housed in outmoded memorial tombs instead of cheerful, well-lit, modern structures. Most libraries were built before 1918, when the fashion was huge-domed ceilings and a long, discouraging flight of stone steps. At least one librarian I know of—and nobody knows how many patrons—had to stop climbing such steps on doctor's orders.

As for lighting, in one Ohio library (built originally as a theater) miners' lanterns on extension cords are actually used to find books in the stacks. The stacks themselves rise five levels to dizzy heights around the former auditorium and are reached by spiral staircases and catwalks with knee-high railings. "Lit" by a dirty skylight, the whole room is in perpetual twilight. One page boy fell four levels; it's a mystery why more people haven't been injured in this eerie, Edgar Allan Poe monstrosity.

At another extreme, in a Southwest city of 50,000 the local library is situated in several tiny rooms in the county court house, with gossiping, tobacco-spitting court hangers-on to discourage women and children from patronizing it.

Library public relations are, in general, so poor that even when a library is equipped to offer services other than lending books, most people don't know about it. For example, lots of information is available by telephone from many libraries—checking a recipe, finding out how to remove a stain or getting guidance in buying books for home or office. Yet millions of people don't know they can phone or visit their libraries for such information. Women, especially, make very little use of their library's reference facilities, the Inquiry found.

Luckily the picture isn't all dark. There are some bright spots.

Come visit the modern Cleveland Public Library, which experts agree is one of the best in the country.

Though most libraries are traditionally low-pressure institutions, this dynamic one is a live community force, offering a great variety of books, services, and information to everyone.

"Cleveland has the most enlightened and appreciative library community in the world," a British visitor observed.

A Cleveland housewife told me, "Since I've started going to the library I've improved my cooking, learned how to make my home more attractive, take better care of my children and have more to talk to my husband about."

What makes this library outstanding? Here are some of the reasons:

It has a handsome easy-to-use main building and 34 convenient branches—all of which recently had new fluorescent lighting put in. What's more, the library maintains over a hundred book stations in stores, factories, schools and fire stations.

It owns and circulates more books per person than any large library in the country. It also lends thousands of phonograph records, 16-millimeter films, and reproductions of fine paintings—all on your library card.

It has lectures, exhibits, concerts, movies, and discussion groups on topics ranging from current events to mothers' problems, during its nine-to-nine day.

Its cozily furnished Robert Louis Stevenson young people's room is a favorite hangout of teen-age poets (who even published their own book) and competes with the local ice-cream parlor for all adolescents' leisure hours. The Cleveland library also runs the school libraries, so often neglected in other cities.

The Cleveland Library answers questions, by telephone or mail, on subjects ranging from household repairs to the latest in child care. I heard women ask questions about nursery schools, party planning, gardening, jewelry making, jobs, how to dress for a

church wedding, and even some intimate aspects of sex and marriage. Mother-in-law trouble, backward children, husbands who drink, are a few of the problems Cleveland librarians are asked to help solve. Sometimes, even, stenographers who can't read their notes and don't dare ask their bosses, have them deciphered by the librarians.

The library operates one of the most extensive information services regarding local businesses of any public library—and some companies located in Cleveland because of this. Before purchasing a new vacuum cleaner or toaster the Cleveland housewife will frequently ask this department for advice.

The foreign-language division has almost 250 newspapers in 23 languages for Cleveland's 40 nationality groups. It translates thousands of foreign letters received locally. I heard one woman ask, "My uncle in Holland wants me to send him some shoes. He says he wears a size 43. What size is that in this country?" The library found the answer: size nine.

A travel bureau helps Clevelanders plan trips. If you're moving to another State you can get information about the climate, schools, shopping, and similar things.

Speakers and exhibits are sent out to women's clubs, church, labor, civic, fraternal, and other groups all over the city. The library will give you pointers on how to be mistress of ceremonies, introduce a speaker, pronounce foreign names. Branch libraries have clubrooms for community gatherings.

There are three sprightly 15-minute weekly radio programs and frequent use of educational films (supplemented by talks) on health, science, nutrition, family, and community problems.

The library has the largest chess and checker collection in the world and holds tournaments on Saturday afternoons.

It delivers books to shut-ins in institutions and in their own homes. Its ceiling books—texts projected overhead—are godsends to many bedridden Clevelanders.

Of course all this didn't just happen. Cleveland is a teamwork town where—according to a stock joke—citizens, before retiring at night, prayerfully ask themselves, "Have I cooperated well today?" The cultural spark plug of this community spirit is Cleveland's librarian, Clarence S. Metcalf, an unpretentious warm-hearted man who would circulate his old hat if anybody would wear it.

A number of leading librarians are hard-hitting men—Baltimore's Emerson Greenaway; Detroit's Ralph Ulveling; Los Angeles' Harold Hamill. Only true missionary spirit keeps many on the job. Librarians—who never go on strike—are one of the most underpaid, unappreciated, selfless groups in America. Today 15,000 library workers are needed but because of the scandalously low salaries few are entering the profession.

Library trustees can be a headache too. Most of the country's 35,000 board members are helpful. But some autocratic trustees, especially in smaller towns, consider libraries their private palaces, even dictating what books should be bought or displayed. That's why some libraries keep controversial books off the shelves.

Censorship is a big problem for librarians. Last year during the trial of the eleven Communists, New York Public Library Director Ralph Bates was asked to explain in court why he circulated Marxist books.

"We have four and a half million volumes," he replied. "Some are on polygamy and murder—but that doesn't mean we're in favor of polygamy and murder."

Some indifferent trustees snooze through board meetings and privately boast of never having read a book. One small-town trustee insists all his library needs is "a Bible and a dictionary." Another big-city trustee on the library board for over 20 years didn't start coming to meetings until very recently. A Midwest city hasn't built a new building because each trustee wants it near his own office.

Libraries as a rule are free from unsavory politics, partly because the meager budgets promise little graft for the corrupt politicians. But occasionally, as in one large Midwest city, the political machine even invades the public library, keeping the staff in an atmosphere of continual crisis.

It's a miracle that with all these handicaps as many libraries as do render such excellent service.

Baltimore, like Cleveland, has a wonderful modern library, the Enoch Pratt, which not only serves but leads the public. Its peacetime atomic energy series is widely hailed as a pioneer achievement in popular education. When I visited the main branch recently, a huge sign outside challenged, "Atomic Energy: Better World Ahead?" The magnificent building is on street level so that women can even wheel their baby carriages into the foyer, where a guard is on duty. The library has a dozen changing window displays—just like a department store. No wonder newspapers assign reporters to the Enoch Pratt as a regular news beat.

A few other scattered big-city libraries know their communities as well as their books. When race riots broke out in Detroit several years ago the library issued a leaflet of tolerance quotations which ran through three printings in a week. Compare this to some southern libraries which deny books to Negroes "because they are unsanitary."

Some smaller-town libraries are also on their public-relations toes. The Montclair, N. J., library puts brief messages on book tabs, such as, "Do you know the library has 200 cookbooks?" Once when a woman asked for help in naming her Persian cat the library's reference section suggested "Azada," the name of an ancient Persian princess. Then, to dramatize the extent of the library's service to the community, it persuaded the Persian (Iranian) Ambassador to participate in a public cat-naming ceremony.

Any publicity about libraries is all to the good because it helps bring people into the library.

To attract youngsters, some libraries have used soft-drink bars, jive concerts, snacks, and even dancing. I know a small-town library where mothers can leave their preschool children while they shop—or visit the hairdresser.

Louisville, Ky., now has 3 television sets in its main library and one in each of its 10 branches. Librarian Clarence R. Graham reports, "The added attendance has greatly stimulated interest in other library services." The Lincoln, Nebr., and Peoria, Ill., libraries have set up "bookateries"—self-service book stations in neighborhood grocery stores.

But "trick stunts" can merely supplement a sound library program. They are no substitute for really serving a community.

Unfortunately the typical American library today is both too small and too poor to give you effective service. They're frequently understaffed, understocked, and not open full time. "The little independent library is really no modern library at all," reminds Dr. Leigh. "And giving funds to it is a waste of public money. Certainly, keep the little libraries—but make them parts of larger units."

Instead of 7,500 anemic libraries as at present, the American Library Association recommends that we have 1,200 healthy consolidated county libraries, with as many branches as necessary.

California has shown the way in starting such first-rate county libraries. Virtually all of the State's 58 counties now have them.

Nevertheless, even county libraries can't always solve the problem, because of their small size or poverty. Dr. Leigh says, "We need library districts or regions large enough to provide a hundred-thousand-dollar annual budget from local taxes and appropriations. This doesn't mean a hundred thousand dollars for each community library but that sum for groups of cooperating libraries which pool their books and professional personnel—whether in a city, county, or region."

Does this sound like a revolutionary concept of the public library? It's the best modern thought on the subject and something that should be of special interest to women.

Many of our libraries grew out of women's reading clubs at the turn of the century. Today, neglected and desperately needing a transfusion, they offer a new challenge to the women's clubs of America to perform the finest type of community service.

What can you do to help improve your local library?

1. Work through a Friends of the Library group. If your town doesn't already have one, the American Library Association, 50 East Huron Street, Chicago, Ill., will tell you how to start one.

2. Regardless of whether your library ultimately ties up with a county, district, or regional library, help it get more funds today. Good library service costs money but it's worth it. Many counties today spend more money for their beach commissions, rest rooms, and dog catchers than for their libraries.

3. Urge your State legislators to appropriate more money for libraries. Twenty States give absolutely nothing today. And look into the possibility of greater Federal aid.

Some final words: Don't let the cynics mislead you. Once people enjoy good library service they refuse to be without it. You'll know what I mean if you've ever seen book-hungry Louisiana women pushing baby carriages a mile over a gravel road to meet the bookmobile. Or watched eager Vermont youngsters waiting in the snow for the arrival of their "library on wheels."

A top Nazi once warned of the American public-library menace. Yes, books are weapons. But they are more than that. Andrew Carnegie, who gave away $56,000,000, once said, "The person who enters a library is in the best society this world affords."

Isn't it about time we made libraries rising instead of falling stars in American life? If they continue to be meaningless appendages to commercial media instead of dynamic educational instruments, they may fade away.

The public library inquiry has sounded the alarm. Will we heed it?

The Tour at Its Climax

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article appearing in this morning's New York Herald Tribune.

Mr. Speaker, I believe the meat of this editorial is in the last paragraph. The President's tour has come to an end but the people have not been enlightened on the real problems and dilemmas confronting them. We are still faced with deficit spending and heavy taxes. It was with great regret when I read that the Committee on Ways and Means had agreed to impose a tax on the net accumulated income of mutual savings

banks and building and loan associations. To me, this is gross discrimination. Not to consider taxing co-ops, unions, and charitable institutions for profits made in competition with private enterprise is not justifiable. In fact, I cannot find any grounds for such action. If there is going to be an honest effort to replace the taxes lost by reducing the present emergency excise taxes, in order to satisfy Mr. Truman, the Committee on Ways and Means would be justified in taxing the mutual organizations in business for a profit, on the same basis as private enterprises are being taxed today. Business, especially small business, cannot continue bearing this burden alone forever and I believe if private enterprise is to survive, other organizations competing in the profit system must pay their legitimate share of the taxes.

THE TOUR AT ITS CLIMAX

The President's arrival at Chicago was carefully prearranged to coincide with one of those large party gatherings which the Democrats manage with uninhibited glee. The unbridgeable fissions within the party might reveal themselves; a local clergyman, hitherto friendly to the Democrats, might denounce the proceedings as a tasteless desecration of the Sabbath. Yet the leaders and the rank and file, the Cabinet members and the crowds in the street, gave themselves over wholeheartedly to what was in part a conference and in part plain circus, with the novel magic of television being combined with techniques as old as the torchlight parade. Coming from a country-wide tour, after scores of speeches and innumerable public appearances, President Truman stepped for his major address into an atmosphere that must resemble the politician's idea of heaven.

What Mr. Truman might say on such an occasion was of less importance than the appearance of the man himself, and what he represented in the minds of his followers. There have been times when he was considered less than an asset to the party. In this same Chicago he had been nominated almost absent-mindedly for the Vice Presidency; in Philadelphia, 4 years later, the party leaders kept him waiting ignominiously in a hotel room for his final selection as presidential candidate. But today Mr. Truman is surrounded by the kind of spell possessed by those who have been successful, and the party leaders are ready to cheer him, as they did last night, to the echo. He stood then, not only at the climax of his current tour, but at what may very possibly be the highest point of his career.

The President set forth confidently from Washington 8 days ago, and it would be hard to deny that the tour has been, on narrow grounds, a success. Mr. Truman's speeches—even the off-the-cuff speeches—have been carefully prepared, so that there have been no bad slips; the itinerary was arranged to take him through areas that do not often have a chance to greet a President, and before the audiences that gathered in shirt sleeves, leaving their spring chores as the Presidential train came by, Mr. Truman has been at his homely best. In his more important speeches he has stressed those programs, like the Brannan agricultural plan, which appear to make good talking points even though almost no one wants to see them enacted; he has spoken in broad terms about the need for international concepts and action; he has stressed the themes of conservation and power development, which have a deeper hold on the West than we in the East probably realize.

Needless to say, there has been little illumination cast on the real problems and dilemmas confronting the Nation. Mr. Truman remains at the end enmeshed in the same contradictions which have marked his whole administration—the same undefined and apparently unlimited commitments, with good and bad inextricably mixed, and both canceled out by the danger of rising deficits and heavy taxes. Mr. Truman has had his chance to see and to be seen; the Democrats have had their day of pageantry. Now the country returns to the issues which cannot be exorcised by incantations, and upon the intelligent solution of which our safety and welfare depend.

Reduction of the Cost of Government

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the RECORD the following editorial entitled "Make It Stick" from the Cleveland (Ohio) Plain Dealer of May 12:

MAKE IT STICK

Here they are, the seven timorous Ohio Members of the House of Representatives who were unable to summon the courage to vote for a reduction in the cost of Government that wasn't even tied to specific projects, but designed merely to lower, slightly, the ceiling on bureaucratic expenditures as a whole:

ROBERT CROSSER and MICHAEL A. FEIGHAN, of Cleveland; EDWARD BREEN, of Dayton; THOMAS H. BURKE, of Toledo; WALTER B. HUBER, of Akron; MICHAEL J. KIRWAN, of Youngstown; and JOHN MCSWEENEY, of Wooster.

These seven Democrats—and their constituents should mark this well—cast their votes against the $600,000,000 reduction in the omnibus appropriation bill, which was approved by an overwhelming bipartisan majority of the House.

Accurately sensing, we are certain, the desire of the people they represent and the need of this Nation for more economical operation of the Government, 14 other Ohio Congressmen voting on the measure—4 of them Democrats—voted for the budgetary reduction. We mention, in a commendatory way:

Representative at Large STEPHEN M. YOUNG, of Cleveland, and Representatives JAMES G. POLK, of Highland, ROBERT T. SECREST, of Senecaville, and EARL T. WAGNER, of Cincinnati, Democrats; FRANCES P. BOLTON, of Cleveland, WALTER E. BREHM, of Millersport, CLARENCE J. BROWN, of Blanchester, CLIFF CLEVENGER, of Bryan, CHARLES H. ELSTON, of Cincinnati, THOMAS A. JENKINS, of Ironton, WILLIAM M. MCCULLOCH, of Piqua, J. HARRY MCGREGOR, of West Lafayette, JOHN M. VORYS, of Columbus, and ALVIN F. WEICHEL, of Sandusky, Republicans.

By voting the $600,000,000 slash in the omnibus money bill, by approving a compulsory reduction in Federal personnel designed to save another $400,000,000, and by sending to the Senate an appropriation measure some $2,000,000,000 under President Truman's budget request, the House did not achieve the millennium in Government economy. Let's be realistic about that.

Horizontal cuts in operating expenditures and personnel are not the forthright scientific way to attain sound economy in Government. The way to have done that would have been to prune away specific functions that are outright frills; to apply the economy shears to specific bureaus that are notoriously top-heavy in personnel, that are staffed with propagandists devoted to fighting against Government economy.

The way the House took was the way of expedience, for, as one Washington correspondent correctly noted, the horizontal reductions attracted the support of "members who in previous tests had balked at supporting cuts in specific programs that they deemed essential or politically advantageous."

But the action of the House was significant because it showed that a majority in the House is sensitive to the public's demand for economy.

The big task now is to make the House economy action stick in the Senate. It will stick if the people of the United States—the individual citizens, the voters of America—make it unmistakably clear to the Members of the upper Chamber that governmental economy, almost ruthless economy, has their approval.

Speech of the Late Senator David I. Walsh, of Massachusetts

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent, I am having reprinted in the RECORD a speech delivered some time ago by the late and lamented Senator David I. Walsh, of Clinton, Mass.

It is especially appropriate that this great fighting speech by Senator Walsh, which was the last major speech he delivered in the United States Senate after long, honorable, and outstanding service in that body, should be recalled at this time when the town of Clinton is celebrating its centennial anniversary.

Senator Walsh was Clinton's most illustrious son—distinguished legislator in the general court, Lieutenant Governor, Governor, and Senator from the State of Massachusetts for almost 30 years. The people of Clinton are proud of his contributions, proud of the great gifts which he consecrated to his country's welfare, proud of his courage and his stirring patriotism, and proud of his devotion to Clinton and its people.

The speech follows:

Mr. WALSH. Mr. President, at this late hour after midnight, I hesitate to take the time of the Senate to make some observations that the unusual proceedings, the exciting and tense debate on this issue, have prompted. I had not intended to address the Senate at this time, but I cannot longer remain voiceless when the deep-seated convictions I entertain over what is transpiring here seek expression.

Mr. President, the Senate has in recent days been passing through a most unusual experience. I have been here a long time, and I have never seen the proceedings in the Senate assume the extraordinary character they have during this debate and especially tonight. We have seen an antilabor coalition ride roughshod over a minority to the extent that even a motion to lay on

the table has been made against amendments in the interests of, and proposed by friends of, the workers, without permitting even debate or a vote on their merits. It is clear that there is a solid bloc of Senators, including members of both parties, determined to vote for almost any amendment restrictive of the rights of the workers. Of course, they urge that their purpose is to correct the excesses of labor unions, but that does not change the fact that their opposition is against every man and woman who belongs to labor organizations or who may choose to join them in the future. The atmosphere of the Senate appears to be charged with a determination to pass legislation impetuously and primarily for punitive ends. Calm and wise judgment has disappeared. As the roll is called, the question seems to be not so much on the merits of individual amendments but on a determined intention to classify Senators into two categories—one, the representatives of the employers, and the other, the representatives of the workers. By innuendo, if you happen to be a Senator championing the cause of the workers, you are a strike sympathizer and should receive the condemnation and contempt that some people hold at the present time toward John L. Lewis.

Instead of the ordinary procedure of discussing and analyzing the problems that affect labor and industry, of trying to prevent or remove the abuses that exist in both groups, the issue here is to seize the present opportunity to curb and restrict the rights now enjoyed by the workers. Senators who heretofore have boasted of their loyalty to the working class are gleefully rushing to vote for amendments that every man and woman in every labor organization in the country considers hostile and detrimental to the rights of the working class. Senators who were elected as friends of labor have succumbed to the hysterical emotions of the hour, and have joined the procession supporting the antilabor amendments. For the first time I have witnessed an attitude of indifference, if not real hostility, toward any expressions of sympathy with, or support of, the causes that Senators heretofore have been proud to advocate. There is a subtle attempt here to imply that those who speak against these repressive measures are either disloyal or wild-eyed labor agitators.

It is to be noted that every amendment to place management and trade associations in the same status as labor organizations, in regard to management of their group funds or reports of their joint membership, has been rejected. It appears to be a determination to punish labor, and labor only.

In contrast with the situation in this Chamber in regard to the legislation at hand, I recall the long struggle of the workers for social justice, for the opportunity of obtaining a decent livelihood, for a fair and just share of the earnings resulting from their toil.

I recall that in my own State it took 60 years of agitation to enact reasonable child-labor legislation. I can remember as a youth scenes in my own community where I saw young girls, 13 and 14 years of age, going out in the darkness of the early morning to work in the cotton mills for 10 and 12 hours, returning in the darkness of the evening. I have heard from their lips stories of how they ran every inch of the way from their homes to the mill gates because they were frightened. Who brought about the changes that have resulted in today's improved working conditions? Who has accomplished the shortening of work hours and the improvement of working conditions? It was done through the organization of the workers, through unions, and other associations that they set up for using their collective power to influence employers who were often of the absentee landlord class.

I recall, in the eighties, the enthusiasm with which the workers received the establishment of the organization known as the Knights of Labor, and their espousal, under difficulties and persecutions, of the cause for shorter working hours, better wages, and better living conditions. Much progress has been made, but the credit is due in large measure, if not in full measure, to the unions and labor organizations that the workers themselves set up.

I recall witnessing—I can picture some of them now—many of them I knew by name—women 75 and 80 years of age—trudging the streets in summer and winter, year in and year out, from the mills to their homes, with bent backs and gnarled fingers due to ceaseless toil over the spindles, looms, and machines in the factories and workshops of New England. Who lifted their voices and used their efforts to help bring about better living conditions, shorter hours of work, and the securing of safety appliances? The workers' organizations.

I remember as a young lawyer prosecuting cases in the courts for damages sustained by employees—one a young woman whose scalp was torn from her head because the hair became entangled in the machinery due to the lack of proper safeguards. I remember other cases seeking compensation for loss of arms, for loss of fingers, and other disabilities. In all of them I found raised in defense the doctrine of "assumption of risk"—that the employees assume the risk involved in their work. These and other victims of industrial injuries were often obliged to turn to public charity or to members of their families for support. Sometimes when a father was seriously incapacitated the children were forced to leave school and to go to work to support him.

Who led the fight and brought about legislation that eliminated the doctrine of "assumption of risk" and made it possible for these victims of industrial life to become other than a public charge? It was labor, organized labor, union labor.

The long and at times discouraging struggle made by labor organizations, against what seemed insurmountable obstacles, to elevate the workers from almost a state of servitude to the improved position that they now hold through legislation requiring safety appliances, better working conditions, and shorter working hours, is an inspiring one. It is indeed a story of the glorious victory of human rights.

I inject a personal story about two factory workers who had reached old age. I had forgotten them, though in my early youth I had carried a dinner pail to them from their homes to the factory gates during the noon hour. One day a few years ago a welfare agent called upon me to inquire about their needs. He expressed pity for their plight because they had once lived fairly comfortably on their meager income. He said, "I never knew till I met these ladies that it is a crime to live to an old age." I asked, "What do you mean?" He said, "Why, these women have toiled for nearly 60 years, and they saved enough money in that time to take care of themselves and to provide for their old age, but they lived too long. Had they died a few years after advancing age forced them out of the factory they would have gone to their graves without public charity. However, because they have lived too long, over 80 years, they are now experiencing the trials and tribulations of poverty." He made another observation, "I never knew before that people could be poor and aristocratic as well. These ladies are aristocrats." They were indeed, aristocrats, sweet, kind, lovable characters; and there are hundreds of thousands of women, and men, too, who during our lifetime have experienced the same hardships I have just described. These are some of the types of people this legislation will affect by curtailment of the workers' rights.

The amendments before us affect every worker and every organization, the innocent as well as the guilty, if there are any guilty, of excessive and unreasonable demands and procedure. I am not defending John L. Lewis, but, Mr. President, I will not be a party, because of Lewis, to enacting laws which will restrict the rights of those honest working men and women who have labored so unceasingly during the war, who gave their sons to the service of our country in our hour of need. I shall not offend or shackle them by telling them that their bargaining rights are to be restricted, that they cannot be relied upon to carry on the candid and open relationship which should exist between employee and employer in collective bargaining.

Mr. President, have we forgotten the obligation, the great debt we owe to the workers of this country? All the vast wealth we have accumulated has come from the toil, sweat, and blood of the workers.

Their strength, their vigor, their health, their labors, have opened up the vast wealth that the Almighty planned in the bowels of the earth for our benefit. They have tilled the fields so that we might have the rich harvests with which we are blessed. They have exhausted themselves in the workshops, factories, and industries of the country. How meager has been their share of the prosperity that has resulted from their toil and sacrifice.

Have they no claim to our sympathy and assistance? Must we be heedless of their social advancement and welfare because some leader may have misjudged his obligation to them or his responsibility to the public? Labor leaders are not immune from the faults, failures, and mistakes or even the misuse of power which is observable in other phases of life.

Even those in the public service, whom we sometimes call politicians, make serious mistakes and fail to promote the public welfare.

I have witnessed the struggle of the workers for recognition of their rights up to this very hour, and I regret to see in this Chamber efforts to restrict the progress that has been made—efforts that indicate a lack of sympathy, a distrust of the workers' organizations, a hindrance to further progress—efforts to place limitations on their rights to organize and to engage in collective bargaining.

Mr. President, I regret to see in this Chamber what seems to me to be a determination to turn back, an attempt to undo some of the helpful things that have been accomplished through years of effort. Indeed, I think I observe here a spirit of passion, a spirit of intense hostility, a desire to get even with someone. We are acting as if we were looking for blood. I fear, instead of helping to end strikes and bring about peaceful and harmonious conditions, we may be moving toward more turmoil, more strikes, and more hostility between capital and labor.

There is a mistaken notion here that some of the amendments which are proposed will prevent or end the present strikes. Not one of these amendments which are being proposed here will affect John Lewis or the leaders of the Railway Brotherhood; but they will affect every man and woman who toils and who chooses to belong to a labor union now or in the future. It is to be noted also that workers who are not members of labor organizations receive benefits attained by the efforts of unions. You cannot get even with John L. Lewis or other strike leaders through these amendments. You can, however, break the spirit, dishearten the working class for a time, but their cause is so humane and just that, like a volcano, the eruption is only being postponed.

Mr. President, not all employers are petitioning for this legislation. There are many, very many who deal fairly and justly with labor. Many of them have a sincere and deep sympathy for their workers. Many of them have often voluntarily expressed this in bonuses, pensions, and in various other benefits to the workers. Let us counsel with these representatives of the employers and we will find them cooperative. Not one of them will ask us to repeal collective bargaining or the right of the worker to strike.

Hundreds, yes thousands, of disputes and differences between labor and industry have been peacefully and successfully adjusted. Because there have been a few failures and hardships have resulted and the public interest has been jeopardized does not, in my opinion, justify the putting of all labor in a strait-jacket.

One would be led to believe, listening to the debate here, that there is no class consciousness on the side of management; that it is all on the side of labor. In my opinion, there is as much class consciousness on the one side as on the other, and in my opinion, some labor unions remain militant because, forced to deal with a hostile employer, they believe that the labor union can survive in no other way.

In the final analysis, it is my opinion that the sympathetic attitude of management toward unions is the key to sound industrial relations, and, if the employers wholeheartedly accept the philosophy of collective bargaining, our labor unions would rise to the responsibilities which they have and fulfill their rich promises.

Unless there is a sharp change for the better in industrial relations, I fear industry and labor will wake up some day to find a new philosophy, an extreme philosophy promulgated through the Nation. In my opinion, radical economic changes will come if labor and industry cannot find a way peacefully to adjust their differences. The success of the American way of life is not through extreme restrictive measures, but through management and labor solving their individual problems through self-government and through industrial democracy. The preservation of the American way of life depends upon their success in solving their mutual problems.

Mr. President, let us think of the workers other than John L. Lewis' as we discuss this legislation. There are millions of them who are law-abiding and who seek and desire industrial peace. Men are fallible and so are leaders, whether they are in the labor, the industrial, or in the political life. Rash and extreme measures that affect and injure the welfare of the people are taken even at times by men in public service.

Let us remember there is another day coming when the present labor turmoil will have subsided. Industrial peace will come, and the workers, in my opinion, desire it and want it just as much as management.

Let it not be said of us when our record is scanned that in the heat of passion we attempted to undo the progress that labor has made through its long up-hill hike for industrial freedom, that we have in a moment of excitement sought to abridge and reduce the rights of workers.

Let us consider these measures calmly. I cannot emphasize too strongly the fact that no amendment proposed here by the coalition can in any manner affect or change the present strike situation. Nor could these coalition amendments, were they the law today, have prevented the present strikes. The amendments are proposed now in the belief that the present hysterical state of mind will give the support that the amendments would not get in normal times. In fact, some of the proponents of these amendments privately concede this.

These proposals will result in arousing the antagonism and resentment of all workers, who are innocent parties to present labor disturbances, when they know the motive behind these proposals and their true significance.

The Lincoln Star's Account of President Truman's Visit to Lincoln, Nebr., on May 8, 1950

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 16, 1950

Mr. O'SULLIVAN. Mr. Speaker, the Lincoln Star, of Lincoln, Nebr., a Democratic daily newspaper, edited by Hon. James E. Lawrence, had this to say in a news item about President Truman's recent visit to Lincoln, Nebr., on May 8, 1950:

LINCOLN WELCOMING TRUMAN—PRESIDENT ROLLS WEST—WARNS ISOLATIONISM RETURN MIGHT PROVOKE A THIRD WORLD WAR—FARM PLAN TOPIC OF ADDRESS—FIRST MAJOR SPEECH TO BE GIVEN HERE

Nebraskans from surrounding areas were crowding into Lincoln today to hear the Chief Executive of the United States speak here on the topic which probably affects them most—farm income.

And in the capital city of the State, all was in readiness as President Truman's special train rolled across Iowa and into Nebraska. The only thing undecided was the weather, and even that was as well prepared for as possible.

At Seventh and Q Streets, where a platform has been erected for the President's address, a canopy is ready to protect Mr. Truman and other dignitaries who will be with him on the platform.

SIXTEEN STATES

The address by the President here today is the first of nine major speeches he expects to make during his swing across the country. During the trip he will tour 16 States. And in Lincoln he will tell what his administration thinks must be done for the farmer.

His train is scheduled to arrive here at 5:05 this afternoon and will leave at 5:45. The President is expected to talk about 20 minutes. After that he is scheduled to use the time before the train leaves shaking hands with the party heads in the State and getting a slant or two from them on the Democratic picture in Nebraska.

The President will be presented with a 50-pound red, white, and blue iced birthday cake in honor of his sixty-sixth birthday. Introducing the President will be Mayor Clarence Miles, a fellow Democrat.

PARADE

Before the President's arrival there will be a parade, starting at 4:15 p. m. at Fifteenth and O, preceding down O to Ninth, then north to Q and west to the platform at Seventh Street.

Among the group welcoming the President will be Democratic National Committeeman James Quigley, Valentine; and State Chairman Clayton Shrout, Omaha. County Democratic Chief Willard Townsend is in charge of arrangements for the Lincoln stop.

In the welcoming parade will be the University of Nebraska, Nebraska National Guard, Lincoln High School, Northeast High School, and Syracuse High School Bands, and the American Legion drum corps and color guard.

PRESIDENT'S ESCORT

Escorting the President from his train car will be Governor Peterson, Quigley, Chief Justice Robert G. Simmons, and Mayor Miles. On appearance of the President the university band will strike up Hail to the Chief.

The 60-member reception committee will be seated immediately upon arrival at the platform, about 4:45 p. m. The National Anthem will open the program, followed by announcements by Chairman Townsend.

He will hen present the Governor and Mayor Clarence Miles, who will then introduce the President.

Members of the Presidential party included Mrs. Truman, Miss Margaret Truman, Mr. and Mrs. Mon Wallgren, Bill Bray, Dewey Long, Charles Ross, presidential press secretary, George Elsey, and Commander H. War.

Members of the local reception committee were: Gov. Val Peterson, Mrs. Grace Barmore, Clayton Shrout, Mrs. Grace Young, Gordon Preble, James E. Lawrence, Judge Delehant, Willard Townsend, Mrs. Essie Davis, Ernest Schiefelbein, Raymond McConnell, Jr., Neal Meisbach, Mrs. Frank Morrison, Mrs. J. P. Jensen, Mrs. Carl S. Gjerloff, Frances Zachek, Mrs. Florence Howe, Paul M. Dennis, Fred J. Sassidy, Michael McLaghlin, Leo J. Beck, Joseph T. Votava, Clarence Clark, Frank Sorrell, Mrs. Lenore Clark, Charles Barth, William H. Smith, P. J. Heaton, Dr. Leo Beattie, F. H. Chapelle, B. L. McMullen, Ceil Fitzgibbon, Edwin Dosek, James C. Quigley, Chief Justice Robert Simmons, Mayor Clarence Miles, Ted Sick, Bishop Kucera, William Meier, Mrs. Mary B. Allen, Hugh Riley, Rev. Thomas Barton, Frank Cronin, Mrs. Frank Sorrell, Kenneth Lewis, John T. Kerns, H. C. Larsen, Lloyd C. Thomas, Robert Tondreau, Mrs. Mina McReynolds, Mrs. Alma Eitel, A. Clifford Anderson, Mrs. Marguerite Stubblefield, Thane Devis, Frank Golden, Joseph Boehler, Fred Deutsch, Otto Kotouc, Jr., J. B. Farris, Ed Moran, Robert Downing, Henry Ley, Anton F. Murch, Sam Josephson, George O'Malley, Charles Ledwith.

It stated the following editorially:

WELCOME, MR. PRESIDENT

The President of the United States came home to his own Monday in a trip devoted largely to the midwest.

He chose Lincoln, the capital of Nebraska, for his major address. And as his train rolled westward, he was to stop at other Nebraska points and to pass through the fertile fields which now in the first flush of spring are donning new coats of green.

Great is the responsibility which rests upon the shoulders of President Truman on this, his sixty-sixth birthday. The head of no other government in the world daily carries such burdens, for here the hopes and faith of free peoples are centered. Here in America is the warming light, beckoning to all men and women the world over who aspire to dignity, to the free conscience and heart that gives them their own self-respect, and enriches their lives with a sense of true, noble purpose.

This paper, which has found much to commend in President Truman against the criticism hurled at him by loose and irresponsible critics, takes this occasion to say to the President that it rejoices in his continued confirmation of the faith that his people have placed in him. There was only recently a striking example of his concern for the welfare of his people in his courageous veto of the Kerr bill. That act of his did call for the highest spirit of public service, and in terms of Nebraska, it may have saved this State large sums of money.

This paper hails Mr. Truman's handling of foreign affairs in a period of great difficulty and danger, and assures him that it is grateful for his unwillingness to depart from true American tradition in combating a sanguine war against communism.

Nebraska is a neighbor of Mr. Truman's home State of Missouri. Stretching through years of territorial and State existence, warm have been the bonds and common interests between these good neighbors.

It was from St. Louis from whence Lewis and Clark took forth for the first detailed survey of northwest territory; it was from Missouri points that the great overland trails took form and thousands crossed the plains, many to remain and to construct the foundations of this State.

The President of the United States by the nature of his office, is a lonely man, hemmed in and cut off from the normal contacts human companionship crave. So it is a splendid thing that the President of the United States can visit his people, and talk with his people, to become the better acquainted with them and with their problems.

A happy birthday, Mr. President, and in neighborly spirit, Nebraska extends its arms to you in warm, neighborly welcome and greeting.

On May 9, it also stated the following editorially:

WHAT MAKES THE PRESIDENT TICK

(By J. E. Lawrence)

It was a drenched, bedraggled corps of newspapermen, who tumbled from President Truman's special train for a look-see at the crowds at the Burlington depot in Lincoln Monday night. The photographers swung into action but the best picture was not snapped. That could have been a shot of a bunch of cameramen trying to take pictures in the rain.

One of the first to step off the train was an old acquaintance, Bert Andrews, head of the Washington bureau of the New York Herald Tribune, the bible of the Republican Party. I asked Mr. Andrews about the crowds. He flicked a couple of raindrops out of his eyes, looked off into space, and said that he could not understand them. The President, he reported, had been greeted by huge throngs in Iowa, but had not been uproariously cheered. "It is that which I cannot understand. They come to see, and they listen to every word." But as a newspaper veteran of many presidential campaigns, Mr. Andrews seemed to feel that the spontaneity of other days was absent. Is that bad, or is it a part of the times?

Another news man on Mr. Truman's train, John Edwards, born and reared in Lincoln, a graduate of the Lincoln high school and the University of Nebraska, and a former member of the Star staff, now with CBS, was pumping hands of old-time acquaintances, who crowded around him at the depot. Mr. Edwards was visibly impressed with the crowds through Iowa. At Pacific Junction, he said, in a very informal fashion the President referred in homespun language to his sixty-sixth birthday and his words caught the fancy of the crowd.

Is he doing himself good by this trip through 14 States? The answer naturally will lend itself to partisan interpretation. But Mr. Truman's popularity with the crowds that gather to hear him is not difficult to explain. He is an unaffected, folksy, warm-hearted man—the kind of American who in simple, earnest, and sincere fashion, seems to be enjoying himself every foot of the way. He had a solid, substantial speech on the farm program here. The test of it can be made by the reading of the complete text. Mr. Truman does not rely upon oratory to sway his people. There was a notable absence of the sharp jibes that he tossed to millions of people in the campaign of 1948, but in his discussion of agriculture, there was an apparent honesty in every word that his political enemies will find difficult to attack.

What makes the President an effective campaigner? Chiefly the fact that he is always himself from his head to his toes—no politician in the orthodox sense with gifted political intuition, but a man who obviously believes in the fight he is making and has a faith in the American people that when the facts are laid before them, they will go with him.

President Truman's Point 4

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask permission to have printed in the Appendix of the RECORD a brief statement summarizing a speech made by Dr. Dewey Anderson, the director of the Public Affairs Institute, at the annual meeting of the Nation Associates in New York on April 29. Few Americans have done more constructive thinking in the field of national and international economics than Dr. Anderson. His recently published series of eight studies on point 4, the bold new program of aid to underdeveloped countries, has been widely acclaimed as a challenging proposal to eliminate poverty, and bring peace to the world. This speech sets forth that proposal in brief, readable terms. It is because it should be made available to Members of a busy Congress that I want it to appear in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the Nation of May 20, 1950]

A REALLY BOLD NEW PROGRAM

(By Dewey Anderson, director of the Public Affairs Institute)

When we speak of point 4—the bold new program for technical and financial cooperation with underdeveloped countries—we are proposing to change the face of the earth with something other than the H-bomb. In addition to some $15,000,000,000 of our national budget already devoted to military preparations annually, we are discussing with a dozen European nations a rearmament program for them calling for twelve to fifteen billion dollars to be spent in the next 5 years.

But even a speeded-up arms race is premised on some period of peace. Whatever its length, I submit that we had better fill that time with constructive efforts which will win us democratic allies, and by their peaceful nature, perhaps lead away from war.

The underdeveloped countries in Asia, Africa, and Latin America are distinguished from other areas in that three-fourths of their working population is engaged in agriculture, largely on a primitive, noncommercial, subsistence level. Twenty-eight of the fifty-three independent countries of the world are underdeveloped in this sense. Their per capita incomes average much less than the equivalent of $100 a year, with our own more than 10 times as great. They form two-thirds of all the people on the earth.

By the year 2,000 the world may have 3,870,000,000 inhabitants, an increase of 1,490,000,000. Of this number 1,310,000,000 will have been added to the already dense populations of the underdeveloped countries. This pressure of people on living space and food supply may well transcend in importance any single problem of the next 50 years.

Are these people in the underdeveloped countries to become merely pawns in a world power struggle? Or are they to have an opportunity under peaceful conditions to emerge from their blighted past? The answer rests largely with our own conception of point 4, how boldly we formulate it, and how cooperatively we put it into practice.

A boldly planned point 4 is essential to the success and development of the United Nations. Only the United Nations can operate an effective program of investment for underdeveloped countries, for only there do the great and small sovereign nations meet to pool their strength and take action on a cooperative basis.

American assistance sincerely given through the UN will be less subject to the charge of Yankee imperialism. World sentiment will rally to the support of such a position. The goal of an adequate point 4 program should be to raise the income and affect the standard of living of all the people steadily and rapidly for the next 50 years. This will be best accomplished by shifting about a fourth of the workers from primitive subsistence agriculture to industrial work, the professions, and other pursuits. At the same time the food base will be strengthened by improvements in agriculture.

Our own experiences and those of other advanced nations indicate that the rate of population growth is slackened noticeably with the shift from primary occupations to industry and other services, and with the increase in living standards that results from this more productive use of manpower. Such a change should strengthen the democratic forces in the underdeveloped countries and give them a greater stake in freedom and peace.

We conceive of this bold new program as requiring a get-going period of 5 years, during which the volume of effort, beginning small, will expand as rapidly as projects are engineered, personnel chosen, and financing secured. Two sorts of technical aid are needed:

1. High-level technical aid. These are the technicians, scientists, administrators, engineers, teachers, cultural anthropologists, agriculturists, surveyors, and researchers working at the UN and in the field who can give advice and assistance to underdeveloped countries in formulating development plans for their countries, moderate intemperate enthusiasm, and project long-range programs.

We estimate that $600,000,000 would be required to finance the work of the several thousand high-level technicans who could become available during the first 5 years. We suggest that this be granted money—$373,000,000 by the United States, $227,000,000 by other United Nations countries.

2. Low-level technical aid. Of equal importance is technical help at a lower professional level which will give the masses of people more proficiency in their work and better living conditions. Specifically, we propose that 250 or more work centers be established in underdeveloped countries. Doctors and nurses, agricultural agents, and machine-shop foremen will start doing and teaching in the villages and the back country. In 5 years a mass shift into more productive and healthful ways of living would occur, and the march toward the goals laid down for the bold, new program would have started. We estimate that a reasonable expectation of growth would require a total

of $1,000,000,000 or more for the 5-year period, to taper off thereafter as these centers accomplished their first major purposes. We suggest that this sum be provided as grants, half to come from the United States, half from other countries.

No technical-aid program by itself will set in motion those desirable changes. Both public and private capital in large amounts are essential. Many needs can and should be met only through Government loans. Only when these investments result in social improvements and increasing stability of governments, in wealth upon which to base other business venture, can it be expected that any large-scale private capital will find its way into the underdeveloped countries.

We suggest several types of government loan funds, tailored to meet specific needs.

1. Across the globe one poor country after another has chopped down its trees for fuel and allowed its land to become barren. To create the basis for a decent life for the people a vast conservation and development program must be undertaken. We suggest the establishment of an International Resources Conservation Corporation with a capital stock of $2,000,000,000, half to be subscribed by the United States, the other half to come from other member countries of the United Nations. This Corporation would be chartered by the United Nations and operated under its supervision. It should provide government-to-government long-term loans for conservation purposes at the cost of money plus the cost of servicing loans.

2. Even in this country, with its numerous banking and lending facilities, vast areas have been in need of capital to launch profitable and much-needed enterprises. We suggest that the United Nations establish a cooperatives' revolving fund to $2,000,000,000, half to be subscribed by the United States and the other half to come from other United Nations countries. Low-cost loans from this fund would be made to underdeveloped countries upon certification by the FAO that feasible cooperative projects were at a stage requiring such capital.

3. The Export-Import Bank makes loans to underdeveloped areas. But its present practices do not entirely fit the needs of these countries for long-term, low-interest-rate money. We suggest that the authorization of the bank be expanded by act of Congress by $2,500,000,000, specifically earmarked to meet these needs on terms calling for return of principal plus a modest servicing charge.

This new authorization should be open to American private interests which wish to use it for productive purposes approved by the country of investment. Moreover, it is suggested that the bank participate in technical-aid missions provided by the American point 4 program.

4. The International Bank for Reconstruction and Development is a United Nations institution. Its strict banker attitude has ruled out any large volume of loans to underdeveloped countries. Its charter should be broadened to provide low-cost loans tailored to the needs of development projects.

5. American private investment in underdeveloped areas has been running currently at about $800,000,000 annually, including reinvestments. This will decrease as the oil companies, which account for a large share of it, finish their foreign developments. If the United States underwrites a bold new program of point 4 activity, it can be expected that, even in the intial stages, an expansion of private business investment will take place. If this basic underwriting is not provided soon, and in volume, then because of the unsettled condition of the world, no large amount of private investment in underdeveloped countries will be made.

Point 4 will probably become law in the United States within a few weeks now. The legislation which is likely to be passed will launch the new program, partly as a United Nations enterprise, partly as a bilateral technical-aid scheme conducted by the United States Government. But the measure will not provide the underpinning necessary to carry out the investment features outlined above. That essential part of the program will probably await action of the Eighty-second Congress next year.

The technical-aid bill will provide some funds for UN agencies, which should allow a small beginning after other nations have made their contributions. To this extent our action will implement point 4 at Lake Success. It will also provide funds for United States agencies operating in the same field. An attempt is being made by proponents of the program to provide the first machinery for cooperation and clearances between these two efforts. Most important of all, as this legislation passes and becomes operative under the direction of the UN and the President, we must make certain that we have launched an effort that is not prevented by law from advancing to fill the need in underdeveloped countries. But this will not happen without much organized understanding and support within both the United States and the other members of the world family of nations.

Address by Dr. Abba Hillel Silver on the Second Anniversary of Establishment of the State of Israel

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Dr. Abba Hillel Silver on the second anniversary of the establishment of the State of Israel. The address was delivered at Madison Square Garden, New York City, on May 11, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY DR. ABBA HILLEL SILVER ON THE SECOND ANNIVERSARY OF ESTABLISHMENT OF THE STATE OF ISRAEL, MADISON SQUARE GARDEN, NEW YORK CITY, MAY 11, 1950

Two years have elapsed since the reestablishment of the State of Israel. We cannot as yet have a true perspective on what has taken place and all of its tremendous implications, but enough has taken place to justify the joyous celebration here this evening and similar celebrations throughout the world.

It is customary and quite natural for us to think of what we have done for Israel. I should like to speak this evening briefly of what Israel has done, is doing, and will continue to do for us. American Jewry has, of course, done much for Israel. Without the decisive political mobilization and action of American Jewry, the State of Israel would not now be in existence. Without its large and sustained economic support, the development of the state, the absorption of immigrants, as well as its military defense, would have been nigh impossible. It will remain to the everlasting credit of the American Jewish community that the greatest challenge in Jewish history did not find it unprepared or reluctant to assume the burdens and responsibilities of leadership.

But great as were the services which we rendered to the State of Israel, greater by far have been the services which the State of Israel has rendered to us and to all the Jewish people in the Diaspora. What has transpired in the last 2 years is not only an impressive chronicle, but an inspiring epic. Close on to 400,000 homeless, menaced or war-ravaged Jews have been given a home in Israel. The great nations of the earth in possession of vast and empty territories did not offer any sanctuary to them. Israel, and Israel alone, opened its doors wide and welcomed these men and women, many of whom had languished for years in the concentration camps and the hellholes of Europe. I recall that in 1943 at the American Jewish Conference I stated that the problem of Jewish refugees would never be solved until the Jewish State is established. There were practical men in those days and men of affairs who presumed to know better. They denounced us as political extremists for raising the issue of the Jewish State at a time when Jews should be concentrating all of their energies on the demand for admission of Jewish refugees to Palestine. They withdrew from and destroyed the American-Jewish Conference over this issue. But these men, who now pride themselves upon being among the guiding spirits of the new State of Israel, were dangerously blind guides in those days, and it was fortunate that the Jews of America did not follow their leadership. The stone which they rejected, the Jewish State, has now become the chief cornerstone in the solution of the world problem of Jewish refugees.

In order to absorb these hundreds of thousands of immigrants who have poured, and are pouring, into that little state Israel has established 200 agricultural settlements, expanded its agriculture and industry, built tens of thousands of homes, and provided for them health, education, and social services. These immigrants, be it remembered, are our charge and the responsibility of Diaspora Jewry. It is we who placed this terrific economic burden upon the young republic, at a time when its resources were being heavily drained to maintain a large defense army, when it had to build from the ground up its administrative and parliamentary machinery, and wrestle with inflation, the high cost of living, and a most unfavorable balance of trade.

Israel gladly assumed the crushing immigration load, aware that it would force a lower standard of living upon its own people and a rigid regimen of austerity which would beggar even the austerity program of England during the war. In accepting this responsibility in the face of these besetting hardships and sacrifices, Israel has rendered a unique and unforgettable historic service to world Jewry. In 2 years Israel became the Eretz Miklat for world Jewry. It is prepared to continue to perform this service for still other Jews—Jews from Iraq, from Rumania, from Hungary, from Moslem countries where they are in imminent danger.

Before 1948 there was no place for such Jews to go except to the gas chambers. Today there is the free and welcoming land of Israel. When, therefore, I hear American Jews say, "How long will Israel continue to ask us for help?" I counter by asking, "How long will world Jewry continue to ask Israel for help?"

The Jewish people established the State of Israel not merely in order to have a state. This in itself is important—to restore to the Jewish people a normal national existence and international status, which it had lacked for 2,000 years. It established the state in

order that there might also be a place of ingathering for those of our people from all parts of the world who may have to go there or who may wish to go there. Having begun this tremendous and revolutionary enterprise, we cannot now stop midway. We assumed tremendous commitments when we set in motion great forces which culminated in the establishment of the state. Because the men and women of Israel believed in the earnestness of our purpose not only to create a state but to help maintain and defend it, they fought so valiantly, inspired not only by the justice of their cause, but also by the knowledge that behind them, in reserve, were the vast material and spiritual resources of the great Jewish community of America. In the same manner, they welcomed the overwhelming number of immigrants and risked all the serious complications to their national economy not only out of a sense of Jewish loyalty and solidarity but because they relied upon our continuous support.

The enemies of Israel are hopeful that we will now leave Israel in the lurch, that we will grow tired of supporting Israel. This would lead to a political collapse, and this is what they are waiting for. This is the reason why they are not now making peace with Israel. They are waiting for that disastrous economic and political debacle which would be for them the signal for a new attack on Israel. In confident anticipation of such an eventuality, they are rearming themselves to the teeth, with the aid of Mr. Bevin and with the quiet concurrence of our own State Department.

However, if I know my people—and I believe that I know them well—they are too loyal, too resolute, and too wise to fall into such a trap. They will not destroy with their own hands what they have so sacrificially and so lovingly built. On the contrary. Our people will help Israel to take care not only of these hundreds of thousands whom they have already sent there, but of the many hundreds of thousands more who are yet to come. They will want Israel to become economically sound, politically stable, and numerically so strong as to discourage for all time the annihilationist hopes of political adventurers in the neighboring Arab countries.

There were three things which we Jews had to do in recent years. First, we had to show the world that we wanted the State of Israel. On a vast scale we organized and made vocal the will of our people and persuaded men of good will everywhere of the sincerity and steadfastness of our purpose. Through many ways, athwart many obstacles, outmaneuvering many conspiracies, we pressed on indefatigably and relentlessly until the United Nations in November 1947 gave sanction to our historic claim for the reestablishment of the State of Israel.

Our people then had to show the world that it was prepared to fight for the State of Israel. And so, unaided by any of the United Nations who sanctioned the establishment of the State, and seriously hampered by an arms blockade, our valiant sons and daughters in Israel for 8 months fought off and kept at bay and finally defeated decisively the armies of six invading Arab States. In the sacrifices and in the blood of these Israeli minutemen were the foundations of the state firmly laid.

And now we must demonstrate to the world and to ourselves—especially to ourselves—that we are prepared staunchly, resolutely, and patiently to sustain that State in all the difficulties and dangers which beset every young State newly come into being, that we are prepared to help it with our resources both material and human. It was Thomas Jefferson who said: "We are not to expect to be translated from despotism to liberty in a feather bed." Certainly we Jews are not to expect to be translated from homelessness, to nationhood, from servitude to freedom in a feather bed. Never in all our history was our lot an easy one. We may be God's chosen people, but we are certainly not God's pampered people. Our ancestors under Joshua had to conquer Palestine foot by foot. Under Zerubabel they had to rebuild Judea, with one hand laying the stones and the other holding the sword. Spiritually our history has always been one of conflict and struggle—a life of swords. To wrestle with gods and men and to prevail—that is the very meaning of the name, Israel. We are not to be pitied because of this. The nature of our experience through the ages has toughened us. It has made us the "am k'she oreph," the stiff-necked people. It is that quality which enabled our people to rise from the ashes and ruins of two world wars which wrecked and ravaged European Jewry and destroyed one-third of our people and undefeated triumphantly to build in the midst of chaos and terror and battle a new state.

A few days ago, on the occasion of its second anniversary, the Government of the State of Israel issued an independence day proclamation in which, after recounting the truly remarkable and magnificent achievements since the establishment of the State, it declared: "However, the road ahead is still long and hard. Our enemies continue to threaten us, our very existence, our independence, and the borders of our State."

The existence of the State of Israel is still being threatened. There is no peace on the borders of Israel. The majority of the Arab States have not yet reconciled themselves to the existence of the State of Israel. What is being done today by the unreconciled Mr. Bevin is shipping military aircraft—108 jet planes, more than half of them already delivered—gunboats, tanks, and other military supplies to Egypt, Iraq, and Jordan, and to Syria with which Great Britain has no treaty obligations and in refusing to supply arms to Israel until—and here is the bitter irony of it all—until Israel is at peace with the Arab States," is not only not contributing to the reconciliation of these countries to the ineluctable fact of the existence of the State of Israel, but is encouraging among them desperate hopes for a renewed offensive which might yield them now what was denied them a year or so ago.

One wonders why the Security Council of the United Nations was so precipitous last August in lifting the arms embargo in the Near East after the victories of the Jewish forces when it had so stubbornly refused to lift the embargo when Israel, dangerously unarmed, was fighting against the Arab armies who had invaded Palestine bent upon undoing by violence the resolution of the United Nations. If pacification of the Near East was the real objective, why was not the embargo kept in force until peace treaties were finally concluded? And why did the United States support Great Britain in rushing through, against the earnest solicitations of the State of Israel, a premature abandonment of all restrictions on the shipment of arms to the Arab countries? Was not the covert intent to change radically the military balance between Israel and the Arab States? No foreign armies were threatening the peace and security of the Arab States. These states do not today need jet planes, bombers, and fighters, tanks, heavy guns, and warships to maintain domestic peace and security at home.

Does anyone perhaps imagine that these arms are intended and will be used by the Arab States to defend democracy and freedom in the Middle East in any future emergency? Only purblind statesmen of short memory who have already forgotten the experience of the Allied Nations with these same Arab States during the last war will persist in entertaining such bizarre hopes. These states who welcomed the Fascist and Nazi enemies of the democracies and were the centers of revolt and sabotage against Allied military operations in the last war, will prove broken reeds indeed for a free world to lean on in any future conflict.

These arms are being assembled against Israel. Mr. Bevin is blunderingly helping to prepare the next war against Israel. Our State Department, by withholding a reply to the request of the Israeli Government to acquire arms in the United States is helping to keep Israel weak in the face of the mounting rearmament threat of the surrounding Arab countries, and is encouraging, wittingly or unwittingly, their intransigence and their refusal to conclude an honorable peace with Israel.

There are forces in the State Department which have not reconciled themselves to the establishment of the State of Israel. It was these same forces which were responsible for the astounding reversal of our Government in March of 1948, when after having voted for the partition resolution of the United Nations, it suddenly announced that it was no longer prepared to go along with it and requested a special session of the United Nations to nullify that resolution. It is these same forces which are now supporting and justifying the supply of arms by Britain to the Arab States. It is the same forces which have been responsible for the ominous silence of our Government on the request of Israel to acquire arms in this country. The explanation given by our Government spokesmen is specious and artful. It is maintained that the security of Israel, surrounded as it is by neighbors which refuse to make peace, which are heavily rearming themselves, which are maintaining a blockade against Israel, and which are propagating for a second round, is really not being threatened.

Similarly disingenuous was the reply given by the State Department to the suggestion of 51 Congressmen that aid under point 4 be extended only to those Arab States which have reached peace settlements with Israel. The State Department believes that it would be undesirable to use this program as an instrument of political pressure. In God's name, since when is the withholding of aid to states which refuse to make peace an undesirable and unjustified form of political pressure? Is our Government not using its financial and material aid in other parts of the world at this very time to exert political pressure? What government in the world today dissociates aid from foreign policy?

Will the United States of America, which was the first country in the world to give official recognition to the newly established State of Israel, stand idly by and see this menace of war mount and magnify until it is beyond control? Is it to the best interests of America to see the young state, which everyone recognizes as an outpost of freedom and democracy in the Near East, weakened and endangered? Does the United States favor a continuation of the present policy of Arab rearmament by Great Britain? This rearmament could not go on without its tacit approval. Does it wish the economically hard-pressed State of Israel to continue to drain off so much of its limited resources on arms instead of using them for its economic reconstruction and the pressing human needs of its vast immigration? Do the American people really want it? Ought not rather the power and the prestige of our Government be used in such a manner as to insure that the Arab States shall negotiate a peace settlement with Israel forth-

with by bringing about a cessation of arms shipments to these Arab States, or by making it possible for the State of Israel to acquire arms in this country, thereby serving notice on the Arab States that any new military adventures on their part will find Israel fully prepared and would prove no more successful and no less costly to them than their earlier futile attempts.

We owe it to Israel and to our own beloved country to make our voices heard so that an end may be put to this dangerous policy which is now being pursued by our Government. Bevin's way has always been the wrong way in Palestine, the stupid and bloody way. Our Government should not follow the lead of this embittered politician whose Palestine policies have been so thoroughly discredited.

On this second anniversary let us give evidence to the fine men and women of Israel that we are not unmindful of the problems which beset them, that we are determined to stay with them through all their political and economic vicissitudes until security and peace finally come to them abidingly. Let us tell them of our gratitudes for what they have done in such a generous and sacrificial manner for our fellow Jews from so many parts of the world and for what they are prepared to do. Let us tell them of our gratitude for what they have done for us—for the new dignity which they have brought into our lives. Who can estimate the worth to us and to our children of the new pride which has come into our souls? What is it worth to us that after the silence of the centuries, the voice of Israel can be heard again, free and authentic, speaking in the council of nations? We are moving proudly and hopefully into a new day because Israel is there. The road may be long, but it is the road which leads away from darkness to light, from debasement to dignity, and from insecurity to peace.

Persons Naturalized in Fiscal Years 1948 and 1949

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. GREEN. Mr. President, I request unanimous consent to have printed in the RECORD a copy of table 44, sent to me by Hon. Watson B. Miller, Commissioner of Immigration and Naturalization, listing by States the number of persons who have been naturalized and have become American citizens during 1948 and 1949. This table, I know, will be of interest to Members of the Congress.

In order to fulfill their obligations as American citizens these peoples should register so that they may participate in our National, State, and local elections. Let me give an illustration. To vote in Rhode Island, one must register before June 30 of an election year. My colleague the junior Senator from Rhode Island [Mr. LEAHY] and I are stressing very strongly the importance of registration, not only by our new citizens, but also by all the voters of our State.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 44.—*Persons naturalized, by States and Territories of residence: Years ended June 30, 1948–49*

State of residence	1948	1949
Total	70,150	66,594
Alabama	102	109
Arizona	305	329
Arkansas	30	60
California	9,194	9,370
Colorado	243	324
Connecticut	1,987	1,861
Delaware	77	85
District of Columbia	350	430
Florida	823	1,069
Georgia	62	157
Idaho	125	76
Illinois	3,259	3,297
Indiana	505	418
Iowa	245	224
Kansas	159	159
Kentucky	68	55
Louisiana	342	273
Maine	517	556
Maryland	539	509
Massachusetts	4,618	5,021
Michigan	3,665	3,301
Minnesota	560	660
Mississippi	47	60
Missouri	413	483
Montana	172	193
Nebraska	148	135
Nevada	116	71
New Hampshire	322	371
New Jersey	4,114	3,448
New Mexico	98	117
New York	25,238	21,174
North Carolina	103	126
North Dakota	148	141
Ohio	1,848	2,285
Oklahoma	110	120
Oregon	482	301
Pennsylvania	2,698	2,685

Invocation by Rev. George G. Higgins

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the invocation delivered at the National Convention of Americans for Democratic Action in Washington on April 1, 1950, by the Reverend George G. Higgins, assistant director of the Social Action Department of the National Catholic Welfare Conference.

There being no objection, the invocation was ordered to be printed in the RECORD, as follows:

INVOCATION DELIVERED AT THE NATIONAL CONVENTION OF AMERICANS FOR DEMOCRATIC ACTION, WASHINGTON, D. C., APRIL 1, BY THE REVEREND GEORGE G. HIGGINS, ASSISTANT DIRECTOR, SOCIAL ACTION DEPARTMENT, NATIONAL CATHOLIC WELFARE CONFERENCE

In the name of the Father, and of the Son, and of the Holy Ghost. Amen.

O God, the Father of all men—the Father of Jew and Gentile, of Negro and white, of Americans and Russians, of all men everywhere—we dedicate this convention to Your honor and glory.

We need Your divine assistance. We need it desperately. Witness the cold war. Witness the hydrogen bomb. Witness 5,000,000 unemployed and other millions working for substandard wages. Witness the scandal of racial injustice. We need Your divine assistance, and we are not ashamed to say so publicly and in the open. Help us then to be better men and better women—men and women of personal honor and integrity. Help us to be better husbands and better wives, better fathers and mothers of families. But help us also jointly and cooperatively to build a better society, a society more in keeping with the dignity of man, who is created in Your own image and likeness.

Help us to have the courage of our religious convictions in the field of race relations. Help us in particular to look upon our Negro neighbors and our Negro fellow citizens as our brothers in Christ, equal to all the rest of us in every last respect in human dignity and worth. Help us to realize that racial discrimination is a sin in the theological sense of the word—a serious sin against the virtues of justice and charity, a grievous insult to our common Father. Help us to be tolerant, but help us to be more than tolerant. Tolerance is negative. Tolerance is neutral and indifferent. Tolerance is sometimes supercilious. Help us to be positive and constructive. Help us to do more than tolerate one another. Help us to love one another as brothers and sisters of one common family.

Help us to be sensitive to the rights and the needs of the poor and the underprivileged. Give us the moral courage to continue to work for the economic betterment of the masses of men and women who make up the backbone of American society. We pray for the coming of a better day when organized labor will be permitted to sit down with management as an equal partner in industry and, together with representatives of the public, plan intelligently for the general economic welfare—for the common good. To this end we pray for the organization of the unorganized workers of America. We pray for the coming of economic democracy.

We ask You to bless our Chief Executive, the members of his Cabinet, our legislators, our judges, and our administrative officers. Theirs is a noble vocation. May they carry it out with honor and unimpeachable integrity and may the public, in turn, accord them the cooperation and the respect to which they are entitled. Give our Senators and Representatives the wisdom and the courage to legislate effectively and without unnecessary delay for the economic betterment of those hundreds of thousands of American workers whose incomes are still at substandard levels—for decent and adequate housing, for civil rights, and for greater economic and social security for all our citizens. At the same time give them the humility and the common sense to realize that legislation is not the only answer, and not always the best answer, to our problems. Help them to realize that individual freedom must be regulated in the interests of the general welfare,

but help them to realize, too, that freedom is as fragile as it is indispensable for the welfare of individual men and women and for the welfare of society. Help them to strike the proper balance between security and freedom, and help them to see the importance, in a democracy, of voluntary associations—the importance of unions and cooperatives, to cite but two examples.

Finally, we ask You, Lord, in fear and trembling, to bless the efforts of our Nation toward the establishment of a just and lasting peace. Help us to be humble in the presence of the hydrogen bomb. Grant that we may not give to either appeasement or aggression. Protect us against the spirit of pessimism and despair and against the spirit of hysteria. Help our representatives at the United Nations and the representatives of all other nations to strive with constancy and courage for the establishment of an international order which will be founded on justice and which will guarantee to the suffering peoples of the world economic and political security, together with that full measure of freedom to which every human being, as a child of God, is entitled and without which life is hardly worth living. Help us to be as wise as serpents in our dealings with the enemies of our Nation, but help us also to be as simple as doves—prepared, if necessary, to defend ourselves and other nations against aggression, but prepared also to conciliate our differences whenever this can be done without sacrificing our own freedom or the freedom of any other nation. Help us to be generous in our financial assistance to less fortunate nations and much more generous than we have been thus far in welcoming displaced persons to our shores. These people are Your children, our brothers and sisters. Grant that we may treat them accordingly.

We ask these favors and these blessings in the name of Thy Divine Son, our Lord, Jesus Christ, who Himself taught us the perfect prayer: "Our Father, who art in heaven, hallowed be Thy name; Thy kindom come; Thy will be done on earth as it is in heaven. Give us this day our daily bread and forgive us our trespasses as we forgive those who trespass against us, and lead us not into temptation but deliver us from evil. Amen."

In the name of the Father and of the Son and of the Holy Ghost. Amen.

Use of the Atom Bomb When Not Necessary

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Horror of Having Used the Atom Bomb When It Was Not Necessary," published in the Ashland Daily Press for May 11, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Ashland (Wis.) Daily Press of May 11, 1950]

THE HORROR OF HAVING USED THE ATOM BOMB WHEN IT WAS NOT NECESSARY

"I would use the atom bomb again if I have to."

These words, spoken yesterday, could have been used by only one man in the whole history of the human race, for only one man authorized the use of the atom bomb. That man was President Truman.

Upon his conscience must be a nightmarish, soul-tormenting weight, for one by one the authorities close to the war are confessing that the use of the atom bomb was not necessary at all.

Admiral Leahy, our own Ashland High School graduate, and Ashland's leading native son, was the first to honestly and publicly state the facts.

In his book, I Was There, on page 441, he states:

"It is my opinion that the use of this barbarous weapon at Hiroshima and Nagasaki was of no material assistance in our war against Japan. The Japanese were already defeated and ready to surrender because of the effective sea blockade and the successful bombing with conventional weapons."

Admiral Leahy goes on to say:

"It was my reaction that the scientists and others wanted to make this test because of the vast sums that had been spent on the project ($2,000,000,000)."

Admiral Leahy continues:

"'Bomb' is the wrong word to us for this new weapon. It is not an explosive. It is a poisonous thing that kills people by its deadly radioactive reaction, more than by the explosive force it develops.

"The lethal possibilities of atomic warfare in the future are frightening.

"My own feeling was that in being the first to use it, we had adopted an ethical standard common to the barbarians of the Dark Ages.

"That is why I come to the end of my war story with an apprehension about the future."

Hanson W. Baldwin, military expert for the New York Times, who received a Pulitzer prize for his reporting of World War II and is considered an authority on modern warfare, writes in his book, Great Mistakes of the War:

"The blockade alone could have defeated Japan. * * * Admiral Leahy was right; invasion was not necessary.

"It is therefore clear today—and was clear to many even as early as the spring of 1945—that the military defeat of Japan was certain; the atomic bomb was not needed.

"It is my contention that in the eyes of the world the atomic bomb has cost us dearly; we have lost morally; we no longer are the world's moral leader as in the days of the Wilsonian 14 points."

Retired Admiral Ellis M. Zacharias, former Deputy Director of Naval Intelligence, this week added his testimony by stating that he and other Government officials had definite information that Japan would have surrendered before the bomb "if we only had given her a chance." The United Press dispatch, quoting Admiral Zacharias, adds: "He blamed the White House and other leaders for not seizing the opportunity."

What the ghastly, horrible blunder of authorizing use of the first atom bomb in human history meant—and doing this when its use was of no material assistance in winning the war—is most graphically described in John Hersey's book, Hiroshima, which by its stark simple realism forever scars the conscience of everyone who reads it.

"A year after the bomb was dropped," he writes, "Miss Sasaki was a cripple; Mrs. Nakamura was destitute; Father Kleinsorge was back in the hospital; Dr. Sasaki was not capable of the work he once could do; Dr. Fujii had lost the 30-room hospital it took him many years to acquire, and had no prospects of rebuilding it; Mr. Tanimoto's church had been ruined, and he no longer had his exceptional vitality. The lives of these six people, who were among the luckiest in Hiroshima, would never be the same.

"Mr. Tanimoto wrote in a letter to an American some words which expressed this feeling: 'What a heart-breaking scene this was the first night. About midnight I landed on the river bank. So many injured people lie on the ground that I made my way by striding over them. Repeating "Excuse me," I forwarded and carried a tub of water with me and gave a cup of water to each one of them. They raised their upper bodies slowly and accepted a cup of water with a bow and drunk quietly and, spilling any remnant, gave back a cup with hearty expression of their thankfulness, and said, "I couldn't help my sister, who was buried under the house, because I had to take care of my mother, who got a deep wound on her eye, and our house soon set fire and we hardly escaped. Look, I lost my home, my family, and at last myself bitterly injured. But now I have gotten my mind to dedicate what I have and to complete the war for our country's sake. * * * Next morning I found many men and women dead to whom I gave water last night.'"

The man who authorized all this, when it was not necessary, is the man who is now saying to us, "I would do it again if I have to."

Proposed Transfer of Watson Laboratories

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three separate communications which have recently been sent me urging the transfer of the Watson laboratories from Red Bank, N. J., to Rome, N. Y. One communication is from the American Legion post at Clark Mills. The other two communications are from local 907 of the National Federation of Postal Employees at Scotia, N. Y., and from the Syracuse Chamber of Commerce, also outlining reasons why the laboratories should be moved to Rome.

In addition to these communications, the Rome Daily Sentinel carried an article on April 29 quoting at length from a Nation-wide broadcast by Cedric Foster over the Mutual network in which this noted commentator stated that the laboratories should be located in Rome for reasons of both economy and efficiency. I ask unanimous consent to have the article from the Rome Daily Sentinel inserted in the Appendix of the RECORD.

There being no objection, the communications and article were ordered to be printed in the RECORD, as follows:

NATIONAL FEDERATION OF FEDERAL EMPLOYEES,
Scotia, N. Y., May 1, 1950.

The Honorable HERBERT H. LEHMAN,
Washington, D. C.

HONORABLE SIR: The membership of Local 907 National Federation of Federal Employees respectfully request that you fully support the move to transfer the Watson Laboratories from Eatontown, N. J., to Rome, N. Y. and oppose any liquidation contrary thereto.

The membership feel that the interests of national defense and of economy should prevail over private interests.

JOHN PALMER,
President.

SYRACUSE CHAMBER OF COMMERCE,
Syracuse, N. Y., May 2, 1950.

Hon. HERBERT H. LEHMAN,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: Rome's neighboring city of Syracuse is concerned about what we believe is a development in Congress contrary to the best interests of the national security.

We refer to the pending congressional action on the proposal of the Department of the Air Force to transfer its electronics research and development installation, known as Watson Laboratories, from Eatontown, N. J., to Griffiss Air Force Base, Rome, N. Y.

Details of the proposal were sent to you by Mr. James M. Kennedy, president of the Rome Chamber of Commerce, in a letter dated May 1, 1950, and in a copy of the majority report of the subcommittee of the House Armed Services Committee supporting the Air Force plan to move Watson Laboratories to Rome, N. Y.

In view of the fact that the transfer has been approved by the Senate in the military public works bill and that the subcommittee of the House Armed Services Committee, after investigation of the Air Force plan for the moving of Watson Laboratories to Rome, N. Y., also fully supported the transfer, the Syracuse Chamber of Commerce concurs with Rome in urging carrying out of the plan.

Our reasons are substantially the same as Rome's and are based on need, suitability of the Rome location, economy, and the fact that we believe, as apparently did the Senate and the House subcommittee, that the Air Force is in a better position to know its own needs for research and development than employees of Watson Laboratories or private citizens concerned only with keeping the installation in its present location.

We believe we have another important reason. Syracuse, only 40 miles from Rome, is the home of Electronics Park of General Electric, the country's largest electronics producer, and Syracuse University, with its famous industrial-research facilities. We understand that Watson Laboratories plan to do considerable business with both Electronics Park and Syracuse University.

We believe that we cannot permit national defense or the safety of our Nation to be jeopardized by a group of private citizens whose thinking is contrary to that of the Department of the Air Force, the Senate, and the House subcommittee who have carefully studied the matter.

We earnestly advocate the transfer of Watson Laboratories to Griffiss Army Air Base in our neighboring city of Rome, N. Y., as being in the best interests of national security.

Cordially yours,

FREDERICK E. NORTON,
Secretary.

AMERICAN LEGION,
CLARK MILLS POST, NO. 26, INC.,
Clark Mills, N. Y., May 4, 1950.

Hon. HERBERT H. LEHMAN,
Senator from New York State,
Washington, D. C.

DEAR SENATOR LEHMAN: At our regular meeting held on May 1, 1950, at Memorial Hall, Clark Mills, N. Y., the following resolution was adopted:

"Whereas the best interests of national economy and defense would be served by moving the Watson Laboratories from Eatontown, N. J., to Griffiss Air Force base at Rome, N. Y.; and

"Whereas nearly 1,000 veterans, most of whom have purchased homes and have families in this area, would be seeking employment on an overcrowded labor market in the event this move is not effected: Therefore be it

"*Resolved*, That the Clark Mills American Legion Post, No. 26, go on record as favoring this move; and be it further

"*Resolved*, That a copy of this resolution be sent to our two United States Senators and our local United States Congressman, and that said Senators and Representative be and are hereby respectfully requested to use every effort at their command to have this move effected."

Very truly yours,

EDWARD J. SPELLMAN,
Commander.

[From the Rome (N. Y.) Daily Sentinel of Apr. 29, 1950]

FOSTER URGES LAB TRANSFER IN NATION-WIDE BROADCAST

The Watson Laboratories transfer situation was carried to millions of listeners yesterday over the Nation-wide hookup of the Mutual Broadcasting System.

In his 1 p. m. broadcast, Cedric Foster, Mutual news commentator, speaking from WKAL, said a tour of Griffiss Air Force Base "left no doubt in my mind as to why Watson Laboratories should be moved from New Jersey to this upstate New York city. * * * In the interest of economy and efficiency it is the logical thing to do."

TOURED BASE

Mr. Foster told his listeners from coast to coast:

"Here in Rome, N. Y., I visited Griffiss Air Force Base, which is one of the outstanding Air Force bases in the world, in a tour of inspection which left no doubt in my mind as to why Watson Laboratories should be moved from New Jersey to this up-State New York city.

"Griffiss Air Force Base was originally constructed as an aircraft maintenance and supply depot at a cost of about $36,000,000. The replacement cost is estimated at sixty-six million.

"The base comprises an area of five square miles. The buildings are of permanent construction and they are in excellent condition. They are air conditioned, centrally heated, and extremely well lighted. They are surrounded by excellent concrete highways and the base is amply served with rail and truck terminals.

IN POOR BUILDINGS

"In addition to this, the base has a first class airport with runways and aprons. The air base is complete with administration building, signal tower, hangars which can be used in connection with the type of work done at Watson Laboratories. The hangars are right now being used and they are housing the experimental type of aircraft which are necessary to the work of the Watson Laboratories which are in New Jersey.

"The Watson Laboratories in Eatontown, N. J., are housed in temporary quarters built during the last war, made out of wood siding and tar paper construction. There is no landing strip at the Watson Laboratories so you have to drive 40 miles to McGuire Air Force Base * * * if you want to engage in active test work.

"It is no wonder the majority report of the House Armed Services Subcommittee recommended that Watson Laboratries be moved to the Griffiss Air Force Base here in Rome, N. Y.

"In the interest of economy and efficiency it is the logical thing to do.

"What will be the work that is done here * * * electronics. At this magnificent field the Air Force can concentrate its electronics experimentation work and it is to be hoped that the Congress will see to it that this work is carried out at Rome, N. Y."

FOSTER AIRS WATSON SITUATION

Cedric Foster told his Mutual Broadcasting System listeners from coast to coast yesterday the Air Force should be permitted to transfer Watson Laboratories to Griffiss Air Force Base at Rome.

Mr. Foster is a news commentator who knows from personal knowledge the dangers that face this country. He is an impartial observer in this Watson controversy. His only interest here is in the welfare of his country.

His opinion coincides with the judgment of the Air Force and the majority report of the House Armed Services Commitee, which made a full investigation of Air Force plans. Mr. Foster's opinion is not based on sectional prejudice or selfish interest.

The only consideration in this Watson transfer situation must be that of national defense, economy, and efficiency. The Air Force must not be handcuffed by localized pressure so as not to be able to accomplish its mission—the defense of the United States.

Two Worlds?—Or One? Or None

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Two Worlds?—Or One? Or None," by Betty Knowles Hunt, which appeared in the New Hampshire Morning Union of May 13, 1950. This article deserves the thoughtful reading of every American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO WORLDS?—OR ONE?—OR NONE

(By Betty Knowles Hunt)

Herbert Hoover has taken a cold sober look at our globe, and noted that we do not have one world, but at least two, and that these two are utterly and hopelessly incompatible. Most of us agree with him, but somehow, it is disturbing to hear it said right out loud. So we pretend that the one world of our balmy, wartime marriage to the Soviet Union still exists. To be sure, every speech and act on both sides advertises our mutual hatred. We shout and scream and shake our fists. We have discarded our Cupid's arrows for planes and bombs, and each of us watches the other with undisguised antagonism.

But when Herbert Hoover calmly suggests a clean-cut divorce, our leading spokesmen shudder and sputter in alarm. They insist that we must keep up the pretence of this mock-marriage at any cost, and that we must preserve the fictional One World United Nations no matter how futile it is. If Russia blocks all constructive action by vote, or walks out whenever she is outvoted, then we

must dicker and compromise, wheedle and bribe, and otherwise beg her to rejoin a family in which she does not belong.

If children acted like this, we would think they were idiots. If the neighborhood bully persisted in heaving insults and rocks at the other kids, and stalked out of the yard when they demanded he quit, would we expect the kids to plead with him to please come back and play some more? We would not. But isn't that exactly what we keep on doing with Russia?

What solitary shred of evidence is there that the Soviet Communists will discard their inhuman slave system, or desist from trying to impose it upon the rest of the world by deceit, infiltration, and force? What solitary shred of evidence is there that they will ever have the slightest regard for liberty, decency, or human dignity? What solitary shred of evidence is there that they would keep a promise, even if we could persuade them to make a new one? And if there is no evidence of these things, then what sense is there in more debates, or negotiations or treaties between us and them?

Since VE-day, Russia has gained control over 4,197,340 human beings. As Jan Ciechanowski, former Polish Ambassador, says:

"Surely there is no chance of any participation by the United States and its allies in the organization of the Sovietized portion of the globe. * * * Why then should the United States and its allies continue to invite and urge totalitarian Communist Russia to participate in organizing what still remains of a free and democratic world merely for the sake of keeping up the pretence of a one-world UN?"

Our diplomats are imprisoned, our citizens are convicted of phony crimes, our property is confiscated, our unarmed fliers are shot down in neutral territory, and a once-proud America is reduced to sending futile notes of protest, knowing in advance that they will only be ridiculed and ignored.

Herbert Hoover is right. We must face the obvious realities of the world as it is. To all those who frantically shout: "It will mean war," I can only ask: "Can an impotent UN guarantee peace?" Besides, it is already war, and people have died and are dying in it. To those who crave peace at any price, I can only say: "The issue is far greater than peace or war, the issue is liberty or slavery, human decency or human degradation."

I have three little girls, 9, 7, and 6 years old. A war with atom bombs, which might obliterate the lives of these three innocent, beloved children, is so ghastly as to be unthinkable to me. And yet, even this is preferable to seeing them become the living slaves of anything so beastly and godless as Soviet communism.

I love life, but I would rather die fighting for the things in which I believe, than to trade them for peace without liberty or justice. I love America, and all it has been and still hopes to be, but I would rather see America wiped out in a noble and honest defense of its ideals, than to see it grovel and sell its soul for mere existence.

The lights of hope are going out all over the world. China and half of Europe are already lost. Next on the Soviet schedule are Germany, Indochina, Burma, Formosa, Japan, India, the Philippines. Does anybody know what we intend to do—or when—or how? And isn't it about time we did know?

Or will we just go on shouting peace, when there is no peace, and playing the game of United Nations, where there are only disunited nations?

Flood Control, Irrigation, and Power Projects in Oklahoma

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement relating to flood control, irrigation, and power projects in the State of Oklahoma.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Statement relating to the present status of flood control, power, irrigation, domestic and industrial water-supply projects located in the State of Oklahoma

Project	County	Purpose	Status	Cost
1. Pensacola	Delaware and Ottawa	Hydroelectric power and flood control	Completed and in operation	$22,000,000
2. Markham Ferry	Mayes	do	Now being surveyed	[1] 37,100,000
3. Fort Gibson	Muskogee and Wagoner	Flood control and hydroelectric power	Practically completed	49,900,000
4. Webbers Falls	Muskogee	do	Now being surveyed	[2]
5. Tenkiller Ferry	Sequoyah and Cherokee	do	75 percent completed	24,250,000
6. Short Mountain	Sequoyah and Haskell	do	Now being surveyed	[2]
7. Eufaula	McIntosh and Pittsburg	do	Survey practically completed	[1] 130,000,000
8. Denison	Red River between Oklahoma and Texas.	do	Completed and in operation	61,595,000
9. Oologah	Rogers and Nowata	Flood control	Now under construction	38,760,000
10. Keystone	Tulsa, Creek, Pawnee, Osage	Flood control, hydroelectric, domestic and industrial water supplies.	Now being surveyed	89,500,000
11. Hulah	Osage	Flood control	Completed	12,226,000
12. Heyburn	Creek	do	do	2,830,000
13. Wister	LeFlore	do	do	11,055,000
14. Hugo	Choctaw	do	Authorized but not completely surveyed.	[2]
15. Boswell	do	do	Survey being completed	[1] 21,300,000
16. Tupelo	Coal	do	Authorized—survey incomplete	[2]
17. Great Salt Plains	Alfalfa	do	Completed	4,842,000
18. Optima	Texas	Flood control and irrigation	Survey being completed	[1] 18,540,000
19. Fort Supply	Woodward	Flood control	Completed	7,535,500
20. Canton	Blaine	Flood control, irrigation, and domestic water supply.	do	10,650,000
21. Cobb	Caddo	Flood control and irrigation	Survey practically completed	[2]
22. Mountain Park	Kiowa	Irrigation, flood control, and water supplies.	Being surveyed	[2]
23. Castaneda	Cimarron	Irrigation	do	[2]
24. W. C. Austin	Jackson	Irrigation, flood control, water supplies.	Completed	13,295,000
25. Mangum	Greer	Flood control and irrigation	Being surveyed	[2]
26. Englewood	Harper and Beaver	Irrigation and flood control	do	[2]
27. Foss	Custer	do	do	[2]
28. Union City	Grady and Canadian	Flood control, irrigation, and water supplies.	do	[2]
29. Bradens Bend	Sequoyah	Protect river bank	Money being appropriated	1,421,000
30. Kaw		do	do	252,400
31. Oklahoma City floodway	Oklahoma	Flood control	Construction authorized and appropriation made to start work:	
			Federal	10,466,000
			Oklahoma City	6,000,000
32. Sand Springs levee	Tulsa	do	Work completed	6,000,000
33. Jenks	do	do	Project completed	
34. Bixby	do	do	Being surveyed	[2]
35. Cherokee	Alfalfa	do	Ready for construction	[3]
36. Kingfisher	Kingfisher	do	Project being surveyed	[2]
37. Pauls Valley	Garvin	do	do	[2]
38. Little River	Cleveland, Seminole, Hughes	do	Project under consideration	[2]

[1] Estimated.
[2] Not yet determined.
[3] No money appropriated.

To complete the program for flood control, hydroelectric, irrigation, domestic and industrial water-supply projects will cost a total of some $500,000,000.

To date the Congress has appropriated and expended over $225,000,000 toward the construction of the several projects as itemized above.

To finish the program it will require additional appropriations in the sum of approximately $275,000,000.

At the present rate of construction, it will require some 15 years to complete the program.

Civil Rights

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Murray Kempton which appeared in the New York Post of May 8, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWUA IGNORES RIGHTS BARRIERS

(By Murray Kempton)

BOSTON, May 8.—Very few major unions hold conventions these days without passing a resolution to support the President's civil-rights program.

The CIO Textile Workers passed one here last week, but before they were finished it had become an action that was a little more than routine.

No other union of substance has to be quite so concerned with the mores of the South as the textile workers must. The South is an occupied country they have to conquer. It has 625,000 nonunionized textile hands, a figure larger than the union's entire membership. And most of them are white.

A convention committee drew up a resolution pledging the union's support to a fair employment practices act, an anti-lynching law, and repeal of the poll tax.

Sol Stetin, a TWUA vice president, presented the resolution in a speech fully conscious of the democratic verities. But Stetin is from Pennsylvania, and what he said was hardly unexpected.

Then to protest there rose up Ed Kirkland, of Columbia, S. C., who said that the CIO's stand on Negro rights was its major handicap in the South. So far as he and his local were concerned, he declared, even if an FEPC law were passed, "where I come from, we would probably defy the law."

When Kirkland was finished, there was a slightly embarrassed silence as TWUA President Emil Rieve recognized "Delegate No. 2."

Delegate No. 2 was as southern as Kirkland. He was C. L. Ross, of Rome, Ga., and his speech was very short. Ross admitted that civil rights were a controversial issue in his part of the country and that some southerners might defy any law that was passed to assure them.

"But the things that bring that about," said Ross, "are not going to be corrected by overlooking them. There will be some type of battle from now on until we see workers all over the Nation treated the same.

"As a member of the Textile Workers Union interested in organization, I feel that certainly this body owes a vote of thanks to the colored people in the South. Every time a ballot is taken for a union or no union you can count on the colored vote before it starts. They're solid.

"It would be well for all of us to recognize that those who have the least—those who need help the worst—are those who have the right to our first consideration."

Rieve spoke next and said that if the union had to organize the South "at the expense of humanity," then "I don't want that type of organization."

Then George Baldanzi, TWUA's executive vice president and director of the CIO's southern drive, spoke for the resolution and the southerners came back.

Lloyd Gossett, of Atlanta—yes; Atlanta—got up to say, "Let's practice this resolution and put it into effect."

C. M. King, of Rome, Ga., rose and said:

"The children, if they are not taught, would not feel any racial differences. I see white boys and Negro boys in Rome, Ga., playing football together, but we have laws and until those are broken down there is nothing we can do about it. We must all resolve in our hearts to support this type of resolution—this type of legislation."

Howard Robinson, of Danville, Va., told how he was raised in a county where no Negroes were allowed to live. Then he went in the Army and lived with Negro troops.

"And I found out that they're good. They're as good as I am or anyone. The only thing is they've got to have equal rights."

When he had finished, the civil-rights resolution was adopted without dissent.

That was Rome, Ga., and Atlanta and Danville talking. The next time anyone argues that any part of the country isn't just a little better because there's a union there just tell him that story.

International Affairs Platform of the American Veterans Committee

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD the international affairs platform of the American Veterans Committee. I call attention particularly to the section headed "Free flow of information," which supports point No. 1 in Senate Resolution 243 calling for a Marshall plan in the field of ideas. Point 1 calls for maintenance, through the United Nations and through our own diplomacy, of a steady and steadily increasing pressure in behalf of world-wide freedom of information.

There being no objection, the platform was ordered to be printed in the RECORD, as follows:

INTERNATIONAL AFFAIRS PLATFORM

PREAMBLE

We of the American Veterans Committee believe in the coming victory of world democracy.

We believe that world democracy can and must be established without world war.

We believe that the way to resolve conflicts is to promote economic, social, and political democracy throughout the world.

In holding these beliefs, we support the following basic principles:

STRENGTHENING WORLD ECONOMY

A continuously rising standard of living among all peoples is the best means to world democracy. It demands these actions of America:

Carrying out the European recovery program in full and without reductions, provided it not be used as a coercive measure to direct the political or economic character of the recipient nations.

Expanding point 4 into a major program of technical assistance including public and private investment in underdeveloped areas, chiefly through the United Nations.

Increasing American imports by cutting tariffs and extending the reciprocal trade program.

Integrating the economics of the democratic nations through greater freedom of exchanges, investment, and immigration, and expanding world trade with all nations.

STRENGTHENING WORLD DEMOCRACY

The survival of the democratic nations depends upon an ever-increasing degree of cooperation. This cooperation demands of the United States:

Encouragement of European federation.

Encouragement and support of democratic forces throughout the world.

STRENGTHENING WORLD SECURITY

Negotiations with Russia, directly or through the United Nations, to prevent an uncontrollable armaments race are imperative. Nevertheless, action for adequate defense of the United States and other democracies should continue to the extent that such negotiations do not succeed. This policy requires:

Negotiation with Russia, directly or through the United Nations, on the basis of equality, to secure a convention outlawing the use of atomic weapons, and the creation of effective world control of atomic energy and weapons of war. The preparation and implementation of a unified strategy for the common defense of the democracies.

STRENGTHENING WORLD ORGANIZATION

We reaffirm our conviction that lasting peace in the world can be achieved only through the establishment of a genuine federal world government, and we continue to work for the development of such a world government. However, until the establishment of such a world government, the United Nations Charter is the one code of international conduct that all nations must recognize.

The well-being and growth of the United Nations require:

Full United States support of the United Nations as the invaluable meeting ground where conflicts can be resolved without resort to force.

Full United States support of the subsidiary organizations of the United Nations.

The creation of a United Nations police force.

Revision of the veto power, looking toward its eventual abolition.

RESOLUTIONS

North Atlantic Pact

We endorse the North Atlantic Pact.

We believe it to be a necessary adjunct to the Marshall plan and to the movement for the unification of Europe. We urge that the pact be administered democratically and that all Fascist elements, such as Franco Spain, be kept out. We deplore the inclusion of Fascist Portugal.

Atomic energy

Negotiations for the international control of atomic energy have been at an impasse for 3 years. The UN majority proposal, which we have consistently supported, cannot gain political acceptance in the world as now constituted. We therefore call upon President Truman to create a new commission with the broadest terms of reference to reexamine the American position in the light of the present deadlock.

We endorse the efforts of General Romulo and the smaller nations in the UN to effect a truce in the atomic armaments race. We urge that negotiations be undertaken in the United Nations to reach an acceptable compromise agreement.

Germany

The problem of Germany can be fully solved only in the ultimate integration of Germany into a peaceful Europe. The economy of Germany must be exploited in the interests of the general economic development of Europe as a whole. Germany must remain unarmed. We disapprove of the armies of German police maintained by the Soviet Union as we would disapprove any plan for the use of Germans in the western zone as mercenaries.

We further recognize the importance of giving encouragement to those democratic elements in Germany upon which the future of freedom in Germany and perhaps of the world depends.

We urge Congress to make a complete and thorough investigation of the present denazification and decartelization in Germany and to make public all reports of such investigations, and to correct any attempts to weaken the original intentions of the Potsdam agreement in this regard.

China

If in fact the Communist regime is the Government of China, we urge recognition of that Government and the establishment of normal trade relations. We take this stand not because we condone the armed seizure of power by the Communists, but because we believe that in the long run our most effective method of helping the truly democratic forces in China is by showing our good faith to all of its Chinese people.

International resources development (the point 4 program)

We endorse the concept of international resources development, through the United Nations, and we call upon the United States Government to draft plans for both a large-scale program of technological aid and public investment in the under-developed areas. Four principles must be borne in mind in preparing the program.

1. Scope: The contemplated program must be world-wide, geared to the needs of the under-developed areas, and must concern itself with the further development of the United States.

2. Relation to the two-power blocs: The program cannot succeed if it becomes merely another instrument in the existing negative power struggle. Work undertaken in the under-developed areas, especially in Asia, must not be controlled by considerations rising out of the European cold-war alliance. The success of the program as a whole will be dependent largely upon its adoption being coincident with a conscious shift of emphasis in present United States foreign policy.

3. Channeling of the program: The program cannot be planned or permitted to develop through uncoordinated private initiative. It should be channeled through the United Nations.

4. Method of financing the program: Germinal funds for carrying out the program must be public funds. Public investment will stimulate and provide the atmosphere for private investment. Such private investment, however, must also not be permitted to create social, economic, or political conditions which run counter to the over-all cooperative plan or to the interests of the peoples concerned. The same safeguards, of course, must apply to public investment as well.

Spain

The concepts of justice, human dignity, and freedom are utterly rejected by Franco Spain. Franco's government is economically, socially, politically, and morally bankrupt. The constitution of Franco Spain specifically prohibits the introduction of democratic rights and procedures in Spain.

All efforts to come to terms with Franco for reasons of military advantage or private profit will be interpreted as an abandonment of western Europe and a betrayal of democratic principles. We deplore the actions of Americans who advance Franco's cause. We applaud our Government for refusing to grant public loans to Franco and for opposing his efforts to gain admission to the specialized agencies of the United Nations, but urge that it also oppose the granting to Spain of private loans. We urge on our Government a policy of no retreat in insisting on friendship only with a democratic Spain.

Israel

We believe that as a prerequisite to any permanent settlement of the outstanding differences between the State of Israel and the Arab countries of the Middle East, the United States and the United Nations should provide technical and financial assistance to the peoples of Israel and to the other countries of the Middle East.

We call on the United States Government to reject the proposed plan of the United Nations Palestine conciliation commission which would cut off Jerusalem from the State of Israel as being impractical, totally unjust, and as endangering the security of the State of Israel, the only democratic bastion in the Middle East.

We recommend the preservation of the international character of the holy places in Jerusalem by placing them under the supervision of the United Nations with the necessary agreement and cooperation of the State of Israel.

We recognize both the urgent problem of the displaced Arab population of Palestine and also the dangerously serious problem facing the State of Israel by forcing upon it large numbers of these refugees. We therefore recommend that the United States Government support, as just and reasonable, the present offer of the government of Israel to settle the refugee problem.

We call on the United States Government to oppose any move intended to alter the present boundaries of Israel.

Free flow of information

A free flow of information among the people of the world is requisite to the competition of ideas in the market-place of thought and thus to the possibility of human growth. We therefore urge the United States to use all powers at its disposal to facilitate the unimpeded movement of ideas expressed through the press, radio and movies, and unhampered travel and access to information of writers and journalists.

Human rights

We reaffirm our opposition to totalitarianism in any form, whether of the left or of the right. We urge United States support, consistent with the United Nations charter, of policies toward each country which will help to maintain or bring about a genuinely democratic government.

We believe that the dignity, freedom, and equality of the individual are the foundations of democracy. This concept is of universal application and we condemn any violation of it whether in the form of religious or racial discrimination in this country, or political, ethnical, or class suppression in others.

We support the universal declaration of human rights and accept it as a standard to judge every government's relations toward its people. We condemn the use of forced labor and the class and religious persecution now being carried out by several eastern European governments in violation of their solemn, international obligations.

We urge prompt Senate ratification of the United Nations covenant on genocide and of the proposed United Nations covenant on human rights, and we urge prompt enactment of effective legislation to implement these covenants and to secure to all persons under the jurisdiction of the United States the realization of the rights contained therein.

Japan

To achieve a democratic Japan, we advocate:

1. Continued vigorous implementation of the 1946 land-reform program.
2. Nationalization of the heavy industries formerly controlled by the Zaibatzu.
3. Complete support of a democratic labor policy which will embrace collective bargaining including the rights of all labor and government employees alike.
4. More emphasis on the functions of the allied council for Japan.
5. The maintenance of the demilitarized status of Japan.
6. The making of a peace treaty with Japan which will assure a democratic political system and the perpetuation of the Japanese constitutional reununciation of war as an instrument of national policy.
7. The substitution in the occupation of civilian for military control.

Colonial peoples

We urge immediate political emancipation of colonial peoples.

UN trusteeship affords opportunity for such emancipation.

We urge such trusteeships until the time when these colonial peoples choose for themselves the manner in which they wish to govern themselves.

Adopted by fourth annual convention, Chicago, Ill., November 1949.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me relating to the proposed St. Lawrence seaway, a statement by Mr. George M. Humphrey, president of the M. A. Hanna Co., on the need of the American steel industry for new sources of iron ore, an editorial from the April 1950 issue of Great Lakes Outlook, and a list of American leaders who serve in the Great Lakes-St. Lawrence Association.

There being no objection, Mr. WILEY's statement and the other material were

ordered to be printed in the RECORD, as follows:

FAILURE TO PASS ST. LAWRENCE SEAWAY LEGISLATION IS A DISGRACE, OUTRAGE, AND INSULT TO AMERICA

(Statement by Hon. ALEXANDER WILEY, of Wisconsin)

Mr. President, I should like to state that the failure of this Congress and of previous Congresses to ratify St. Lawrence seaway legislation is a national disgrace, outrage, and insult to the American people. The ability of a sinister combination of blind, selfish, obstructionist interests to sabotage this legislation is a shocking commentary on the congressional process. The refusal of other areas of our Nation to recognize the legitimate interests of the 50,000,000 people in the valley of the Great Lakes—this refusal is one of the most colossal, selfish, and unfair attitudes ever adopted by other sections of the Nation toward one particular geographic region.

Mr. President, the Middle West has always battled for the Great Lakes waterway because it knew that its economic future depends on the seaway. But it knew that far more important than its interests alone were the national interests involved.

The Middle Western States have always been lax and apathetic in organizing for their own self-interest, while other States of the Nation—the Mississippi Valley States and other geographic units—have zealously organized to secure billions of dollars of appropriations for their area. I am not, of course, suggesting that the Middle West organize for a raid on the Treasury. I would fight against such a move with all the power at my command, but I do issue an appeal to every governor, every legislator, every trade association, every chamber of commerce, every union, every veterans' organization, every farm group, every women's group in the Middle West to mobilize together in a midwestern regional council to battle for the national interest and for the consistent regional interest in a project such as the St. Lawrence seaway.

This waterway will not cost the American taxpayer a single red cent. It is self-liquidating through ship tolls and power revenue. The Northeast is starving for electricity. The Middle West is starving for expanded commercial traffic with the deep-water ports of the world. The Middle West must organize, organize, organize, if we are to avoid the continued rebuffs by a disinterested Congress.

All of us, Mr. President, must share the blame in this staggering defeat of the national interest which is involved in the failure to ratify the seaway resolution. Those of us who are proponents of the bill have not done all that we could to mobilize sentiment in the Senate and House. Those who are opponents of the bill will, I believe, receive a verdict from history of colossal and monumental negligence in meeting a national need.

Blame must also be shared by the executive agencies of the administration. It is a bitter fact that the State Department, the Department of Commerce, the Maritime Commission and other agencies which bat 100 percent in requesting the passage of certain bills in the Congress which are in turn almost immediately passed invariably—that these agencies should somehow be so unsuccessful when they appeal for the seaway. I say, Mr. President, that these agencies are either not trying and are pulling the wool over the eyes of the American people, or the personnel which they have assigned to the seaway are horribly inefficient. Whichever of these alternatives is true, I say the time has come to correct that situation. If the administration actively believes in President Truman's endorsement of the seaway, then it is up to the administration to show the goods. Moreover, I say very frankly to my own Republican party that while this is a nonpartisan issue, the effects of continued failure on the part of certain Republicans to recognize an historic fact is proving of serious disadvantage to the party's interest. I think that my party, generally speaking, has a splendid record in promoting the waterway, but it too must share a part of the collective blame.

I do not want to point an accusing finger but it is merely citing a fact when I state that the business groups of America have not united, the labor groups have not united, in promoting the seaway. Fortunately, the great farm organizations of America have a splendid record of unity and cooperation for the seaway.

Now, Mr. President, I do not mention this as a mere academic matter. I have in my hand a brilliant statement by one of the great industrial leaders of our country, Mr. George M. Humphrey, president of the M. A. Hanna Co., on the subject of the imperative need of the American steel industry for new sources of iron ore. This statement has together with it certain maps which I wish could be reproduced in the RECORD, but even though we are unable to do so, I think that the clarion facts presented in this statement will be of tremendous interest to the Nation. I ask unanimous consent therefore that the text of Mr. Humphrey's comments be printed in the Appendix of the CONGRESSIONAL RECORD.

I ask unanimous consent that there be printed with that statement a hard-hitting editorial published in the April 1950 issue of the Great Lakes Outlook, published by the Great Lakes Harbor Association, and edited by one of the most outstanding port authorities in the United States, Mr. Harry Brock of Milwaukee, and that there be appended to it a list of some of the great American leaders who serve in the Great Lakes–St. Lawrence Association, located in the Mayflower Building, Washington 6, D. C., which is spear-heading the fight for the seaway. This group, composed of leaders in both political parties, bespeaks the eloquent support of the seaway among all segments of our society.

The iron ore statement by Mr. Humphrey supplements the comments I made on the national defense aspects of this situation in the CONGRESSIONAL RECORD of March 16, 1950.

NEW SOURCES OF IRON ORE FOR THE AMERICAN STEEL INDUSTRY

(Statement by George M. Humphrey, president of the M. A. Hanna Co., on iron ore reserves, benefication, new discoveries in Labrador and Venezuela, the St. Lawrence waterway, and the national defense.)

About 75 percent of the blast furnace capacity of the steel industry of the United States lies within the area from Buffalo and Pittsburgh on the east through Ohio and Indiana to Chicago on the west. This area is the center of the greatest manufacturing region in the world, which lives on steel as its principal raw material.

The principal raw material of the steel industry, in turn, is iron ore—a ton of ore for every ton of steel produced. The steel industry of this region gets more than 95 percent of its iron ore from the ranges of the Lake Superior district, from which 2,500,000,000 tons have been mined and shipped.

We have already entered the period when the steel industry serving this great manufacturing area can no longer look solely to iron ore from the Lake Superior district for its ore supply, and thus cannot continue to fill the ever-expanding requirements for steel unless new low cost sources of iron ore can be developed.

The great ranges of the Lake Superior district have already passed their prime. Their total reserves are variously estimated at from 1,300,000,000 to 1,600,000,000 tons as against 2,500,000,000 tons already shipped. Annual shipments reached a peak of 93,000,000 tons during the war, and average more than 74,000,000 tons a year from 1946 through 1949.

Even these over-all figures do not tell the whole story. The backbone of the Lake Superior ore supply has in the past been the open-pit ore found mainly on the Mesabi range in Minnesota—ore that could be stripped and mined by power shovels. Today the open-pit reserves of Minnesota are 584,000,000 tons, according to the records of the Minnesota department of taxation. Five hundred and eighty-seven million tons of open-pit ore have been shipped from the district since January 1, 1940, and shipments from open-pit mines are continuing at the rate of 50 to 60 million tons a year. New discoveries and process improvements will probably substantially increase ultimate recoveries of open-pit ore over present estimates. Even allowing for these factors, however, it is certain that the open-pit reserves of the district will continue to decline.

This situation is not new. It has been foreseen for years by those in the steel and ore business, and they have been engaged in seeking solutions for it along two main lines—beneficiation of lower and lower grades of iron-bearing material, and world-wide search for high-grade ore. Although the M. A. Hanna Co. and its associates have substantial reserves in the Lake Superior district, we have been active for years both in research for improved beneficiation and in the search for new sources of ore. We now operate fifteen beneficiation plants employing every presently known commercial process, and are constantly engaged in advanced research in our laboratories to discover new methods of beneficiation. We have also actively participated in the far-flung search for new sources of iron ore.

Beneficiation: Many methods of beneficiating lower-grade ores are now in operation. There are in the Lake Superior district large reserves of taconite, which cannot yet be commercially used in steel production. Research on taconite, in which we are participating and which we think is vital, has been going forward for a number of years and will ultimately, we believe, be commercially productive. However, the processes required are costly and will require expensive beneficiation plants, now estimated to cost from $10 to more than $20 per ton of annual productive capacity. It is highly desirable that these experiments be continued; but the most optimistic estimate from informed sources now is that, in the normal course of development, production of ore from taconite will not exceed 10,000,000 tons per year by 1960. Other estimates are considerably lower. Nothing indicates that the requirements of the ever-expanding steel industry can possibly be met by beneficiating the taconites of the Lake Superior district.

Other sources of ore: On the North American Continent several deposits outside the Lake Superior district have been known for many years: in Newfoundland, where the lower grade Wabana ore extends out under the sea; in the Adirondacks, where about 2,500,000 tons a year are beneficiated to usable form; in northern New Jersey and Pennsylvania, which produce about one and a half million tons a year; in Alabama, where lower grade deposits can be locally used; relatively small or lower grade deposits in Texas, Missouri, southern California, Colorado, and Utah; and possible showings in Mexico which so far have not been commercially developed. These deposits, however, all involve either physical or commercial complications which make it desirable to have some better source to fill a gap created by a decline in shipments from the Lake Superior district.

Outside North America and available for shipment to this country in relatively limited tonnages, there is ore from Sweden, Chile, northern Africa, and Cuba. Brazil is known to have large reserves, and there are other large reserves in even more remote locations; but commercial and transportation problems have so far prevented their development on any substantial scale.

Exploration for new ore reserves is a tedious and costly job, in which success comes only to a few. All the work and all the money expended over the last several years have so far developed only two new major sources of ore supply: one on this continent, in Labrador and Quebec; and the other in Venezuela.

In Venezuela United States Steel Corp. has announced the discovery of new ore deposits, where it is said that by early 1949 about half a billion tons had been proved by drilling. Bethlehem is opening a smaller deposit not far away, and Hanna has concessions adjacent to those of Bethlehem discovered nearly 20 years ago.

In Labrador and Quebec, the Hollinger interests of Canada and Hanna had by the end of 1949 proved, by drilling, reserves of over 350,000,000 tons of open-pit ore, 10 percent higher in grade than standard ores now being shipped from the Mesabi. Only a small fraction of the area has yet been explored. Recently a group of midwestern steel companies, including Armco, National, Republic, Wheeling, and Youngstown Sheet & Tube, have joined in further exploring this region and preparing for commercial production. An initial production of 10,000,000 tons per year is planned.

Both the Labrador and the Venezuelan ores are adequate in quantity and quality to serve as substantial supplementary sources to the steel industry of this country as shipments from the Lake Superior district decline. The main problem for both of them is transportation to the mills where steel is now made.

TRANSPORTATION

It is 2,206 statute miles from Trinidad to Baltimore, and 2,229 miles from Trinidad to Philadelphia. It is clear that Venezuelan ore will be cheaper at seaboard ports than if delivered by rail to inland steel plants. United States Steel Corp. has recently announced the acquisition of a site for a steel plant on the Delaware River near Trenton.

Seven Islands, the St. Lawrence port for Labrador ore, is not as far as Trinidad is from these coastal ports, being 1,550 statute miles from Baltimore and 1,366 miles from Philadelphia. In the other direction, however, via the St. Lawrence and the Great Lake, Labrador ore is only a little farther than Lake Superior ore, in terms of water transportation distance, from the steel mills of the central region running west from Pittsburgh and Buffalo. The map indicates that the port of Ashtabula, Ohio, is 876 miles from Duluth and 952 miles from Seven Islands. The St. Lawrence trip can be made at present through a canal system accommodating boats of only 14-foot draft, which substantially limits the tonnage of iron ore that can now move over this route. However, the entire route is now available for use by the largest lake ships except for a distance of about 100 miles just west of Montreal. If the St. Lawrence seaway at this point is completed to a channel depth of 27 feet, any of the boats of the present Great Lakes ore fleet could go to Seven Islands and return, taking any required quantity of Labrador and Quebec ore to Lake Erie ports, from which it would move to the mills of the central steel-producing area over the same loading facilities and railroads that are now handling ore from the Lake Superior district.

There are two other routes by which Labrador ore could move to the central consuming region.

The first is from Seven Islands by ocean freighter to an Atlantic seaboard port such as Baltimore or Philadelphia, and thence inland by rail. The water distance from Seven Islands to Baltimore is 1,550 statute miles, and to Philadelphia is 1,366 miles, as compared with the Seven Islands-Ashtabula distance of 952 miles. Because the sea voyage would be made at higher speeds in larger boats, the cost per ton of transporting ore from Seven Islands to Atlantic ports should not greatly differ from the cost of transportation from Seven Islands to Ashtabula.

From the standpoint of the blast furnaces located directly on the lakes, which had a 1948 capacity to melt 19.9 million tons of iron ore, the seaway route would deliver ore directly to their docks, whereas the ocean route would involve an additional rail haul of from 430 miles (from Baltimore to Erie, Pa.) to more than 625 miles (from Baltimore to Detroit). This same rail haul would be required for Venezuelan ore.

For furnaces located in the valley district, with a 1948 capacity to melt 13.5 million tons, the seaway route would require a rail haul of about 70 miles (Cleveland or Ashtabula to Youngstown), whereas the rail haul from Baltimore to Youngstown is about 400 miles.

For furnaces in the southern Ohio district, with a 1948 capacity of 3,000,000 tons of ore, the seaway route would require a rail haul of from 180 to 250 miles, as against a rail haul of 450 to 580 miles from Baltimore.

To the Pittsburgh district, with a 1948 capacity of 27,000,000 tons of ore, the rail haul from Lake ports is 126 miles, and from Baltimore it is 328 miles. To eastern points, both Labrador and Venezuelan ore will move cheaply via seaboard ports.

The other route is from Seven Islands to Montreal (a distance of 484 miles) by water and thence by rail to consuming centers. The rail haul required by this route is about 700 miles to Pittsburgh and is for the most part the same as that over which beneficiated ore now moves from the Adirondack district.

NATIONAL DEFENSE

The construction of the seaway should also be considered indispensable as a measure of national security and defense, to give access through protected waterways to the only substantial source of high-grade open-pit ore on the North American Continent outside of the Lake Superior district.

In the past, the open-pit ore of the Lake Superior district has been the only reserve from which production could be quickly expanded to meet a national emergency. In a few years (probably not more than five and certainly less than ten) the capacity to expand this open-pit production substantially in an emergency will be greatly curtailed.

Production of the Lake Superior ranges was just over 64,000,000 tons in 1940, of which about 19,000,000 were from underground mines, and about 45,000,000 from open-pit mines, most of it from the Mesabi Range. In 2 years, under the stress of war demand, the total production of the Lake Superior district was raised from 64 to 93 million tons. Ninety percent of this increase, as a matter of necessity, was from open-pit production. Underground mines cannot be quickly expanded; in the peak war year of 1942 they bettered their top peacetime volume by only 3,000,000 tons.

Taconite production, like underground mining, cannot be relied upon to provide the necessary expansion in an emergency even after a successful standardized process has been worked out, because of the tremendous plants and facilities which it requires. To add 20,000,000 tons of capacity would take 2 or 3 years, during which plants would have to be built at a cost of from 200 to 400 million dollars, with all that this implies in consumption of critical materials and manpower during the emergency. Moreover, because three tons of taconite would have to be mined and beneficiated to produce one ton of ore concentrate, actual production requires several times as much manpower as the equivalent open-pit tonnage.

The nearest available deposits in Chile, Venezuela, and Brazil are far away and involve political and transportation problems which may make them again unreliable in time of war, as they quickly proved to be in the last war.

Fortunately, the large reserves now proven in Labrador and Quebec are minable by open-pit methods, so that the presently planned production of 10,000,000 tons per year could quickly be doubled or tripled in an emergency by adding more trucks, shovels, and transportation facilities. However, without the St. Lawrence seaway, most of this ore would have to move by sea more than 1,350 miles through the Gulf of St. Lawrence and the Atlantic Ocean to east-coast ports. With the seaway, all of it could move from Seven Islands westward to Great Lakes ports through what are designated by the military authorities as protected inland waterways.

The comparative cost and burden on the national economy of expanding these two routes in time of war involve a number of factors, some of which are easily evaluated and some of which only the military establishment can appraise.

In peacetime, the transportation of 10,000,000 tons of ore per year from Seven Islands to Baltimore or Philadelphia would require from 10 to 12 oceangoing ore ships of 33,000 tons capacity each. This fleet would have to be doubled or tripled to accommodate a corresponding increase in ore production for an emergency and might have to be still further expanded to allow for convoying and sinkings. The military authorities can best determine the degree of needed expansion and the expense and difficulty of protecting the traffic under wartime conditions.

The added ships to carry larger war-emergency production, and to allow for convoying and attrition, would have to be constructed under wartime conditions, again at the expense of other needs for critical materials, manpower, and seacoast shipyards. On the other hand, if the seaway were then available for use, the present Great Lakes ore fleet, which has carried over 90,000,000 tons of ore in a single season of lake navigation, would be available for carrying Labrador as well as Lake Superior ore. Moreover, shipbuilding facilities of the Great Lakes would be available to supplement the ore fleet. Protection from submarine attack, if required at all, would be limited to a short distance west of Seven Islands, and casualties, if any, would be relatively far less important.

The seaway is obviously the only satisfactory way of assuring in peacetime the major part of our needed wartime expansibility of ore production with the least burden on the wartime economy. The United States share of the cost to complete the navigation facilities for a 27-foot channel is estimated at less than $400,000,000. The seaway will be of major use in peacetime, and with it in existence, expansion of Labrador ore production involves relatively little effort and cost in time of war. To secure equivalent expansibility with taconite means either the construction of stand-by plants costing from $200,000,000 to $400,000,000 which would lie idle except in wartime, or, in the alternative, their construction under wartime conditions with an immense burden to an already overstrained economy. Reliance on ocean transport of Labrador ore would be just as inefficient; it means either a stand-by ocean-going ore fleet almost as expensive as the taconite plants, or the construction of such a fleet under wartime shortages of men, materials, and shipyards, plus in either case a tremendously increased wartime burden on the railroads to transport the ore from seacost ports to steel mills in the Great Lakes basin.

LETTER TO SENATOR WILEY

On February 19, 1949, Mr. Forrestal, then Secretary of Defense, in his published letter to Senator WILEY, referred to the advantages of access through the seaway to Labrador iron ore, which, he said, "may soon be a vital source of iron ore to the Lakes steel industry to supplement or replace in part the ore now being supplied from the rapidly depleting sources in the Lake Superior district." That time is now here.

As President Truman said in his budget message on January 9, 1950:

"I repeat most emphatically my previous recommendations for approval of the St. Lawrence waterway and power project. Authorization of the seaway, with its related power facilities, is a matter of urgency for our peacetime industry and our national security. In particular, each succeeding year reduces further our domestic reserves of iron ore and increases correspondingly the importance of the seaway as a means of economical access to the proven ore deposits in Quebec and Labrador."

[From the Great Lakes Outlook of April 1950]

THE COLD HARD FACTS

Important and possibly revolutionary changes are confronting the steel industry. The facts are that without the St. Lawrence seaway cost of iron ore will be much higher in the Middle West than on the east coast, and, therefore, there will be strong tendency for steel productive facilities to move to the coast. The ultimate effect of this will be to put the Middle West through the same kind of economic squeeze as suffered by New England when the textile mills moved South. This can be prevented by the construction of the St. Lawrence seaway and the improvement of Great Lakes harbors for deep-draft navigation.

Why have we not made more progress on getting national approval of the St. Lawrence seaway project? Every time an impartial congressional committee has held hearings on this subject, in 1933, 1941, 1946, and 1947, it has been approved overwhelmingly on its merits. But as soon as the legislation gets to the floor of either Senate or the House all kinds of discredited arguments are made against it; and even though opponents know better, they are forced to vote against the measure because of "home" pressures. These pressures are strongest in the East and South, but they are also present in the Middle West and the Plain and Mountain States of the West. A persuasive case for the seaway has been made effectively in Washington. We have failed to withdraw the opposition, or to counteract it.

The principal opposition to the St. Lawrence seaway and power project comes from the eastern railroads and electric utilities. Starting with this handful of business enterprises, the opposition spreads through affiliated interests in banking, insurance, suppliers, holding companies, and trade associations to all parts of the country.

The result is that whenever the St. Lawrence matter comes before Congress, railroad presidents and workers, coal operators and miners from every district of the country swarm the halls of Congress, buttonholing their Congressmen and Senators. Bankers and chambers of commerce executives from Seattle to Houston, from Los Angeles to Baltimore, write, wire, phone their Congressmen pleading against the project.

As against the Nation-wide organization and personnel and resources of a powerful seaway opposition, the movement for the seaway has been powered almost by a one-cylinder engine with small resources of money and manpower. We have made good use of those limited resources. The seaway has been twice successfully steered through the Senate Foreign Relations Committee. The project has been kept before the public. The seaway has earned the support of many farm and labor organizations, and they have been kept interested, but the seaway movement has lacked sufficient resources to publish literature, to send speakers into the hinterland, and to make new converts.

The seaway project must succeed on its next congressional drive. The southern Democrats, who control the committees of Congress, will take every measure to prevent congressional action in this closing session of the Eighty-first Congress. Our sights must be set on 1951–52. The plans must be drawn now for final victory in the Eighty-second Congress. No effort must be spared to build up public opinion in the crucial States which will decide the destiny of the project.

Public opinion throughout the United States and Canada is overwhelmingly in favor of the St. Lawrence seaway and power project. President Truman and high leaders of both political parties have repeatedly urged the project upon Congress. Insofar as the President is concerned, his vigorous endorsement of the seaway project is being sabotaged by members of his own party. The vast ground swell of American public opinion for the seaway is being thwarted by a small but well-financed opposition. The friends of the seaway must marshal their vast resources in the way of public opinion, press support, and legislative leadership to a degree sufficient to swamp the opposition. Public opinion inevitably prevails in a democracy.

It has many times been said that the St. Lawrence seaway project is an inevitable fact of geography. Even the enemies of the project are beginning to concede its inevitability. The Workboat magazine, mouthpiece for the inland waterway interests of the Mississippi Valley recently warned its readers that, "the St. Lawrence * * * ultimately will be carried through; it will be just too hard to kill in the long run." The Workboat advised its readers to plan quietly and thoroughly as to what may be done after the seaway down the St. Lawrence is finally approved and in operation; the thought may not be pleasant, but some timely planning at the present may more than make up for that ultimate defeat.

We are glad to have the assurance of the Workboat that the seaway must inevitably be built. As to the Workboat's thought that this happy event may have unpleasant consequences for the Mississippi Valley, we hasten to reassure the Workboat's editor and the entire Mississippi Valley that the St. Lawrence seaway can have nothing but the most pleasant and beneficial consequences for the Great Lakes region, the Mississippi Valley, and all of the United States and Canada.

Apprentices in Government Service to Veterans

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, on May 4 I submitted minority views on S. 3050, now on the calendar of the Senate. In that connection I made it clear that the bill would drastically interfere with and seriously hamper the Government apprentice programs.

I ask unanimous consent to have printed in the body of the RECORD a letter dated May 3 which I have received from the National Advisory Committee for Aeronautics expressing disapproval of S. 3050. I should like also to have printed the names of the distinguished members of this committee.

There being no objection, the letter and names were ordered to be printed in the RECORD, as follows:

NATIONAL ADVISORY
COMMITTEE FOR AERONAUTICS,
Washington, D. C., May 3, 1950.

Senator HUBERT H. HUMPHREY,
United States Senate,
Washington, D. C.

DEAR SENATOR HUMPHREY: H. R. 7165, to limit the appointment of apprentices in the Government service to veterans, has just passed the House, and an identical bill, S. 3050, has been favorably reported in the Senate.

If enacted in its present form, this bill would immediately impede and, in a few years, terminate our apprentice-training programs that are essential to the staffing of the fine trades and crafts in our scientific research laboratories. There would be no compensating advantage to veterans as a class, nor to the public service generally. This is because: Apprentices are usually hired between the ages of 18 and 22; the average age of veterans is now about 32 years, with only about 4 percent under 23; there is no new supply of young veterans coming along; and older veterans cannot be expected to make good apprentices, nor to accept the low starting pay of an apprentice.

It is strongly recommended in the public interest that the bill be not approved. The Bureau of the Budget advises that its enactment will not be in accordance with the program of the President.

If nevertheless it be the wish of the Senate to approve the measure, it is urged that it be amended to provide that it shall have no application with respect to apprentice positions under the National Advisory Committee for Aeronautics.

J. F. VICTORY,
Executive Secretary.

The names of the members of the committee are as follows: Jerome C. Hunsaker, Sc. D., chairman; Alexander Wetmore, Ph. D., vice chairman; Hon. John R. Alison; Detlev W. Bronk, Ph. D.; Karl T. Compton, Ph. D.; Edward U. Condon, Ph. D.; James H. Doolittle, Sc. D.; Ronald M. Hazen, B. S.; William Littlewood, M. E.; Rear Adm. Theodore C. Lounquest, U. S. N.; Vice Adm. John D. Price, U. S. N.; Maj. Gen. Donald L. Putt, U. S. A. F.; Arthur E. Raymond, Sc. D.; Francis W. Reichelderfer, Sc. D.; Hon. Delos W. Rentzel; Gen. Hoyt S. Vandenberg, U. S. A. F.; and Theodore P. Wright, Sc. D.

Address of the President at Sandpoint, Idaho

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. WHITE of Idaho. Mr. Speaker, under leave granted to extend my remarks in the RECORD, it is a privilege to insert the address made by the President of the United States at Sandpoint, Idaho, on the occasion of his recent western trip:

Thank you very much, Mr. Mayor. I appreciate this privilege. I have just received the finest welcome I think I have had anywhere in my whole career, during this trip; in Iowa, in Nebraska, in Wyoming, in Idaho, in Oregon, and in Washington. Now I want to thank you very much for this fine reception. You have given me the same kind of welcome I had yesterday morning when I made a number of stops in southern Idaho. I traveled all along the Snake River, and now it is grand to be up here in this rugged country around Sandpoint. I have just been watching the scenery, and I never saw anything more beautiful in my life, and my whole staff feels the same way. I am sorry it will be dark when this train goes through Cabinet Gorge. I would certainly like to see that. I have been reading about it all my life.

I have celebrated two birthdays on this trip across the country. My own—for 66 years—was last Monday. Today is the fifteenth birthday of the Rural Electrification Administration. I helped to celebrate that by dedicating Grand Coulee Dam—a wonderful project which is already supplying tremendous quantities of cheap electricity to thousands of users.

Here at Sandpoint you have the headquarters of the first REA-financed cooperative in the Rocky Mountain region. This was the second cooperative west of the Mississippi, and it is nearly as old as the REA itself.

I hardly need tell you what benefits cheap electricity means to a region. In addition to making life easier in homes and farms, it brings new industries and lets old ones expand.

One of the industries in this part of the country that needs a great deal more power is phosphate mining. There are tremendous phosphate resources down south of here in Idaho and Montana. Farmers all through the West and Middle West need lots more phosphates. The power that can be brought into this region through great Federal projects like Grand Coulee and Hungry Horse should make it possible to develop a big phosphate industry.

I have been greatly impressed on this trip by what I have seen and heard about the wealth of mineral resources in Idaho, Montana, and Washington. These minerals aren't important just to you people, they are important to the national economy as a whole, and to the whole world.

There was a time when big-time operators stalked through the Northwest, exploiting the cream of our mineral resources. They were men who exploited for their own profit, without thinking of the generations to come after them.

I have always maintained, and I always will fight for the policy that natural resources must be used so as not to destroy their value, and they should be used for the benefit of the Nation as a whole and not for any special individual.

In order to supplement our resources of critical minerals, we must take vigorous steps to add to our supply. The stockpiling program is designed to meet our national defense needs. Other measures are equally necessary. We must expand research to make better use of submarginal mineral deposits. We must search for new deposits of minerals. We must avoid waste in the mining, production, and use of minerals. We must find ways to use substitutes for critical minerals.

I have been greatly encouraged by the development of the cobalt-copper deposits here in the forest areas of Idaho. We have not had nearly enough cobalt production in this country. You know, we get most of it from Africa—most of the cobalt comes from Africa, and I would like very much to see some prospector find enough ore for use here at home. It is important to national defense for us to speed up the development of new sources of cobalt in the district just north of here.

When we get more power into this area, and when we begin to develop the mineral resources here in the Pacific Northwest as they should be, there will be a tremendous industrial expansion.

When we get low cost power in greater quantities into this area, it will aid the metal mining industry through the establishment of lead and zinc smelting plants.

You know, there was a time when Missouri was the greatest producer of lead and zinc. That is not true any longer, because those mines are exhausted. The mines in Oklahoma are almost exhausted, so it is up to you to see that we have plenty of lead and zinc. It will be carried out in cooperation with the producers throughout Idaho, northeastern Washington, British Columbia, and Alaska. This will mean new prosperity and new wealth for all of you. It will mean a more prosperous and a stronger nation. We need both prosperity and strength if we are going to keep our position of leadership in the world, so that we can work for world peace.

You know, there are people in the world who do not appreciate our viewpoint, they don't understand how we can live as a great country and still let the individual be his own boss. They don't understand that our democracy is one which comes from the people up and not from the top down.

What I am trying to do is to keep our economic situation in such a condition that we can remain strong enough to show those people that our plan is much better than any other plan in the world.

We are for the welfare of the people of the whole world. We have no desire to exploit anybody. We want to help people. We want to make the world a better place to live in. We want to give everybody an opportunity to live as a man, and to live with his neighbors amicably. And that will make for peace in the world. That's all I am working for.

I appreciate very much your coming out here.

The President Visits Montana

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. MANSFIELD. Mr. Speaker, I am happy to call to the attention of the House, editorials on President Truman's visit to Montana carried in the Montana Standard, of Butte, the Great Falls Tribune, of Great Falls, the Daily Missoulian, of Missoula; and an article by Joe Harsch in the Christian Science Monitor.

It is a source of personal pleasure and pride to me that Montana extended such a spontaneous and wholehearted welcome to our President. The man of the people reported on the state of the Union to his constituents—and they liked it.

[From the Montana Standard, Butte, Mont., of May 12, 1950]

AS BUTTE WELCOMES PRESIDENT HARRY S. TRUMAN

The friendly and hospitable people of Butte will turn out today to welcome their President. Perhaps remembering the most generous reception the people of the mining city accorded President Harry S. Truman on his last visit here in June 1948, the Nation's chief executive again chose Butte as one of his major stops on a tour of 16 States along the northern tier of the Nation. The present tour of the President has many striking resemblances to the one just short of 2 years ago when he launched the spectacular drive which won him the Presidency in his own right.

So there is no doubt that the people of Butte are linked in happy associations in the presidential memory. Mr. Truman had come to Butte previously as a candidate for the vice presidency on the Franklin D. Roosevelt ticket. One of Mr. Truman's notable characteristics is that he remembers his friends.

Local committees, under the cochairmanship of Lt. Gov. A. Cannon and William A. Curran, have prepared a sparkling reception for the Nation's chief executive in keeping with western hospitality and friendliness. Led by Gov. John W. Bonner, dignitaries from the far reaches of the Treasure State will be in Butte to take part in welcoming the President, Mrs. Truman, their daughter, Margaret, and other members of the presidential party.

Most of Butte will knock off for a time at midday to take part in welcoming President Truman. When the President steps to the platform erected in front of the Northern Pacific depot to make one of nine major addresses scheduled on his 6,500-mile tour, he will look out on a colorful and friendly crowd. The Butte High band, which drew from him words of high praise 2 years ago, will sound off with the familiar Hail to the Chief.

As President Truman leaves, he will bear away numerous gifts and mementos which have special significance relative to this mountainous and mining region.

The presidential visit will stand as another memorable day in the long and colorful history of the mining city.

[From the Great Falls (Mont.) Tribune of May 12, 1950]

MONTANA WELCOMES PRESIDENT TRUMAN

Montana today bids proud and enthusiastic welcome to President Harry S. Truman.

In his trip across the country the President has been talking to the people about governmental relations with which we are most vitally concerned. He has been talking directly and quite informally to the people

and that is the way this western region likes to talk.

Here in Montana we are naturally concerned about the farmer and about the continuing stability of farm markets. We are concerned also about the wage and salaried workers in our cities and towns; in the mines and processing plants and in our other enterprises. President Truman has demonstrated his concern about these things and his determination to put into operation Government programs to protect both the farmer and the consumer.

Some critics have been crying it can't be done. But President Truman believes there is a way to combine farm production and market stability with a fair deal for the wage-earning consumer. He believes such a plan should be made a part of the national farm program. The Tribune heartily endorses the President's conviction that this can be done.

President Truman has shown himself to be a sincere and understanding friend of both reclamation and conservation, and of that Montana and other Western States are rightly appreciative.

Just before he started on his cross-country tour the President gave Congress a plan to stimulate small and independent business and asked for its passage at this session. At Cheyenne Mr. Truman talked about this program. His recommendations rest on three simple principles—that the small-business man needs long-term credit, he needs venture capital, and he needs technical assistance.

The President believes that "if we are to have an expanding economy small business must provide its share of additional jobs needed"—and that proper government measures can assist.

The Tribune says "Amen" to that.

The President takes no stock in the belief of some that a boom-and-bust pattern is inevitable in American economy. And he has been proving that it is not. He deserves a large measure of credit for that, as he would get a large measure of blame if the reverse were true.

Montanans, along with the millions of other Americans, are concerned about national security and world peace and about the Communist menace to free nations and free peoples. We are cheered by the President's expressed conviction that elsewhere in the world the goals of stability and peace are "clearly within reach."

We are quite willing to accept the President's further admonition that there is no quick or easy way to end the present world difficulties. The way to win, Mr. Truman says, is for the world's free nations to "clearly demonstrate the superiority of freedom over the iron hand of tyranny."

President Truman has refused to be stampeded or discouraged. He comes to Montana with a report that is both encouraging and inspiring.

The Tribune is proud and happy to be numbered among the ardent supporters of President Harry S. Truman and to bid him welcome to the Treasure State.

[From the Daily Missoulian, Missoula, Mont., of May 12, 1950]

WELCOME, MR. PRESIDENT

Western Montanans, regardless of political affiliations, welcome President Truman and his entourage and regret that their visit here this morning cannot be more extended.

We have high respect for the Office of Chief Executive and admiration for the grim determination with which Mr. Truman fought his way to election in 1948 in a campaign in which the prophets didn't give him a chance.

As the President makes his way across Montana he will find typical Treasure State welcomes at every stop.

It is Missoula's rare privilege to be host to the President this morning. Welcome, Mr. President, and come again.

[From the Christian Science Monitor, Boston, Mass., of May 15, 1950]

STATE OF THE NATION

HARRY TRUMAN, TOWN BOOSTER

(By Joseph C. Harsch)

CHICAGO.—Speaking of President Roosevelt, Republicans used to say: "You can't shoot Santa Claus."

Today it should be rephrased to read: "Nobody boos the town booster."

That is, I think, the most accurate way to describe the Harry S. Truman who has joined forces here in Chicago with the big and little leaders of his party for the openly political climax of his cross-country tour.

Victor A. Johnston, official Republican observer of this tour, has labeled it a "traveling medicine show."

Mr. Truman himself invariably has called it a "report to the people."

Those designations best suit the views of the individuals making them. But they equally miss, or obscure, what actually has happened. Mr. Truman started the trip preaching "growth, expansion, and progress." In varying forms he has preached it all the way across the country and back here to Chicago. He has made himself the town booster of every town in the country and of the whole country put together.

And there hasn't been a boo in the whole trip—with one exception, to his advantage. That was in Madison, Wis., where a dozen shabby and obviously very left-wing pickets paraded in front of the university field house, where he was speaking, with placards objecting to Mr. Truman's foreign policies.

It has been an exercise in town boosting from cold-war victory without war and endless prosperity without loss of freedom to protection of pitchfork handles from grasshoppers.

It has been one of the smoothest dress rehearsals of all political time. The train has been on time at every stop. A smooth-working presidential staff, which makes it a business to know the interests of every community before it is reached, has a speech ready and keyed to local interest. As the train rolls on the mimeograph machines do, too, and within an hour every correspondent has a true copy of what the President had said, including the extemporaneous remarks. Even the weather seemed to be under the town-boosters' control, for drought turned into rain and winter into spring in the path of his progress.

The Truman manner is easy and natural. At Spokane a prize-winning 4–H sheep waiting to be beribboned by the President made loud disapproving noises. "That must be a Republican sheep," said Mr. Truman, and everyone laughed.

Harry Truman is the genial town booster. He is Rotary, Kiwanis, and Lions Club rolled into one. He preaches progress like a man who believes. He preaches it in the vernacular. "That's a mighty pretty pig you raised." And when he says reservoir it comes out "reservoy." He doesn't high-hat anyone. He doesn't show annoyance, if he ever feels it, but he can be firm. At Great Falls, Mont., the train pulled a car's length beyond the band and reception committee. It was ordered back and went back.

How does one campaign against the town booster?

America believes in growth, expansion, and progress. America is made up of Rotarians, Kiwanians, and Lions—of people who make a religion of preaching a better and safer and more prosperous tomorrow and of going out and trying to do something about it. Mr. Truman has tuned himself to the gospel of every chamber of commerce in the country. You can't be against what he is for without being against the chamber of commerce and the American dream of wider horizons and happier people. You can call it pie in the sky and a traveling medicine show, but you can't be against it. And it would be hard to preach it with more conviction or confidence than does Mr. Truman.

At Pasco, Wash., Vic Johnston watched the crowd watching Harry Truman.

"Nobody hates him," he observed.

That's about it.

The Argument About Socialism

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Argument about Socialism," written by Walter Leckrone, which appeared in the Indianapolis Times on May 14, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ARGUMENT ABOUT SOCIALISM

(By Walter Leckrone)

Perhaps without meaning to, President Truman last week got right at the root of the argument about socialism.

The President recalled that away back in 1887 somebody proposed that the Federal Government give each State $5,000 with which to set up an agricultural experiment station. One Kansas Senator who opposed the idea, charged that it was interference with local government and would lead to destruction of individual freedom.

The bill passed anyway, the State got the money and many of them did set up their experiment stations, and nobody lost their freedom because of it, the President said. And that, he went on, is just the same argument he gets today, whenever he proposes any "bold progressive measures." The opposition just yells "socialism."

There are, though, some thoughtful citizens who believe today that the Kansas Senator was more right than he even realized himself back there in 1887.

Anyway the President did point up rather graphically the fact that only sixty-odd years ago it was considered a pretty radical move for the Federal Government to give a State even a little bit of cash for any purpose.

Few would pay any attention to a $5,000 hand-out today, of course. Now it hardly rates a headline unless the hand-out runs into the billions. From giving a little money to each of the States the Federal Government today has taken to handing it out not only to States, but to cities and villages and even millions upon millions of individuals.

SMALL START

From that little $5,000 start for an experimental farm in 1887 the Federal Government has gone on to giving money for highways, schools, health services, poor relief, house building, retirement pensions, old-age assistance, airports, to start new businesses, to expand old businesses or to bail out failing businesses, and to pay for potatoes and butter and other crops that nobody

wants to buy, so the prices won't come down, and Mr. Truman wants to give more.

The point is it didn't all begin at once. It started with just a little hand-out, as little as $5,000 to a State, for a purpose that seemed worthy. Soon there was another purpose that also seemed worthy, and another, and a lot of others. So many that at length Congress barely raised an eyebrow at $25,000,000 to finance a venture as wild as Lustron Homes, or to put a new automobile on the market or to pay a crowd to attend a political speech by a Cabinet member. After all, it had been done before. Once the States had their $5,000 for their experiment stations it was just a matter of amount, and not of principle any more.

Of course any one who stopped to think at all knew quite well that there is no such thing as a gift or a grant from the Government to the people. The Government has no money of its own. All it has it gets from the people as a tax on what they earn or what they have. All it could ever give them back would be part of their own money, less, of course, whatever it costs to collect and pay out that money.

As President Truman says, it isn't likely anybody lost his freedom just because each of the States got $5,000 out of the United States Treasury back in 1887, or at least not enough freedom that he could miss it.

The States, though, pretty soon found out that their own freedom of action began to be limited when they received Federal funds. The Federal Government that gave cash to a State for relief, for instance, soon began to tell the States just how it should be spent and if the State didn't obey the money was cut off. When a Federal bureau didn't like a county welfare director, right here in Indianapolis, it ordered him fired, and held up the grant of money till he had been fired. The people of Indianapolis hadn't much to say about their county welfare director.

MANAGING FARMS

The farmers who get Federal hand-outs now are beginning to run into the same thing as individuals. The government that guarantees them a high price for their potatoes or their eggs also tells them how many potatoes they can grow, and how many hens they can have, and year by year reaches further into the managing of their farms.

The government which pays a worker a retirement pension (out of his own money, of course) already tells him how much he has to be paid and how much of it he can keep for himself.

Every time, indeed, that anyone—State or city or individual—has got a grant or a gift or even a loan from the Federal Government he has got a directive, too, that tells him just what he can or cannot do, and to some degree limits his freedom.

So he has by now lost quite a lot of the freedom of action he once had. Just a little at a time, of course, so gradually that already he finds it hard to understand what the Senator from Kansas was talking about back in 1887. And the more he gets the more he loses.

No matter what the men in Federal Government want to do, this is what they must do—it can't be handled any other way. The government which guarantees a worker a pension or a doctor bill has to decide what he does with his time and money. The government that guarantees a farmer a certain price for his crops has to decide how much of a crop he can grow.

President Truman objects to folks calling this socialism, and we agree that it doesn't much matter what you call it, although socialism is what they call it in England and in Russia.

MORE MONEY FROM PEOPLE

The issue is the same, under any name, and President Truman's speech about the grants to the States back in 1887 has helped to make the whole thing clearer.

His administration proposes to take more and more money from the people who earn it and give more and more money back to them for what the Government feels they need, imposing whatever controls over their lives this makes necessary.

His opposition proposes that the people just keep their own money in the first place and spend it the way they want to spend it, without making all this Government control of their lives necessary.

That, mostly, is what the election is about.

Effect of Proposed Tariff Reduction on American Leather-Glove Industry

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I have in my hand a very terse and hard-hitting analysis by the National Association of Leather Glove Manufacturers located at 52 South Main Street, Gloversville, N. Y. This statement very clearly points out the grave implication of proposed tariff reduction on the American leather-glove industry.

I should like to ask unanimous consent now to have this statement reproduced in the Appendix of the CONGRESSIONAL RECORD. This supplements my previous comments on the Senate floor pointing out the damaging impact of tariff slashes on the Wisconsin shoe industry and to Wisconsin tanneries, as well as other industries. As I have previously emphasized, I believe that our greatest obligations are to our own American people, to American businesses, and to American workers. We cannot build the prosperity of the world on the basis of destroying the prosperity of our own country. We cannot create jobs abroad by closing factories here at home, because in the long run, reduced purchasing power on the part of the American people will inevitably be reflected in depression abroad. We want to promote world trade and commerce, but not through the crucifixion of vital American industries.

I appeal, therefore, to those gentlemen of the State Department and of the Tariff Commission to consider very carefully the results of actions which they may choose to take at the tariff conference table.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EFFECT OF PROPOSED TARIFF REDUCTION ON THE AMERICAN LEATHER GLOVE INDUSTRY

NATIONAL ASSOCIATION OF LEATHER GLOVE MANUFACTURERS, INC.,
Gloversville, N. Y., May 5, 1950.

This brief statement has been prepared and approved by the employers and employees of the American leather-glove industry and civic leaders in the communities where leather-glove plants are located. It is prompted by the fact that the State Department has placed men's and women's leather dress gloves on the bargaining list for further tariff rate cuts this year.

1. Employment: In Fulton County, New York State, one of the principal manufacturing areas, we have at the present time almost 7,000 people unemployed out of a 9,000 working population. Of these, 1,328 have exhausted their unemployment benefits, which means that they have drawn the full 26 weeks of benefits permitted by law. Of this group 78 percent are directly employed in the glove industry and the balance are dependent upon the industry for a livelihood.

2. Unemployment trend: During the past 3 years, monthly Fulton County unemployment has averaged: 2,476 in 1947; 1,726 in 1948; 3,715 in 1949; and 5,615 to date in 1950. The current claims are in addition to the 1,328 exhaustions for the benefit year 1949-50, which will end in June.

3. Earnings: Male workers in the leather-glove industry average $1.60 per hour and female workers 92 cents per hour. This is in sharp contrast to the rates paid in England, which is one of the highest-cost leather-glove-producing areas in Europe. There male workers are paid 33 cents an hour and female workers 20 cents an hour. In addition to this, the English Government recently negotiated an agreement with a glove manufacturer in England, giving him exclusive rights to glove production on the Isle of Malta for 10 years. No actual wage schedule exists; however, the manufacturer estimates that it will amount to about 25 percent of the labor rates in England; or, stated in another way, male workers would receive approximately 9 cents an hour and female workers 5 cents per hour. It should be noted that the production of gloves on the Isle of Malta is being developed primarily for the United States market.

4. Conditions of manufacture: Leather, the raw material used in making gloves, is a product of nature and varies in size, shape, texture, and weight according to the animals from which it is taken. Consequently, the cutting of gloves must be a handcraft operation, the same the world over. This statement is made to describe briefly the operations in the industry and, at the same time, to eliminate any misunderstanding that might arise when we speak of a handcraft industry. The word "handcraft" should at no time be associated with inefficiency.

5. Industrial comparison: American leather gloves are the product of a factory industry, which operates at a higher unit cost of production than is necessary abroad, because of our higher wages, overhead, and social benefits for the workers. American factory standards cannot be compared with foreign "factories," which are merely raw-material depots and collection and distribution points for home work. Glovemaking has been known traditionally as a cottage industry throughout Europe.

6. Subsidy: Apparently, also, the American worker is competing with a subsidized foreign industry. Gloves that French manufacturers quoted at $15 per dozen in 1930 are quoted at the same price in 1950. As that is patently impossible, it seems that they must buy their raw materials with ECA credits or funds, and sacrifice the price of the finished product to earn dollars. This is obviously unfair competition with the product of American labor. It raises this question: when does a foreign price reflect true cost, and when is it merely a merchandising price?

7. Constant tariff reductions: Since passage of the Tariff Act of 1930, when rates on imported leather gloves were calculated to equalize the difference between costs of production here and abroad, United States labor costs alone have increased more than 114 percent, while our measure of tariff protection was lowered in the French agreement of 1936, the United Kingdom agreement of 1939, and again at the Geneva Conference in 1947.

8. Hidden tariff cuts: In addition to tariff-cut concessions given by the United States, currency devaluation abroad has already added directly to the tariff cuts this industry has suffered. Further currency devaluation, which is predicted, will only tend to aggravate the tariff rates already cut, without granting any further concessions this year.

9. Foreign monopoly: Consideration of any further tariff cuts will only displace more workers and, in practical application, give European producers a monopoly in the domestic glove market. American industry would be so hopelessly out of competition that only foreign merchandise would be salable.

10. International contribution: American leather-glove manufacturers purchase 95 percent of the raw skins used in the manufacture of leather gloves from foreign countries and make a substantial contribution to international trade. A dislocation of the American leather-glove industry will only reduce this expenditure and, if anything, widen the dollar gap. At present an average of $50,000,000 a year is spent in the purchase of raw skins in the backward countries, which have little other capacity to earn dollars. The transfer of the American glove-manufacturing industry to Europe would eliminate the dollar earning power of these areas, as their customers would be the soft currency countries of Europe.

11. No export market: The American leather-glove industry is primarily prevented from exporting due to our higher costs, caused by the differential in labor rates and factory overhead in this country, versus the lower labor rates and lower overhead in foreign countries. In addition to this, under customs regulations in most foreign countries gloves are barred from importation, being classified as a luxury item. These are the same countries which are interested in gaining a market here and asking for broad tariff concessions, while refusing us a market in their own countries. Consequently, the exports of American-made gloves have amounted to only a fraction of 1 percent of production.

12. Tariff no barrier to imports: To date, present and past tariff rates have only tended to keep the labor cost of imported gloves somewhat in line with American labor costs. At no time have our tariff rates proven a barrier to imports. Last year the ratio of imported women's leather gloves to domestic-made gloves was 27.1 percent, while before the war foreign countries sent us more than double our production under tariff rates that were higher than those rates which prevail today. Why, therefore, is it proposed that the rates be again lowered?

13. Business mortality: According to actual figures in glove-producing areas, 78 concerns have gone out of business since 1946. Any prolonged continuation of present conditions can only mean that others will have to consider a similar move before the end of this year. Therefore, any unwarranted concessions given to foreign producers can only aggravate a situation which is already critical.

14. National defense: The threat to the continuance of this industry which is inherent in further tariff cuts must be considered in the light of its importance to the national defense. All armed services procurement officers have unequivocally stated that food and clothing are of the first importance in arming our Nation. Even now, gloves rank No. 14 on the quartermaster's priority list of critical items. During the last war, the services procured over a half a billion pairs of gloves from the American industry. It would, therefore, seem that this is no time to jeopardize the life of an industry so important to our national defense.

In conclusion, the issue may ultimately be defined as whether or not the glove industry is to remain in this country. Past experience has proven that we cannot consistently concede the major portion of our domestic market to imports. We have no export markets in which the reciprocal lowering of tariffs by other nations might benefit us. We must, therefore, look to our own market; and, if our portion of it is so reduced in size that the small volume remaining precludes payment of overhead, we must accept extinction.

Radio Broadcast by Senator Taft—Do You Want Rubber Stamp Congress?—Reply to Truman's Socialist Program

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, on Tuesday night, May 16, one of the finest addresses it has been my privilege to hear was broadcast over the major radio networks of the Nation by that great American statesman, the Senator from Ohio [Mr. TAFT].

The content of that address formulated a message of great importance to the American people; it exemplified the principles of my party, principles which I have always supported, and which I will continue to support.

I ask unanimous consent to have the text of the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PRESIDENT DEMANDS A RUBBER-STAMP CONGRESS

Fellow taxpayers, the President of the United States has just completed a 6,000-mile trip at our expense and made 57 speeches, most of them political. He must have had some very important purpose in mind, for there was plenty to occupy him in Washington. He left Congress in session rejecting administration plans of vital importance, at least to him. Most of the principal railroads of the United States were closed down while his train ran on. The Foreign Ministers in London are considering the most vital decisions of recent years in foreign policy. But the President's purpose is now clear. He admits that he has been on a 10-day crusade to elect an Eighty-second Congress in November which will do his bidding in every respect. Every "obstructionist" is to be removed from Congress.

True, we already have a Democratic Congress today, but it won't pass the socialistic measures which Mr. Truman has long advocated. He bitterly criticized the Eightieth Republican Congress because it did not agree with his CIO-PAC philosophy of government. He treats the Eighty-first Congress more tenderly—for the present—but promises criticism in the future. But the fact is that the Democratic Eighty-first Congress, except for the spending of money, has rejected the Truman program as definitely and conclusively as the Republican Eightieth. I don't believe for a moment the people of this country approve the Truman program. I don't believe for a moment they want an Eighty-second Congress subservient to Mr. Truman, prepared to rubber stamp that program.

TO ENACT A SOCIALIST PROGRAM

What is that program as shown by the speeches of this past week? A part of it, of course, is just irresponsible promising. Our annual output of goods and services is to be $350,000,000,000 by 1960. Every American family is to have an income of at least $4,000 a year. Everyone is to be healthy, and rich, and happy as Harry. Of course, this kind of thing is bipartisan policy. In fact, I don't see why the amount can't be $5,000 a year. I don't know about these greedy, selfish reactionaries that the President talks of, because I have never met them. The President is always imagining bogymen under every bed. I do know that every Republican Congressman is just as anxious to reach these goals as the President himself. There is no particular reason why we shouldn't reach them, for they do not reflect any greater rate of growth and improvement than we have had since this Government was founded in 1789. But common sense tells us we can only count on the same rate of improvement if we follow the same principles of liberty and rewards for ability and hard work and genius, the free life, on which American progress has always been founded.

But that's not Mr. Truman's program. He wants to bring the Government into every field of individual and community and national life. Our governments are already spending more money than we have ever spent in peacetime, more than 25 percent of the national income. We all are working more than one day in four for Government and less than three for ourselves. The Federal Government is the biggest monopoly and the biggest spending institution in the world. The public debt stands at $256,000,000,000 and is increasing at the rate of $6,000,000,000 a year. Every time the sun sets our Government is $15,000,000 deeper in debt. How long can it last?

But that is just the beginning of the spending. The President insists on the Brannan plan to pay the farmers 100 percent of parity and sell the crops for anything the consumers will pay for them, the difference to be charged to the taxpayer. If we do it on the same scale as Great Britain, it will cost us $5,000,000,000. And who is the taxpayer? Why, of course, the farmer and the consumer who are supposed to get the benefits. Do you want a Congress which will spend that $5,000,000,000 more?

Then we have the program of socialized and nationalized medicine, on which the President is treading pretty lightly on this trip. But he has heretofore endorsed it three times enthusiastically, and we can assume that if he ever gets a Congress which will do his bidding and that of the CIO-PAC that he will return to his first love. He proposes that we levy another $6,000,000,000 of taxes, set up a vast Federal bureau to employ all the doctors and all the hospitals in the United States to give medical care to 150,000,000 people, including all those who are perfectly able to pay for it themselves. It would destroy the freedom of the medical profession and supersede the tremendous system of community and charitable health service which has given this country the best health of any comparable country in the world. Do you want a Congress that will go out and spend that $6,000,000,000 more?

And then we have the field of Government controls. To carry out the Brannan plan, the Government must limit the production of corn and wheat and cotton and every other crop. In England they even regulate the number of chickens. As Senator WHERRY, the Republican floor leader of the Senate, said Monday, "Under the Brannan plan producers of perishable commodities would become wards of the Government. The Government would manage their farms, and tell them what to plant and how much. Then it carries fines and jail sentences for

farmers who refuse to goose-step upon command of Washington bureaucrats." Under the medical plan, every family must be told by detailed regulation just what kind of medical service they can get and what they can't get. Mr. Truman attacked the Eightieth Congress because it refused to give him power to fix prices and fix wages and allocate and ration commodities, all the old OPA powers of wartime—"police state controls," he called them himself. Prices have been going down so we haven't heard much of these lately. But the Spence bill is still pending and a $6,000,000,000 deficit is bound to bring inflation again. Do you want a Congress that will bring back the OPA?

Combined with the Brannan plan, the Spence bill would give Washington bureaus the job of regulating in detail all commerce, industry, and agriculture in this vast country. It could not be effective without regulating all wages also, telling every workman for how much he shall work, and every housewife what she shall cook.

And last year the President asked for power to put the Government into any business, like the steel business, where some Government economist told him the industry wasn't expanding fast enough. Of course some things can only be done by the Government like the construction of huge dams on navigable rivers. But if we are going to keep free industry, the Government can't get into competition with its own citizens. No one can compete with the Government, prepared to lose all the taxpayers' money necessary.

The labor leaders are powerful. Therefore, Mr. Truman proposes to repeal the Taft-Hartley law and restore a condition of the most complete special privilege the law has ever given in this country. Before that law, union officials were not liable on their contracts. They weren't liable for the acts of their agents. They weren't liable for damages to those they injured or put out of business. They were not liable to their own members. Those workingmen who defied them could be driven from the union and from their jobs. They weren't liable to the Nation itself—for strikes which crippled the economy and threatened the safety and health of 150,000,000 people.

The President sabotaged the law in failing to deal effectively with the coal strike. He only appoints members of the National Labor Relations Board if they are approved by the CIO and A. F. of L., and he refuses to accept the principle of the law that the Government shall hold the scales of justice even between labor and management. The Department of Justice fails to enforce the anti-Communist oath provision.

The Taft-Hartley law is based on free collective bargaining and freedom to strike. It protects the workman against arbitrary treatment by his labor union bosses. It is wholly wrong to say as the President said last night that the Taft-Hartley law infringes the basic freedom to bargain collectively. Of course no one will believe his claim that it has undermined the strength of labor unions. Do you want a rubber-stamp Congress which will restore those special exemptions of labor leaders and their power to dominate their men, and all but the most powerful employers?

The general program of the Truman crusade is clear. Promise everyone everything and back it up with Government money. Every American knows in his heart that such a policy will wreck the United States and reduce it to bankruptcy. It will bring, first inflation, and then depression.

The President asks how your liberties have been limited or the country socialized. Of course the first answer is that since Mr. Truman was first persuaded by his left-wing followers that his political future depended on accepting the CIO policy on every major issue, both the Republican Eightieth Congress and the Democratic Eighty-first Congress turned down all the principal features of his program, except the pleasure of spending which the first session of the Eighty-first Congress could not resist.

YOU PAY FOR IT ALL IN TAXES AND HIGH PRICES

But your freedom has been limited by a huge taxation. Just add up the money deducted from your pay over the year, and then remember that when you buy food or clothing or shoes or anything else, the price includes about 20 percent of taxes paid along the way by the farmer, the railroad, the manufacturer, the retailer and all the rest of them. Altogether the governments take more than 25 percent of the national income in taxes, and most of this is passed on to the poor old consumer. The Government is taking from you the freedom to spend the money you earn by the sweat of your brow. You've lost about a quarter of your freedom if we go on with the present spending program. In England they have already lost 40 percent of their freedom to spend their own money. If we go on spending Fair Deal, we will all soon lose most of our freedom. I don't know any better way to deprive a man of all freedom than to take over for him the spending of practically all he earns.

The people can't hope for any real increase in their standard of living on this kind of program. Every increase in wages is balanced by higher prices and higher taxes. It's all done with mirrors. Something for nothing to everyone. Parity prices to the farmer, unlimited loans to little business, free medicine to all, unlimited power to labor to obtain any wage they desire, free gifts to the entire world. Even the taxpayer can't stand it in the end. It can only be done by printing money and killing the value of the dollar. No people in this world ever got something for nothing.

And the present annual $6,000,000,000 deficit is bound to bring inflation, reduce the value of savings and insurance and savings bonds, and lead to a false boom and a depression.

This is not all the false glitter of the Fair Deal or of this nonpolitical trip. The political immorality of the Truman administration has shaken the confidence of the people in their Government. It has shocked the sensibilities of Americans who have always believed in law and order, in justice, fair play and equality, and in hard work and thrift.

The President says the Democratic Party today still believes in giving the facts to the people. But do they? Not a word was said by the President of the delivery of top secret State Department documents in the Hiss case or the Amerasia case in which every effort was made to suppress investigation amid Presidential shouts of "red herring." Every file and every fact which reflects on the past policy of the administration is ruthlessly suppressed and refused to Congress.

Every kind of civil-rights measure is promised by the President knowing that half his party bitterly fights his program. And he supports a Democratic candidate for the Senate in Missouri who is openly hostile to civil rights.

He accused his opponents indiscriminately of greed and privilege, but he said not a word about greed and privilege in his home bailiwick of Kansas City or in the White House itself. Mr. Truman himself spoke in behalf of Mr. Tom Pendergast on the Senate floor after Mr. Pendergast's conviction in a Federal court, as Senator FERGUSON pointed out this week in the Senate. Senator FERGUSON inquired also regarding the privilege represented by Mayor Curley of Boston, pardoned by the President for mail frauds, of those four members of the Capone gang paroled from the penitentiary, or Mr. John Maragon, the friend of General Harry Vaughn. What about the vote frauds and ballot-stealing cases in Kansas City quietly passed over by the Department of Justice?

The President busily told the people in the West of the tremendous progress made in that section in the 17 years since 1932. From Mr. Truman's western speeches, one would think that the West began 17 years ago. But as Senator MILLIKIN said this week, "The President neglected a great opportunity to pay deserved tribute to the free American men and women who made their danger-ridden trek to that part of our country, whose unsubsidized bivouacs and pioneer cabins were the citadels of their dauntless hope, courage, and independence, who settled the lands, utilized the waters of the stream, built up their herds, opened the mines and oil fields, and developed a superior civilization long prior to 17 years ago." It will be hard to persuade the West that it was New Deal handouts rather than liberty and self-reliance which laid the basis for their progress.

Until Mr. Truman attempted to make a political issue out of reclamation, it was a bipartisan policy, founded by Republicans when they were in power. And the Republican Eightieth Congress actually appropriated 50 percent more money for reclamation than any previous Congress.

It is somewhat hard to see why the President wants all the additional spending and power he demands, for he tells us that the country today has reached a prosperity beyond the dreams of avarice, and that he and his friends created this prosperity. One would think that he would leave well enough alone. But he knows as well as anyone that there is something false about the economic prosperity resulting from war, inflation, and a huge debt. The 10-year improvement in income of which he boasts came about not from the New Deal but from the war.

In spite of their present income, the people are full of fear and apprehension about the uncertain basis of their prosperity.

Even more, the people are concerned with the threat of a third world war. I am myself hopeful that it will never occur, but it is the foreign policy of the Democratic administrations which has made it possible. By our constant building up of Russia, by the pro-Communist attitude of Wallace and Hopkins, culminating in the secret agreements of Yalta, confirmed at Potsdam, we have placed Russia in a position where it is a threat to the world. By the pro-Communist policies of our State Department, we have permitted Russia to take over all of China and threaten to absorb the entire Far East. By the time Senator VANDENBERG was able to reverse that policy in Europe, the Russians were established in Berlin and Prague and Vienna whence they could shut us off from eastern Europe and threaten the safety of the west.

Our foreign policy is still full of contradictions. We loan money to Tito, and we refuse to loan money to Franco. We defend Indochina, but we do not defend Formosa. Our taxpayers feed Germany while we dismantle their plants and create unemployment.

The President talks glibly of peace being assured by the reduction of tariffs and the International Trade Organization. This last ITO agreement is opposed by nearly everyone who knows anything about it because it reduces our tariffs and ties our hands, but gives every other nation countless loopholes through which it may avoid its obligation to admit American goods. But certainly the administration free trade policy is no insurance of peace. The Democrats came in in 1913 and passed the Underwood tariff for revenue only. Within 4 years we were in the First World War. In the thirties we adopted the reciprocal trade agreements

program and by 1941 we were in the Second World War. Whatever the arguments for free trade, it is a pipe dream to imagine that it will make the Russians less likely to start an aggressive war.

One thing is certain, the election of a Congress subservient to Mr. Truman will remove all the necessity he feels today to consult with Congress on foreign policy. It was the imaginary mandate from the election of 1948 which led him to abandon the so-called bipartisan policy and go it on his own. I don't believe the people want a Congress subservient to Mr. Truman in foreign policy any more than they do in the domestic field.

And so we face next November a fundamental issue. Shall we turn the country over to Mr. Truman and a rubber-stamp Congress, or shall we elect a Congress that believes in liberty and Americanism and sound fiscal policy? Even a Democratic Congress with a strong Republican minority can be that kind of Congress, but just to be certain the people would feel a lot safer if they give both Houses a substantial Republican majority.

Mr. Truman wants to purge all the Congressmen whom he refers to as obstructionists and isolationists. An isolationist today appears to be anyone who disagrees with his particular brand of foreign policy at the moment. An obstructionist is anyone who disagrees with Truman's Socialist program. What about Senator LUCAS? He has been an obstructionist against the Brannan farm plan, but the President urged his reelection. Apparently it is just Republicans the President had in mind. But apparently the people of Florida had another and better idea—they have begun the purge with Senator PEPPER.

The President implies that he deserves some credit for the few accomplishments of the Eighty-first Congress, which he lists. As a matter of fact, most of these accomplishments are simply continuations of the policy of the Eightieth Congress. The Eightieth Congress started the ECA. It initiated the idea of the Atlantic Pact and extended the Reciprocal Trade Agreements Act. The only change made in that act by the Eighty-first Congress is to remove the peril-point amendment so that foreign goods manufactured by cheap foreign labor can come into this country even though they destroy the existence of an American industry and throw thousands of people out of work as in the pottery and glass and coal and oil industries today.

Reclamation and the Rural Electrification Administration were widely extended by the Eightieth Congress, and the Eighty-first only followed in its train. The National Science Foundation bill was passed by the Eightieth Congress, and would have been law long ago except for President Truman's veto, which demanded more power over the Foundation for himself. As for the increase in the minimum wage to 75 cents, the public housing program, and the hospital construction program, these were put through the Eighty-first Congress because the Republican leadership supported them. Two of them I sponsored myself.

A REPUBLICAN POLICY

What kind of policy will a Republican Congress carry through? In the first place, it will back up Mr. Truman or any other President in his foreign policies as far as they stand foursquare against the spread of communism anywhere in the world. It will welcome any efforts toward peace which he deems to be practical by direct negotiations with the Russian leaders. It will provide an all-powerful armed force for the United States. It will insist on the elimination from Government, and particularly from the State Department policy-making group, of every man who thinks that communism has about it any of the elements of true Americanism.

A Republican Congress will insist upon the maintenance of liberty, freedom of speech and of the press, freedom of the individual to choose his own occupation regardless of the dictation of government or labor leaders, and spend his earnings as he desires to spend them, freedom of the local community to work out its own systems of education and health and welfare with Federal assistance, if necessary, but without Federal control. We believe in the free life.

A Republican Congress will maintain civil equality for all races and will prevent special privileges, both for big business and big labor. It will not hesitate to use the power of Government to prevent the abuses and excesses of a laissez-faire economic system, to protect a proper minimum wage, to protect farm prices in the market place that will maintain agricultural purchasing power in reasonable relation to other groups in the population, and prevent any destruction of that purchasing power which could bring about another depression. It will guard against the development of monopoly and insist on the maintenance of free competition, but avoid in every case except public utilities the deadening regulation of Government bureaus attempting to fix prices, practices, and quotas in free industries.

Such a Congress will return to the principles of thrift and sound fiscal policy on which this Nation was built up. That is the best method of providing a foundation on which the economic machine can be kept running at a high rate of speed, with full employment. It will readjust the tax system to reduce taxes on incentive and create the channels through which the earnings of all income groups may flow into the productive enterprises which alone can make jobs.

Finally, a Republican Congress will be interested, as every man concerned in Government must be interested, in promoting better education, better health, better housing, better security for our people, and better equality of opportunity for our children. The Federal Government can aid by research and education. It can give financial assistance where it is absolutely necessary and where it can be done without destroying incentive or placing too great a drain on the Treasury. We believe that hardship and poverty can be eliminated, without extending Government welfare service and regimentation to the whole population, for such universal free service can bankrupt the Government while it destroys the freedom and the character of the people to whom it is extended.

Now is the time for the people of this country to begin the discussion of the kind of Congress they wish the Eighty-second Congress to be. Socialism is the constant extension of government power, and government operation, and the spending of government money. Great Britain has gone a long way down that road, and there is no return once you have gone. It is the road which Mr. Truman is urging upon us while he paints the picture of Utopia. It has never yet increased the standards of living of the people, but it has over and over again destroyed their freedom. It is all the more dangerous because the administration advocates of these schemes try to conceal the government spending and bureaucratic controls which they involve. I really don't believe Mr. Truman realizes what the inevitable results are. But in England they frankly speak of them as socialism, and admit their cost in cash and regulation. Finally, and above all else, socialism is a threat to the basic institutions of our modern civilization. It is materialism at its worst, undermining and weakening the character and the moral fiber of the people. It tends eventually to weaken the basic unit of our society, the home; it relegates religion to the realm of the horse-and-buggy days.

The great need in the world today is a rebirth of morality—a fresh morality. A government's word in international matters should be its bond. A government's integrity and stability in domestic affairs should be its principal virtue. Whether or not Mr. Truman realizes what socialism means—one thing is clear: If he gets the rubber-stamp Congress he is now demanding that the people give him, dominated as it would also be by the top brass of the unions, we would have a completely controlled people and a hand-out state, as long as there is any money left in the land to be taxed away.

If we hope to progress in the future as we have in the past, we can only do so if we elect a free Congress, one which will carry out a program of progress based on the principles of liberty and justice and equality on which this Nation was founded.

Brigham Herd Smashes Records

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Saturday, May 6, 1950

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Jersey Bulletin of March 25, 1950:

BRIGHAM HERD SMASHES RECORDS—SETS ALL BREED RECORD FOR HERDS ABOVE 100 COWS, NEW 10-YEAR RECORD—FRUIT OF 27 YEARS' TESTING

A Jersey herd of 104 cows milked twice daily averaged 11,703 pounds of milk with 616 pounds of butterfat on Herd Improvement Registry in 1949. This herd, owned by Elbert S. Brigham of St. Albans, Vt., is the first herd of 100 cows of any breed to average over 600 pounds of butterfat on official test regardless of the number of times milked.

Mr. Brigham is president of the American Jersey Cattle Club. His herd has averaged 538 pounds of fat and 10,268 pounds of milk per cow for 10 consecutive years. Every cow in the Brigham herd has been tested since 1922 when private records were started. In 1925 the herd was entered in the local Dairy Herd Improvement Association.

Look at this record of production since 1937 when the herd was entered in the herd improvement registry test of the American Jersey Cattle Club.

Mr. Brigham purchased his first Jerseys in 1904. His breeding program ever since has been built on this simple but highly effective principle: Breed high producing cows to proved sires that will raise the production of their daughters to a still higher point.

In practice Mr. Brigham buys some young sons of tested sires. He breeds these sons to enough cows to get 10 or 12 daughters. After that, the bull is not used until the daughters begin milking and show whether they are giving better production than their mothers.

Especially interesting to dairymen is the fact that every female has been bred on the farm since 1918. Brigham has purchased no female stock from outside the herd since that date. The cows are milked twice a day, and left in stanchions except when in pasture.

Mr. Brigham in speaking of his dairy program says, "We chose the Jersey breed as best adapted to our conditions. Our dairy program has been designed to secure low cost production. To obtain this we breed cows with capacity for high production, grow a large percentage of our feed in the form of good quality palatable roughage, and we give the herd good care."

Brigham's herd has more tested dams than any other Jersey herd in the United States. Forty-three tested dams have 137 tested progeny averaging 10,987 pounds milk and 584 pounds butterfat. Ninety-four cows have received the coveted Ton of Gold award—more than any other herd in the Nation.

Mr. Brigham has had an active career in public service. He was Vermont commissioner of agriculture for 11 years. Then he served as United States Representative in Washington for three terms. After that the National Life Insurance Co. at Montpelier elected him a director. In 1937 he was named president of the company.

In 1948 the Jersey breeders of the United States elected him president of the American Jersey Cattle Club and they reelected him in 1949. He was named as a master breeder by the Jersey breeders in 1947.

Brigham Farm herd averages

Herd-improvement-registry test year ending—	Number of cows	Pounds of milk	Pounds of fat
1949	104	11,703	616
1948	105	10,934	588
1947	111	9,942	530
1946	92	10,259	543
1945	96	10,078	527
1944	91	10,171	520
1943	92	10,058	529
1942	98	10,116	517
1941	92	9,734	512
1940	84	9,441	483
1939	78	8,796	455
1938	79	8,398	438
1937	70	7,617	385
13-year average	92	9,802	517

Effect of the Present Excise Taxes on New York State

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 8, 1950

Mr. GAMBLE. Mr. Speaker, under unanimous consent heretofore granted, I insert in the CONGRESSIONAL RECORD a statement of Commissioner Keller, of the Department of Commerce of the State of New York, on the effect of the present excise taxes on the Empire State:

The economic strangulation of small business throughout the length and breadth of the Nation is becoming of ever increasing danger to the well-being of the Nation. This stifling of initiative, suffocating of the drive to improve one's station in life, is swiftly coming to a climax unprecedented in the history of the United States. Not the least of the many forces bearing down on the small-business man today is the growing burden of excise taxes imposed on manufacturers and as retail taxes.

The many advocates of these taxes will argue that the money to support our many and varied operations in the field of government must come from some source. But I ask you, must it come at the expense of those businesses operating in the margin of desire? Excise taxes whether passed on directly to the consumer through retail sales taxes or indirectly through higher prices resulting from manufacturer's taxes result in reduced sales. As prices rise former purchasers either find a substitute or a cheaper commodity.

All too familiar with this principle are the entrepreneurs in the leather goods, sporting goods, jewelry, and photographic industries. They have suffered severely from the harsh excise taxes imposed as a wartime measure. Let us examine the measure's effects in my State. The following table shows how large a part of these industries is represented in New York State:

Principal manufacturing industries affected by wartime excise taxes

	Tax rate	Employment in New York State, 1947 [1]	New York as percent of United States [1]
Manufacturer's tax:	Pct.		
Sporting and athletic goods	10	3,051	13.3
Photographic equipment	[2]	34,566	67.9
Radios and related products	10	33,412	18.7
Phonograph records	10	1,193	11.9
Musical instruments and parts	10	3,002	17.8
Consumer's tax:			
Furs	20	17,835	77.4
Watches and clocks	[3]	6,865	19.8
Jewelry (precious metal)	20	7,269	28.4
Costume jewelry	20	7,252	28.6
Luggage	20	3,918	24.4
Handbags and purses	20	12,988	64.0
Toilet preparations	20	7,783	29.9
Grand total		140,034	20.6

[1] Source: U. S. Bureau of the Census.
[2] Cameras, lenses, and photographic equipment have a 25-percent tax. Unexposed films, plates, or sensitized paper have a 15-percent tax.
[3] 10 percent on alarm clocks selling below $5 and watches selling below $65. 20 percent on all other watches and clocks.

I am informed by the New York State Department of Commerce that at the present time only 65 percent of the photographic industry workers are employed while only 77 percent of the furriers are busy. Likewise, the cosmetic industry is at only 33 percent of full strength and 55 percent of the leather and luggage workers are idle. Approximately 71,000 persons were employed in these industries in 1946 in New York State. Today these industries, suffering from the harsh flat 20-percent excise tax, employ only 53,000 persons.

This situation in New York State is not local. It is rather Nation-wide. The regeneration of business in the several industries following a sharp reduction in the present levies is a picture that I would find very pleasant. Like the pebble tossed in a pool, it promises a "shot in the arm" to other allied and associated industries. Increased sales, a higher level of employment, greater production in a variety of fields are all something that can be looked for.

Excise taxation has until comparatively recently been left almost wholly to the States; Federal excise taxes, on the other hand, were resorted to as regulatory measures in rare cases and as revenue sources in times of war. No other attempt was ever made, however, until 1941 when the existing statutes were extensively revised. This past year brought an all-time high in excise-tax revenue for the Federal Government. More than $7,500,000,000 was derived from this source alone, more than five-fold the amount derived from similar sources 10 years ago and approximately 14 times that derived from excise levies 20 years ago.

The tax on whisky imposed in 1791 proved so unpopular that it led to the famed Whisky Rebellion in 1791. Three years later, however, the young United States levied on other commodities, sugar, snuff, carriages, auction sales, and liquor as well (the previous tax having been repealed). This entire system was abandoned in 1802 only to be revived and supplemented in 1812. The Civil War, Spanish-American War, and World War I periods were marked by the addition of numerous tax levies on the statute books. With the exception of those designed as regulatory measures, these taxes were almost universally abandoned when the conflict terminated.

Such was also the expressed policy adopted in World War II. In 1947, many of the wartime provisions were continued despite clauses in the statutes calling for reduction 6 months after the end of hostilities. The present session of Congress has before it a number of bills to reduce or abolish these excise taxes which fall to so great an extent on the people of our Nation unfairly. The character of the excise tax will always of necessity be regressive. This is true since the taxes strike so sharply at the individual with the lower income, not only the employee and the small-business man but the consumer as well. It is not to be forgotten that the prospective consumer who does not buy due to the higher cost induced by excise taxes is deprived of the use of the commodity. This results in a lower standard of living for the community.

Recognition of the problem has come from many sources within and without the structure of Government. Respecting the several varieties of excise taxes, no less an authority than the Treasury Department (Federal-State Tax Coordination, 1949 revised edition) suggested that the admission tax field is barred to the States by the present high Federal tax. Certainly then, the Congress must hear the pleas of the assembled governors in 1947 when Gov. Thomas E. Dewey, of New York, said:

"We find at the present time that the National Government has almost preempted certain sources of revenue. Some of these sources of revenue are basically local. They include taxes on local businesses, local places of resort or amusement. They are sources of taxation which could more easily be administered by the people in the city, the county, or the State."

In conclusion may I heartily recommend to your attention those bills which provide for a reduction or elimination of these taxes which are withholding the very means of livelihood from untold thousands of skilled craftsmen throughout our land. At work, they add millions of dollars weekly in production, they spend millions in trade. Idle, these workers are an adjustment problem that taxes capacity of the States beyond compare. The solution is in your hands.

Need for Marine Corps

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Nation Needs Marines," from the Terra Haute Star, of April 18, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATION NEEDS MARINES

When unification of the military services was effected in 1947, a mistake was made which Congress now has an opportunity to correct. The mistake was to put the United States Marine Corps in such a subordinate role that its extinction in the course of time was likely.

The correction is incorporated in a bill by Representative CARL VINSON, of Georgia, chairman of the Armed Services Committee of the House. He would amend the Unification Act to include in the Joint Chiefs of Staff the commandant of the Marine Corps. It now includes representatives of the Army, Navy, and Air Force. The threat to the marines is that the Army and the Air Force could combine against the Navy to whittle the marines down to nothing.

The Joint Chiefs of Staff are advisory only, but with the marines having a full vote on organization, strategy and other matters, it would be in position with Navy help to hold up its end of the allocation of men and material which spells the difference between strength or weakness for any branch of the armed services.

The Marine Corps has a proud record and its achievements have written many thrilling chapters of United States military history. The Navy must have an amphibious arm and the marines in the past have discharged that function to perfection. It will be a sad surrender of splendid tradition and a potential weakness in future conflicts if this arm is allowed to wither.

The Nation needs the marines, of whom it has so often been said they "have landed and have the situation well in hand."

The Late Schuyler Otis Bland

MEMORIAL ADDRESS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1950

On the life, character, and public service of Hon. SCHUYLER OTIS BLAND, late a Representative from the State of Virginia

Mr. WEICHEL. Mr. Speaker, with the passing of the Honorable SCHUYLER OTIS BLAND, the State of Virginia lost one of its most distinguished sons. It was with sadness that I learned of his passing for during the war period and the readjustment he gave untiringly of his great ability to creating the American merchant marine necessary to our success in war as well as in peace. It was this super effort put forth during those troubled days that took so much of his strength. Upon coming to the Congress, I had the privilege to serve with Judge BLAND on the House Committee on Merchant Marine and Fisheries where he was a most able chairman and a gracious gentleman. He was especially considerate of the new Members of Congress, and I shall not forget his warmth of friendship extended to me, as a freshman in the Congress.

His continuity in the House of Representatives from July 2, 1918, is a glowing tribute of the high esteem in which he was held by his native State. He will be long remembered as a distinguished legislator whose life interest was the establishment and continuity of an adequate American merchant marine, and I want to join with his colleagues from Virginia in mourning the passing of a most distinguished Member of the Congress whose name will live as the father of the American merchant marine.

Organization of All-American Conference To Combat Communism

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by me relative to the recent organization of the All-American Conference To Combat Communism, and including the statement of policy of the conference, a list of its officers, and certain other material.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MUNDT

Mr. President, last week end in Chicago a new American organization came into being and went into action—I refer to the All-American Conference To Combat Communism which held its sessions on May 13 and 14 with delegates present from more than 50 national organizations including a total membership of more than 65,000,000 good, patriotic American citizens. At this meeting a statement of program and purposes was formally adopted, bylaws were established, a budget approved, and national officers elected. For the first time in American history, therefore, our country now has a vehicle for offering a united front against communism and for providing a new challenge to tyranny in every form.

For those who have not been closely following the development of this new movement, perhaps a few words of background information are in order. On January 28 and 29, in New York City, the first meeting in the series of events leading up to formation of the continuing All-American Conference was held in the Hotel Astor. Participating in that meeting were representatives of organizations and associations including a membership of more than 50,000,000 citizens. The New York City meeting was called through the leadership and under the direction of George N. Craig, of Brazil, Ind., the national commander of the American Legion. Included in the speaking program for that 2-day conference were Lt. Gen. W. Bedell Smith, former United States Ambassador to Russia; George Sokolsky, noted columnist; Dr. Francis L. Bacon, professor of education, UCLA; in addition to Commander Craig and your present speaker, the junior Senator from South Dakota.

OPENING STATEMENTS

In opening that historic January meeting in New York City, Commander Craig said, in part:

Commander CRAIG. For many years you in your organization and we in ours have envisioned an occasion for the majority of the American people to sit down and through their representatives consider the benefits and dividends of our great democracy. This occasion, we feel, presents an opportunity where the representatives of a majority of the people of the United States, interested in perpetuating Americanism and defeating communism and communistic influences may through counsel and consideration bring about unity of purpose to the end that this Nation, this land of ours, may always be secure. Thus we may maintain those principles of faith in God and a unity of purpose.

In addressing the closing session of the New York City meeting, I made the following statement which I quote from the transcribed record of that January session:

Senator MUNDT. I urge that from this conference there will grow and develop a national movement comprised of representatives of many cooperating groups and operating at the grass-roots level through the active participation of the local units of these national groups, directed and led by community committees comprised of delegates from each participating national group, so that the forces of those who would remain free may finally have at least as much cohesion and concentration of power as the forces of those who would enslave us have employed for many, many years. Fortified by such organized support, I feel confident we can win against communism at home and curtail it abroad by means short of a fighting war. I trust and pray that out of this conference will come the beginning of a continuing and permanent all-American movement which will forever help to keep all Americans free.

At the conclusion of the New York conference, Mr. President, a committee on continuing organization was appointed and on March 26 the following members of that committee met in the executive committee room of American Legion headquarters in Indianapolis, Ind., for the purpose of drawing up a statement of purposes and program and to map out an action agenda for setting up this new organization: Mr. W. C. "Tom" Sawyer, for the American Legion; Jackson J. Holtz, for the Jewish War Veterans; Lewis Hines, for the American Federation of Labor; Dr. Ernest E. Irons, for American Medical Association; Miss Olive H. Huston, for Business and Professional Women's League; Rev. Daniel A. Poling, for Federal Council of Churches; Rabbi Benjamin Schultz, for Jewish League Against Communism; Alexander T. Wells, for Lions International; Paul Wamsley, for National Education Association; Senator Jack B. Tenney, of the California Legislature; and Senator Karl E. Mundt, for the United States Congress. Senator Tenney was elected chairman of the committee; Alexander T. Wells was made chairman of the Finance Committee; Senator Karl E. Mundt was made chairman of the committee on policy and program. All actions at Indianapolis were subject to change or confirmation by the Chicago conference which was called for May 13 and 14 in the LaSalle Hotel.

Mr. President, it is with genuine pleasure and great hopefulness that I now call attention of the Congress and the country to the fact that a continuing, ably officered, carefully planned, generally inclusive All-American conference to combat communism was brought into reality at the Chicago conference and is now a functioning and significant organism for promoting freedom and defeating communism.

Commander George Craig again presided at the Chicago conference. The reports of the committees headed by Chairman Tenney, Chairman Wells, and Chairman Mundt were all accepted without significant alterations after due deliberation by the delegate assembly.

There follows at this point in my report to the Senate the statement of policy and program as it was prepared at the Indianapolis meeting and amended and adopted at the Chicago conference. Point 4 deals with finances as recommended by the committee of which Mr. Wells was chairman.

STATEMENT OF POLICY OF THE ALL-AMERICAN CONFERENCE TO COMBAT COMMUNISM

I. NAME OF ORGANIZATION

The name of the organization shall be The All-American Conference To Combat Communism.

II. STATEMENT OF POLICY

The constituent bodies in the All-American Conference To Combat Communism support wholeheartedly the basic liberties which are assured by the Constitution of the United States—freedom of speech, freedom of the press, freedom of assembly, and freedom of religion.

They will continue to strive for equal justice for all citizens without discrimination on grounds of race, color, national origin, faith, or creed.

They will strive, in all areas of life, to strengthen American democracy and thereby demonstrate its moral and spiritual, as well as economic, superiority over any totalitarian regime, whether it be Communist, Fascist, or Nazi.

The conference recognizes that its functions are informational, educational, and advisory.

The immediate, specific, and united task of this conference is to unite in one all-American organization those groups of good repute desiring to coordinate their activities in a Nation-wide crusade to defend and promote our freedoms and to expose and curtail communism and other subversive elements in this country. The All-American Conference proposes to carry out its campaign through National, State, and local efforts. It will stress the use of effective means of education and publicity directed at the local grass-roots level by the cooperative leadership of the groups which are associated in the national program of the All-American Conference.

Among the responsibilities to be undertaken by the All-American Conference are:

1. The sponsorship and encouragement of a Nation-wide series of community-by-community programs which will preserve our freedom and combat communism by:

(a) Recommending appropriate courses and activities in our schools and other institutions of learning;

(b) Recommending commemoration of a Know Your America Week in every community for the purpose of aiding everyone in the locality to rededicate himself to the preservation of the basic American principles which will be exemplified and dramatized throughout that week;

(c) Projecting the benefits of our free way of life and its opportunities increasingly to more and more people of every American community as a consequence of community-directed steps toward that objective; and

(d) Protecting our freedom through aiding Americans to become more alert to the personalities, purposes, programs, and front organizations of the Communists in this country.

2. This conference recognizes that communism, fascism, nazism, and all other forms of un-Americanism are equally abhorrent, and each is destructive of the rights and dignity of the individual. Therefore we pledge our efforts to combat all as inconsistent with the democratic way of life. While we are equally opposed to all, we recognize the clear and present dangers of communism and the necessity of meeting it with a positive and militant program as described herein, and whenever fascism or nazism or other forms of un-Americanism threaten all or any segment of the American population we likewise will meet it with the same positive and militant program.

3. The operation of a central national clearing house to collect, prepare, and distribute, through the respective organizations or by direction of the All-American Conference To Combat Communism, printed material, motion pictures, radio and television programs designed to acquaint the average American with the true nature and purposes of the Communist conspiracy and which will portray dramatically and understandably the values and virtues of our free American institutions and organizations.

4. Helping to create and inform public opinion and assisting in the prevention of secret infiltration of our institutions and organizations by Communist agents.

5. The holding of national, State, and regional meetings to unite and crystallize the efforts of those desirous of advancing nonpartisan programs of value in bringing about a better understanding of the basic American concepts which have built America and for expanding the benefits of our American success formula.

6. The continuing organization shall not have authority to and will not speak for any of the cooperating organizations.

III. EXPANSION

With regard to expanding the conference sponsorship, in addition to the present sponsoring organizations, it is resolved that organizations selected for inclusion in the conference shall—

1. Be generally recognized as representative and national in scope;

2. Be excluded if they combine an attack upon communism with an attack upon races, faiths, either or both; and

3. Be restricted to those organizations which express a determination to combat communism and accept the principles, ideals, and objectives as set forth by the All-American Conference To Combat Communism.

IV. ORGANIZATIONAL PATTERN

An organizational pattern is adopted consisting of an executive council composed of one national chairman, five national vice chairmen, one national secretary, one national treasurer, and seven other conference members—no two members of the executive council to be delegates of the same member organization.

V. DELEGATE REPRESENTATION

Each affiliated organization shall be entitled to three delegates to the conference, these delegates to have full voting powers.

Provision shall be made for associate delegates to the All-American Conference To Combat Communism who will serve in an advisory capacity. The selection shall be made by the executive council, subject to approval of the full conference.

VI. FINANCES

1. Each supporting and affiliated organization within the conference shall pay an annual fee of $100 and be asked to make such voluntary contributions as it may be able to make.

2. The continuing organization shall be provided with a minimum budget of $50,000 for its activities for the remainder of the current calendar year.

Adopted May 13–14, 1950, LaSalle Hotel, Chicago, Ill.

Following the adoption of committee reports on the acceptance of the statement of policy and program, the delegate assembly adjourned for the conference banquet which was addressed by Benjamin Gitlow, former Communist organizer, whose long services against communism have won him renown, and F. Joseph Donahue, special assistant to the United States Attorney General who handled the Government's recent case resulting in the conviction of Harry Bridges in the west-coast trial.

Typical of the spirit and optimism prevailing throughout the conference was the statement of Attorney Donahue in his banquet address when he said:

This meeting may well be the most important conference ever held in the United States.

Throughout the New York City meeting, the Indianapolis meeting, and the Chicago conference, the emphasis was on mapping out and carrying through a genuinely practical, realistic, and effective program to protect and promote our freedoms and to expose, identify, and defeat communism and its collateral creeds and friendly fronts.

On May 14, officers were elected as the initial leaders of this All-American Conference To Combat Communism. The spirit of unanimity and cooperation which brought together more than half a hundred great national organizations with varied interests and divergent points of view on many issues but with a determination to unite and solidify their strength in fighting communism was demonstrated by the fact that all officers were unanimously elected.

The following officers were chosen to head the All-American Conference which will hold its next national meeting in Buffalo, N. Y., next November:

OFFICERS OF ALL-AMERICAN CONFERENCE

The following is a list of the names, with addresses, of the national officers and the executive council of the All-American Conference To Combat Communism:

Dr. Daniel A. Poling, chairman, editor, the Christian Herald, 27 East Thirty-ninth street, New York 16, N. Y.

W. C. "Tom" Sawyer, secretary, national Americanism director, the American Legion, 777 North Meridian Street, Indianapolis, Ind.

J. George Fredman, treasurer, Jewish War Veterans, 18 Seventy-sixth Street, North Bergen, N. J.

Five national vice chairmen:

Lewis Hines, first vice chairman, American Federation of Labor, 901 Massachusetts Avenue, Washington 1, D. C.

Rev. John F. Cronin, S. S., director, National Catholic Welfare Conference, 1312 Massachusetts Avenue NW., Washington 5, D. C.

Dr. Frederick C. Fowler, president, National Association of Evangelicans, 324 Zara Street, Pittsburgh, Pa.

Mrs. Marie L. Sheehe, national president, American Legion Auxiliary, 531 Indian Terrace, Rockford, Ill.

Alexander T. Wells, past national president, Lions' International, 41 East Forty-second Street, New York 17, N. Y.

Seven general conference members:

Gerard M. Cahill, representative, Association of Motion Picture Producers, 1600 I Street NW., Washington, D. C.

Robert W. Hansen, editor, magazine, National Fraternal Order of Eagles, 212 West Wisconsin Avenue, Milwaukee, Wis.

Miss Olive H. Huston, executive director, National Federation Business and Professional Women's Clubs, 1819 Broadway, New York 23, N. Y.

Rabbi Benjamin Schultz, executive director, American Jewish League Against Communism, 220 West Forty-second Street, New York 18, N. Y.

Rear Adm. Charles S. Stephenson, national medical director, Disabled American Veterans, United States Navy, Marine Corps, retired, 1701 Eighteenth Street NW., Washington, D. C.

Hon. Jack B. Tenney, member, State senate, California, 112 California State Building, First and Spring Streets, Los Angeles 12, Calif.

Paul Wamsley, representing National Education Association of the United States of America, 281 Hartwell Road, Buffalo, N. Y.

In recognition of the pioneer work done by National Commander George Craig, of the American Legion, and Senator KARL MUNDT, of South Dakota, in the formative stages of the All-American Conference, Commander Craig was elected as honorary chairman and Senator MUNDT was elected as an associate delegate of the continuing conference, in which capacities they will serve as consultants and advisers, with the executive functions to be administered by the national officers and the executive council. Correspondence concerning the new organization, its program, its purposes, and the procedures

for affiliating or cooperation with it should be directed to Mr. Sawyer in Indianapolis, Ind., which is the temporary headquarters of the conference.

ACCEPTANCE SPEECH BY NATIONAL CHAIRMAN DANIEL A. POLING

After his unanimous election as national chairman of the All-American Conference To Combat Communism, Rev. Daniel A. Poling addressed the delegate assembly, saying in part:

This marks the first dynamic new unity of the American people to carry the fight to communism everywhere in the United States. We have mobilized here today a mighty task force to wipe out every Communist beachhead in our land.

The All-American Conference To Combat communism is an American unity, not a Soviet conformity. Among organizations and organizationally it will be the master of none, the servant of all and through all its constituent groups and agencies it will seek to be the stout defender of American freedom.

The spirit manifested here, the willingness to meet minds, the charter and structure finally achieved, justify every patriotic organization in the United States and every American of good will in joining with us. I believe that when these facts are fully known only the subversives will be our enemies and no worthy citizen or group will wish to remain aloof.

Here is a unity in which all faiths, all races and colors and all religious, industrial, economic, fraternal, labor, professional, civic, and social groups may comes together to strengthen American freedom and to help save America and the world from communism.

Following the adjournment of the Chicago conference, a meeting of the executive council was held and the following business was transacted:

ABSTRACT OF PROCEEDINGS, ALL-AMERICAN CONFERENCE TO COMBAT COMMUNISM, EXECUTIVE COUNCIL, CHICAGO, ILL., MAY 14, 1950

The chairman was authorized to appoint such committees as, in his opinion, he deems necessary to facilitate the operation of the conference programs, the membership of these committees to be chosen from the general conference membership.

The date for the next general conference meeting was set for November 18 and 19, 1950 (the site was previously determined by conference action to be Buffalo, N. Y.).

The next meeting of the executive council was set for New York City July 15 and 16.

Instructions were given to establish temporary headquarters in Indianapolis.

Lewis Hines was designated as vice chairman of the council.

The treasurer was authorized to draw warrants for obligations of the conference and the executive council upon the demand of the chairman and the secretary.

Mr. President, many Senators and others are likely to receive correspondence from those desiring to affiliate with this great, new, vital force to preserve our American success formula against the forces of tyranny and the conspiracies of communism. To such inquiries the following reply would be accurate, brief, and helpful: "The All-American Conference is an organization of organizations—not of individuals." At the conclusion of these remarks, I am attaching a complete list of the organizations represented by delegates at the Chicago meeting; a few others may since have affiliated with the All-American Conference, but if your association, your service club, your religious denomination, your farm or labor organization, your lodge or fraternity is not included among the affiliated groups, you should have the local unit of such organization communicate to its national officers your desire to join up in this all-American crusade. An annual membership fee of $100 is assessed against each participating national organization—beyond that, the budget will be raised by voluntary contributions from member organizations and from patriotic groups and individuals desirous to help advance this program.

In brief, the All-American Conference To Combat Communism will employ the idea used so successfully by the community chest program in fighting poverty and underprivilege; the conference similarly will unify and unite into a concentrated effort the strength, determination, and efforts of those desiring to fight communism and its kindred creeds. Further information on how to affiliate and how to cooperate with the All-American Conference can be obtained by writing our national secretary, Mr. W. C. "Tom" Sawyer, American Legion Building, Indianapolis, Ind., or to Rev. Daniel A. Poling, national chairman, 27 East Thirty-ninth Street, New York City 16, N. Y.

Now, Mr. President, I call attention to the list of organizations participating in the formation of this All-American Conference:

ORGANIZATIONS PARTICIPATING IN THE ALL-AMERICAN CONFERENCE TO COMBAT COMMUNISM, CHICAGO, ILL., MAY 13–14, 1950

Althusa International.
American China Policy Association.
American Federation of Labor.
American Federation of Soroptimist Clubs.
American Hungarian Federation.
American Jewish Committee.
American Jewish League Against Communism.
American Legion.
American Legion Auxiliary.
American Medical Association.
American War Mothers.
Amvets.
Association of American Physicians and Surgeons.
Association of Motion Picture Producers.
Benevolent and Protective Order of Elks.
B'nai B'rith.
Brotherhood of Locomotive Engineers.
Brotherhood of Railroad Trainmen.
Catholic War Veterans of the United States of America.
Chamber of Commerce of the United States.
Committee To Defend America by Aiding Anti-Communist China.
Common Cause.
Conference of American Small Business Organizations.
Daughters of the American Revolution, National Society.
Disabled American Veterans.
Federal Council of Churches of Christ in America.
Fraternal Order of Eagles.
Freedoms Foundation.
General Federation of Women's Clubs.
Grand Lodge of Free and Accepted Masons.
Improved Order of Red Men.
Independent Order of Odd Fellows.
Interfraternity Research and Advisory Council.
Jewish War Veterans of the United States of America.
Kiwanis International.
Knights of Columbus.
Knights of Pythias.
Legion of Guardsmen.
Lions International.
Loyal Order of Moose.
Military Order of the Purple Heart.
Modern Woodmen of the World.
Mothers of World War II.
National Association of Evangelicals.
National Association of Manufacturers.
National Catholic Welfare Conference.
National Education Association of the United States.
National Federation of Business and Professional Women's Clubs.
National Grange.
National Interfraternity Conference.
National Panhellenic Conference.
National Small Business Men's Association.
National Sojourners.
Society of Former Special Agents of the FBI.
Sons of the American Revolution.
Sons of the Revolution, General Society.
United Spanish War Veterans.
Veterans of Foreign Wars.

N. B.—Several other organizations were represented by observers, but requested not to be identified until they have had an opportunity to report to their respective executive bodies.

Finally, Mr. President and Members of the Senate, I call your attention to the following news story appearing in the May 15 issue of the Chicago Tribune, which contains the press report relating an account of this organization meeting of the All-American Conference To Combat Communism:

SIXTY GROUPS FORM BODY TO COMBAT AMERICAN REDS—DR. DANIEL POLING NAMED FIRST PRESIDENT

An organization with a potential power of more than 80,000,000 Americans behind it was organized officially yesterday to combat communism in the United States.

The group, which adopted the name of the All-American Conference To Combat Communism, was organized by the unanimous votes of delegates from more than 60 organizations of all types, meeting in the La Salle Hotel. The Reverend Dr. Daniel A. Poling, of New York City, editor of the Christian Herald and a commentator and author, was made first interim national chairman. He will serve until the next meeting of the conference, November 18 and 19, in Buffalo.

MARKS DYNAMIC UNITY

"This marks the first dynamic unity of the American people to carry the fight to communism everywhere in the United States," Dr. Poling said.

Under the new organization all faiths, races, religions, professions, and all economic, industrial, labor, and social groups can come together to strengthen America and save our country and the world from communism, he said.

The conference authorized a $50,000 interim budget for its immediate activities, and then directed that a subcommittee work out plans to aid key Government witnesses whose testimony helped convict Harry Bridges, president of the CIO longshoremen's union, in his recent perjury trial in San Francisco.

Joseph Donahue, special assistant United States attorney general who prosecuted Bridges, had told the delegates Saturday night that 6 of the 10 key witnesses had lost their jobs as a result of their testimony, and said the Government was helpless to assist them.

CRAIG'S EFFORTS RECOGNIZED

George N. Craig, national commander of the American Legion, was elected honorary national chairman of the group in recognition of his efforts to bring the member organizations together in a united front against communism. The Chicago organizational meeting was an outgrowth of a similar Legion sponsored meeting in New York last January.

Also elected were five vice chairmen: Mrs. Marie Sheehe of Rockford, Ill., national president of the American Legion Auxiliary; the Reverend John A. Cronin of the National Catholic Welfare Conference, Washington; Dr. Frederick C. Fowler of Pittsburgh, president of the National Association of Evangelics; Lewis Hines of the American Federation of Labor, Washington; and Alexander T. Wells, of New York, past president of Lions International.

SENATOR MUNDT ELECTED

W. C. Sawyer, of Indianapolis, director of the American Legion's National Americanism

Commission, was elected secretary, and J. George Fredman, of Union City, N. J., a member of the Jewish War Veterans National Executive Committee, was elected treasurer. Senator MUNDT, Republican, of South Dakota, was elected an associate member of the conference. He was a member of the 17-man policy committee which drafted a policy statement and planned the Chicago meeting. A five-member executive committee also was chosen.

The policy statement outlined plans to fight communism in every locality of the United States. Literature and radio and television programs will be channeled from a central clearing house. National, State, and local meetings are planned. Other organizations in sympathy with the conference will be invited to join.

Idaho Opposition to Proposed Columbia Valley Authority

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Thursday, May 18 (legislative day of Wednesday, March 29), 1950

Mr. DWORSHAK. Mr. President, the people of Idaho are grateful for the services of the President in pointing up for the coming campaign an issue involving the Columbia Valley Authority. Idaho editors are commenting on this development of the President's recent trip to the Northwest. Typical of this comment is an editorial published on May 14, 1950, in the Idaho Sunday Statesman at Boise, Idaho. I ask unanimous consent to have the editorial printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. TRUMAN'S TRIP MAY NOT BE POLITICS FOR DEMOCRATS BUT HE SURE DID THE REPUBLICANS A BIG FAVOR IN BOISE

Mr. Truman has come and gone. Not too many Idahoans appeared for a glimpse of the Nation's Chief Executive. It was true that the schedule brought him into eastern Idaho early in the morning, which would explain the attendance at Pocatello, but the crowd at Boise lends credence to national reports that the President is not as popular as he used to be, and that he keeps on slipping.

Mr. Truman did nothing for his popularity with his speech at Boise. He came out for the Columbia Valley Administration (Authority). In a scolding manner, he seemed to suggest that here we just don't know what CVA is, or what it would do.

The facts are that we understand perfectly what CVA happens to be, and understanding, we want to be everlastingly sure that CVA never has a chance to get control of Idaho.

Mr. Truman denied the contention that CVA has special powers. Either he has not read the bill, or he is avoiding the truth.

Mr. Truman also said CVA would be administered here, rather than in Washington. But answerable only to Congress. And composed of political appointees of the President. Former Idaho Senator James Pope was named to the Tennessee Valley Authority after Idaho defeated him for the Senate. Idaho could not expect CVA administrators any better than Mr. Pope was for Tennessee. We might might even get someone from Missouri to run CVA. We have just had a man from Missouri telling us we have to have CVA.

The President says the reason CVA is needed is to stop the fuss between the Reclamation Bureau and the Army Engineers.

Why doesn't the President stop this fuss himself?

The Reclamation Bureau is a part of the Interior Department. The Secretary of the Interior is appointed by Mr. Truman. Mr. Chapman, another CVA promoter, is in control of any Reclamation Bureau fussing.

The Army engineers, we are quite certain, could be told to stop fussing by Mr. Truman. Seems he's the head man there, too.

So what do we have here?

We have a President admitting failure on his own part. So he wants CVA rather than do his job.

It is also to be noted that Mr. Truman does not say "Columbia Valley Administration."

He says: "Columbia Valley Authority."

That's the one place where he sticks to facts.

"Authority" is correct.

That's why Idaho says no.

The President, however, did make one substantial contribution to Idaho's future, as far as Government is concerned, when he made CVA the issue. To date Senator TAYLOR had avoided CVA. And this was practical politics. The Senator knows, from actual experience, that Idaho does not want CVA. Mr. TAYLOR campaigned the State, in an election in which he said CVA was the one and only issue, and he knows the results. The CVA candidates were soundly whipped.

Therefore Mr. Truman's projection of the CVA issue at this time, with an election in the offing, makes it once more the big topic, and, at the same time, a most welcome development for all Republicans in Idaho.

Mr. Truman may not, as he claims, be on a political trip, but he certainly got into politics in Idaho. He definitely helped Idaho Republicans who were hopeful CVA would be the campaign issue once more.

The easy way to whip the Democrats in Idaho is for them to come out whole hog for CVA.

A Concurrent Resolution Protesting Against Census Procedure in Allocating Residence of Students in Educational Institutions

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1950

Mr. MICHENER. Mr. Speaker, in the Second Congressional District of Michigan, which I have the honor to represent in Congress, are located the great University of Michigan at Ann Arbor, the State Normal College at Ypsilanti, Siena Heights Girls' College at Adrian, Adrian College at Adrian, the Cleary Business College at Ypsilanti, as well as other institutions of learning.

The students attending the schools do not as a rule have permanent residence in the city where the school is located. In these circumstances, the new regulation allocating students in college to the population of the city where the college is located rather than in the cities, villages or townships where the students have their domiciles is, in my opinion, an error and should be corrected.

The Legislature of the State of Michigan has passed a concurrent resolution pointing out the fallacy of the regulation and directive of the Bureau of the Census in changing the traditional, time-honored and sensible allocation of students temporarily in college to the population of the communities where they actually reside and have their homes. This concurrent resolution points out the injustice of the present policy of the Census Bureau and how it will affect the distribution of State tax money in Michigan. I am in receipt of a certified copy of the concurrent resolution and, pursuant to permission granted by the House I include that resolution which reads as follows:

House Concurrent Resolution 23

Concurrent resolution protesting against census procedure in allocating residence of students in educational institutions

Whereas under the present Federal census taking procedure by directive from the Census Bureau in Washington, all students at the University of Michigan, Michigan State College, and other such institutions of learning are being registered as residents of the cities and counties in which such institutions are situated; and

Whereas the constitution of this State, section 2, article III, contains the following provision: "No elector shall be deemed to have gained or lost a residence * * * while a student at any institution of learning"; and

Whereas, by law, the residence of minor students, unemancipated, is that of their parents; and

Whereas section 23 of article X of the State constitution, the so-called sales tax diversion amendment, provides for a distribution of tax receipts on a population basis and adopts the Federal census of population as a base in the following language: "Population computation shall be based on the last Statewide Federal census for purposes of division among counties * * *" and said tax is so distributed, as well as other revenues which are distributed by statute on the same basis; and

Whereas the Federal census procedure in this regard will redistribute part of the State tax receipts, not on a basis of the real population of counties, cities, villages, and townships, but in the case of thousands upon thousands of students, upon a temporary residence in an institution of learning, thereby upsetting the intended method of distribution of tax money; and

Whereas because of this method these places in which are situated such institutions of learning will receive many thousands of dollars not justly due to them and deprive the actual places of residence of such students of an equal amount which should, under State law, be paid to them: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the Members of the Michigan delegation in the Congress be requested to see that the directive described be changed so that this virtual amendment of laws and constitution of this State by a Federal Bureau be changed, and that the census be accurately taken so that the true residence of students be accredited to the various counties, cities, villages, and townships as has heretofore been done; and be it further

Resolved, That a copy of this resolution be sent to each Member of the Michigan delegation in Congress.

Adopted by the house April 27, 1950.

Adopted by the senate May 4, 1950.

FRED I. CHASE,
Secretary of the Senate.
NORMAN E. PHILLEO,
Clerk of the House of Representatives.

Citation Given M. L. Goodman

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Scranton Tribune, dated April 27, 1950, honoring Mr. M. L. Goodman:

CITATION GIVEN M. L. GOODMAN—HONORED AT CAPITAL FOR 50-YEAR RECORD

WASHINGTON, April 27.—M. L. (Mike) Goodman was honored tonight by the Atlantic Coast Independent Distributors Association for 50 years outstanding service to the newspaper and magazine distributing industry and his rise from newsboy to publisher of the Scrantonian and the Scranton Tribune.

Goodman was honored at a dinner at the fiftieth annual convention of the ACIDA in the Mayflower Hotel, Washington. He was presented a life membership in the association and a plaque, his picture mounted on it, with the following inscription:

"In recognition of more than a half century of service to independent distribution."

S. F. Gingold, New Haven, Conn., in presenting Mr. Goodman the plaque described him as humanitarian, distributor, publisher, and civic leader.

He said Goodman arrived in America at age 9. In 1898, at 17, he acquired the distributing agency for the Philadelphia North American and launched his career as distributor. Gingold said:

"Mike's early start was in the days of the push-cart era, and since that time has built one of the largest distributing agencies in America."

Gingold said Goodman became publisher of the Scrantonian, 1920, and the Scranton Tribune, 1937.

"Through all these busy years he was mindful of his civic and humanitarian obligations * * * activities: Community chest, chamber of commerce, United Jewish Appeal, and founded Temple Israel.

"His friendship and counsel to his hundreds of friends in this industry has endeared him to the hearts of everybody.

"Mike, we in this industry are proud to pay you honor and salute you."

Murray Kissen, of the Kissen News Agency, Port Jervis, N. Y., wrote and read the following poem in honor of Goodman:

"Fifty years a newsboy I'm asking you Mike,
is that bad?
Fifty years a newsboy
Ever since you were a lad.
Remember how you used to yell out
'Extra'—hey, what do you read?
And all of the famous old headlines
Bout the battleship *Maine*—and Boss Tweed.

Selling papers is one thing
We all know you did that darn well
But selling yourself that's another
And there's where you really excel.

When you started out on the sidewalks
Away down in Scranton, P. A.
Did you ever dream that there'd be a club
Like the ACIDA.

Among newsboys you are an exception
I'm sure everyone will agree,
A newsboy—wholesaler—publisher—
And damn if you ain't the whole three.

Where else in the world could that happen?
Well I'm happy to stand here and say
It could happen in any old hamlet
Of our glorious U. S. A.

In the hall of fame for newsboys
Your name will be right on the door
And may God be kind and keep you
With us for 50 years more."

Members of his family present were: Judge and Mrs. David Rose; brother, Morris and wife; son, Herman; and Mr. and Mrs. Ralph Furman.

Rabbi Simon H. Shoop, of Temple Israel, Scranton, sent this telegram:

"Temple Israel adds voice to the many honoring M. L. Goodman. We honor a pioneer who cleared the frontiers of a large industry and helped to build it. We honor a man whose fighting instinct and dauntless courage propelled him from poverty to a position of outstanding leadership. We honor the fine, gentle, affable founder of our temple whom we fondly call Mike. May God grant him many additional years of strength and happiness."

The Amerasia Case

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. HILL. Mr. Speaker, I have been reading the articles on the Amerasia case which are appearing in the Washington Daily News and other Scripps-Howard newspapers under the byline of Mr. Frederick Woltman.

Mr. Woltman, I need not inform this Chamber, is no Red baiter. He is a newspaper reporter of the highest repute, the recipient of the Pulitzer prize for just such newspaper reporting as he is doing now.

When Mr. Woltman was chosen for the Pulitzer prize a few years ago, some national magazine—I believe it was Time—observed that many journalists had attempted to report the tricky subject of Communist infiltration, but that only one person had done as careful a job as Mr. Woltman.

I believe, Mr. Speaker, that Mr. Woltman and his editors are performing a major service to American freedom by bringing up the Amerasia case at this time.

For weeks we as a Congress and a nation have been confused by charges and denials that certain individuals influential in the conduct of our foreign policy were either Communists or akin to Communists in their methods and purposes.

Unfortunately, there is no easy way of saying who is and who is not a Communist. In the final analysis, it often rests upon highly subjective interpretation of acts and words. Since there is always room for two opinions, this kind of discussion tends to deteriorate into useless name-calling.

But the Amerasia case is another matter.

The Amerasia case is a matter of actual court record. It bristles with hard, ugly facts. It raises ugly questions as to the reliability of persons who have held and still hold our highest national offices. It cries out even now for a clarification.

Mr. Speaker, I need not recall that in the Amerasia case more documents—and more important documents—were purloined than in the famous Chambers-Hiss case. Just as the Chambers-Hiss case did much to clarify America's thinking on the menace of communism, so I believe that the full exploitation of the Amerasia case will clear up our doubts about the charges raised in the McCarthy-Lattimore case.

I venture to say that if the Congress and the administration will make an effort to get to the bottom of the Amerasia case, this Nation will know beyond a shadow of a doubt whether Communist sympathizers or concealed Communists in our Government engineered our diplomatic defeat in China and the enslavement of millions of our oriental friends.

If the charge is false, there can be no objection from anyone into looking into the situation.

If it is true, then all the Members of this Congress have an equal duty to develop the facts.

Mr. Speaker, even now the people of my district and of the districts of my colleagues are living in dread of another war. We have heard from Mr. Acheson himself that the events of May 28 in Berlin may quickly decide whether there is to be a third world war starting in 1950.

Surely, the hour is passed for worrying whether the truth can hurt particular parties or particular candidates. This is no time to condemn earnest, sincere Americans who are deeply concerned about this Nation's security—and even survival—as engaging in "politics" or attempting to drag out "red herrings."

This kind of approach is unbecoming to those officials whom the people of this Nation have placed in our highest elective offices. I devoutly hope that we have heard the last of such excuses.

Meanwhile, I believe that a determined nonpartisan effort to uncover the decisions that led to quashing the Amerasia case will do more than anything to enlighten and unify the people of this great Nation.

If our Government was right in handling the case as it did, then our corroding doubts will be removed. If individuals in our Government did wrong, we shall know where we stand and what steps to take to assure the preservation of freedom in a world where the area of freedom is becoming smaller every day.

Know the truth, Mr. Speaker, and the truth shall set you free.

Democratic Platform in the Congressional Campaign of 1950

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. O'HARA of Illinois. Mr. Speaker, the platform of the Democratic Party in the presidential campaign of 1948 is the platform of the Democratic Party in the congressional campaign of 1950.

The following is the text of the resolution adopted by the Democratic national resolutions committee at Chicago on May 15, 1950, on the occasion of the celebration of the one hundred and fiftieth anniversary of the election of Thomas Jefferson as President of the United States:

Whereas the Democratic National Committee has met in Chicago in connection with the Jefferson Jubilee and has here again rededicated itself to the ideals Thomas Jefferson espoused; and

Whereas the Democratic National Committee has met on the eve of one of the most significant campaigns in the history of our Nation; and

Whereas powerful enemies of the Democratic Party are already embarked on a serious campaign to reverse the mandate for progressive liberalism which the voters gave to President Harry S. Truman and the Democratic Party in 1949: Now, therefore, be it

Resolved, That the Democratic National Committee adopt the following set of principles;

The Democratic National Committee reaffirms its support of our President and of the Fair Deal program as espoused by our President and by the sound, liberal platform adopted by the Democratic National Convention in 1948 and we pledge ourselves to press with continued vigor to reach the goals espoused in those programs drafted to benefit all Americans, regardless of their origin, color, race or religion.

FUNDAMENTAL GOALS LISTED

The following remain our fundamental goals:

To exert the leadership of our ideas and our ideals so that the sinews of our free-enterprise economy will continue to work for a lasting and just peace based upon the freedom of the individual to enjoy the rights and liberties of which he is deprived under communism or other forms of totalitarianism;

To maintain our own defense so that no foe of the American way of life—a democracy of free citizens and a free-enterprise economy—shall dare to seek to conquer us by military force;

To make our democratic Government and our free-enterprise economy dynamic so that we shall continue to improve the lot of all of our citizens and to increase our national production to provide jobs for an expanding population, and by creating a constantly expanding economy to avoid the old cycle of boom and bust.

The Democratic Party believes that this can best be achieved when the businessman, the farmer, and the workingman act as a team with the cooperation of government which provides the climate in which business can thrive and the individual can live in reasonable freedom from the fear of economic disaster.

We proudly cite the achievements of our Nation in the past 17 years as an example of what can be achieved under such a program.

We are proud of an administration under which national income has more than tripled in 17 years and we offer it as proof that wise, liberal government contributes greatly to the growth and prosperity of our free-enterprise economy.

We wish to take formal notice of the charge that our party is a welfare party. We are proud that we have measured up to the authority and duty of the Government as set forth in our Constitution to promote the general welfare and we propose to continue to promote the general welfare—the general welfare of all Americans.

PRESIDENT IS PRAISED

We are proud that this has been done without depriving one single American of one single liberty and without the socializing of any aspect of American life. We propose to continue to protect the rights of all individuals and to preserve our free enterprise economy.

We commend our President for his courage in calling for the necessary Federal expenditures to promote international cooperation toward peace and the containment of communism and a budget which will also allow the essential Government expenditures that contribute to the welfare of the American people.

We are in full agreement with our President that the way to balance the Federal budget is by expanding our economy rather than by weakening our defenses, surrendering to Russia in the cold war, and reverting to isolationism.

We agree with our President that we must not abandon the important domestic programs which have rescued our Nation from a depression and brought it to the highest level of prosperity any nation in the world's history has ever known.

We are strongly in favor of the right kind of economy—the kind practiced by this administration in reorganizing the Government to achieve greater efficiency and in practicing constant vigilance to find ways to reduce expenses without impairing vital services.

More specifically:

In the field of foreign relations we reaffirm our support of bipartisan cooperation and we praise wholeheartedly those Republicans who have refused to let partisanship or political bias affect their support of a sound international policy.

We are in full support of the President and the Secretary of State in their efforts to aid freedom-loving nations and to roll back the tide of Red totalitarianism.

BELIEF IN UNITED NATIONS CITED

We continue to believe firmly that the United Nations can be developed into the greatest organization for peace the world has ever known and we look to the day when it can protect oppressed groups now ground under the heels of police states in countries behind the iron curtain.

We urge ratification of the Convention on Genocide to stop the destruction of subjugated peoples. We reaffirm our desire to help to the fullest extent possible those made homeless by the war and to admit displaced persons into our Nation under a liberal program which will permit us to continue to receive the great contributions made to our society by persons of foreign birth.

We pledge ourselves to finish the job now under way by the Economic Cooperation Administration and to continue an effective program of military assistance to friendly nations.

We pledge our full support to the point 4 program enunciated by the President in his inaugural address. We believe that this program of technical assistance and capital investment to the underdeveloped areas of the world will be a major contribution to lasting peace.

In the field of domestic legislative activity we shall continue the balanced program of conservation and integrated development of our natural resources which are the bedrock foundation of our economic society.

This means that we shall continue reclamation and flood control projects and that we shall continue to harness the energy of our streams to create the cheap electrical power that has been so important in encouraging economic expansion over many areas of our Nation.

We believe that the pattern of integrated valley development pioneered by the Tennessee Valley—a project which has created wealth and productive capital far beyond its original cost—be continued in the valley of the Columbia River and in other areas where such a project is found feasible.

We recognize the croplands must be protected against the ravages of misuse or overuse by a program of soil conservation conducted vigorously and we also recognize that our farm economy must be kept healthy if the Nation is to continue to progress.

We view as a serious problem the drop in the income and purchasing power of American farmers and reiterate that the Democratic Party believes in supporting farm income at a fair level at a time when that support is needed and rejects the idea that supports should be high when they are not needed and low when they are needed.

PRODUCTION PAYMENTS BACKED

We believe that our party should always be alert for methods to improve our farm program and we believe that a system of production payments on certain commodities as proposed by the President offers an excellent opportunity to improve our present program and should be given a test at the earliest possible opportunity.

We believe that competition is the life blood of our free enterprise economy and we stand for continued vigilance by the Department of Justice and other agencies charged with the job of preventing monopolistic practices and of encouraging competition.

We believe that changes improving the present antitrust laws can be of great value in preserving competition and assisting small business.

Further, in the field of small business, we call for a Federal program which will enable private financial institutions to provide small business with the capital it needs to compete successfuly with larger concerns.

We do not believe that big business in itself is bad for our economy, but we believe that small business must be given the opportunity to grow and thrive so that our economy can expand as our population increases. We must preserve the kind of an America where a man with big and good ideas but small capital can succeed in the world of business.

We believe that the workingman must receive a fair return for his labor if our economy is to remain in balance.

We hail the contributions minimum-wage legislation has made in this field and believe that existing laws should be under constant study so that they may be changed as conditions warrant.

We believe that growth of the trade-union movement has contributed greatly to economic stability and to the expanded economy and higher standards of living which all Americans now enjoy.

FOR TAFT-HARTLEY REPEAL

The Taft-Hartley law is unfair to labor unions and imperils the contributions which organized labor has made to our society. We urge its repeal and substitution therefor of legislation which will be equally fair to worker and to management and will protect the public interest by encouraging genuine collective bargaining.

Our employment insurance program should be strengthened as a cushion against temporary recessions or local unemployment.

The program of Federal assistance to the housing industry and to public agencies desiring to construct low-cost housing for low-income groups has contributed greatly both to the economic good health of our Nation and to the personal welfare of our citizens by encouraging the family life in good surroundings that is a tradition of our Nation. This program must be continued and additional steps should be taken to enable middle-income families to achieve better homes at prices that will not work hardships upon them.

Until the housing shortage which still exists in many areas is alleviated, it is necessary to provide a reasonable system of rent controls in order to prevent severe economic dislocation and actual hardship on many families. The present law provides for equitable adjustment of rents and for orderly decontrol and should be continued until the present housing shortage is ended.

In other fields which contribute to the personal welfare of our citizens this Nation has made great strides but our successes in these fields should not cause us to become complacent but rather to spur us on toward even greater achievements.

Increased activity by the Federal Government is necessary in the field of education to provide every American with the opportunity for a decent minimum of education.

Our social-security system needs to be broadened and its benefits increased.

In the field of health, we need more hospitals, more doctors, dentists, and nurses, more medical technicians of every kind, more research, and more public-health activities in connection with medical care which will protect our citizens from the financial disaster which illness can now bring to millions of families.

HEALTH PLAN ENDORSED

In order to avoid socialized medicine in the United States, we endorse the President's program for broadened Federal activity in the entire field of health and medical care and the adoption of a pay-as-you-go insurance program to put better medical care within the financial reach of all Americans.

We endorse in general the program of Government reorganization along the lines recommended by the Hoover Commission, and we commend our President for his earnest efforts to bring about governmental reforms and reorganization to promote Federal efficiency. We condemn the actions of those who make speeches in favor of economy and efficiency but vote against it for partisan reasons when major aspects of the reorganization program are up for a vote.

We urge that S. 1527, relating to suffrage in the District of Columbia, be discharged from the committee and passed by the House of Representatives in concurrence with the Senate.

We urge statehood for Alaska and Hawaii without delay.

In conclusion, we believe that the person is more important than property; that the rights of humans are the basic rights which have made our Nation strong, and this has been a major tenet of the Democratic Party.

A careful study has shown that, even with vigilant enforcement of existing laws, our program of protecting human rights is not perfect and that additional legislation is needed.

We affirm specifically that portion of the Fair Deal and our 1948 platform which said, "The Democratic Party is responsible for the great civil-rights gains made in recent years in eliminating unfair and illegal discrimination based on race, creed, or color. The Democratic Party commits itself to continuing its efforts to eradicate all racial, religious, and economic discrimination. We again state our belief that racial and religious minorities must have the right to live, the right to work, the right to vote, the full and equal protection of the laws, on a basis of equality with all citizens as guaranteed by the Constitution."

We commend President Harry S. Truman for his courageous stand on the issues of civil rights.

We are, of course, opposed to any Communist being employed in our Government and we will not tolerate Communist interference in any way. It is the duty of every citizen who has evidence of disloyalty to furnish any such evidence to the Government, and we condemn efforts to gain partisan advantage by smears and innuendoes which hamper our Government and blacken the characters of innocent citizens.

HITS RUMORS, DISTORTIONS

We reaffirm our belief in fair play and honest factual investigation and we believe that development of facts better serves the interests of our people than development of headlines based on rumor and distortions.

The Democratic Party will never advocate fighting communism with the police state terrorism which communism imposes upon its own victims.

The honesty, patriotism, and sound judgment of the American people show plainly that our strongest defense against those who rob us of our freedoms is to retain and protect these freedoms.

To this we pledge ourselves once again.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, May 18 (legislative day of Wednesday, March 29), 1950

Mr. AIKEN. Mr. President, I ask unanimous consent that a statement favoring the development of the St. Lawrence seaway, by Clyde T. Ellis, executive manager of the National Rural Electric Cooperative Association, before the Committee on Public Works of the House of Representatives on May 9, 1950, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF CLYDE T. ELLIS, EXECUTIVE MANAGER, NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, BEFORE THE PUBLIC WORKS COMMITTEE, HOUSE OF REPRESENTATIVES, MAY 9, 1950

Mr. Chairman and gentlemen of the committee, my name is Clyde T. Ellis. I am executive manager of the National Rural Electric Cooperative Association, which is the service organization of the rural electric systems of the United States. Eight hundred and fifty-nine systems are members of their service organization, with a consumer membership of approximately 2,500,000 farm families in 43 States and Alaska.

STRUGGLE IN ST. LAWRENCE AREA

The rural electrification program is having its most difficult struggle in the St. Lawrence area. For the purpose of this discussion, we have defined the St. Lawrence area as including New England, New York, New Jersey, and Pennsylvania, for we believe the St. Lawrence development will vastly improve the power supply situation and the power cost situation in most of this area.

REA Administrator Claude R. Wickard stated to the Agriculture Subcommittee of the House Appropriations Committee on January 30, and I quote from page 1056 of the record:

"I referred this morning to the New England area and that is where we are meeting the most difficult situation now in trying to improve the situation financially. The cooperatives are small and have been harassed by the spiteline activities of the power companies. * * * Their wholesale costs are going up."

I do not know whether Mr. Wickard meant to include New York in the term "New England area," but his statement would certainly apply with equal force to New York, and to a smaller extent, to Pennsylvania and New Jersey.

The rural electric systems of the country conduct their own annual survey as of January 1 each year to determine among other things their needs for further loan funds to achieve area coverage and their power supply requirements. There are 28 rural electric cooperatives in the St. Lawrence area, and 22 of them returned their survey questionnaires. We arrived at the figures I shall give you here by averaging the 22 and projecting them through the 28. This method has always given us very accurate figures.

Our 28 systems were serving 69,237 farms and rural establishments on January 1, but they stated that within their system areas there are still 40,984 which they desire to serve. In other words, they had achieved only 63 percent area coverage within their system areas. REA estimates that nationally approximately 85 percent of the farms and rural establishments were served on January 1. I hasten to point out that most of the St. Lawrence area is and has always been above the national average in percent of farms electrified, but the areas served by our rural electric systems are below the national average. Twenty-seven percent of our systems in the St. Lawrence area report a present inadequate supply of wholesale power. This is higher than the national average.

A similar number of our systems in the St. Lawrence area (27 percent) report that they don't have enough power in sight for future growth. This is higher than the national average. Forty-five percent of these systems report restrictions on the use of power they do buy.

But here are the two figures that hurt most. Eighty-six percent of our systems report that their power costs went up in the past year, as compared with 34 percent nationally which report an increase, and as you know, our power costs went down in several areas in the country last year. Our 28 systems report that they paid an average wholesale power cost of 13⅓ mills per kilowatt-hour last year, and this 13⅓ mills compares with 9.9 mills national average.

I believe you can see from these figures that our power situation is very difficult in the St. Lawrence area. There is always the constant danger that our systems may run completely out of power, for they are having to depend on sources that are generally unfriendly—indeed the very sources that tried to kill many of them off.

Let me give you a few examples of our desperation:

1. The Maine Public Service Co. in the fall of 1949 offered the Farm-Home Electric Cooperative of Patten, Maine, a wholesale rate of 2 cents per kilowatt hour, provided the coop would sign a 10-year contract, and gave the cooperative the only alternative of accepting its other filed schedule at a rate of 3½ cents per kilowatt hour. No rural electric cooperative can long survive under these conditions, and the power company knows that.

2. The power company which is supplying the New Hampshire Electric Cooperative is on the one hand opposing an acquisition

which would make it possible for the co-op to virtually achieve area coverage in the State, and on the other hand, at the same time, it is seeking to raise its wholesale rate to the co-op, and its rate is already one of the highest. The power company is also, at the same time, engaged in the process of "pirating" the co-op's member customers.

3. In Vermont, Washington Electric Cooperative's power supplier has refused to rehabilitate the transmission lines serving the cooperative in order to render decent service, and at the same time has strenuously opposed the co-op's efforts to develop some small hydro potentialities in the area.

4. In New York, the rural electrification program was seriously crippled and almost killed by intense power company activity. One co-op was spitelined to death, and the five remaining ones were seriously crippled. The power companies are charging the co-ops one of the highest wholesale rates in the country, and their recent offer of a slight reduction is so filled with jokers that our systems hesitate to accept it, much as they need a reduction.

5. In Pennsylvania, the same New York power company that has been the worst enemy of rural electrification in New York sells power to the Northern Pennsylvania Power Co. at a rate so high that the Pennsylvania company's resale rates to the three northern cooperatives in Pennsylvania are prohibitive.

MUST HAVE POWER AT OUR LOAD CENTERS

Perhaps I should say a word about getting our power delivered to the load centers. All our distribution systems are necessarily designed with load centers into which the power must be fed. Our generation and transmission co-ops and the Federal Government make a practice of selling their power delivered to our distribution co-op load centers. Private companies deliver it to our load centers in some cases, but in a large percent of the cases the private companies require us to build our own transmission lines from our load centers to their substations in order to pick up their power.

We are paying the Federal Government an average of 5 mills per kilowatt-hour for wholesale power in other sections of the country, delivered at the load centers. We are paying the private companies in the St. Lawrence area 13⅓ mills, much of it not delivered to our load centers.

POWER COMPANY RESTRICTIONS ARE DICTATORSHIP

Perhaps I should say another word also about restrictions. Whereas our generation co-ops and the Federal Government do not restrict our use of power, do not tell us to whom we may sell it, many of the power companies do restrict us, and this is true in nearly half of the cases in the St. Lawrence area. The power companies scream free enterprise on the one hand (always carefully omitting the word "competitive"), while subjecting us to totalitarian practices on the other hand. They go so far as to tell us whom we can serve and whom we can't, and for how much. They demand to be the only grocer in several counties and yet they prohibit us from feeding one child at all, tell us how much we can feed another and penalize us for feeding a third. Their monopolistic practices are dictatorial, unscrupulous, and un-American.

SAVINGS AND AREA COVERAGE AT TVA RATE

I am listing here our 28 cooperatives in the St. Lawrence area, showing the amount of power they purchased last year, July 1, 1948, to June 30, 1949, what the cost to the co-ops would have been at the TVA rate, and the savings at the TVA rate. I believe the Ontario rate just across the St. Lawrence River from this area is about the same. I believe it is fair to use the TVA rate as the comparison because we understand that St. Lawrence power can be produced at a cost much less than that of TVA, largely because of the tremendous flow of the St. Lawrence and because of the fact that there is practically no fluctuation in the stream flow.

Cooperative	Kilowatt-hours	Fiscal 1949 billing	Billing under TVA rate	Savings under TVA rate
New York:				
Otsego	2,934,800	$40,733.00	$17,542.80	$23,190.20

Pennsylvania:				
Crawford	16,630,800	167,573.00	85,030.00	82,543.00
Indiana	10,589,020	107,347.00	56,699.00	50,648.00
Sullivan	2,518,385	37,818.00	15,235.00	22,583.00
Tioga	10,924,163	152,732.00	58,390.00	94,342.00
Clearfield	3,824,615	38,804.00	22,517.00	16,287.00
Bradford	12,264,428	182,559.00	65,065.00	117,494.00
Armstrong	14,190,000	123,077.00	73,873.00	49,204.00
Warren	3,058,320	31,840.00	18,237.00	13,603.00
Blair	8,280,480	84,614.00	44,988.00	39,626.00
Somerset	6,303,600	62,566.00	34,970.00	27,596.00
Jefferson	4,166,600	42,410.00	24,130.00	18,280.00
Bedford	4,609,280	46,092.00	26,371.00	19,721.00
Adams	9,269,595	122,007.00	56,010.00	65,997.00
Total	106,629,286	1,199,439.00	581,515.00	617,924.00
Grand total	143,316,973	1,694,887.81	798,357.31	896,530.50

It is our opinion that if our cooperatives in the St. Lawrence area could purchase their power at the TVA rate they could achieve area coverage and still be in the black. With present rates, some of them are now in the red, and they probably can never serve the more thinly settled areas.

OTHER REASONS OUR PEOPLE FAVOR ST. LAWRENCE

The St. Lawrence area is the largest area in the country that has had no Federal power development. Farmers, particularly in the New England area, are becoming concerned about their markets. When the mills close down, their milk sales go down; the whole economy is affected.

Our people in this area, like all people throughout the country, are also interested in the fact that should war come again the St. Lawrence development would supply power requirements that we might not be able to get from another source.

NOT ADVOCATING NATIONALIZATION

The power companies are spreading a lot of propaganda to the effect that some people are advocating nationalization of power. I want to make it clear that I know of no farmer among our two and a half million farm families who is advocating nationalization of the electric-power industry. We do not advocate it, and I do not advocate it. We believe the power companies will get along as well or better when the St. Lawrence is developed, for the power companies usually manage to benefit from the Federal power projects in many ways. The Federal Government is not in the retail power business anywhere. We do not want it in the retail power business. But these farmer-owned cooperatives do want to purchase adequate wholesale power, delivered to their load centers without restrictions, at reasonable costs.

We hear there is little chance that this committee might vote this bill out this year for action. Nevertheless, we appeal to you to do that very thing.

How the New Deal Has Changed Life in the South

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 18 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by myself concerning life and events in the South, together with a poem published in the Daily Tribune of Bay City, Tex.

There being no objection, the statement and poem were ordered to be printed in the RECORD, as follows:

HOW THE NEW DEAL HAS CHANGED LIFE IN THE SOUTH

Mr. President, a southern friend of mine has sent me the following bit of verse, author unknown but not unknowing. It was first printed in the Daily Tribune down in Bay City, Tex., and while it is apparently intended to point out to our good southern citizens that more than any other group in the United States of America they are responsible for both the New Deal and the Fair Deal, the moral of the verse also seems applicable to many in the North who have

placed partisan prejudice above the principles of thrift and independence.

However, Mr. President, for the RECORD and for historic reference it should be noted here that, regardless of whether the New Deal-Fair Deal drive for political authority, its wasteful extravagance, its sneering contempt for State's rights, its affinity and affection for national socialism and the other aspects of its zeal and zest for big government constantly expanding larger and expending more, is chronicled by historians as the golden era or the era of good-by to freedom, one stark, stern, stubborn fact must stand out beyond and above all others. Whatever the outcome of these many long, expensive years of new dealing-fair dealism, it is the South which must assume and accept full responsibility for the consequences.

Mr. President, plaintive calls for aid from our southern friends, and vocal protestations that in Dixie they do not believe in FEPC, state medicine, "squandermania," the Brannan plan, and all the many other facets of the Roosevelt-Truman royal regimes neither change the course of history nor convince the politicians in the palace.

VOTES ARE WHAT COUNT

Whether stubbornly, sullenly, cringingly, courageously, dolefully, or gleefully Americans south of the Mason-Dixon line have consistently voted for what they've gotten and have been the biggest single factor in perpetuating the Roosevelt-Truman philosophy of winner take all. Consequently, my Texas friend is probably right in dedicating the following poem to Dixie:

THE SOUTH NOT ONLY ASKS BUT PLEADS FOR SOCIALISM

Mr. President, there is one thing about this grand and glorious country of ours on which we can all agree. We always get exactly the type of government we vote for; we can have any type of government we want; we live under precisely the kind of governing concepts and officers that we deserve.

Maybe the South really wants FEPC and so-called civil-rights legislation and socialized medicine and the Brannan plan and perpetual and prodigious deficit spending. Maybe it wants for once and forever to put a complete and total end to the concept of States' rights. How can we know? It talks against these things but it votes for them.

Small wonder indeed that northern Democrats laugh up their sleeves and behind their hands at the protests and plaintive objections of their southern colleagues who complain while they are being kicked around, pushed back, sneered at, used as a public whipping boy, condemned as obstructionists, Dixiecrats, reactionaries, tories, horse-and-buggy citizens, and being completely ignored when it comes to writing the planks in a Democratic National Convention platform or selecting national Democratic candidates. If the once proud and independent Southern States would just once vote like they talk; if they would just once proudly demonstrate with their votes that they could no longer be kicked around and insulted with impunity we could put an end to all these socialistic trends and return to the progressive and fundamental brand of Americanism which built this country strong and made it great. Until then, of course, the trend of the times must continue to move unerringly against the South because voters who are always "in the bag" have lost both their freedom and their influence and are snubbed as blatantly as they are seduced by the big Democratic machine bosses of the North.

IT'S THE WAY THEY VOTE THAT COUNTS

If such able Senators and great Americans as HARRY BYRD, WALTER GEORGE, SPESSARD HOLLAND, JOHN MCCLELLAN, RICHARD RUSSELL, JAMES EASTLAND, and many others who could be named are right when they caution their colleagues against socialism and big government—and I feel confident they are—then those in the South who consistently vote for a national administration which in essence is no more Democratic than Henry Wallace's Progressives were liberal (in fact, a comparison of the platforms and purposes of the two groups shows more similarities than dissimilarities) should search their souls, consult their basic principles, recapture their independence, and reassert their influence by joining other areas in this country in voting against that which they so vigorously and eloquently condemn with futile words. Surely there is no hope for the South—or for America as a whole—if citizens consistently support with their votes the principles and the politicians they condemn so uselessly with only their voices.

In all events, Mr. President, this verse from the Daily Tribune of Bay State, Tex., may be lacking in poetic quality but it packs a punch which should cause the voters of the South to find some manner or method for harnessing their voices and their votes to the same end.

Florida has demonstrated one way to do it; in the last election four proud and independent Southern States demonstrated another way it can be done; a congressional district in Texas recently rebelled against being used as the tail of the Democratic donkey forever and demonstrated a third method of asserting its independence. I have long admired the spirit and the qualities of southerners. I cannot cease to hope and believe that before it is too late—but time is fleeing rapidly—that great section of the country will free itself from the voting strait-jacket into which the New Dealers and Fair Dealers have forced it and that southern citizens will yet strike a blow for freedom which will restore America to its time-honored principles and practices. Until this happens, however, Dixie must continue to feed the Democratic donkey and to carry its tail; it can never lead it or tell it what to do or where to go.

"POOR FATHER

(Dedicated to our southern Democrats)

"My father, poor, misguided gent,
Wasted his life, a life misspent
By working hard and working late,
From 6 a. m. 'till way past eight.
Poor Dad! He'd fuss and fret and toil
And burn the blooming midnight oil,
For nothing but a litle cash
To buy the daily beans and hash
Poor Dad! He was so mild and meek
He'd work 6 days in every week
And 14 hours every day
To try to keep the wolf away.
Now Father, meaning well, but dumb
Amassed a rather tidy sum
With which he planned to buy some beers
To brighten his declining years.
Then the New Deal came; simple Dad,
Who worked so hard for all he had,
Awoke one morn to find that he
Was now a public enemy,
A louse, a Scrooge, a national cyst,
An economic royalist!
So, Dad, industrious but dumb,
Is now the source from which will come
The coin to buy the gasoline
For some underdog's machine,
To bring the more abundant life
To every loafer and his wife;
From Dad will be extracted sums
For radios to ease the hells
Of all the chronic ne'er-do-wells;
Poor Dad, a faithful, trustful goon,
Was born just 30 years too soon!

L'envoi

A moral lurks along the hall
In all this fancy fol-de-rol,
And it is this: That any cheat
Who says you ought to work to eat
Is simply nuts, out of his head;
Sit on your tail or stay in bed;
The Government will see, by gad,
That you get yours from chumps like Dad!"

—Author unknown—but not unknowing.

Turkish Election Should Make Wallace Eat Hard Words

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, May 18 (legislative day of Wednesday, March 29), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Turkish Election Should Make Wallace Eat Hard Words," by Milton Berliner, appearing in the Washington Daily News of Friday, May 12. The article is a very interesting one, and I hope all Senators will read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TURKISH ELECTION SHOULD MAKE WALLACE EAT HARD WORDS

(By Milton Berliner)

On Sunday an event will take place that should cause Henry Wallace and fellow left-wingers to eat some of the political invective they hurled so indiscriminately 2 years ago.

At that time, it will be remembered, the Progressive Party's choice for President stormed across the country and even into Europe denouncing the Truman doctrine as a device to bolster reactionary governments all over the world.

But on Sunday, one of the countries so characterized, Turkey, will hold a general election that will mark the country's greatest step toward democracy in its 500-year-old history.

Far from bolstering a reactionary government, United States aid has been a striking factor in accelerating Turkey's march toward true democracy. It is safe to say her first nation-wide election in which several independent parties will participate would have been long delayed but for the close cooperation between the two countries during the past few years.

The give-and-take among the candidates for 487 seats in the Turkish Grand National Assembly (from which the president and cabinet are selected) has been so free that the Turks themselves have been amazed.

At Izmir, recently, President Ismet Inonu, who ranks with Kemal Ataturk as a Turkish hero, even joked about the possibility of his losing office if the Republican People's Party were overturned.

"I accepted all your criticism when I was in power. Let's see what will happen when I will be on the opposition," he said with a smile.

The chance of the Democrat Party or the Nation's Party winning a majority is considered remote, but the point is that such levity about political power from a Turkish leader has been unheard of until the present election.

Sunday's balloting will take place under new laws guaranteeing Turkish citizens complete secrecy and ruling out any discrimination based on religion, race, color, sex, or even

illiteracy. Members of judiciary will do the counting. The Democrat Party, which in 1946 complained that the People's Party had rigged the election rules, agree on the judiciousness of the new law.

There is little doubt that the freedom of political criticism (American style) that has been allowed since the 1948 by-elections has caused the People's Party, which has been in power since 1923, to liberalize its position.

But whatever the differences, Turkey's political parties all agree that continued friendship with the western democracies is their country's best defense against the threat of Russian imperialism.

Encroachment of Government on Private Utility Field

EXTENSION OF REMARKS

OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 18 (legislative day of Wednesday, March 29), 1950

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "CIO Union Scores Federal Utilities," published in the New York Times on Sunday, April 30, 1950. I also ask unanimous consent to have printed in the Appendix the text of a resolution and statement of policy adopted by the CIO Utility Workers of America at their convention in New York on April 30. The statement of policy is reasonable, sound, and sensible. It would be good common sense and a wise policy for the Federal Government to conform to these recommendations in any present and future plans to invade the utility industry.

There being no objection, the news article, resolution, and statement of policy were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 30, 1950]

CIO UNION SCORES FEDERAL UTILITIES—CONDITIONS INFERIOR TO THOSE IN PRIVATE INDUSTRY ALLEGED AT CONVENTION HERE

Further encroachment of the Government on the legitimate field of privately owned electric utilities was condemned yesterday in a unanimous vote by 400 convention delegates of the Utility Workers Union of America, CIO, at the Commodore Hotel.

In a resolution reflecting views contained in the officers' report, the "creeping paralysis of nationalization of the industry" was called "the first step down the socialistic highway."

"Control of the electric industry is the key to control of the major industries of the Nation; the control of transportation, mining, agriculture and all basic industry," the report said. "The Government is already in the utility business to quite an extent and, unless we are on our guard, will soon own most of it. This will be the first step down the socialistic highway. Then transportation, communication, steel and the rest will follow to put an end to our American way of life."

The theme of the second day of the three-day convention, as expressed by top Congress of Industrial Organization officials, was that the CIO had made great strides toward winning rank and file support in unions dominated by Communists.

Speakers included Allan S. Haywood, CIO vice president and director of organization; Jack Kroll, CIO-PAC director; James B. Carey, CIO secretary-treasurer, and Joseph Curran, president of the National Maritime Union, CIO.

RESOLUTION ON UTILITIES

Joseph A. Fisher, head of the utility workers union, presided. He said the resolution of the special committee on public ownership of utility companies, headed by Andrew J. McMahon, had the full support of all the officers.

The resolution looked with alarm upon Government power projects that seem to be unnecessary and are in direct competition with light and power companies with whom we hold contracts. It said the union believed that while water-development programs in most cases should be undertaken by the Government, these worthy projects should not be the means of destroying taxpaying utility companies who, under proper regulation, are furnishing adequate service.

Noting the increased trend toward Government participation in the utility business in competition with private industry, the resolution declared that if this were permitted to continue we will soon have authorities, not elected but appointed, who will constitute a supergovernment with control of practically all the electric power in the Nation.

Mr. Haywood told the convention that the Communists had failed in an attempt to gain control of the light, heat, and power industry in America. The new International Union of Electrical Workers (IUEW) formed by the national CIO after the expulsion of the United Electrical Workers Union, represents 28,000 workers, against 14,000 in the old union, he asserted.

DEVELOPMENT OF RESOURCES

The Government, the resolution said, should develop only those projects that would result in a definite gain in the resources of the country.

Declaring that job security, promotional opportunity, and working conditions too often became the tools and plums of politicians and that wages and working conditions were fixed by political management, the resolution said that union members employed by Federal agencies and municipalities that operate their own light and power businesses work under conditions inferior to those enjoyed by our members employed in private industry.

Public power employees, such as those of the Tennessee Valley Authority, have little or no job security, in that they are not covered by contract or by civil-service laws, it was declared.

The CIO, contrary to the belief of some individuals, has never gone on record in favor of nationalization of the utility industry or any other industry nor does it favor a socialist form of government, the resolution said.

Organic unity will be achieved by labor in this country in time, Mr. Haywood declared, referring to the projected coalition between the CIO and the American Federation of Labor.

"If you bring about that unity," he said, "you will have 16,000,000 men with their wives and families marching together."

Mr. Curran declared that the only way Communists could be driven out of the labor movement was by extermination.

TEXT OF THE RESOLUTION PASSED BY THE CIO UTILITY WORKERS OF AMERICA AT A CONVENTION IN NEW YORK APRIL 30

By virtue of the responsibility vested in the public power committee by the appointment of the national president, our committee, after long and careful consideration on the question of public power, feel it is necessary to declare the reasons which impelled it to make the recommendation contained in the report on this highly controversial subject.

We believe that the policy of the Congress of Industrial Organizations in past conventions and in statements of policies, has advocated and expressed repeatedly its fundamental concern with orderly, regional development of waterways and resource conservation.

Such development and conservation affect the industry that provides for the welfare of several hundred thousand workers in the light, heat, water, and steam industry to which Utility Workers Union of America has been granted jurisdiction by the Congress of Industrial Organizations. By virtue of this jurisdiction by the Congress of Industrial Organizations, Utility Workers Union of America shall be ever mindful of that obligation and the constant objective of our union shall be to correct and continue to improve the wages, working conditions, and policies which affect the security of all employees of public utility corporations throughout this Nation.

Your committee has analyzed and looked with alarm upon the efforts of those socialistic and even more collective minded form of government advocates, who would have us surrender our basic concept of the American way of life, to the creeping paralysis of the all-powerful state. They would destroy the philosophy of our forefathers, built upon the system of free enterprise, which has made our standard of living the highest in the world, and which has made us the leader among the nations of the world.

It is our theory that Government is the servant of the people, not our master.

Therefore, basing our belief on this principle, we hold and advocate that the God-given resources of our Nation should be developed and used for the benefit of all and we further agree that the water resources properly belong to all of the people of this Nation and that water development programs can be most successfully developed and accomplished by the Government in order to overcome floods, aid navigation, prevent soil erosion, supply water for irrigation, and other purposes outside the realm of private industry. However, the development of these worthwhile projects should not be the means of eliminating taxpaying utility companies who, under proper Government regulation, are furnishing adequate, efficient service to their consumers and dealing fairly with their employees.

Job security, promotional opportunity, and working conditions, all too often become the tools and plums of political-minded individuals who would deny to the worker either his economic or legal appeal against the Government. However, we further believe that privately owned public utility corporations should cooperate with the Government in the utilization of the natural resources by offering to buy power from Government projects for transmission and distribution to consumers in the area of the project so that the basic interest of all the people of our Nation shall have been served and the purpose of Government shall be to conserve and utilize our natural resources without becoming engaged in competition with investor-owned utilities except for national defense or where private industry fails or refuses to provide adequate generation of electrical energy.

We believe in the United States of America, we believe in its people, we believe in the right and ability of the American people, especially those in organized labor, to ascer-

tain and elect to public office only those people who comply with and subscribe to the American way of life and our democratic form of government.

We do not believe it, nor do we subscribe to the theory of some leaders of CIO who advocate the policies of their own unions to the detriment of other national unions. For example, the argument has been set forth, if a power authority were created in one part of the country, it would help the economic position of the workers and enable the manufacturers who employ them to compete successfully with another part of the country where living standards are below normal. The truth of the matter is simply that, even if electricity were furnished free, the manufacturers still could not compete with the South until such time as the economic conditions of the workers in the South have been improved. Therefore, the fallacy of this argument is apparent and the motives of those using this argument becomes crystal clear and quite obvious.

Moreover, it is the thought of the committee that nothing herein contained should be construed as giving aid or comfort to the power interests or any of their associates as such. However, the fact that the power interests might happen to be on the same side of this question may cause some to look askance on the recommendation of this committee. The committee took this into consideration and, after carefully weighing this situation, came to the conclusion, despite the possible implication, we had no alternative but to take a courageous position which, though it may prove unpopular in some circles, is in the final analysis, in the best interests of our country, our membership, and future generations.

In conclusion, this committee unanimously recommends that the following statement of policy with respect to public power be adopted by this convention:

"STATEMENT OF POLICY

"1. Where power is generated in conjunction with worth-while water projects, the transmission, distribution and sale of such energy should, under proper regulation, be allocated to the private utility companies.

"Where investor-owned companies fail to provide for the distribution and sale of electrical energy then, and then only, should the Government undertake such duties.

"2. Approximately one-fifth of the power generated in America today is distributed and sold by Government agencies. We believe that further encroachment of Government into the utility industry should be discouraged except in cases of national emergency.

"3. It is our firm belief that the best interests of all of the people of this Nation can best be served and secured through collective bargaining in investor owned public utility corporations.

"4. We shall continue to advocate that the water resources of the Nation be developed. However, we shall object to any move that will result in these worthy projects being used as a means of destroying taxpaying utility companies, who, under proper regulation, are furnishing adequate service.

"5. We further recommend as a matter of policy that the national officers, the local officers and members use every means available to prevent further nationalization of the utility industry and

"We further recommend as a matter of policy that we insist on fair and proper regulation of the utility industry and that every effort be made to compel utility managements to fulfill their obligations to the consumers and to their employees."

Fair Employment Practice Commission Act

EXTENSION OF REMARKS
OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 18 (legislative day of Wednesday, March 29), 1950

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD several editorials and special articles dealing with the Fair Employment Practice Commission Act.

All these articles present different phases of this question, and voice the viewpoint of citizens in varied walks of life and different sections of the country.

Some of these editorials are from North Carolina newspapers in different parts of the State, and these editorials were selected at random. It is the unanimous voice of the press of North Carolina that this proposed measure would be detrimental to the common good and would hinder and retard the progress which is being made in good race relationships, and therefore it would be most unwise to enact the bill.

Some of these articles are from newspapers like the Evening Star and Washington Post, in the Capital City. Another article is by Raymond Moley, a well-known writer and a man well-versed in civic affairs and deeply concerned in promoting harmony and good will among all the people.

I am submitting these articles in the hope that they will be read by those who take such an extreme view of this situation and are so rampant in their advocacy of this revolutionary measure which, if adopted, would set back our progress by at least 20 years.

Only eight States in the American Union have adopted this measure or one similar to it. The legislatures of 19 States in the North and West have rejected it. A bill of this character was defeated by the voters of California by a majority of over a million. This measure could not be adopted in a single State in the Union if submitted to a popular vote of the people. Why, then, is there the pressure to try to drive a bill of this character through the Senate and deprive the American people of their constitutional and individual rights?

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

(The following editorial is from the Laurinburg (N. C.) Exchange, which is edited by Hon. Odus L. Moore, a member of the Legislature of North Carolina and an outstanding editor:)

WHAT FEPC MEANS

The United States Senate is staging a bitter fight on FEPC this week with southern Senators battling with all their might against it. In that fight they will have aid and comfort from men of other States and regions, but they must bear the brunt of the battle themselves.

And what is FEPC? Why all the fuss and fury about it? It is legislation, based on political motives, which would set up arbitrary and arrogant controls over and interference with the private affairs of the American people and their private business. It is nothing less than that, and it is even a good deal more than that, for it implies an unlimited and arrogant police power which would be put in the hands of partisan and biased men who in turn would acknowledge no responsibility or obligation to anyone except their political masters.

And when you undertake to regulate the private lives of people and their private business with political and police power you are creating a dangerous situation.

FEPC would give a federally appointed and controlled commission power to regulate employment, and the hiring and firing of employees. Its purpose is to force employers to employ persons whom they might not want in their employ. It specifically says that no person shall be denied employment because of race or color.

And how would FEPC be enforced? By the courts? No. By trial by jury? No. By one's peers and his fellows, as the Constitution prescribes? No. But by bureaucrats. By men clothed with Federal police power whose arbitrary orders and decrees would have all the force and effect of law.

What chance would any employer have who wanted to run his own business according to his own wishes? He could go to court, yes; if he wanted to spend a fortune, suffer humiliation, and be subjected to all the smear tactics that smart lawyers and politicians can devise.

Southern people are opposed to FEPC. North Carolinians, who are tolerant and broadminded, find FEPC and its political implications too crude and arrogant. FEPC seeks to cure something by law which law can't cure. It would remedy one evil by arbitrarily imposing a greater evil. It would have the Federal Government play god over the people and dictate to them how they shall manage their personal and private business. It would take the individual's liberty and his right of choice away from him in order to confer a political favor upon another.

(The following editorial is from the Greensboro Daily News of May 16, 1950, which is one of the leading dailies of North Carolina:)

SOUTH'S RIGHT TO BE HEARD

Whatever may have been the motives which prompted North Carolina Democratic National Committeeman Jonathan Daniels to speak out at a Chicago panel discussion on FEPC, it took courage to step into the staged event, as he did, and give something of the South's feeling on and attitude toward this controversial measure.

What Mr. Daniels voiced was opposition to compulsory FEPC, an opposition which exists not merely in the deep South but in more progressive North Carolina and which must be reckoned with in any practical consideration of the issue and its ramifications. Even those Tar Heel leaders who approve the principle involved are realistic enough to know that the cause can be pushed only so far and so vigorously without setting up a chain reaction and undoing the progress that has been made in racial relations hereabouts throughout the years.

The Chicago panel, at which the Tar Heel committeeman seized upon the occasion to speak, was further evidence of the manner in which the South, its viewpoint and its problems are left out in party councils and programs. The other side of FEPC was

wholly unrepresented in the Chicago discussion; yet it is difficult to think of a genuine panel in which all sides of the topics being discussed are not represented. That is indicative of what has happened all along and has thus served further to arouse southerners. After all, the South's views, right or wrong, on FEPC or any other issue are the views of a sizable tier of States and some millions of people, and as such they deserve consideration in Democratic conferences and policies. Naturally it arouses southerners when they are disregarded. Their views become meaningless, while a political sop is thrown out to several hundred thousand persons in a few key congressional districts in doubtful States which may thus be swung into the party fold. Such differentiation may be good politics, but it is not founded in basic fairness or consideration of all groups and sections in party councils. Certainly the area which has to wrestle directly with the most acute problems and situations growing out of FEPC has a right to speak its piece and exert an influence commensurate with its numerical strength and its long-time contribution to and sustenance of the Democratic Party.

Mr. Daniels was justified in speaking out. But it is not until the southern view is taken into more serious consideration and treatment that last week's assurance of Keynoter Thad Eure at our own State Democratic conventions that the Democratic Party is big enough for all shades of opinion and schools of thought can be said to have national acceptance and application. All that we are talking about is the South's right to be heard and have its practical problems considered in their true worth and effect in the councils and fabrications of the party that it has supported, through thick and thin, all these years. The F in FEPC really ought to apply to a fairness that is not wholly confined to employment as such.

(The following editorial is from the McDowell News, published at Marion, in western North Carolina, and one of the leading semiweekly newspapers of the State:)

THE WEAK LINK IN THE FEPC

No matter how desirable the proposed Fair Employment Practice Act may appear on paper, there is a practical hitch that will ruin the whole scheme.

The hole in the dyke is: What will prevent an employer from having his business operations wrecked by a swarm of fraudulent discrimination claims whenever he hires or fires a worker.

Objective of the controversial measure now before Congress is to prohibit discrimination in employment because of "race, color, religion, or national origin." It applies to any employer engaged in commercial operations who employs 50 or more individuals.

The way we see it, the legislation is so broad that it will be impossible to determine a legitimate complaint of discrimination from an unreasonable or personal grudge.

This is what could happen to an employer: He has a job opening and 100 aspirants apply. Naturally, only one man can have the job. Then the 99 disappointed job seekers could, if they chose, file complaints with Fair Employment Commission agents, and the harassed employer would be forced to suspend his own work and be hailed into court to answer the mass charges.

Such a set-up would invite thousands of trumped-up lawsuits by unscrupulous lawyers. It would set the stage for a new era of racketeering and blackmailing in America.

The Fair Employment Commission agents might exercise the greatest possible care in examining each complaint. But, by law, it will be mandatory for the agents to make thorough investigations of each complaint before making a decision.

Furthermore, it's a hundredfold easier for an employer to be accused of racial or religious discrimination than it is for him to prove himself innocent of the charge.

Let's take an example. Suppose a small factory owner employs 100 workers. Twenty percent of them are Chinese, 10 percent Negroes, 40 percent are Methodists, 20 percent Baptists. Any Negro or Baptist who was refused a job could file a complaint. The claim would be that there are more Negroes and Baptists in this country than Chinese and Methodists, and yet, in this instance, they would be employed.

In such an instance the employer would find it hard indeed to prove himself innocent of intentional discrimination.

Sounds fantastic, doesn't it? But it could happen, and something like it undoubtedly would in hundreds—maybe thousands—of instances. The employer might get a clean bill of health on the first complaint, the second, third, or even fourth, but eventually the trap would ensnare him. Anyway you look at it, he can't win.

Businessmen and farmers have a big enough problem already in trying to succeed in their enterprises, pay taxes, provide jobs, and help maintain a strong economy without having the FEPC added to their burdens.

(The editorial entitled "The Senators Have a Text" is from the Wilmington Star-News, a leading daily, published in eastern North Carolina:)

THE SENATORS HAVE A TEXT

As the long-delayed fight over the Fair Employment Practice Commission bill gets under way in the United States Senate, the great majority of North Carolinians are glad both their Senators are committed to vote against this legislation.

Because of previous consideration of the issue in Congress, Senator HOEY'S stand has been known for a long time.

The junior Senator, FRANK P. GRAHAM, has let it be known in the strongest way possible that he is against FEPC. As recently as last Thursday, in his address at the Wallace festival, he reiterated his opposition as he said:

"We here in North Carolina are getting ahead for both races without any Federal laws of compulsion. We in this State are gaining our ends through proper understanding and cooperation. Our Nation must follow that pattern if any good end is to be achieved."

But North Carolinians are expecting their Senators to do more than merely vote against this unnecessary and disturbing legislation. Because of the clear sentiment of the State they are beholden to speak out at those times when their words will mean the most toward defeat of this effort at infringement upon individual rights.

And if and when they speak, there could be no better text for their assertions than the first two paragraphs of an Associated Press news story which appeared in Friday morning's newspapers under a Raleigh dateline. They read:

"The State board of education today approved allocations totaling $3,328,752.45 from the State's $50,000,000 school plant construction, improvement, and repaid fund.

"The allocations, recommended by the board's building committee which met yesterday, totaled $1,848,878.75 for white schools and $1,479,873.70 for Negro schools."

Compare the two amounts for white and Negro facilities. The one for white projects is greater by only $369,005. Surely the proportion of population would encourage a larger figure. But the building committee, free to act without interference from law or any other authority, delegated the money only on the basis of need and without consideration to race. Thus, in this one case alone, it scored a triumph in raising the standards of North Carolina's Negro schools.

This disregard for race has been apparent since the school board took up the big task of distributing the $50,000,000 where it is needed most. In New Hanover County, the first projects to be considered were not for white but Negro children. Here, too, the authorities considered only the factor of need.

In public housing, approval of a proposed expansion project in Charlotte was held up in Washington for sometime because practically all the units were for Negroes. This, so the planners in the Capital thought, was discrimination against the white population. But, there too, the local decision was based on need and not race.

North Carolinians should be proud of these facts.

They illustrate, better than millions of words of debate and argument, the tremendous social, economic, and other progress made by the State without regard to race. They offer powerful ammunition to explode the false charge of discrimination in North Carolina sometimes lodged by outsiders ignorant of true conditions or anxious to ignore impressive facts.

There are numerous other cases Senators HOEY and GRAHAM could cite to their colleagues.

As these illustrations prove North Carolina and other States do not need FEPC, the two Senators should also drive home the fact that its dangerous compulsion would prove the most damaging of all influences upon sound and progressive racial relations.

(This editorial entitled "FEPC Dilemma," is from the Washington Post of May 17, 1950:)

FEPC DILEMMA

Jonathan Daniels' outspoken speech at a Chicago forum featuring the President's Cabinet brings into sharp focus the dilemma facing the administration in connection with the FEPC bill. At no time has the administration had the votes to pass the bill in the face of the bitter opposition from the southern wing of the Democratic Party. It has used FEPC as a handy political issue, without any real prospect of turning promises into legislation. President Truman has pretended that it was a question of pushing the measure through over the opposition of a few reactionary Dixiecrats. But Mr. Daniels' opposition is plain notice that the liberal elements in Mr. Truman's own southern following are fighting him on the issue of making the FEPC compulsory.

Mr. Daniels, as he pointed out in his speech, was one of the few southerners to vote for Mr. Truman's nomination at Philadelphia in 1948 and to take an active part in his campaign. Like other progressive leaders in the South, however, he fears that the FEPC fight will strengthen the cause of the Dixiecrats and enable them to hide behind the civil-rights issue while they fight every progressive measure. In other words, the administration is pressing the fight for civil rights at the point where the greatest opposition is encountered. Instead of moving step by step toward attainment of its laudable goal of eliminating discrimination, the administration has got itself entangled in a mere vote-making maneuver.

The Senate will vote Friday on the limitation of debate on the motion to take up the administration's FEPC bill, and Senator TAFT has announced that he will support cloture. Even if the preliminary filibuster is thus broken, however, it will break out again so long as the administration's compulsory bill is before the Senate. The Republicans, who are also playing political football with the issue, are not likely to agree to a limitation of debate for the sake of getting the Democratic bill passed. They have their own measure to push and will undoubtedly try to substitute it for the administration bill if cloture switches the debate to the merits of the legislation itself.

The House has already accepted the counterpart of Senator TAFT'S voluntary FEPC. Apparently the administration will have to

accept this measure or withdraw from the fight to avoid wrecking the remainder of its program. The choice thus open to the President is not a happy one, but he should have realized that he cannot make campaign promises which his own party has no prospect of fulfilling without placing himself at the mercy of the Republicans.

We have felt that, because of the gravity of the international situation and the demoralizing effect of a filibuster, the Senate should promptly accept the House bill setting up a voluntary FEPC. Mr. Daniels' thinking seems to be running along the same line. The President could salvage some credit for himself and his party by asking his Senate leaders to eliminate the compulsory provisions of the bill. The alternative promises to be another fiasco that would give a hollow sound to fresh promises from the stump.

(The editorial entitled "No Argument for FEPC" is from the Washington Evening Star of May 14, 1950:)

NO ARGUMENT FOR FEPC

SENATOR BENTON'S appeal for adoption of a compulsory FEPC bill was not based entirely on the fact that Russian propaganda plays up racial discrimination in this country. But the Connecticut Senator's argument, to the extent that it was based on this ground, is unworthy of serious attention.

It is true, of course, that there is racial discrimination in the United States. It is also true that the Russians are doing their best to make capital out of that fact. But it hardly follows that we should try to combat Russian propaganda in other parts of the world by passing a law which can be expected to do a great deal more harm than good in this country.

In this newspaper's opinion, a compulsory FEPC law, wholly aside from its dubious constitutionality, would be thoroughly bad in its effect on race relations in this country. Because the Senate bill does not cover employers of fewer than 50 persons, Senator BENTON makes the curious secondary argument that it is unobjectionable because it would not apply to 98 percent of the enterprises in this country. What does he think the Russians would say if we were to pass a law ostensibly safeguarding the rights of people in 2 percent of our business establishments and ignoring those in 98 percent?

The real ground for opposing the FEPC bill, however, has nothing to do with the number of enterprises that would be affected by it. If the bill is passed it will have to be enforced, and it is ridiculous to suppose that it will not be enforced. But in the South and perhaps in some other sections of the country it could be enforced only at a price of dissension and bitterness far exceeding anything seen in this country for many a long year. That is not the way to improve race relations. If we want to wipe out the progress that has been made and foment racial hostility the way to do it is to pass the Senate FEPC bill. And if Senator BENTON is worried about the Russian propagandists, he ought to think of what they could do, not only before, but after the FEPC bill became law.

(A very splendid article appeared in a number of newspapers written by Raymond Moley and entitled "FEPC Faults," which is as follows:)

FEPC FAULTS

(By Raymond Moley)

Several arguments have been advanced for the fair employment practices bill, now before Congress, that should be dragged out for close examination. For if a piece of legislation is enacted under the persuasive influence of fallacious reasons, we shall have fallacious law.

The President's Committee on Civil Rights, from which this measure was derived, included lawyers, and at least one was a good lawyer. But it argued in a manner that would hardly be adequate in any court. It used the old tricks of political dialectic. One argument, embellished with a fine chart elaborately drawn, was intended to show the great number of discriminatory acts by employers and others. This showed business to be the greatest offender, with labor comparatively sinless. These compilations of alleged cases of discrimination also showed cases by race and religion. This illustrative material was drawn from the records of the old Fair Employment Practice Committee set up by President Roosevelt to deal with discrimination in the war effort.

The cases cited were complaints. They were not proved cases. In short, the word of the complainant is taken as proof of discrimination. This would be like calling an error on an umpire every time Manager Leo Durocher makes a complaint.

Another argument seriously advanced is that it is a good thing to pass a law in the hope that it will never be used. Thus, Congress is asked to pass a law with severe penalties in it and involving a big bureaucracy which after all is designed merely as a piece of moral advice. But all experience shows that laws that are unenforced are worse than no laws. They remain as festering sores, often the means of blackmail and a broad invitation to corruption. If it is possible to end discrimination by law, which is very doubtful, let the law be enforceable and let it be enforced. A law which is intended as a bluff, which is merely passed to appease some minority group, is a snare, a delusion, and a fraud.

Another argument advanced by the new Senator, BENTON of Connecticut, is that Russia and other nations reached by the Voice of America—which the Senator used to run—will be deterred from accusing the United States of denying people their civil rights. Aside from the ridiculous idea that Russia could impress even its satellites with a tale about civil rights, this argument is rooted in the proposition that laws are seriously to be passed by Congress not for the maintenance of peace and justice at home, but for use as propaganda abroad. It is, however, exactly what might be expected from a professional propagandist trying to act like a lawmaker.

Another fallacy implicit in all the arguments for the bill is the suggestion that because there is discrimination, the only way to deal with it is by law and Federal law at that. To argue that a Federal law is necessary because a State law won't work is to say that such pious gestures as the New York law won't work. Well, it doesn't work well. It, too, is a bluff, because no serious supporter of the law, including Governor Dewey, expected it to work. It was a watered-down version of what minorities wanted passed to win their political support.

Separation of Mail Pay From Airline Subsidies

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, May 18 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial appearing in American Aviation on May 15, regarding my plan for separating the mail pay from the subsidy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THANKS, SENATOR

(By W. W. P.)

At last there is official recognition in high places that the airlines of the United States are not being subsidized by mail pay.

If there is any subsidy involved in air-mail payments, the subsidy is on behalf of the communities and users of the air service.

No less than a report of a committee of the United States Senate puts this issue squarely on the record for the first time where it really counts.

Senator EDWIN C. JOHNSON, Democrat of Colorado, chairman of the Senate Committee on Interstate and Foreign Commerce, has just made an interim report on the separation of air-mail pay from subsidy.

"The subsidy need is clearly not a subsidy to the airline, which is merely rendering a public service for a fair return," his report says, "but goes to the passengers, shippers, and air-mail patrons of the communities the airline serves."

So Senator JOHNSON proposes to charge up to the communities that don't pay their way the additional costs involved in the air service. That's beginning to call a spade a spade, to place the burden of cost responsibility where it belongs. It is refreshing, for once, to see a report that doesn't accuse the airlines of gorging themselves at the public trough.

Senator JOHNSON said that a careful reading of the testimony before his committee last year revealed that there was agreement in general that airlines carrying only long-haul business and servicing only a few high-density points could operate profitably without subsidy; or, to put it another way, that the certificate requirement compelling the airlines to serve a large number of small stations, or to carry predominantly short-haul traffic, absorbed most of the profits earned in the long-haul high-density business and was the basic reason why subsidy was required.

Thus, he added later, if management economy and efficiency are attained, the subsidy rests squarely upon the community whose revenues are insufficient to pay the cost of airline service.

Senator JOHNSON is now proposing that subsidy for domestic air transportation should be specifically identified and presented to Congress on a community basis, and he is recommending that legislation be passed by Congress directing the determination by communities of the amount of subsidy required to support the airline services presently certificated to each community within the United States.

While we commend the Senator most heartily for his frank and honest attribution of air-mail costs to communities, is there not a danger in carrying such an allocation to an extreme?

The airlines were once a political football, up to the creation of the Civil Aeronautics Board. What is needed is a stable national transportation system—something that can't be tinkered with each year by a partisan appropriations committee of Congress bent on removing air mail from communities in States that happen to be dominated by the minority political party at the time. Any return to the insecurities and inequities inherent in political control would be tragic.

However, the Johnson report is salutary in many respects and begins to finalize the question of costs of air service to small towns. As we have pointed out many times before, the national airline system could be made immediately self-supporting and immediately profitable—without mail pay—by

confining it to high-density routes. We still believe that the CAB is the proper agency for determining what service needs to be continued, but Senator JOHNSON'S committee is to be commended, at this point at least, for bringing some vital issues to the front.

Our Great American Heritage: Liberty

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 18 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a winning essay by Jeanette Stanzil on the subject Our Great American Heritage: Liberty, from a recent issue of a Three Lakes, Wis., newspaper.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WINNING ESSAY IS PUBLISHED

The essay of Jeanette Stanzil, Three Lakes, Wis., which won first place in the American Legion essay contest on Our Great American Heritage: Liberty, is reproduced in full as follows:

" 'Four score and seven years ago our fathers brought forth on this continent a new nation conceived in liberty and dedicated to the proposition that all men are created equal.' These were the immortal words spoken by a truly great American, Abraham Lincoln. Consider the many battles fought, lives lost, tears shed, and speeches made simply for this one word—liberty. Just a seven-letter word but from it a host of ideas have been drawn, and by it millions of people have lived. However, the meaning of this word could never be completely contained in books or manuscripts for it is indeed a part of all persons living in this free country, today. Liberty is so much alive in every being that it has become a portion of the people's soul and mind. For what could be accomplished without such a heritage? Nothing, because our laws, government, and actions are all influenced by the fact that we are a free people of America. We are greatly indebted to the men who came before us, that were always striving to reach this goal of freedom, and to us it was given and accepted with a deep appreciation.

"Let us then, for a better understanding of this thing termed 'liberty,' break it into proportions more understandable to us. Try to imagine that L stands for love, for it is love and not hate that is the foundation upon which good feelings toward our fellowmen are built. I represents independence, a type of freedom that allows us to develop as we are naturally inclined, and also eliminates a feeling of restraint in all things we attempt, within the margin of the rules and laws. B could mean beauty, the satisfying ray of impressive light that radiantly shines in the eyes and upon the countenance of a person who is free. E for equality, the living symbol of a freedom maintained by opportunities for all, disregarding race, color, or creed. R brings to mind rights and privileges, bestowed upon us by legal documents which were written wisely by the preceding generations. The intelligence and forethought of many famous men has given us such important papers as the Declaration of Independence and the Constitution. Next T expressing truth, for anything based on this cannot die or be destroyed, but lives forever. Last we come to Y which shows us youth, the coming generation which must uphold this great heritage by a greater faith and even stronger courage, perhaps, than others before them did. The responsibility of a free nation rests upon the shoulders of youth and is placed there with care and confidence!

"Whether Abraham Lincoln realized it or not, the words of his Gettysburg Address are still living today, in the hearts and minds of all American people. We should proudly and valiantly protect and defend the undying principles of this Nation if we hope to retain our great heritage—liberty."

Ship Operating Subsidies

EXTENSION OF REMARKS
OF
HON. JAMES J. MURPHY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. MURPHY. Mr. Speaker, I have been thinking further about the debate which took place on the floor of the House on May 5 in connection with an amendment offered by the gentleman from Texas [Mr. THOMAS] reading as follows:

Provided further, That no part of the foregoing appropriation shall be available for obligation, nor any obligation made, for the payment of an operating-differential subsidy for any number of ships in excess of the number of ships which are entitled to receive an operating-differential subsidy pursuant to provisions of any contract, authorization, commitment, or obligation by the commission in existence on January 1, 1950, including within said limitation as to number any ships being constructed or contracted for on said date under a construction-differential subsidy contract, and including also any ships the operation of which may be authorized by the commission under any contracts which may result from any formal applications filed with the commission prior to January 1, 1950.

Mr. THOMAS stated that this amendment was offered in substitution for language contained in the bill on page 304, beginning at line 5 and ending with "1950." in line 10. The gentleman from Texas further stated that the language he was asking the committee to consider is the language submitted to the committee by the chairman of the Committee on Merchant Marine and Fisheries "with only a slight variation."

I am a little concerned that there shall be no misinterpretation or misconstruction of the meaning of the language, particularly the "slight variation" referred to by the gentleman from Texas [Mr. THOMAS].

I wish to say for the record that as a member of the Merchant Marine and Fisheries Committee, it was my understanding that the appropriation referred to shall be available for the payment of operating subsidy for ships not in excess of the number which first, "are entitled to receive an operating-differential subsidy pursuant to provisions of any contract, authorization, commitment or obligation by the commission in existence on January 1, 1950," second, being constructed or contracted for on said date under a construction-differential subsidy contract," and third, "any ships the operation of which may be authorized by the commission under any contracts which may result from any formal application filed with the commission prior to January 1, 1950."

I believe that the amendment as adopted by the House has the effect which I have just stated. However, if there be any question that it has a more limited effect, then I wish to express my belief that the amendment differs in principle and essence from the language submitted to the gentleman from Texas [Mr. THOMAS] by the chairman of the Merchant Marine and Fisheries Committee. I further would like to say that it is my belief that my colleagues of the Merchant Marine and Fisheries Committee believed that the amendment adopted had the meaning which I have just stated and was so considered by them in registering their vote in the House.

A Scandalous Situation: The Knauff Case

EXTENSION OF REMARKS
OF
HON. F. D. ROOSEVELT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. ROOSEVELT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix to the RECORD, I insert the statement issued yesterday by Mr. Justice Jackson, of the United States Supreme Court.

Several times now, I have called to the attention of the House the case of Mrs. Ellen Knauff, a war bride who has had an incredible time since she entered this country as the wife of an American veteran. The latest act in this scandalous situation was played yesterday when the Department of Justice, with unseemly haste, tried to rush Mrs. Knauff out of the country before her legal remedies had been exhausted. The statement of Mr. Justice Jackson makes plain what an unconscionable flouting this was of both the Supreme Court and the Congress.

It was the Knauff case that brought up again the whole question of the power of the Department of Justice to exclude an alien—even a war bride—without a hearing. It has been my continued view that the issue here is far more important than this one case. I say as flatly as I can that the Immigration Service is guilty of arbitrariness in its handling of this case. I say that this highlights a threat to the whole philosophy on which our Government is based—the system of checks and balances. It is time we checked these misusers of a power they were given as a wartime measure. It is time we took this power from them and properly exercised our duty to protect the country against arbitrariness in the executive branch.

To accomplish this, I have introduced H. R. 7476, which has been referred to the House Committee on the Judiciary.

I hope that this latest demonstration of the need for this legislation will speed the committee in its deliberations.

TEXT OF MR. JUSTICE JACKSON'S STATEMENT GRANTING STAY

As circuit justice for the second circuit, it is my almost invariable practice to refuse stays which the court of appeals or its judges have denied. This because they are closer to the facts, have heard the merits fully argued, and because I have confidence that they would grant stays in worthy cases. This rare departure from practice may call for a word of explanation.

The decision of the court of appeals denying petitioner relief on habeas corpus was handed down yesterday, and about 4 o'clock yesterday afternoon stay was denied. The court suggested to counsel that he could apply "at Washington" for a stay, and counsel announced a purpose to do so. Immediately, however, the Department of Justice notified petitioner to be ready to be shipped on a commercial plane leaving New York this morning at 11 o'clock. This scarcely gave counsel time to prepare an application for stay here and no time for me to hold a hearing on it. As the case comes to me, I am informed that preparations are complete at the airport to deport her in a matter of minutes.

Bundling this woman onto an airplane to get her out of this country within hours after the decision of the court of appeals, if accomplished, would have two consequences. First, it probably would defeat this court's jurisdiction to consider her petition for review. Second, it would circumvent any action by Congress—which the Department has vigorously opposed—to cancel her exclusion, already unanimously taken by the House of Representatives. In this connection the Department of Justice was given hearing by a subcommittee of the Judiciary Committee of the House of Representatives. After considering the objections of the Department of Justice, the committee, nevertheless, reported favorably on the bill and the House of Representatives, with rare unanimity, decided the exclusion order should be canceled. That bill, together with a like measure introduced in the Senate, is now before the Senate Judiciary Committee for consideration. There appears also to have been an agreement by the Department with the Congress to withhold action under such circumstances, but I have been unable in the time allowed to ascertain its text.

If the Department had at any time shown even probable grounds to believe that presence of this woman a few days more in this country might jeopardize national security, even infinitesimally, I should refuse the stay. But the Department of Justice has not only had opportunity, it has been importuned to show courts or Congress any reason for its exclusion order.

Not only is the petitioner unable to learn what the specific charges against her are, but neither can the courts which are asked to play at least a consenting part in her exclusion, nor the Congress, which is in the midst of an effort to stop it. It overtaxes credulity to believe that it would jeopardize the security of the United States to impart to coordinate branches of the Government some inkling of the charges against this woman.

That the purpose of this haste to rush her out of the country is to defeat any effort to have this Court review her present habeas corpus proceeding, appears from statements apparently made to the press by the Government's counsel in the court of appeals. We are not ordinarily satisfied with newspaper evidence, but the speed of events has left no time for verification. The statements of several reputable newspapers are in substantial accord: After the court suggested that petitioner's counsel could apply at Washington for a stay and he said he would do so, the Government attorney answered, as quoted in an Associated Press dispatch appearing in the Baltimore Sun, "She may not be here then." The New York Herald Tribune attributes to him the statement that she may be deported by the time action is taken and that the case would then be academic. The New York Times quotes him as later stating he would advise the Department of Justice that "There are no legal impediments at this time which would prevent her immediate deportation." This leaves no doubt that the purpose is to defeat the jurisdiction of this Court as well as the determination of Congress.

It may well be that this removal eventually will be sustained. But to consummate it while the right to do so is still in litigation cannot be permitted, and to attempt to do so after a bill to forbid it has already passed one House by unanimous vote and while it is pending in the other is alleged to be a most unusual departure from administrative practice. Nothing has been produced to show why this particular petitioner should be so discriminated against. To stand between the individual and arbitrary action by the Government is the highest function of this Court.

It is not for me to now reach any conclusion as to the merits of the decision below. But to grant writs to protect the Court's jurisdiction to inquire into the matter is one of the most usual functions of an individual Justice. Because the Government's action since decision by the court of appeals would have the effect of foreclosing petitioner's right to be heard in this Court, I grant the stay.

ROBERT H. JACKSON,
Associate Justice, Supreme Court of the United States.

MAY 17, 1950.

An Iowa Farmer's Farm Plan

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. JENSEN. Mr. Speaker, under leave granted to extend my own remarks in the appendix of the RECORD, I do so for the primary purpose of giving well-deserved publicity to a timely article written by a real dirt farmer and which appeared in the Malvern Leader, of Malvern, Iowa on April 6 last, sent to me by my friend, Ed E. Eaton, of Sidney, Iowa, as will be noted. His letter in part and Mr. Gregory's plan follow:

MAY 4, 1950.

Mr. BEN F. JENSEN,
Congressman from Iowa,
Washington, D. C.

DEAR BEN: I have taken an article from the Malvern Leader, Malvern, Iowa, issue of April 6, 1950, which I am enclosing and asking that you give it special attention.

This article was written by one of your Mills County constituents living on a farm abutting Highway No. 275 just north of Tabor, Iowa. He is extremely bright and a progressive farmer. His article is so sensible that it has been extremely well received wherever it has come to attention.

Incidentally, the article would seem to me to rather substantially support the position you have taken with regard to the proper method of approaching the flood control problem as I have noticed from various press releases.

In my opinion, BEN, this article should at an appropriate occasion be inserted in the CONGRESSIONAL RECORD. I have Mr. Gregory's permission that this be done and I personally feel that your use of it in this manner would bring to it some deserved attention and also the thinking that is becoming more and more prominent in this section.

If you do not feel that you can make any use of the article, I would appreciate your so advising me as it actually is my intent to assist in giving it the highest publicity possible. I would feel that you should be first granted the opportunity of making whatever use of it you might find desirable.

I must close at this time. With best personal regards, I remain

Yours very truly,

EDWARD E. EATON.

[From the Malvern (Iowa) Leader, of April 6, 1950]

AN IOWA FARMER'S FARM PLAN

(What do operating farmers who also must pay taxes think of the various farm plans which come from Washington? Recently Warren Gregory wrote the following article on this subject and the Leader at once asked permission to publish it. Mr. Gregory's farm lies just north of Tabor in an area which is known as the most intensively conserved neighborhood in Iowa. He knows at first hand the problems of both the soil and profitable management of a farm. The Leader believes the enactment of a proper farm legislation one of the most vital problems facing the United States. We cordially urge our readers to study this and invite comment on it, no matter whether you agree or not. Reproduction rights of this article are reserved.)

(By Warren Gregory)

The farmers of this country have been wooed and proposed to with numerous plans; some, no doubt beneficial and most of them very costly. Why must all of these plans emanate from Washington? Why not from the farmer? Has he been asked what he desires? We need nothing so ghastly as the Brannan plan, which calls for much unnecesssary, luxurious Government assistance. We need no pay for planting a crop, primarily for our own good, no payment for legume seedings to plow for our own soil fertility benefit.

Have we any surpluses? The food and agricultural organizations of the United Nations are worrying themselves with the problem of increasing world food production. They maintain this is a problem of education, engineering, and science. They also maintain that unless the world food problem is solved, there will be another world war, which will end civilization.

Our so-called emergency measures cannot continue indefinitely without socialism resulting.

Washington says the Republican Party has no farm plan; they say the Farm Bureau and other farm organizations have no farm plan, even though they are very critical of other plans. If we, of the Midwest agricultural regions wish a plan (instead of a dole); if we wish free enterprise (instead of Government dictatorship) and finally, if we desire to be the self-reliant people we once were, we must come forth with a workable project for agriculture of our own. We must consolidate our desires and needs immediately. These fraudulent Government programs must be halted now and something conservative, understandable, and practical instituted in their stead.

The population of the United States is increasing by leaps and bounds—about two to two and one-half million people per year. How can we feed this increase in the future? Must we semistarve our people for 10 years, because the population and production curves cross, in the near future?

Our Government seems to operate on two principles—scarcity and fear. Surpluses do not go along with socialism, any more than cats go along with rats. Scarcity is socialism's mate. No socialistic government, or country, has enough to eat, to wear, or to consume, without governmental subsidization and resulting suicidal taxation, borne by the consumer. Fear is the greatest weapon of our Government— fear of surpluses, fear of war, fear of depression and fear of long-continued peace and the loss of usurped power, under multitudinous emergency acts.

Our surpluses are all fictitious, so far as food is concerned. The Government has billions of dollars of the taxpayers' money invested in monuments to poor farm management and has control of our so-called food surpluses, as the farmer and feeder will learn much too late. Our livestock population is at a low ebb. We have fewer head of livestock, per capita, than we had in 1918. Our national income is still at an all-time high. Our gainfully employed are, practically the same number, if you consider the people who actually want to be regularly employed. R. C. Pollock, of the American Meat Institute, estimates we will have 171,000,000 people by 1960 in this country. We must gear our conservation practices and future production to meet that number if Mr. Consumer is ever to have Mr. Brannan's so-called cheap food.

Our Government in Washington seems to aggravate strikes and, certainly, stands at the top of the list in perpetuating labor strife. We cannot blame labor or management for this. The blame lies in mismanagement of labor's problems, and interference with management's difficulties, by our many Washington agencies.

We stand at the goal line of the most prosperous years and the greatest industrial expansion this Nation, or any other, has ever known. Let's not drop the ball.

We realize, only too little, how near we are to complete socialism. The control of industry and labor and Mr. Brannan's plan are all we need to complete it. The Government is, each day, destroying initiative to work, to produce and to operate one's own business in a businesslike manner, by bureaucratic meddling.

Why have all these plans when they are all on a day-to-day, month-to-month basis?

Why not forget the MVA? It will only mean more TVA and control of the vast resources of the Missouri Valley by Government. Why not continue with the Pick-Sloan plan, which is already under way? This question also applies to the Ohio, Mississippi and all other river projects.

Let us have one long-range plan, the farmers' own plan.

We have one heritage in this country and have been rapidly depleting it. "Your land and mine," as Henry J. Taylor so often calls it. We do not seem to be profiting by experiences of other peoples, who now are afflicted with famines. This heritage does not belong to us. We merely have the use of it—either to spoil and waste or to improve and conserve. We came here with nothing and when we leave this earth can take nothing with us.

It is not feasible to solve these agricultural problems jointly? The problems are: surpluses (if any), cheaper meats, flood, food prices and costs of production.

We need to conserve our soil—the greatest of all our resources—and improve its productivity and tillability. Our heritage will then be passed on to our children in better condition than when we, of this generation, received it. Two simple words will cure these and many of our other ailments: Soil conservation. Practice of soil conservation and proper rotation practices in all agricultural regions will solve these problems and many more.

1. They will hold down the production of surplus crops on marginal land.

2. They will furnish pasture and forage to enable us to increase livestock.

3. Fertility will be increased manyfold, in case of war or other need for greatly increased production, in line with population increases.

4. The cost of production of meat animals will be lowered for the farmer.

5. The cost of food, including meat, will be less to the consumer, without the imposition of other taxes.

6. Food production will increase, whereby we need not starve for 10 or 20 years, in a helpless state, striving to make the production curve again parallel the population curve—instead of cross it.

7. It will, as has been proven, minimize dust storms and crop failures, so far as human effort is concerned.

8. It will tend to stabilize and raise our water level and forestall water shortages.

9. It will put agriculture on a better basis financially; not dependent upon any one crop in particular.

10. It will create a more stable demand, by agriculture, for industrial products—such as automobiles, appliances and home improvements.

11. It will control flooding of rivers and streams, by eliminating run-off, in making the rain and snow soak into the soil, when they fall.

12. It will do away with Government subsidy payments on agricultural crops, which payments are made at the expense of the taxpayer.

13. It will tend to stabilize population in the rural areas, as farming will be more attractive to the younger generation on a good fertile farm, than one of those submarginal, eroded, semi-arid ones.

14. It will discourage Government interference with farming operations, so the American farmer may be happy, prosperous and on good terms with labor (his consumer).

15. Our streams will run clear once more, unhampered by silt and debris, abounding with fish, as they once were.

16. Recreational facilities will be increased, on large farm ponds, rivers and in our farm wood-lots and forests.

17. Wildlife protective cover will be improved, which will automatically restock our game birds and animals.

18. Farming will require less man hours, less cash outlay for expensive, seldom used equipment, but savings will be offset somewhat by construction of new fences and conservation work.

19. It will require two things to bring about all of these improvements: the technical assistance of our Soil Conservation Service and the will of the farmer to stand on his own two feet.

20. Last, but not by no means least, it will create that thing toward which we are all striving: A stable agricultural economy.

Why Not Repudiate Yalta's Betrayal of Poland, and Weaken Soviet Grip?

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. FURCOLO. Mr. Speaker, by request, I am including the following editorial from the May 13 issue of the Saturday Evening Post:

WHY NOT REPUDIATE YALTA'S BETRAYAL OF POLAND, AND WEAKEN SOVIET GRIP?

(By Ann Su Cardwell)

America, struggling against an adversary that is deadly serious, is looking for friends, and our Government has declared its intention of attempting to win the peoples in the satellite countries for the west even though their puppet regimes remain tools of Moscow. Poland is a case in point.

A conference between Churchill, Roosevelt, and Stalin in the Crimea resulted in what is known as the Yalta agreement (February 11, 1945). This agreement was never presented to the Senate for ratification, and was not a treaty but only an agreement between the three Chiefs of State. The Yalta accord specified that the "Provisional government [set up by Stalin] which is now functioning in Poland should therefore be reorganized on a broader democratic basis," and that this new government shall be pledged to the holding of free and unfettered elections as soon as possible. Furthermore, the three heads of government (Churchill, Roosevelt, Stalin) consider that the eastern frontier of Poland should follow the Curzon line, with digressions from it in some regions of from 5 to 8 kilometers. They recognize that Poland must receive substantial accessions of territory in the north and west * * * final delimitation of the western frontier of Poland should thereafter await the peace conference.

This Yalta accord, making Stalin a present of over 47 percent of Poland, conspired with geography, circumstances, the Red army and the NKVD to make it possible for Stalin to transform what remained of the helpless country into a Soviet province in everything but name. Soviet citizens masquerading as Poles now govern Poland according to Moscow's instructions. Nothing was guaranteed Poland in the west. Stalin gave Poland some German territory east of the Oder and Neisse Rivers, and this act, as well as the expulsion of thousands of Germans from western Poland, was confirmed at Potsdam.

Yet Poland, although handed over to the Kremlin, need not be lost to the west unless the west so wills. The Polish people remain pro-American in sympathies, separated from us only by the Yalta betrayal, the heaviest blow dealt them during all the war and occupation years. Polish distrust of us will persist as long as our Government regards the Yalta agreement as binding. Repudiation of Yalta would sweep it away and give a lift to lowered American prestige not only in Poland but throughout all eastern Europe.

What could Moscow do? It could multiply lies and vituperation. But it could not present a case against the United States, because Stalin has never made any pretense of living up to the Yalta terms. Out of nearly 40 Yalta agreements, according to President Truman, Stalin chose to honor only that concerning Japan. In so doing he was acting to his own advantage and our hurt.

The question arises: Has an agreement any validity when its conditions are ignored or deliberately misinterpreted by one of the contracting parties? For 5 years, to our great disadvantage, we have honored the Yalta agreement. And we may expect to be bullied, deceived, insulted or outsmarted as long as we hold to that phantom accord. At Yalta the Moscow men thought they had taken our measure. The records of the conference suggest that they were right.

Stalin's plans, as later events disclosed, required his possession of Poland, "the keystone of the European arch." On that subject he was adamant. Reporting to Congress on his Yalta trip, President Roosevelt said, "The whole Polish question was a potential source of trouble in postwar Europe * * * we came to the conference de-

termined to find a common ground for solution, and we did." The Big Three thought that by assuming the peacemakers' authority they could settle the "Polish question" once and for all by turning Poland over to Stalin while the Poles had no means of appeal.

Thus the Atlantic Charter was abandoned. At Yalta, America was made an active participant in an act of aggression against Poland and obligated to see that act executed.

Now, in 1950, America wants the friendship and support of the Nation betrayed in 1945. To get it we must make what restitution we can. Our repudiation of Yalta would revive faith in America and create insuperable difficulties for those entrusted with the execution of the sovietization program. It would regain for us the friendship of more than 20,000,000 highly useful people, and permit us to respect ourselves—which, incidentally, is one thing Mr. George Kennan says we must do if we are to insure our own security.

Armed Forces Day

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. HELLER. Mr. Speaker, recently the public has been confused because some utterances of important public persons have indicated that the international situation is more dangerous for us than at any time in recent years, and yet President Truman has said that the world situation is far, far better than in 1946.

What both parties say is true.

In a sense the situation is worse than before, because the Communists have completed or almost completed their control of China, with 450,000,000 more people added to their empire, and that unhappy country, with its enormous manpower and other potentials, in their hands. At the same time our hold on Berlin, always precarious, is threatened anew.

Yet what the President says is also true, because Communist power in Europe, which affects western civilization far more importantly than China, was at its height in 1946. Yugoslavia was strongly allied to the Soviet Union. The Red Army was still in Iran despite the United Nations. Jews and Arabs were preparing for armed battle in Palestine. Egyptians were in open revolt against Britain. The independence of India was threatening civil war. The world grain supply was three and a half million tons short. The economic condition of Europe was worsening rapidly.

Every one of these situations has taken a turn for the better since. There is probably no immediate likelihood of war, though it is always a possibility.

Probably the biggest single factor in the change is the fact that whereas in 1946 the United States was in the midst of the most rapid and wasteful disarmament in history, now we have rearmed and at the same time allied ourselves with the countries of western Europe in what is not only an economic and political tie but a military one as well.

In this present situation of international tension it is our defense forces which will do most to keep the peace. At the first aggression our Air Force will take to the skies with instruments of swift destruction to enemy centers. This is a great deterrent to war because aggression always feels out weakness.

After that all three arms of our defense services will play a balanced, cooperative, and powerful part in war. The Navy will keep the seas open and with its carrier take mobile air bases over the world. The Army with its ground troops and the Air Force with its tactical support and its transport will be able to launch offensive movements against the enemy. Meanwhile, we are building stout radar and tactical defense to protect our own homeland against enemy strikes. We may well hope and pray there will be no new war, but, if it should come, we are not now helpless and confused as we would have been in 1946, and that fact itself is our best ground for confidence that there will be no immediate war.

The Hitlers and Stalins of the world never start a war unless they think they can win. It is for us to see to it that they know they cannot win. "The strong man armed" will keep his own house, as the Bible says. It is for us all, as Americans, to see that this strength of our defense forces is maintained and incremented as long as the threat of Soviet domination hangs over the world.

Pie in the Sky

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. MILLER of Nebraska. Mr. Speaker, I listened to the President's speech at the Democratic rally in Chicago and I read it in the RECORD. Mr. Truman attempted to write a prescription for the Nation that would let the people have their cake and eat it, too.

The President called his party a "party of dreamers." I guess we are all dreamers, and it is well that we are. We want better living conditions for all. We want to conserve our resources. We want to be a Christian nation. Indeed, the President painted a flowery picture of our aspirations. But there are certain hard realities of life that we must face without cringing. Our ancestors did not build the greatest nation on earth, with the highest living standards the world has ever known, by squandering their hard-earned savings in socialistic schemes. I am sure our people would feel a lot better if they knew we had somebody at the helm with a clear understanding of the hard facts that face us and a determination to solve our problems with the help of the best brains available, rather than resorting to political maneuvering for the purpose of perpetuating his party in office.

He held out glittering promises of future well-being if the people would elect to Congress the candidates who believe as he does. He offered something to everyone. He promised Federal aid to education, socialized medicine, socialized housing, the Brannan farm plan, and a lot of other costly schemes. He left the impression that the Government can give them all these without cost. He failed to tell the people that the adoption of this program would add another $25,000,000,000 a year to the Federal budget. He failed to mention the hard fact that Government produces nothing and can give the people nothing without first taking it from them in more and higher taxes or by increasing the debt. He carefully avoided telling the people about the huge deficits he is piling up each year. He did not mention the fact that in 4½ peacetime years he spent more money than the first 32 Presidents spent in 152 years of our Nation's history. He failed to explain that this deficit spending is debasing our dollar and that the $100 bonds they bought in 1940 for $75 will today only buy $60 worth of goods in the market place.

Mr. Truman failed to clear the air of the doubts we have in regard to our international problems. In recent speeches and whistle-stop talks he said that conditions are much better than they were in 1946, but his military and foreign affairs advisers warn us that conditions are very critical. The military are asking for more money for defense and a continuation of conscription. He avoided mentioning the "Pinks" and those in Government who have been playing "palsey-walsey" with the Communists. When the Committee on Un-American Activities was attempting to route these "Pinks" out of Government, he said, on 9 different occasions, that the Republicans were digging up "red herrings." He did not announce that his Secretary of State, Dean Acheson, and himself were now ready to turn their backs on these traitors. Nor did he assure the people that his hand picked Committee in the Senate would now cease its attempts to smear those who brought charges against certain persons high in policy making Departments and begin to make a real investigation.

He failed to tell the people about the Pendergast machine in Kansas City, how it first placed him in office and later helped him to purge an able Member of the House of Representatives who didn't take orders. He carefully avoided mentioning the tie-up of his Administration with gangsters and gamblers who completely control political machines in the big cities.

Conspicuous by its absence was any mention of the recommendations of the Hoover Commission for reorganizing the Executive Branch to effect a saving of billions of dollars in the cost of Government. He has sent several plans up to the Hill but in most of them the President says, "The taking effect of the reorganization included in this plan may not in itself result in substantial immediate

savings." But "substantial immediate savings" are what the people are looking for. No, the President is giving lip service to the recommendations of the Hoover Commission but his Department and Bureau Chiefs are vigorously opposing any changes in their agencies which would cut expense and thousands of employees off the swollen payrolls.

The President spoke glowingly of Thomas Jefferson and how the Democratic Party stood for the principles of Jefferson. He failed to mention the fact that Jefferson had a consuming fear of big government as expressed in his statement that "Those people are best governed who are least governed" and, "I place economy among our first and most important virtues, and public debt as the greatest danger to be feared." I am sure, Mr. Speaker, if Mr. Jefferson were to return to this earth and would see how the Democratic Party has been debauched, he would have an attack of angina pectoris or suffer a heart block that would be fatal.

Mr. Speaker, the Democratic Party has no monopoly on being against sin, or on wanting this Country to be a strong Christian Nation. It has no monopoly on the desire for a peaceful world and a prosperous economy. It is nice to be an idealist and a dreamer. There are certain facts we cannot ignore and we must face up to the hard, cold realities of life. The President failed to present these facts to the people. His speech in Chicago and his whistle-stop talks were of a "pie-in-the-sky" and "heaven-above-all" type designed to promise something to everybody without cost. He should remember he cannot "fool all the people all the time."

Whistle Stop at Wendover

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of May 11, 1950:

WHISTLE STOP AT WENDOVER

Wendover, Wyo., is just a railroad division point with a population of 22 persons, but there were 400 people on hand when the Presidential train (Presidents do not have to worry about railroad strikes) pulled into the yards on Tuesday. Mr. Truman appeared upon the rear platform to speak warmly of "my good friend, JOE O'MAHONEY, who happens to be a Senator from this State." It was always good, he said, to come back out West. Wyoming was a progressive State—the first, in fact, to give women the right to vote. "Can you imagine," the President asked, "what some of the stuffy reactionary easterners had to say about the fact that you had woman suffrage out here? Listen—listen to this—you will like it—you will want to remember it. The editor of a prominent magazine published in New York said about Wyoming when you gave women the right to vote—now this is a quote: 'This unblushing female socialism defies alike the apostles and the prophets.'"

The chronology, it seems, was a little out of kilter. It developed later that the President was quoting from Harper's New Monthly magazine of November 1853, whereas Wyoming did not grant suffrage to women until 16 years later. However, the President has made his point: The rugged West and the effete East—the new frontiersmen of the ever-expanding exchequer and the old fogies of the balanced budget.

"Just what is an off-the-cuff whistle stop speech?" wrote our correspondent in his story. "President Truman delivered one today that is regarded on this train as a classic."

"Jumping Joe in Action Again"

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach the following editorial from the Milwaukee Journal of May 8, entitled "Jumping Joe in Action Again." It points up neatly the kind of demagoguery of which the junior Senator from Wisconsin is capable by quoting from an article which he read into the RECORD in June 1949, opposing opening of the FBI files. Without an excuse or a reason, he now demands the files be opened.

"JUMPING JOE" IN ACTION AGAIN

"If the State Department loyalty files are opened, then my charges will be proved," Senator MCCARTHY has been shouting since he started his campaign against the State Department.

Now President Truman has authorized the State Department to open its files in the cases of the 81 individuals that MCCARTHY has termed loyalty risks.

Is MCCARTHY satisfied?

Of course not. Now he charges that the State Department files are ph ny, that they have been tampered with and that the President is guilty of deceit and dishonesty in making them available.

And he demands that the FBI files be opened. These will prove his charges, he says in effect.

Less than a year ago MCCARTHY was against opening the FBI files. On June 16, 1949, he read on the Senate floor an article by David Lawrence explaining in detail the great damage that would be done by such action. The article pointed out that publicizing of FBI files harms the FBI, endangers its informants, and imperils the reputation of innocent persons.

Yes, the man who didn't believe FBI files should be opened last June now wants them opened.

And does anyone think for a moment that if the administration did decide to open the FBI files (which it shouldn't and wouldn't) MCCARTHY would be satisfied. Of course he wouldn't. He'd shift ground again. He would retreat to some further position, hurl some new charges or find some new names to throw at the administration.

They tell a little story about "Jumping Joe" in Washington these days. It fits him perfectly. It goes like this:

"MCCARTHY is a slippery fellow. Every time you think you've caught up with him, he's down the river on another cake of ice."

Taxation of Mutual Savings Banks

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, it is a pleasure for me to insert the following thought-provoking address delivered by our distinguished colleague, WALTER A. LYNCH, before the dinner meeting of the Savings Banks Officers and Auditors and Comptrollers Forum at the Hotel Astor, New York City, on May 16, 1950. Representative LYNCH is the New York majority member of the Ways and Means Committee and to his subject he brings a full and seasoned viewpoint founded upon broad experience in the practice of the law and especially in the field of banking and of taxation. His subject was most timely in view of the pending proposal to tax earnings of mutual savings banks about which I shall undoubtedly have more to say at a later date in opposition to the proposal. It would serve all well to read carefully the following obviously well-prepared address:

Mr. Chairman and members of the forum, it gives me great pleasure to be with you today. A life-long ambition of mine has been fulfilled. At long last I find myself in a group of men with so much money under their control that they do not know what to do with it. I do not know whether my choice as the speaker of the occasion is altogether fortuitous from your point of view, especially when you men learn that I am a member of that group of tax gatherers known officially as the Committee on Ways and Means of the United States House of Representatives. I might say that it is a most cooperative committee. I happened to mention to some of the members in the early part of last week that I was scheduled to speak before your group today and that I was at a loss for a topic. With characteristic thoughtfulness for a member of their committee, they came to a tentative agreement last Friday by a vote of 13 to 10 to tax mutual savings banks—thus giving me not only a topic for my address before you today, but also a very good reason for being here.

Before I discuss, however, the question of taxation of mutual savings banks, I think it might be well if you bankers knew something about the Committee on Ways and Means. It is the oldest committee in our Government and is charged with the responsibility of raising revenue for the operation of the Government. It is composed of 25 members, 15 from the majority side and 10 from the minority. Modesty forbids me to extoll the capabilities of the members of this committee, lest you get the impression that I would bathe in their reflected glory. Suffice to say that Presidents and Vice Presidents have, in the course of their congressional careers, been members of this committee and the present Chief Justice of the United States Supreme Court recalls with real enthusiasm the not too distant days when he served on Ways and Means. The problems that confront the committee are many and complex and the pulling and the tugging of conflicting interests is beyond adequate description.

In the category of bills assigned for its consideration are the tax bills of the country, the customs and tariff bills, reciprocal

trade agreements, unemployment insurance, social security, and bills of like nature, all involving revenue. A bill comes before us in one of three ways. It is either introduced by a Member of the House and referred to our committee, or it is prepared by one of the departments and is introduced by the chairman of the committee as an administration bill, or, recommendations are made by the President in his message and from those recommendations the committee works out a bill of its own. Although we talk about the "tax bill of 1950" today, actually no such bill has been introduced. We are still in the deliberative and formative period of the bill and have only reached tentative agreements thereon. When we have come to final conclusions on the various matters that are to go into the bill, it is referred to the drafting service. After it is returned from the drafting service we again go over the bill for final correction and it will then probably be introduced by the chairman of the committee, if he is in favor of the bill. Following this formality, the bill is then referred back to the Ways and Means Committee; we take a formal vote upon it and favorably report it out. We then go before the Rules Committee to get a rule which determines the length of time that will be allotted for debate on the bill and the conditions under which the debate will be held. Usually when a tax bill is reported, we obtain what is known as a closed rule—at least that is what you call it on the majority side—while, if you are in the minority, you protest vigorously against the gag rule. The purpose of the closed rule is to prevent any amendments from the floor and you must take it or leave it. You can imagine the precarious position of those who are caught in the present net that has been spread to catch the so-called loophole tax evaders when these provisions are tied up with provisions that would reduce obnoxious excise taxes. Whether or not there is a loophole, or whether the committee discovers new sources of tax revenues heretofore not tapped, the situation is equally precarious for those who have previously legally enjoyed tax exemption.

In view of the fact that the proposed 1950 tax bill will contain substantial excise tax reductions, it is fair to assume that in an election year the Congress will vote for a bill that will reduce taxes, even though there may be some things in the bill with which they might not generally agree. When the bill has passed the House it is sent to the Senate and referred to the Senate Finance Committee which, in turn, goes through a procedure somewhat similar to that before the Ways and Means Committee. After the Senate has exercised its prerogative as "elder statesman" and has amended the bill to the collective satisfaction of its Members, it goes into conference and then the hatchet work is done. I might say that the conferees are selected by seniority. So that you might understand more clearly what this means, I have been in Congress 11 years—I am now in my eighth year on the Committee on Ways and Means—and for the first time I was selected as a conferee on the recently passed tax bill affecting life-insurance companies. I might say that I was selected for the reason that some of my seniors stepped aside so that I might be chairman of the conferees. I recite this to you in order that you might know—and particularly that the presidents of savings banks in Bronx County might realize—the importance of a conferee and might understand the necessity of urging the reelection of your speaker of the evening.

We go into these matters rather thoroughly and it was from a study of the history of mutual savings banks that I learned, for instance, that the original founders of mutual savings banks were religious leaders and that the members of your organization have some of the solid religious convictions of your forebears in the mutual savings banks industry.

Moreover, I, being both a lawyer and an elected public official, and at the same time having very firm religious convictions of my own, needed only to consult the counsel of Thomas Jefferson regarding the close tie between thrift and religion. Jefferson wrote John Page, "Would a missionary appear, who would make frugality the basis of his religious system, and go through the land preaching it up as the only road to salvation, I would join his school, though not generally disposed to seek my religion out of the dictates of my own reason, and feeling of my own heart."

Of course, as demonstrated by the fable of the ant and the grasshopper, thrift is not universally embraced as a virtue. From Publius Syrus, the Roman, we have the assertion that frugality is misery in disguise.

Now I must confess, in all candor, that my own view lies somewhere between Thomas Jefferson on the one hand and Publius Syrus on the other. I would not accept the view of the philosopher that, "Let us all be happy and live within our means, even if we have to borrow the money to do it with."

But I believe my own conviction was best expressed by Samuel Johnson, that "A man who both spends and saves money is the happiest man, because he has both enjoyments."

I make no pretense to having the fervent, rigid adherence to thrift that may be required for membership in your association. I must say that I admire the beneficent works of the Reverend Dr. Henry Duncan (who perhaps appropriately founded the first modern savings bank at Ruthwell, Scotland, in 1810), as well as his counterparts in this country, including New York's own Thomas Eddy and DeWitt Clinton.

But to come back to 1950—as you know, the Committee on Ways and Means is in the process of drafting a major tax bill. The committee's work was initiated in response to a Presidential message suggesting that some excise tax reductions were in order at this time, provided the resulting loss of revenue was made up through the enactment of loophole-closing legislation. The committee is aware, as I am sure you are also, of the desirability of reduction in the excise field in order that we may stimulate business and maintain a high level of employment. The excises are still at their wartime peak and in many cases the rates are almost punitive. Some of these rates were imposed during the war in an effort to discourage the consumption of strategic material and the use of labor needed in the war industries. These rates are inappropriate at the present time. We are in a so-called peace economy, in which we are endeavoring to stimulate production and to absorb in employment, not only those who were in the armed services, but the 500,000 or 600,000 of new annual entrants into the employment market. We are confronted with depressed business activities in certain fields and while the latest labor reports show that 60,000,000 people—the largest in the history of our country—are now employed, we must see that there is no deterioration in the standard of living of this increased labor group. To do that we must stimulate business, particularly in those depressed lines, such as jewelry, furs, leather goods, and other similarly affected industries. In some cases involving the admissions tax on movies, theaters, dining room service in hotels, where a singer is engaged to sing the Star Spangled Banner, and in so-called cabarets and night clubs which employ hundreds and thousands of people, the 20-percent tax falls unduly heavily. In other cases involving the tax on transportation of persons a real hardship is experienced, while the tax on transportation of property is so recurrent that in the case of a manufactured article it constitutes a substantial portion of the cost of production, as the transportation of each part is taxed as well as the finished product. In other cases such as in beer and light wines, the taxes unquestionably discriminate against persons of comparatively modest means. In short, there can be no doubt that excise revision is highly desirable.

The task of the Ways and Means Committee in its endeavor to reduce excise taxes might indeed prove somewhat pleasurable if, first, we could satisfy anyone without complete elimination of the tax on the article in which he is most interested, and, secondly, if we were relieved of the responsibility of raising, otherwise, taxes in an amount equal to the excises we reduced, in order to prevent the national deficit from growing greater.

Major tax reductions have already been made in two primary sources of wartime revenues, namely, the taxes on corporate and individual net incomes. The feeling throughout the country is today that excise reduction is overdue by reason of the fact that the last wartime increases in the excise rates, made in 1943, were enacted with the clear and distinct stipulation by the Congress of the United States in solemn assembly and enacted into law by the signature of the President, that these excise taxes would be removed within 6 months after the cessation of hostilities.

While the Committee on Ways and Means recognizes the strong merits of an excise reduction program, it is also acutely aware of the fact that the Federal Government is running a deficit of major proportions in the current fiscal year and may show an even larger deficit in 1951 if expenditures are not held to the budgetary levels or business conditions begin to slack off. The staff of the Joint Committee on Internal Revenue Taxation has estimated that the deficit for the fiscal year 1950 will be $6,700,000,000, and that the deficit for 1951 will be $7,300,000,000 even if expenditures are held to the levels contained in the President's budget message. Hence the committee is making a vigorous effort to work out a balanced tax program in which the excise reductions which the committee has tentatively agreed upon and which, as you probably know, involve an annual revenue loss of about $1,000,000,000, will be offset by increased revenues from other sources.

I am sure that you will recognize that it is not an easy task to raise that much additional revenue, particularly from a tax system which is already overburdened and which, through its depressing effects on both consumer purchasing power and incentives, threatens to become a real obstacle to the continued progress of our country.

It is especially difficult to raise additional revenues of this size by the loophole-closing route. Many of the suggestions which the committee has received appear to be meritorious but promise no substantial amounts of revenue. Other suggestions have to be discarded because of the serious administrative difficulties which they would produce, and a good many are unacceptable because they involve changes in the fundamental principles of the income-tax law which are not acceptable to the committee.

Because of this situation it is not surprising that the tax exemptions provided in section 101 of the Internal Revenue Code have received close scrutiny. A good deal of revenue is involved, and, as you know, interest in these exemptions has been stimulated by a well-organized and determined agitation on the part of a group of businessmen who regard the exemptions as a loophole and believe they have fostered unfair competition. While the center of the stage

has been held by the dispute over the exemption of farm cooperatives, and the spectacular tax-avoidance schemes such as the lease-back arrangement used by certain educational institutions and insurance companies, it was inevitable that the committee's studies should extend to the other institutions which benefit under section 101, including the mutual savings banks.

I am impressed with the history of faithful public service of the mutual savings banks in providing a safe and secure depository of the small sums saved by the journeymen, the coachmen, the chambermaids, and the artisans. Without the savings banks in the days before series E savings bonds, these workmen of humble background would have had no safe place to keep their savings.

When one views the 133-year history of successful operations of the mutual savings banks, however, I believe that he is likely to be impressed with a paradox difficult to explain. Why is it that there is about one account for every three inhabitants of the territory that savings banks serve (and in New England and New York the proportion is even greater), yet the operations of savings banks are limited to only 17 States, and the majority of them are in the New England and Middle Atlantic States.

I know that the textbook writers explain that the pioneer country had great demand for the money and credit which ordinary commercial banks would provide while savings banks, being more conservative in lending policy, could not meet the need. It has been suggested that the farmers and miners of the West have an independence of spirit and a recklessness for adventure that did not require the protection afforded by the savings banks in the eastern cities for industrial employees.

The testimony before our committee emphasized the cooperative nature of mutual savings banks, the fact that they have no capital stock outstanding and are operated by trustees, and that ultimately all of the assets belong to the depositors. Emphasis was placed also upon the character of the business done. The small size of the average deposits was stressed, as was also the fact that these deposits were by and large held by persons of comparatively modest means. In particular, attention was directed to the importance of school savings and Christmas club accounts. The honorable history of these institutions and the long-standing character of their exemption under the Federal income tax was pointed out. Finally, it was argued that any tax imposed on mutual savings banks would reduce their ability to accumulate surplus which, in connection with a continued expansion in their deposits, would tend to weaken the banks and increase the risks of their depositors. It was pointed out also that State laws required the accumulation of a surplus for the protection of the depositors and that a conflict would exist between these laws and a tax which impeded the accumulation of the desired surplus. These are indeed impressive arguments.

Your general counsel, Mr. Fred N. Oliver, accompanied by Mr. Earl B. Schwulst, Jr., President, Bowery Savings Bank; Mr. A. George Gilman, Malden Savings Bank, Malden, Mass.; and Mr. Henry Powell., executive secretary, Savings Banks Association of the State of New York, gave us the following statistics—that as of December 31, 1949, the total deposits of savings banks amount to over $19,000,000,0000, the total assets, $21,-500,000,000, total depositors over 19,000,000, and an average deposit per account of approximately $1,000. Now, the record of safety and security of the mutual savings banks in handling the deposits left with them by small depositors is admitted. I should point out that these depositors received on the average an interest rate of 1.78 percent in 1948. In contrast, the yield on series E bonds held to maturity is approximately 2.9 percent, and even series F and series G bonds yield 2.5 percent. I repeat, therefore, why should small investors leave their savings with the mutual savings banks? Why is it, and why should it be, public policy to grant an express exemption from Federal corporate income taxes for mutual savings banks? I ask these questions appreciating full well your great record of nearly a century and a half of service. I do so as a friend, however, to suggest that perhaps investment practices which result in more than 52 percent of the assets of mutual savings banks being invested in securities of the Federal Government might be reexamined.

Your representatives told the Committee on Ways and Means that there is a shortage of sound investments yielding a higher rate of interest. They related the experience of the Bowery Savings Bank in purchasing at premium prices FHA insured mortgage loans and your current efforts to negotiate with the Federal National Mortgage Association to buy a substantial amount of their portfolio. The real question, it seems to me, is whether the mutual savings banks have an additional obligation to make available their best judgment in seeking out on a selective basis investment opportunities for the great number of low- and middle-income wage earners and salaried employees.

Unless the savings banks can provide a service in this respect which these people cannot provide for themselves, why should they share with the savings bank the return which they can obtain through a direct investment in a Government savings bond or in some other investment guaranteed by the Government.

This leads me to the next question—if mutual savings banks are no longer providing to the public the service which led to their great growth and expansion on the eastern seaboard, why should they be given any special consideration under the internal-revenue laws? I think it is generally acknowledged that the corporate tax should not be imposed on amounts distributed to depositors, but according to the information given to the Committee on Ways and Means by your representatives, mutual savings banks now have retained reserves in excess of $2,000,-000,000. According to your representatives, savings banks' earnings in 1948, after expenses, totaled $423,000,000, yet only $302,-000,000 were actually paid to depositors. In view of the fact that savings banks are now investing primarily in Government bonds and Government-guaranteed obligations, it is claimed that there is little justification for the accumulation of the large reserves that have been wisely available in the past. Consequently, a tax policy which provides a tax exemption for such accumulated reserves is understandably under close scrutiny at a time when the present high tax rates on the tax-paying sector of the economy are bearing so heavily. The need for Federal revenue makes it essential to scrutinize tax exemptions at the present time much more closely than has been done in the past.

Gentlemen, I have given you the pros and cons as faithfully as I am capable of the question of the taxation of mutual savings banks. I presume that you have all answered the question in the negative, probably without taking into consideration the viewpoint of the affirmative. I think you would be interested in knowing that I voted against this tax. I voted against this tax for a number of reasons, some of which are as follows:

Savings banks are essentially a regional institution and fundamentally there is no difference between the mutuality of a savings bank and the mutuality of a farm cooperative—and I am opposed at this time to taxing the people in the cities and urban districts of the New England and Middle Atlantic States and letting the farmers in their mutual organizations go free. Furthermore, I am fearful that by this tax we will encourage the distribution of income rather than to build up the reserves and that after all insurance is only a secondary objective and the real bulwarks against depression are the original assets of a bank. My third objective is that in my opinion this might amount to taxation by entrapment. In other words, as I understand it, today 69 percent of the savings banks are insured in FDIC. It seems to me apparent that the insuring company has the right to determine what reserves should be set up by those companies which it insures. It is apparent, therefore, that the greater reserves demanded by the Federal agency for insuring savings banks will result in greater revenue through income taxes for the Federal Government. This does not take into account the various State laws that establish reserves and this proposed provision may very well be used to beat the States into submission to conform with the reserve policy of FDIC which, in turn, might well be determined not by the safety ratio, but by the political necessities.

Even though it be the eleventh hour, I suggest that you reexamine your whole structure and see whether or not you are today performing the function for which you were established and for which tax exemption was granted. In your conservative appraisal of your investments have you restricted yourselves so that instead of being helpful to the development of your community you are more intent to invest your deposits largely in Government bonds and Federal secured mortgages. I fear you have been lulled to sleep by the morphine of Federal security. Are you now so addicted to conservatism that you are willing to sacrifice the institutions which you have established and maintained, so that by your conservatism you may escape the criticism of possible loss. Many a person has died becaues they have not had the will to live. Have you the will to survive or are you going to let the Federal Government continue the mortgage loan business and savings business? Don't you say you can't compete. You can, if you will, but you haven't shown the will. If you want security, you can have it for a price—that is extinction. The time will come, and in my opinion it is not far distant, when your depositors will prefer postal savings or Government bonds to your meager interest rate. The mortgagees will demand that the Government take over their mortgages and eliminate the middle man, the savings bank, to which the mortgagee pays what he considers high interest for a loan of money guaranteed by the greatest country on the earth.

Look at your portfolios—not with an eye to the proportion of Government securities and Government guaranteed mortgages to total assets—but with an eye to the ratio between Government securities and Government guaranteed mortgages acquired since war's end to your new investments of the same period, and determine for yourselves whether you will fight for survival in competition with the Government, or whether you will peacefully succumb to the opiate of governmental beneficence.

Gentlemen, this is the time for courageous, determined, and decisive action. This is the time when the glorious history of our industry should embolden you to fight for the principles upon which your institutions were founded. The zero hour has not struck. It is still not too late, but it is later than you think.

Attack on Louis S. Budenz by Hon. Dennis Chavez, of New Mexico

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 18 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement of the Reverend Laurence J. McGinley, S. J., president of Fordham University, in reply to the attack on Louis S. Budenz by the Senator from New Mexico [Mr. CHAVEZ].

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE REVEREND LAURENCE J. MCGINLEY, S. J., PRESIDENT OF FORDHAM UNIVERSITY, IN REPLY TO THE ATTACK ON LOUIS F. BUDENZ BY SENATOR DENNIS CHAVEZ, OF NEW MEXICO, ON THE SENATE FLOOR

Prof. Louis Budenz joined the faculty of this university in 1946. Since that time he has given complete satisfaction in the discharge of his academic duties. Within the limits imposed on him by his obligations as a scholar and teacher, he has at times complied with the requests of public and private agencies to lecture on the philosophy of communism and on the subversive techniques of the Communist Party. This was done with the knowledge and consent of the university authorities. During his years at Fordham, Professor Budenz has deserved and continues to enjoy the full confidence of the university—both as a teacher and as a Christian gentleman.

From time to time, much to his own inconvenience and the occasional inconvenience of the university, Professor Budenz has been subpenaed by the Government to testify in cases involving alleged Communists or Communist activities. It has always been his wish that such information as might be sought from him by the Government be given solely on his own responsibility. He foresaw that he would be subjected to violent attack from Communist quarters and he did not wish to involve the university.

It has remained, however, for a member of the United States Senate to bring this personal vilification of Professor Budenz to a point even lower than that reached in the columns of the Daily Worker. It might fairly be said that never within recent memory has a Member of Congress so used his immunity in personal attack upon the character of a fellow citizen. The Senator had the effrontery, moreover, to pose as a Catholic while publicly enacting this vicious offense against Christian charity. As a priest of the Catholic Church, and as president of the university of which Professor Budenz is a respected faculty member, I cannot allow so slanderous and cowardly a demonstration to go unanswered.

Under Government subpena, Professor Budenz has appeared as a witness in many trials over the last 5 years. He has, as was to be expected, when he testified against Communists or Communist activities, been castigated both here and abroad by those whose conspiracy he was called upon to expose. Never, to my knowledge, have responsible officials of our own Government or members of the American press had other than praise for his conscientiousness as a witness.

It was not until he went recently to Washington—once again not at his own request but under subpena from a Senate committee—to testify in an inquiry into alleged Communist influences in our own Government, that those who should have been his friends turned on him with that weakest and most cowardly of all weapons, slanderous attack on his character and his family.

As an American and a teacher of young Americans, I find Senator CHAVEZ' attack disturbing in the extreme. As a priest, I must denounce the hypocrisy and uncharitableness that characterized it.

Whatever mistakes Professor Budenz has made in the past are an open book. Unfortunately for him, he has had to live under the constant threat of Communist reprisals, and to bear in silence the sneers of modern pharisees who are always ready to point a self-righteous finger at their fellow man.

The Catholic Church, convinced of the sincerity of his repentance, welcomed Louis Budenz back into the fold. Let those who in the name of the church of charity presume to shout another man's alleged transgressions from the housetops, look instead into their own hearts.

Communism at Home—FEPC—White Americans Betrayed

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. RANKIN. Mr. Speaker, it is not only useless, but ridiculous, for the administration, or anyone else, to advocate spending billions of dollars of the American taxpayers' money in foreign countries under the pretense of fighting communism abroad, and at the same time attempting to impose communism upon the American people here at home.

These attempts to ram the FEPC down the throats of the people of this country is simply following the Communist line; and this persecution of the white people in the District of Columbia through this so-called antisegregation movement has reach a state of degredation that I never dreamed I would ever live to see in the Nation's Capital.

Remember the Communists, their stooges and fellow travelers, do not give a "tinker's dam" about the Negroes. They are simply using the Negroes as a smoke screen to force this communistic program on the American people. It is a part of the Communist program for the destruction of this country.

Thomas Jefferson would turn over in his grave, if he could hear this communistic FEPC program advocated in his name and hear his words twisted or misinterpreted to fit a program of communistic compulsion, by which white Americans in the District of Columbia are persecuted as they have never been persecuted before—and see the attempts made to extend this persecution to white Americans everywhere.

Whether the President knows it or not, this is a communistic scheme to undermine this country and destroy the white man's civilization throughout the world. It is being fostered and pressed by alien-minded minorities that have for their purpose the amalgamation of the races and the destruction of the white man's civilization, and wiping Christianity from the face of the earth.

Here in the District of Columbia white children are driven from their playgrounds and swimming pools, white people generally are driven from certain theaters and other places of amusement.

These alien-minded real-estate agents are driving the white people of the District of Columbia out of their homes and forcing them to move over into Virginia for protection, by selling Negroes homes in their midst—thereby bringing about a condition that causes white people to have to sell their homes and move across the Potomac River.

As I have said before, these Communists do not give a tinker's dam about the Negroes. They are simply using them as a smoke screen to carry out their infamous designs against the white people of this country. They are doing the Negroes infinite harm.

If President Truman does not know what is going on, he had better get some advisers who can give him the facts. If he does know what is going on, then he ought to call a halt.

I exposed this communistic FEPC on the floor of this House 2 years ago. When Mr. Dewey, Governor of New York, signed the bill imposing that vicious measure upon the people of New York, I said at the time, that "all the perfumes of Arabia would not sweeten his little hand."

Something like a million copies of that speech have been printed and circulated throughout the land. Everywhere this vicious measure has been introduced in the State legislature, and the Members have read copies of that speech; they have killed the measure in every single instance.

If it was referred to a vote of the people in the various States and they were informed as to what it means, they would do just what they did in California—defeat it by an overwhelming majority in every single individual county. They would kill it so dead you would never hear of it again.

They have this vicious law on the statute books in the States of New York, Massachusetts, Connecticut, Rhode Island, and New Jersey, and have spent millions of dollars trying to force it on Pennsylvania, Ohio, Michigan, Illinois, California, Minnesota, Colorado, and other States; and, as I said have failed in every instance.

The best service the Legislatures of the States of New York, Massachusetts, Connecticut, Rhode Island, and New Jersey could possibly render their people would be to repeal this vicious measure at once and stop giving aid and comfort to those enemies of America that are trying to impose it upon the entire Nation through the Congress of the United States.

In my speech in the House on February 13, 1947, in discussing this measure, I said:

I want to read you some of the regulations that are now being imposed upon the people of the State of New York under this vicious

law. Businessmen from New York tell me that the way they are getting around this measure is by operating through employment agencies, because no intelligent businessman would go to a State with that kind of law on its statute books and attempt to establish a new business or a new enterprise, especially with the regulations or rulings under it which I am now going to read to you.

Remember they put this measure on the ticket in California and the people voted on it in the last election; and it lost in every single individual county in California. It was beaten in the entire State by about 3 to 1.

You simply destroy business with a measure like this. That is what the FEPC did here. Men have gone out of business all over the country in the last few years because of the persecution that was carried on by this outfit here in Washington, the personnel of which I shall insert later on.

A few people are going around urging us to pass it as a national law, to put everybody else in the same predicament. These people who are carrying on this racial agitation are using the Negro as a smoke screen. They do not give a tinker's dam about the Negro. They are not trying to help the Negro. They are doing them more harm than anybody else has done in the last 50 years, and the decent law-abiding Negroes know it.

But let me show you what they have done in New York, and let me give you some of the regulations or rulings, as they are called, and ask you if you would like to have them in your State. I want to ask the gentleman from Illinois [Mr. Dirksen] how he would like to have them in Illinois, or how you would like to have them in Ohio, Indiana, Pennsylvania, or in Missouri, or in any other State in the Union.

Here are the regulations, or rulings, issued by the State of New York. They are headed:

"State of New York Executive Department. State Commission against discrimination. Rulings."

Here are the rulings:

I want to show you some things you cannot ask in the State of New York when you go to employ a man.

Remember that State has no gas, coal, or oil, and very little water power. The rest of the country does not have to go to New York, or to any other State, to get what it needs in the years to come. The American people in every section of this country are in a position now to take care of themselves. You put this measure on in one State after another and you will simply penalize those States beyond reason, and when they ask you to pass it for the whole United States and put it on the entire American people, after the fiasco they have made of it here in Washington in the last few years, it is simply unthinkable to a man who knows what he is doing and has the interest of the people of the country at heart.

Here are some of the things you cannot do under the law of New York:

UNLAWFUL EMPLOYMENT PRACTICES BEFORE HIRING ANYBODY

Those words are written in capitals. Here is the first unlawful practice:

"Inquiry into the original name of the applicant for employment, whose name has been changed by court proceedings or otherwise."

If you inquire as to his name or what his name used to be, you violate the law. You commit an unlawful practice. For instance, take this man who writes for PM, who calls himself I. F. Stone. His name was Isadore Fainstein, as Cordell Hull once pointed out. Suppose he comes to you asking for employment and you ask him that question. Then you will have committed an unlawful act.

Here is the next one:

It would be unlawful practice to make—

"Inquiry into the birthplace of the applicant for employment, the birthplace of his parents, spouse, or other close relative."

How would you like that in Iowa, Illinois, Texas, or Nebraska? In California I know you do not like it, because you have just voted on it.

Here is the next unlawful practice.

"Requirement that the applicant for employment produce a birth certificate or baptismal certificate."

That would be an unlawful practice under this FEPC Act in New York.

I was surprised to see Governor Dewey get his mustache in the wringer on this proposition. I do not see how he is ever going to get loose from it.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. What about this requirement during the war that every person employed in certain industries had to prove that he was born here before he could get a job?

Mr. RANKIN. Certainly. If we had this law all over the country then, the Japs would have had a spy at the elbow of every man in a key position; so would the Germans, and so would every other enemy country.

I thank the gentleman from Illinois for his timely suggestion.

It is an unlawful practice in New York, under this law, to make—

"Inquiry into the religious denomination of an applicant for employment, his religious affiliations, his church, parish pastor, or religious holidays observed. Inquiry into whether an applicant for employment is an atheist."

Inquiry into whether an applicant for employment is an atheist is forbidden, although you may be publishing literature for the Methodist Church, the Baptist Church, or any other denomination.

Another thing, an applicant for employment—and I am reading from the rules laid down by this Commission:

"An applicant for employment may not be told that this is a Catholic, Protestant, or Jewish organization."

In other words, if you are in the business of publishing religious literature you cannot even give him that information under this law which the gentleman from Illinois [Mr. Dirksen] now proposes for the whole country, including Illinois.

Here is another unlawful practice:

"An applicant for employment may not be told that the following holidays will be observed by the firm and no others, naming the holidays; e. g., Decoration Day and July the Fourth, etc."

You cannot tell them under the laws, rulings, and regulations of the State of New York that they may observe the Fourth of July.

Here is another unlawful practice:

"An applicant for employment may not be told that employees are required to work Rosh Hashana and Yom Kippur."

Frankly, I did not know there were any such days until the last few years.

Another thing, it is an unlawful practice under this New York law to make—

"Inquiry into the complexion of an applicant for employment."

Inquire into his complexion and you are likely to get yourself tangled up with the law of the State of New York.

Here is another unlawul practice:

"Requirement that an applicant for employment annex a photograph."

That would be an unlawful employment practice. You are not supposed to know how he looks.

Remember, this is not in Russia, but in New York.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MASON. And yet the State Department in order to grant a visa requires a photograph of the person to be presented with his application.

Mr. RANKIN. Certainly, and they ought to do so. Much as I respect the distinguished gentleman from Illinois [Mr. MASON], I certainly would not want to employ him unless I knew how he looked. If I had never seen him, I would certainly want to see his picture.

Here is another unlawful practice:

"Inquiry whether an applicant for employment is a naturalized or native-born citizen; the date when the applicant acquired citizenship; whether the applicant's parents or spouse are naturalized or native-born citizens of the United States; the date when such parents or spouse acquired citizenship."

You cannot inquire into those questions under this FEPC law in New York.

Here is another unlawful practice:

"Requirement that an applicant for employment produce his naturalization papers or first papers."

He may lie to you and tell you that he is a naturalized citizen, but you cannot ask to see his papers.

Another unlawful practice in New York is to—

"Inquire into the lineage of an applicant for employment, his ancestry, or national origin."

You remember a few years ago the Dallas News inserted an advertisement for a colored janitor, and this FEPC outfit down the street ordered them to take it out, said it was an unlawful practice.

One member of this FEPC outfit here in Washington went into the office of Swift & Co. in Chicago. This FEPC man asked them: "How many Negroes do you have on your board of directors?"

The answer was "None."

Then the FEPC man asked him: "Why haven't you?"

That was the FEPC down here in Washington a few years ago before it died because a few radicals could not browbeat Congress in perpetuating it.

But it is now in force in the State of New York.

Here is another unlawful practice under the New York law:

"Inquiry into the location of places of business of relatives of an applicant for employment."

It is an unlawful practice to make—

"Inquiry into the place of residence of the parents, spouse, or other close relatives of an applicant for employment."

I am reading from the records at Albany.

Here is another unlawful practice:

"Inquiry into the maiden name of the wife of a male applicant for employment and/or inquiry into the maiden name of the mother of a male or female applicant for employment."

The other day we had the Eislers down here. One of them has been shown to be representing the Comintern, according to his sister's testimony. He has a brother out in California, who seems to be poisoning the public mind through the moving-picture industry. He tries to defend his brother and refers to this woman as "my former sister." If you wanted to employ any of them and check the name of at least one of them as given here, you could not inquire into those names at all—if you are trying to do business in the State of New York—even though one of them has a half dozen aliases. You could not even ask where they came from or when they got here or when they changed their names.

Here is another unlawful practice, in New York:

"Inquiry into the general military experience of an applicant for employment."

I wish every ex-serviceman could read that, and the next one.

Here it is. It is an unlawful practice to make—

"Inquiry into the whereabouts of an applicant for employment during the First

World War, i. e., during the period from 1914 to 1919."

In other words, inquiry as to his whereabouts in the period from 1914 to 1919 is forbidden as an unlawful practice in the State of New York.

Is that what you want in Colorado? Is that what you want in Massachusetts?

Mr. GIFFORD. We have it.

Mr. RANKIN. Get rid of it, and we will help you.

Is that what you want in Kansas, in Ohio, and in other States?

Let your States vote on it. Michigan is going to vote on it right away. If you will tell the people of Michigan the whole truth, let them know the whole truth about this monstrosity. I will guarantee you they will beat it worse than they did in California.

Here is another unlawful practice:

"Inquiry into the organizations of which an applicant for employment is a member, including organizations the name or character of which indicates the religion, race, or national origin of its members."

I presume, if they should ask me if I am a member of the Masonic lodge, I could have them jerked up and brought before this inquisition board or probably prosecuted at various places throughout the country.

Mr. Speaker, I am not criticizing the people of New York. I have long since learned in going from one State to another that real Americans are about the same everywhere. I believe, if they had a vote on it, the people of New York would beat it, just as they did in California.

They are having a vote on it in Michigan because a little minority group has been attempting to browbeat the Legislature of Michigan into passing it. I dare say when it goes on the ballot in Michigan and the people of Michigan understand what it means they will defeat it more thoroughly than they did in California. The same thing would happen in probably every other State in the Union.

Mr. AUGUST H. ANDRESEN. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Minnesota.

Mr. AUGUST H. ANDRESEN. Will the gentleman tell us what the penalties are in New York?

Mr. RANKIN. In addition to being harassed to death with orders and directives to cease, desist, rehire, etc, there is a punishment provided of "imprisonment in a penitentiary or county jail for not more than 1 year or by fine of not more than $500, or both."

Mr. GIFFORD. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Massachusetts.

Mr. GIFFORD. I want to remind the gentleman that we have that law in Massachusetts.

Mr. RANKIN. I was afraid of that.

Mr. GIFFORD. I was thoroughly amazed when I looked into it; I had not learned what the rules were. But, perhaps we carried it too far. I am so sorry, and I have been, and I am not in favor of this, I can assure the gentleman.

Mr. RANKIN. I know the gentleman is not, and I am sure the people of Massachusetts would not favor it if they had a vote on it.

Mr. GIFFORD. Employers always inquire and must know whether you come from a respectable family or not. They are so careful. Perhaps they overdid it. But I think a man ought to be able to find out whether he came from a respectable family.

Mr. RANKIN. There are a great many questions that should be asked, which are forbidden under this law.

Mr. Speaker, in order to give the new Members an idea of what a mess this FEPC was here in Washington during its existence under Executive order, I insert a speech I made on this subject in 1945.

It reads as follows:

"FEPC A BETRAYAL OF WHITE AMERICANS

"(Speech of Hon. JOHN E. RANKIN, of Mississippi, in the House of Representatives, Thursday, July 12, 1945)

"Mr. RANKIN. Mr. Chairman, the passage of a law at this time legalizing this so-called FEPC would be a betrayal of the white people of the country. If every individual in the United States could understand just what it means, there would be such a roar of protest coming from every State in this Union that it would never see the light of day.

"If every Member of Congress would 'screw his courage to the sticking place' and vote his convictions on this so-called FEPC, it would not get 50 votes out of the entire membership of 435.

"It is a most dangerous and brazen attempt to fasten upon the white people of America the worst system of control by alien or minority racial groups that has been known since the crucifixion.

"When I read the names of the personnel of this outfit you will understand what I mean.

"To sanctify this organization by law would give the lie to everything we have told our American boys they were fighting for. Instead of coming back to liberty, freedom, and democracy, they would find themselves sold into this bondage, herded, humiliated, and regimented by alien influences directed by a foreign comintern representing the deadly doctrine of Karl Marx that is based upon hatred for Christianity and for everything that is based on Christian principles.

"It is a manifestation in legislative form of that infidelity that has closed thousands of Christian churches in Europe and been responsible for the murder of untold millions of Christian human beings.

"This measure is not directed altogether at the white people of the South. If it were, you folks in the North would not have so much ground for alarm. We in the South know how to combat subversive elements. As Henry Grady once said, we wrested the South from such domination 'when Federal drum beats rolled nearer and Federal bayonets hedged closer to the ballot box of the South than it ever will again in this Republic.'

"But you people in the North have not had that training, and this FEPC is likely to bring grief, strife, hatred, race riots, and chaos in your northern cities if this vicious agency is perpetuated and sanctioned by your votes.

"Do not forget that the returning servicemen know what this thing means, and they are going to call you to account next year—beginning with the primary. They are not going to wait until the general election.

"Do not forget that every businessman, every farmer, every professional man, and every other independent individual whose blood glows with the instinct of American liberty, is going to join these men, and those other patriotic forces that are fighting to save American institutions for which these boys have been fighting and dying upon every battlefield in the world.

"If every man and every woman in the United States could just read the list of individuals that compose the personnel of this crazy FEPC, and its subdivisions throughout the country, I dare say there would not be enough of you left who vote for it, even if nominated in the primaries next year, to form a corporal's guard.

"For your information, and for the information of the American people generally, I am going to read you the official personnel as it exists today. Remember, this list is taken from the official record. This is the group that wants to nose into and control every business in the United States. Remember, they can search the files and records of every business establishment in America where some disgruntled individual is willing to trump up a charge of discrimination. They can drag them all over the country and try them, and in that way destroy any ordinary business concern.

"The next thing they are going to try to do is get control of your schools and force their communistic henchmen into the schools and teach your children their subversive doctrines.

"Read these lists carefully, which, as I said, are taken from the official records here in Washington, and you will see that not one out of ten on these rolls is a white gentile American.

"Here is the official list:

"Committee on Fair Employment Practice, Washington, D. C., Office of the Chairman

Incumbent	Title	Race	Salary
Ross, Malcolm	Chairman	White	$8,000
Johnson, George M.	Deputy Chairman.	Colored	8,000
Hubbard, Maceo	Hearings examiner.	do	5,600
Bloch, Emanuel	do	White	5,600
Copper, Evelyn	do	do	5,600
Berking, Max	Assistant to Chairman.	do	3,800
Alexander, Dorothy	Secretary to Chairman.	Colored	2,600
Clifton, J. Jeanne	Secretary to Deputy.	do	2,000
Brooks, Mary	Clerk-stenographer.	do	1,800
Banting, Myra	do	White	1,800

"You will note that in this office of the chairman, consisting of 10 people, there are 5 Negroes and 5 white people, most of whom have foreign names. One of the whites is a stenographer who receives the smallest salary of anyone on the list.

"Remember that the members of this group preside over the destiny of every business enterprise in America, and are using their assumed powers to harass white Americans out of business.

"This is the organization Members of Congress are being asked to perpetuate by the passage of this bill.

"FIELD OPERATIONS

"Here is the Division of Field Operations:

"Field operations

Incumbent	Title	Race	Salary
Maslow, Will	Chief	White	$6,500
Mitchell, Clarence	Principal fair-practice examiner.	Colored	5,600
Davidson, Eugene	do	do	5,600
Beall, W. Hayes	Senior fair-practice examiner.	White	4,600
Mercer, Inez	Fair-practice examiner.	do	3,800
Rogers, Eleanor	Clerk-stenographer.	Colored	1,800
Saito, Otome	do	Japanese-American.	1,800
Thompson, Mildred	do	Colored	1,800
Cornick, Emma	do	do	1,620

"You will note that it consists of nine people—five Negroes, one Japanese, and three others—two of whom have records of affiliations with Communist-front organizations, according to the reports of the Dies committee.

"Imagine this group going about over the country riding herd on the white American businessmen of the Nation, telling them whom they shall employ, whom they shall promote, and with whom they may associate.

"It would be interesting, and probably enlightening, to check up on these people and see how many of them are native-born Americans.

"Members of Congress had better do this now, before they get caught in this trap, because this question of un-American activities is going to be an issue in every congressional district next year, beginning with the primaries.

"The people are not going to wait until the general election for someone who holds a commission as a result of the pernicious activities of Sidney Hillman and his gang to wrap the party cloak about him and shout to the people of his district that 'I am a Republican' or 'I am a Democrat.'

"More than 2,000,000 young men have already been discharged in this war, and they are organizing now to try to save America for Americans. They are going to read your records, and they are likely to ask you some very embarrassing questions when you get home.

"REVIEW AND ANALYSIS DIVISION

"Now look at this list and see who reviews all these records of racial discrimination when they come to Washington, and you will understand how the editor of the Dallas News felt and how other white gentiles feel, including Cecil B. DeMille, the great American movie producer, when they are harassed out of business.

"Here is the list:

"Review and Analysis Division

Incumbent	Title	Race	Salary
Davis, John A	Chief	Colored	$5,600
Lawson, Marjorie	Research analyst	do	3,800
Colightly, Cornelius	Compliance analyst	do	3,200
Hemphill, India	do	do	2,600
Coan, Carol	do	White	2,600
Davis, Joy P	do	Colored	2,600
Hoffman, Celia	Clerk-stenographer	White	1,800
Spaulding, Joan	do	Colored	1,800

"You will note that it consists of six Negroes and two white people, one of whom is named Carol Coan and the other Celia Hoffman, a white stenographer receiving the lowest salary on the list.

"Now, if you sign the petition to bring out this bill or vote for this monstrosity, do not forget that when you get home those white American businessmen who help to sustain this Nation in time of peace and whose sons are fighting its battles in time of war are going to want to ask you some questions that you may not be able to answer.

"LEGAL DIVISION

"But if you want a real laugh, look at this Legal Division.

"Legal Division

Incumbent	Title	Race	Salary
Reeves, Frank D	Attorney	Colored	$4,600
Stickgold, Simon	do	White	4,600
Gordon, Jernevive	Clerk-stenographer	Colored	1,800

"You will note that this so-called Legal Division consists of two Negroes and a Simon Stickgold.

"INFORMATION DIVISION

"Now we come to the Information Division. If you want information about this outfit write to this Division:

"Information Division

Incumbent	Title	Race	Salary
Bourne, St. Clair	Information specialist	Colored	$3,800
Whiting, Margaret	Clerk-stenographer	do	1,800

"You will note that it consists of two Negroes, one registered as an information specialist and the other as a clerk-stenographer.

"BUDGET AND ADMINISTRATION

"Now we come to the Budget and Administration Division. This Division not only makes up the budget but administers the regulations. Here is the list:

"Budget and Administration

Incumbent	Title	Race	Salary
Jones, Theodore	Chief	Colored	$5,600
Jeter, Sinclair	Assistant administrative officer	do	3,200
Baker, Vivian D	Clerk-stenographer	do	2,000
Jackson, Rosales A	Clerk-typist	do	1,620
Paynter, Minnie A	do	do	1,620
Hollomon, Irving	Clerk	do	1,440
Selby, Ralph R	Chief, fiscal	do	2,600
Ross, Sylvia B	Voucher auditor	do	2,000
Nelson, Otelia	Accounting clerk	do	1,620
Carpenter, Elizabeth	do	do	1,620
Brent, Pearl T	do	do	1,620

"This outfit, which is composed of 11 Negroes, and no whites at all, not only makes up the budget for financing this aggregation, but it seems to have the power of administration. I hope you will read this list to your white businessmen, farmers, and ex-servicemen at home when you get back and ask for renomination in the primaries next year.

"MAIL AND FILES DIVISION

"Now, here are the ones that have control of the mails and filing system:

"Mail and Files

Incumbent	Title	Race	Salary
Douglas, Lela	Chief, Mail and Files	Colored	$2,000
Welch, Selena	Docket clerk	do	1,800
Gamble, Jessie	File clerk	do	1,620
Phillips, Rose	do	do	1,440
Reed, Charles	Messenger	do	1,380
Mitchell, Regina	File clerk	do	1,440

"You will note that this division is composed entirely of Negroes—six Negroes, and no whites at all. I wonder why they discriminated against the white race in setting up these two powerful branches of this most dangerous agency?

"REGIONAL OFFICE, NEW YORK

"Now, let us turn to the regional offices and see who is going to harass the business people back in the States. Here is the list for the State of New York:

"Regional office, New York

Incumbent	Title	Race	Salary
Lawson, Edward H	Regional director	Colored	$5,600
Jones, Madison S	Fair-practice examiner	do	3,800
Jones, Robert G	do	do	3,800
Donovan, Daniel R	do	White	3,800
Irish, Miriam	Clerk-stenographer	Colored	2,000
Asepha, Tillie	do	White	1,620
Schwartz, Sonia	do	do	1,620

"This is the list that is going to help Governor Dewey harass the white American businessmen of the Empire State. You will note that it is composed of four Negroes and three white people. Please read the names of the three white people and see if you can figure out their antecedents.

"Businessmen of New York are going to have a hard time after this war without having all this communistic conglomeration to deal with, to say nothing of the one which Governor Dewey and his political henchmen have now heaped upon them.

"REGIONAL OFFICE, PHILADELPHIA

"Now, let us turn to Philadelphia, the birthplace of the Constitution—the City of Brotherly Love. At the risk of causing glorious old Benjamin Franklin to turn over in his grave, I read you the list:

"Regional office, Philadelphia

Incumbent	Title	Race	Salary
Fleming, G. James	Regional director	Colored	$5,600
Greenblatt, Mildred	Fair-practice examiner	White	3,800
Manly, Milo A	do	Colored	3,800
Risk, Samuel R	do	White	3,800
Grinnage, Willard	do	Colored	3,200
Gorgas, Helen	Clerk-stenographer	do	1,800
Klinger, Karyl	do	White	1,800
Brown, Grayce	do	Colored	1,440

"You will note that it is composed of eight individuals—five Negroes and three whites, Mildred Greenblatt, Samuel R. Risk, and Karyl Klinger.

"Don't you know there will be some brotherly love when that crowd gets going on the businessmen of the Philadelphia area?

"REGIONAL OFFICE, WASHINGTON, D. C.

"Now, here is the regional office in Washington, D. C., the Nation's Capital, where there has been so much persecution of white gentiles in the last few years. Here is the list:

"Regional office, Washington, D. C.

Incumbent	Title	Race	Salary
Evans, Joseph	Regional director	Colored	$5,600
Houston, Theophilus	Fair-practice examiner	do	3,200
Kahn, Alice	do	White	2,600
Chisolm, Ruby	Clerk-stenographer	Colored	1,800
Urback, Dorothy	do	do	1,620

"You will note it consists of four Negroes and Alice Kahn. Just what chance a white gentile will have with this group is entirely problematical, to say the least of it.

"REGIONAL OFFICE, CLEVELAND

"Now, let us move out where the West begins and take a look. Here is the list in the Cleveland regional office:

"Regional office, Cleveland

Incumbent	Title	Race	Salary
McKnight, William	Regional director	Colored	$4,600
Abbott, Olcott R	Fair-practice examiner	White	3,800
Glore, Lethia	do	Colored	3,200
Kelley, Berniza	Clerk-stenographer	do	1,620
Wasem, Edna	do	White	1,800

"You will note that this group is composed of three Negroes and two whites, Olcott R. Abbott and Edna Wasem.

"Don't you know the white people of Cleveland will enjoy being dominated by them?

"CINCINNATI REGIONAL OFFICE

"Cincinnati seems to be largely under the jurisdiction of the Cleveland office since it only has two people:

"Cincinnati

Incumbent	Title	Race	Salary
James, Harold	Fair-practice examiner	White	$4,600
.....	Clerk-stenographer	.....	1,800

"DETROIT REGIONAL OFFICE

"Now let us move on to Detroit, Mich. Here is the regional office for Detroit:

"Detroit

Incumbent	Title	Race	Salary
Swan, Edward	Examiner in charge.	Colored	$4,600
Sese, Doris K	Clerk-stenographer.	Japanese-American.	1,620

"You will note that it is composed of one Negro and one Japanese. I know the businessmen of Detroit are grateful for this consideration.

"I should like to hear some of the comments they will make to you gentlemen from Detroit when you get home next summer, if you support this vicious measure.

"REGIONAL OFFICE, CHICAGO

"Here is the list of the regional office in the Windy City:

"Regional office, Chicago

Incumbent	Title	Race	Salary
Henderson, Elner	Regional director.	Colored	$5,600
Gibson, Harry H. C.	Fair-practice examiner.	do	3,800
Schultz, Joy	do	White	3,800
Williams, Le Roy	do	Colored	3,200
Zeidman, Penny	Clerk-stenographer.	White	1,800
Ingram, Margueite S.	do	Colored	1,620

"You will note it is composed of four Negroes, Joy Shultz, and Penny Zeidman. I am told that a representative of this group went into the office of Swift & Co. and asked how many Negro members they had on their board of directors. The answer was, "We have no Negro members on our board of directors." Then the question came back, "Why haven't you?" This just shows what this supergovernmental set-up is driving at. They want to communize America and destroy everything which our glorious ancestors have left us and for which our boys are now fighting and dying all over the world.

"REGIONAL OFFICE, ATLANTA

"Here is a list of the Atlanta office:

"Regional office, Atlanta

Incumbent	Title	Race	Salary
Dodge, Witherspoon	Regional director.	White	$4,600
Hope, John	Fair-practice examiner.	Colored	3,800
McKay, George D	do	White	3,200
Chubb, Sally	Clerk-stenographer.	do	2,000
Ingram, Thelma	do	Colored	1,800

"You will note that it consists of two Negroes and three whites; the most important post in this office, that of examiner, is held by a Negro. I wonder how the people of Georgia enjoy the domination of this group. I may have more to say about them later.

"REGIONAL OFFICE, KANSAS CITY

"Here is the list of the Kansas City office:

"Regional office, Kansas City

Incumbent	Title	Race	Salary
Hoglund, Roy A	Regional director.	White	$5,600
Ormabee, Eugene	Fair-practice examiner.	do	3,800
Jones, Mildred	Clerk-stenographer.	Colored	1,620
Schlien, Helene G	do	White	1,620

"You will note that this office force consists of three whites and one Negro. You can read the list of whites yourself and then judge how many of them really represent the people of that area.

"ST. LOUIS REGIONAL OFFICE

"Here is the list of the regional office at St. Louis:

"St. Louis

Incumbent	Title	Race	Salary
Theodore Brown	Examiner in charge.	Colored	$3,800
Morris Levine	Examiner	White	3,200
Armatha Jackson	Clerk-stenographer.	Colored	1,620

"You will notice that it consists of two Negroes and Morris Levine. Just how they came to select these particular individuals to preside over the destiny of the white businessmen of the great State of Missouri I cannot understand.

"REGIONAL OFFICE, DALLAS, TEX.

"The members of the regional office at Dallas are as follows:

"Regional office, Dallas

Incumbent	Title	Race	Salary
Castenada, Carlos	Regional director.	White	$4,600
(Vacancy)	Fair-practice examiner.		3,200
Gutleben, Willetta	Clerk-stenographer.	White	1,800

"You will note there is one vacancy. Last year that position was held by a Negro, namely, Roy V. Williams. The other two members, Carlos Castenada, the regional director, and Willetta Gutleben seem to be in charge of the office at the present time. This is the regional office that attacked the Dallas News last year for carrying an advertisement for a Negro janitor. This fellow Castenada, the director, held the same position that he holds now. If this set-up is made permanent, then I presume the rest of the white American businessmen in Texas may expect to be harassed just as the Dallas News was.

"REGIONAL OFFICE, NEW ORLEANS

"The regional office at New Orleans consists of the following members:

"Regional office, New Orleans

Incumbent	Title	Race	Salary
Ellinger, W. Don	Regional director.	White	$3,800
Morton, James H	Fair-practice examiner.	Colored	3,200
Ronning, Evelyn	Clerk-stenographer.	White	1,800

You will note that there are two whites and one Negro in this office. As the Negro is the fair-practice examiner, just what the decent people of Louisiana may expect at the hands of this outfit is something to contemplate.

"REGIONAL OFFICE, SAN FRANCISCO

"The San Francisco office consists of the following individuals:

"Regional office, San Francisco

Incumbent	Title	Race	Salary
Kingman, Harry L	Regional director.	White	$5,600
Rutledge, Edward	Fair-practice examiner.	do	4,600
Ross, Bernard	do	do	3,800
Seymour, Virginia	Administrative assistant.	do	2,000
Maren, Jewel	Clerk-stenographer.	do	1,800

"This is the only office we have found yet that consists entirely of white (?) people. Just what the background of each one of them is I am unable to say.

"LOS ANGELES REGIONAL OFFICE

"The Los Angeles regional office consists of the following:

"Los Angeles

Incumbent	Title	Race	Salary
Hunt, A. Bruce	Hearings examiner.	White	$5,600
Brown, Robert E	Fair-practice examiner.	Colored	3,600
Lopez, Ignacio	do	White	3,800
Vetter, Vera G	Clerk-stenographer.	do	1,800
Lerna, Marie	do	do	1,620

"You will note that there are four whites and one Negro in this office, the Negro being the fair-practice examiner. I do not know what consideration the white businessmen of the Los Angeles area are receiving at the hands of this group, but from what I can hear there is considerable gnashing of teeth over the situation.

"Mr. Chairman, this FEPC is a supergovernment of commissars, with more power for evil than any other agency that has ever been created in this country. If Congress should ratify it and make it the law of the land, then we will have sacrificed and destroyed that sacred freedom for which our brave men are now fighting and dying on every battle front in the world.

"We have no right to pass such a drastic, revolutionary measure that literally changes our way of life, as well as our form of government, while these boys are away from home in uniform fighting to sustain American institutions.

"As I said before, we are going to carry this battle against such un-American activities into every congressional district in the United States next year, in the primary, so that no one can crawl behind the party cloak and claim immunity at the hands of any segment of our people.

"This is a battle for the survival of free constitutional government, for the survival of the American way of life, for the survival of free enterprise, for the survival of American liberty itself.

"It is a battle to save America for Americans."

Maritime Commission

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1950

Mr. O'HARA of Illinois. Mr. Speaker, in including in my remarks the following editorial from the Washington Post of May 13, 1950, I wish to remind the House that my distinguished predecessor as Representative in this body from the Second District of Illinois, the Honorable Raymond S. McKeough, so admiringly and affectionately remembered by Members of seniority and who on the Maritime Commission has rendered such outstanding service to the Nation, is not a member of Maritime Commission majority.

MARITIME REVOLT

Advocates of all-out governmental subsidies for the merchant marine have had tough going recently with both Congress and

the administration. Perhaps the crowning blow was the endorsement yesterday by Senator MAGNUSON of Reorganization Plan 21, which would abolish the Maritime Commission and reconstitute its functions in the Department of Commerce. Senator MAGNUSON, who is known as a friend of the merchant marine and is himself the author of a long-range shipping bill, gave as his reason the mounting criticism of and unsatisfactory relations with the Maritime Commission.

This criticism has been building to a crescendo. Last summer the Comptroller General blasted the Maritime Commission for irregularities in granting overly large ship construction subsidies. His objections were upheld and amplified by the House Executive Expenditures Committee after protracted investigation. The President himself showed concern over uncontrolled subsidies in his budget message. He translated this concern into action with Reorganization Plan 21. Now the Hardy subcommittee of the House Executive Expenditures Committee is readying another report covering the entire subsidy operation of the Maritime Commission, both operating and construction, for fiscal 1949 and 1950. Indications are that this report will be even stronger than the last.

That suspicion of shipping subsidies has permeated the House is shown by the approval of the Thomas amendment to the omnibus appropriations bill putting a ceiling on the operating subsidies that may be granted by the commission. Incidentally, the House also deserves credit for finally knocking out the amendment by Representative HALE BOGGS—which had been tentatively approved—granting an unasked increase in funds for maritime training and reactivating two closed training stations.

There is a reason for this rising hostility, and it is not that most Congressmen or administration officials are opposed to a strong merchant marine. It is simply that a large part of the shipping industry—which despite a recapture clause enjoys substantial subsidies and even more important tax advantages—seems too anxious to shift more responsibility to the Government and to get its hand further into the public till, and that the Maritime Commission majority seems only too eager to help. For example, there is no indication that the Commission has paid the slightest heed to criticism so far. In short, the confusion of the public interest with private interests is altogether reminiscent of the atmosphere which led to the famous Black report of 1935. Confidence will not be restored until there is a drastic shakeup and, more important, until Government aid to shipping is in the hands of men who are both disinterested and competent.

Besieged by Terror

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., May 14, 1950:

WE CANNOT BE COMPLACENT

There is no reason to be complacent. Communism beaten back, driven underground or scattered to the four winds which blow around the globe, never gives up.

The reason is that the Reds, casting religion adrift, must yield to the inner compulsion of the human heart to worship something. If it isn't God, then new gods must be made. Savages down the long centuries, with their absurd and preposterous idols, manufactured or observed in nature, prove it.

So they genuflect to a political system and having doubts about it, since nowhere in all history has it had a semblance of success, they become fanatical like the whirling dervishes or the holy rollers.

That accounts for the endless pressure which the devotees of Marxism exert. It accounts for their ruthlessness to their enemies and to their own colleagues. It accounts for their willingness to lie, cheat, deceive, and slay as they press on to impossible ends.

There are signs, despite all the conquests made out of the chaos of the postwar years, when bewildered, war-weary people were willing to lean even on reeds, that they are losing the battle. Yet no one should be complacent.

For all their triumphs, the Reds have suffered fiascoes. They have lost west Germany. The final straw was the announcement by Pravda that all German prisoners had been sent home. Germany, in angered grief, retorted that 1,500,000 Germans are still unaccounted for.

The only conclusion can be that, taking German exaggerations into account, at least hundreds of thousands of German prisoners were either slain in cold blood, allowed to starve to death, or are imprisoned forever in slave labor camps beyond the Urals.

In Italy was fiasco number two. The first shipment of American arms under the North Atlantic Pact stirred the Reds into action. They mobilized dock workers to stop the disembarking. They invoked strikes.

Italy responded by calling up the police in battalions, holding the army in reserve and then, with the help of loyal dock workers, unloading the weapons and transporting them to a safe, guarded place.

Reports out of Hungary of workers being recalcitrant and even threatening to strike, adds up. In China, Red tax collectors have been beaten off by half-nourished peasants and driven out of the mudwall towns to the security of the cities.

A year ago, Communist might in France being so strong, the government would not have dared to announce a willingness to make an industrial pact in steel and coal with Germany. The same is true of Belgium. An election to decide what to do with the exiled king would not have been attempted.

Allied anti-Russian propaganda is having its effect. Russia's expressed willingness to hold elections in Berlin and settle the Trieste question, even though her terms were preposterous, demonstrates a recognition of the fact that she cannot bull her way through these problems.

Yet we cannot afford to be complacent. Communism has nine lives. We must press on against the doctrine of heaven on earth in a slave camp, by armament, enlightenment, and also by letting the Kremlin dig their own graves all over the world.

Oil and New England

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial entitled "Oil and New England" which appeared in the May 16 issue of the Boston Herald. The problem of the impact of imported oil upon our economy is not a simple one. I recognize that there are those who are sincerely concerned about the effect of imports in an unwise amount upon a healthy domestic production. Yet, as the editorial indicates, there are other considerations which must be given full weight in terms of an over-all healthy economy.

OIL AND NEW ENGLAND

The way high-tariff chickens come home to roost is well illustrated by the current controversy over oil imports. Because of a world surplus in oil production, prices have been dropping sharply and some domestic producers have been having trouble meeting the competition of foreign imports. Inevitably there has been a demand from the small and marginal producers for protection in the form of quotas or tariff increases against imported oil.

But the demand has stirred up strong opposition from a number of sources. The bulk of our present imports is from the overseas production of American companies, and, since these companies are already meeting serious discrimination in foreign markets, they are naturally dead set against import bans at home. Domestic consumers have also registered opposition to losing the price advantage they now enjoy on imported fuels for the sake of "protecting" home producers. And conservation interests, notably the military, have questioned the wisdom of cutting off imports of oil in peacetime and thereby reducing our over-all reserves against future emergency need.

All of these practical and immediate arguments have backed up the State Department's long-term opposition to steps which restrict imports and thereby cut down the ability of foreign countries to buy goods in our markets.

It is gratifying that in this case New England has been quick to see what roost the chickens were headed for and has acted to meet the situation. At its last quarterly meeting the New England Council resolved to oppose "any measure designed to restrict or reduce oil imports into the United States" on the ground that it could only do harm to this "fuel deficit area."

Expressing satisfaction at the Council's alert action, a spokesman for the State Department's petroleum policy staff last week wrote that among the many disadvantages of the proposed import restrictions might be noted "the probable increase in fuel costs for industrial and public-utility plants, particularly in areas like New England, increased fuel costs for ships, and the probable diversion of some ships' bunker business to foreign ports."

If the time actually comes when the domestic petroleum industry is threatened with extinction as a result of foreign competition, New England will join with other areas in authorizing legitimate protective measures. There is no doubt that the country has a great stake in the industry both as a provider of jobs and as a defense instrument. But there is no very convincing evidence yet that it needs either quota or tariff protection to get through its present troubles.

We must go slowly in applying remedies which produce a dozen new problems for each one they solve.

I also wish to include here the text of the resolution adopted by the executive committee of the New England Council at its meeting in Providence, R. I., on March 23. It reads as follows:

Resolved, That approval by Congress of any measure designed to restrict or reduce oil imports into the United States will be contrary to the best interests of New England.

The London Conference—Double Feature

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely and interesting editorial, entitled "The London Conference—Double Feature," which appeared in the May 16, 1950, issue of the Christian Science Monitor. The article follows:

THE LONDON CONFERENCE—DOUBLE FEATURE

The two big features at the Big Three meeting in London were the French proposal to unify the French and German coal and steel industries and the Big Three decision to speed up the return of Germany as an equal member of western society.

That was the order of their showing, but not necessarily of their significance. It is altogether probable that so clear a decision on Germany could not have been taken had it not been accompanied by a plan to give the French real hope of making Germany safe for world democracy. That is one of the main hopes in the coal-steel program as propounded by French Foreign Minister Robert Schuman.

But while the direction in which the west now invites Germany to travel is plain enough, timetables have not been thrown away. Not all reliance for a correct German development within the western community is placed on the Schuman plan. The very facts of life preclude this, and it is only realistic of West Germany's Chancelor Adenauer to accept them optimistically along with their implications.

The chief of these facts is the present division of Germany. That means an indefinite postponement of a German peace treaty and therefore a continuation of an occupied status for Germany, with consequent supervision of the main streams of political development, though with increasing self-rule for the western Germans.

The concessions which the Big Three felt able to make to the West German Republic in this situation should help Dr. Adenauer against his political opponents in western Germany as well as help the west's position generally against Communist propaganda.

Another very big fact is the need of western Germany for defense against possible military aggression. The military implications in the continuance of a modified occupied status are that western Germany will be defended by the west against attack from the east. On this point, as on self-rule, Dr. Adenauer can claim a victory.

The Schuman plan filled a diplomatic gap at London for Dr. Adenauer as well as for M. Schuman, for Dr. Adenauer had several times urged some such integration of industry. He can now point to this program as the reason why the French-German dispute about the Saar should become a secondary issue for Germans.

The total of the achievement of London, as it is immediately visible, therefore, is to provide a strong base for gaining the offensive in the "cold" battle for Germany. The double isolation of western Germany—from eastern Germany on the one hand and from the western community on the other—may now be relieved, and the good wishes of the western nations for the democratic elements in western Germany made plain.

This will still take some doing, to be sure, as will the decisive strengthening of democracy within Germany. The London meeting has at the very least created an international atmosphere more favorable to these hopes than any that has existed since the war.

Criticism of Public Officials

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Star of May 15, 1950:

ON CRITICIZING PUBLIC OFFICIALS

A plea by State Department Counselor George F. Kennan, in an address before the Institute on United States Foreign Policy, deserves some attention.

"The Government may lose many of its best qualified people," said Mr. Kennan, "if abuse and derision heaped upon officials grows much worse."

It is not difficult to understand why loyal and honest employees of the State Department find their situation disagreeable these days. None of them can entirely avoid some of the public suspicion which has fallen upon the Department and the work they do cannot be done best under present conditions.

"The strains under which our leading officials work," said Mr. Kennan, "leave them a very slender margin of physical and spiritual energy to absorb abuse and derision from the people for whom they conceive themselves to be working. I must tell you that the atmosphere of public life in Washington does not have to deteriorate much further to produce a situation in which very few of our more quiet and sensitive and gifted people will be able to continue in Government."

These officials, the loyal ones, deserve the sympathy of the people. But two questions are raised by Mr. Kennan's address. First, who is to blame for the deterioration of the atmosphere of public life in Washington? And second, how can undesirable employees be removed from their jobs without creating the disturbances which embarrass good officials?

It has been proven beyond the slightest doubt that espionage was carried on within the State Department with the cooperation of disloyal employees. These incidents opened the doors for speculation as to whether disloyal persons still held jobs in the Department. If it had not been for the Alger Hiss and the Amerasia incidents, for example, the charges of Senator MCCARTHY would not have received so much attention.

The blame for the condition which fostered the atmosphere of suspicion must be placed upon those whose negligence permitted disloyal persons to hold jobs in the department. If it is argued that top officials cannot be blamed for a situation of which they were unaware, the reply is that top officials were notified and warned several times about Alger Hiss. Three times President Roosevelt was appealed to in that case. He ignored each appeal, even laughing at one of them. And Dean Acheson quickly restored John S. Service to his State Department job after Service had been arrested in the Amerasia case. The status of Service is yet to be determined, when the secrets of this incident are exposed, but it cannot be said that Mr. Acheson was unaware that Service's loyalty might be questioned in the future.

The theft of hundreds of secret State Department documents can be charged only to top level negligence. Such negligence led to public scandals which, in turn, led to further charges. Members of Congress could be charged with compounding that negligence if they allowed their suspicion of other disloyalties to remain unspoken.

As to the second point, how are disloyal employees, if such hold jobs, to be removed without public charges, Senator MCCARTHY has given an illuminating answer. He preferred, he has said, to proceed quietly but learned that nothing could be accomplished that way. The people now know what extreme methods became necessary and how long it took to convict Alger Hiss. The people have also seen a demonstration of official resistance to the current State Department probe. Even in the Senate Committee assigned to the investigation there was powerful resistance. Washington officialdom, therefore, must be blamed for the necessity for public accusations which make the lives of loyal Government officials miserable these days.

Mr. Kennan is pointing the finger of blame at the wrong persons. The men who have sat in the White House and who have occupied the office of Secretary of State are responsible for the deterioration of the atmosphere of public life in Washington.

Americans Against Communism

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. DOLLINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, written by Victor Lasky, feature writer for the New York World-Telegram. It appeared in the May issue of the American Legion magazine:

AMERICANS AGAINST COMMUNISM
(By Victor Lasky)

At long last the American people have awakened to the menace of communism and they're doing something about it. Sixty-six great American organizations, representing about a hundred million people in every field of endeavor, have come together against a common enemy—world communism.

On assignment from my newspaper, I covered the birth of this great citizens' movement last January. However, the story did not end with the close of this American Legion-sponsored All-American Conference, for since its inception the movement is having an amazing growth. And so powerful is its potential for the good of this Nation that the Communists and their dupes, both knowing and unknowing, are moving heaven and earth in an all-out attempt to smash what grew out of the 3-day conference.

I watched the Communist and non-Communist press coverage of the event. At first I was amused, then disgusted. For in their frantic efforts to smash the new all-American movement the Communists are resorting to their typical lies, deceptions and distortions of what took place, in an effort to put class against class, faith against faith, and organization against organization. Typical headlines in such papers read: "Labor sits down with labor-baiters," "B'nai B'rith sits down with Jew-haters," and "Veterans united with those who would curtail their privileges." Understandably hysterical, too, was the Soviet radio commentator Zaslavsky, who on February 4 screamed from Moscow: "The assembly in New York considered itself to be a step toward the formation of a Fascist Party in America. The speeches were Fascist, they shouted like the Nazis. The entire set-up was borrowed from Hitler and was a mixture of pogrom-mongering and self-induced hysteria."

What actually took place? Leaders of the great labor, business, industrial, fraternal and religious groups got together to discuss a common problem—how to combat communism. It was agreed by the participants that many of the organizations normally have conflicting interests, but all the groups were willing to unite in the fight against those who would destroy the liberties of all Americans.

The speakers represented labor and capital as well as government and religion. All were in agreement that communism was seeking to undermine everything this Nation has stood for in the world since our Constitution was drafted.

The delegate then passed a historic resolution calling upon all loyal Americans to join the battle against "the steady infiltration of communism into our schools and colleges, into our press, radio and screen, into our labor and business and into our Government itself (constituting) an immediate, serious and growing menace to the very existence of the America that we know and love."

A continuations committee composed of a cross section of the participating groups was empowered "to act as a clearinghouse and information center through which the various organizations may be informed and advised of the activities and experiences of other organizations, all upon the understanding that such committee shall recognize the full independence of the various organizations and shall not attempt to control or supervise them."

High above Times Square, where the All-American Conference took place, I had a chance to talk to some of the men and women who passed this resolution. No matter from where they hailed, they were concerned over the extent of subversion in their respective communities. And they've been doing a lot of hard thinking. They know that mere hatred of communism is not enough. Too often, they realize, unchanneled anti-Communist feeling and action play right into the hands of would-be martyrs of the Paul Robeson stripe. Somehow such emotional reactions must be transmuted into an effective plan of action—action that will meet community needs in a positive, rather than negative manner.

Basically, the people I talked to agreed that a plan was needed to make Americans in Maine, New York, California and Alabama enthusiastic about the American way of life. That resounding phrase may be an abstraction, but it was once used with deep meaning by generations of Americans who taught their children to revere its tenets and, on unhappy occasions, to shed their blood in its defense.

The phrase can't be defined easily; but, in essence, it means democratic living in a free society under the protection of the laws of the land. No swashbuckling dictators to tell you what to do. Yet, in recent years, too many Americans have become confused, uncertain and hesitant in defending their heritage against the wiles of the Communists and fellow travelers.

How these insidious intellectual con-men set up innocent sounding organizations as traps for every section of the population was fully described by the distinguished speakers at the All-American Conference. They told how the Reds, seeking a shield of respectability by associating themselves with decent causes, bore from within established political, labor and social organizations. FBI Chief J. Edgar Hoover recently estimated there were more than a half-million Communists and fellow travelers in the country.

You'll find their spokesmen on the air, the public platform and in the press. You'll even find them running nursery schools, represented on school boards and in parent-teacher associations and officiating at lodge meetings. It takes only one dedicated Stalinist to spread poison and cause dissension in any neighborhood or group. He's the eager merchant peddling easy answers to all problems, and he's always looking for dupes who unwittingly will advance the Kremlin cause.

Tireless, resourceful, crafty and dedicated to the godless ideals of Marxism-Leninism-Stalinism, the Communists are a tough crowd to buck. However, with a united front to oppose them at the grass-roots level they can be defeated.

Those present at the All-American Conference had no qualms about the future. There wasn't any question in their minds about making a clean sweep of the commies; the primary problem was that of the approach to be used.

I spoke to one man representing a large fraternal organization who said he felt that voting was one of the first problems which would have to be tackled by the conference. Pointing out how lightly Americans take this vital right and privilege, he reminded me that during the 1948 Presidential election almost half of those eligible to vote had failed to cast their ballots. At the same time, he said, the commies worked day and night to pile up the vote for their favorite, Henry A. Wallace, and spent an estimated $3,500,000 in their attempt to put Wallace in the White House.

As the delegates were told by Dr. Francis L. Bacon, professor of the college of education of the University of California at Los Angeles, most Americans have got to learn—or be taught anew—the basic facts about our democracy. They must realize how the individual citizen can literally move governments. The machinery of our Government is poised purposefully so that the tiny but insistent pressure of a single citizen can be felt not only in city hall but in the White House. You can be assured that a letter to the mayor, and even to the President of the United States, will receive attention. How well the subversives know these elemental facts.

Another important job will have to be done in our school system. This is a ticklish job since Communist teachers, who make no bones about hating America and loving Russia, have managed to penetrate our schools. The intellectual balderdash of Marxism, unfortunately, appeals to or confuses many educators.

That Communists have no place in the school system has been stated by the educational policies commission of the National Education Association. But whenever action against them is taken there are high-pitched screams that academic freedom and free speech are being impaired. In many cases these come from Americans who should know better. This argument recently was answered by Dr. Earl J. McGrath, United States Commissioner of Education. In a major statement of policy, Dr. McGrath asserted:

"Children are not sent to school to be indoctrinated with a closed system of philosophy or the political views of the teacher. The Communist embraces and teaches dogma. He is, by his party membership and sympathy, committed to a closed system of thought.

"He is not free to serve the truth as evidence may uncover the truth. He has, therefore, surrendered his right to teach in a nation of free people. Communist influence, if it began to find expression in our schools and colleges, would be inimical to the development of the minds and characters of American youth, on whom the future depends."

But the anti-Communist movement must steer clear of those who, in the name of Americanism, would put shackles on our schools, Dr. McGrath warned.

"Our efforts to avoid one danger," Dr. McGrath said, "must not betray us into adopting measures of censorship and control, which are the essence of the police state. Some persons have the unfortunate tendency to label as communistic every idea which they happen to dislike. This form of intimidation through vilification is just as objectionable and just as stultifying as the closed-mindedness of the Communist."

The Communists have long viewed the schools as their best recruiting grounds. For decades they have sent "organizers" into the high schools and colleges to spread the Marxist gospel.

But the delegates I spoke to recognized that driving the Commies out of the schools is not enough. Too many Americans, they pointed out, are unable to defend their heritage with facts and intelligent interest. One possible reason has been suggested by Benjamin Fine, education editor of the New York Times. His investigations indicate that the study of American history in American schools has fallen off considerably.

His ideas were amplified by an educator I met at the conference who told me emphatically that parent-teacher groups should wake up. Schools, he said, should and will teach what parents think is vital in education. Your board of education needs you to tell it what to do. If parents are active, well-informed and interested in democracy, the board will respond to their needs. Otherwise it will be sheer luck if you get good schools.

There should be more scholarships, this man continued, for students to study the glories of America's past. Books outlining the virtues of the American way should be subsidized. They should be as readable as books decrying the American way, many of which manage to reach best-seller proportions. Essay contests on such subjects as Our Community's Place in the Story of the Nation's Freedom should be encouraged. The winning essays, he concluded, should be published in the local newspapers.

As a newspaperman, I'd like to amplify that last point. Your newspaper editor will be glad to cooperate. He's not the cigar-chewing tyrant the movies make him out to be. He's got a stake in the American way, too. The American press is the freest in the world and your editor wants to keep it that way. He'll play ball.

And don't overlook the importance of radio in your community. A powerful blow against communism can be struck by broadcasts of recordings prepared by the Office of Education in Washington. Such scripts as American Heritage, Democracy in Action, The Bill of Rights, Americans All—Immigrants All, are available for the asking. Forums in which pro-American spokesmen can thresh out local problems are certain to prove popular.

Pressure should also be exerted at the community level for the production of motion pictures which dramatize American history. Such films can do much in inspiring American youth, and yet too few have been made. This is curious, too, since good historical motion pictures such as Cimarron, Gone With the Wind, Drums Along the Mohawk, and Northwest Passage have made millions for their producers. More such films are needed instead of the stuff that Hollywood grinds out, and also needed are more short features dealing with our country, its history, its people, and its traditions.

Too many films deal with America's imperfections. The Grapes of Wrath type of Hollywood product does accurately reflect a phase of American development, but it was, after all, a minor one. Small wonder that the Russians love to show films like the Grapes of Wrath to their people as an indication of what American life is like.

Not that America is perfect. But modern man has reluctantly come to the realization

that absolute perfection of any kind is impossible. Americans, however—unlike the Russians—freely admit their imperfections and have never made any secret of them. It is obvious that the time has now come when the emphasis has to be placed not on what is wrong with this country but what is right with it.

And that is the job ahead for the Americans who are lining up in the fight against communism. There can be nothing passive about it. As more than one of the speakers said: "This fight cannot be won by adopting resolutions and letting it go at that." From what I observed, and from the temper of those present, it is not going to end with resolutions adopted in committee rooms. This battle is going to be fought, and won, in thousands upon thousands of American communities. And the commies are going to be licked at the grass-roots level by such men as Big Jim Levinson, whose story was told to me by one of the delegates to the All-American Conference.

Big Jim Levinson is the head of the Levinson Steel Co. in Pittsburgh. This is a small company compared with the giants of the industry, but few of its 170 mill hands would care to work anywhere else. Big Jim came to America as an immigrant boy. He soon developed a passionate love for his adopted land. Equality of opportunity more than anything else impressed him. Where else could an immigrant boy, through hard work, rise as quickly in the community as he had?

So it was not surprising that Big Jim never asked a man his race or nationality when he hired him. All he was interested in was, would he make a good worker? And not only was Big Jim the easiest boss in the world to talk to, but he was always looking out for their interests—whether they were in the shop or community. Big Jim always tried to transmit his own zeal for Americanism to his employees through posters, bulletin board announcements, and a house publication. He was always stressing the responsibility of every American to vote, to perform jury duty, and to take an active part in community affairs.

When his son, S. M. Levinson, took over as president of the company, the same labor-management relations continued. So that when the trade magazine, Printer's Ink, and the American Heritage Foundation jointly sponsored a contest in industry the Levinson employees were among the first to participate. They had had good training from Big Jim Levinson.

And they put that training into use. They launched community clean-up campaigns, organized children's ball teams, aided the Community Chest, the March of Dimes, and other civic ventures. They distributed the posters in behalf of religious tolerance, encouraging voting in primaries and promoting a score of other worth-while causes such as blood banks, CARE packages, and chest X-rays for detecting tuberculosis.

Yes, the Levinson employees took first prize in the American Heritage contest and Big Jim's son, in announcing the great honor which had come to them, told his employees:

"If your interest in your American heritage ends with this program, our efforts will have been in vain. This country and its stand for 'life, liberty and the pursuit of happiness' didn't just happen. It took sweat, blood, and intestinal fortitude. They gave us a heritage which you and your children must protect and foster."

In Big Jim Levinson's words, that is what the All-American Conference is all about. It's a job that the delegates can start, but which all loyal Americans—the Americans against communism—will have to work at from this time forth, every day in every year.

What Is the Future of the Steam Locomotive With the Advent of Diesel Power?

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. VAN ZANDT. Mr. Speaker, with the advent of the Diesel engine much discussion is taking place regarding the future of the steam locomotive in its relationship to the coal industry.

Recently I accepted an invitation from a group of B. & O. Railroad employees to address B. & O. Night on May 17 at Du Bois, Pa.

I took the occasion as an opportunity to discuss the future of the steam locomotive and the competition it is receiving from Diesel power.

My address follows:

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, TWENTY-SECOND CONGRESSIONAL DISTRICT OF PENNSYLVANIA, AT BALTIMORE & OHIO NIGHT, HELD AT ELKS BALLROOM, DU BOIS, PA., MAY 17, 1950

Mr. Chairman, ladies, and gentlemen, coming here tonight as your Representative in Congress, I am also appearing before you as a fellow railroader and one who is deeply concerned over the future of the railroad industry in America.

My railroad experience began in July 1916, when I entered the employ of the Pennsylvania Railroad as an apprentice boy in the Altoona shops. After having served in various departments of the Pennsylvania Railroad I held the position of district passenger agent when elected to Congress in 1938.

In accepting the invitation to address you, I did so because I always feel at home with a railroader and his family. This is true because we speak the same language, even though you represent the B. & O. and my railroad employment has been with the Pennsylvania system.

I would like to talk to you this evening about the future of the railroads in America as it applies to the use of coal as a source of power, and the substitution of the Diesel engine for steam locomotives.

I have selected this subject because of the great importance of coal and steam locomotives to not only Du Bois, but to other railroad communities in this congressional district.

I am sure you will agree that when the miners dig coal and railroaders have jobs, it means a healthy economy for our area in Pennsylvania.

While other sources of power continue to make inroads upon the use of coal it is important to remember that coal still is our largest single source of fuel and power.

In 1948 production of bituminous coal in this country was 600,000,000 tons, and we produced more than 57,000,000 tons of anthracite coal. In 1949, of course, production of both bituminous and anthracite was much lower.

Of the total production of bituminous coal in 1948, railroads purchased almost exactly one-sixth. Their total purchases somewhat exceeded 102,000,000 tons, a figure you should keep in mind, to have a correct idea as to the fuel and power situation on the railroads.

The Diesel locomotive has advantages which railroads cannot afford to overlook. Then, too, there have been notable increases in recent years in the use of Diesel power on the railroads.

The fact remains, however, at the beginning of 1950 the railroads still owned 28,800 steam locomotives, compared with approximately 7,500 Diesel locomotives.

With growing pressure of competition, the railroads are obliged to take advantage of every opportunity for increased economy and efficiency, and in some situations the Diesel is of advantage to them.

However, not all of the advantages in the field of locomotive power are with the Diesel. One important fact is that a Diesel locomotive costs considerably more than a steam locomotive of equivalent power.

In order to overcome this higher cost, the Diesel must be intensively operated, so that the higher initial cost can be spread over a greater road mileage or greater number of switching hours than the steam locomotive, thereby equalizing the unit cost.

However, we all know that the situations where locomotives can be thus intensively utilized are not unlimited on the railroads; there are a good many runs and yards where it just is not possible to have around-the-clock operation of a locomotive.

For this reason, the idea that steam locomotives are due to disappear from the railroads in the next few years may be too pessimistic.

Moreover, it is the natural thing that steam would be first replaced by Diesel power on those runs where the opportunity for intensive utilization is most advantageous to the Diesel.

Thus, such replacements tend to take place in a descending order of relative comparison, so that as time goes on the situation tends toward stabilization.

That is, the Diesels have found their place in those fields where the utilization factor favors them, and the steam locomotive retains its place where situations in turn favor it.

Nor should it be supposed that the death knell has been sounded for coal as a source of fuel on the railroads and nothing is being done to delay or halt the funeral. In point of fact, quite the contrary is the case. Perhaps under the spur of competition from the Diesel, a great deal of work is being done to improve the efficiency and performance of the coal-burning steam locomotive and to develop new types of locomotives using coal as fuel.

It has already been found, for example, that a coal-burning steam locomotive of modern, efficient design, with good upkeep and servicing, can closely rival the Diesel for percentage of available miles run per month.

Let it not be forgotten that the railroads still have a good-sized investment in steam locomotives, and they are not going to sacrifice any part of this investment unnecessarily.

The railroads also are actively at work on the development of new types of steam locomotives which will develop greater efficiency in extracting power from coal and delivering it at the drawbar.

One of the great advantages of the Diesel is that it is about four times as efficient as the conventional reciprocating-piston type of steam locomotive in delivering power relative to fuel consumed.

New designs of locomotives are being tried in an effort to narrow or overcome this handicap. Such new designs include steam-turbine and gas-turbine locomotives, to burn coal.

The steam-turbine locomotive differs from the reciprocating-piston type in that the steam under pressure is directed against blades of a turbine wheel, instead of against pistons operating in cylinders.

Steam-turbine locomotives thus far have been of two types, direct-geared and turbo electric.

In the first of these types, the turbine is mechanically geared direct to the driving

wheels. In the turbo-electric type, the turbine drives electric generators, which in turn drive motors which are geared to the wheels.

The first American direct-geared steam-turbine locomotive was placed in service in 1944. It developed 6,900 horsepower, and new designs of this type are expected to deliver up to 9,000 horsepower.

The first steam turbo-electric locomotive was placed in service in 1948. It is designed for high-speed passenger service and depends on a 6,000-horsepower turbine which delivers a total of 4,960 horsepower to the eight driving axles.

Much research and experimentation also have been devoted to the development of a coal-burning gas-turbine type of locomotive.

In this type, combustion gases power the turbine directly instead of being used to convert water into steam. Thus, coal is used to power an internal-combustion engine somewhat similarly to the manner in which gasoline powers an automobile engine.

A group of nine railroads is cooperating with five coal companies in the development of the gas-turbine locomotive.

The railroads concerned are the Baltimore & Ohio, Chesapeake & Ohio, Illinois Central, Louisville & Nashville, New York Central, Norfolk & Western, Pennsylvania, Virginian, and the New York, Chicago, & St. Louis.

The coal companies are the M. A. Hanna Co., Island Creek Coal Co., Pocahontas Fuel Co., Pittsburgh Consolidation Coal Co., and the Sinclair Coal Co.

President Roy B. White, of the Baltimore & Ohio Railroad, has been chairman of the locomotive development committee since its formation in 1944.

The incentive for the development of these new types of locomotives is that bituminous coal continues to be the cheapest locomotive fuel.

Since 1945, the cost of coal per million B. t. u. (British thermal unit) has risen from 12 cents to approximately 18 cents, while the cost of Diesel fuel has climbed from 50 cents to 69 cents per million B. t. u.

However, the cost of fuel required to pull a train depends as much upon the efficiency of the locomotive in extracting power from the fuel and delivering it at the drawbar, as upon the price of the fuel.

As we have just seen, the steam locomotive is much less efficient than the Diesel in this respect. However, the gas turbine, because of its ability to use low-cost fuels with good efficiency, bids fair to be a strong competitor of the Diesel-electric locomotive for road service.

Except when idling, the coal-burning gas-turbine locomotive is expected to cost much less to operate than any of its competitors.

In road service where the average load is 60 to 75 percent of full power, the coal-burning turbine should save $12 to $15 per hour under the Diesel's fuel cost, or any annual saving based on present fuel prices of $50,000 per locomotive can be expected.

This saving is the key to the interest displayed in the development of the coal-burning gas turbine.

In the development of this locomotive, many technical problems of great difficulty have been encountered.

One has been the pulverization of the coal to the extreme fineness required and its delivery to the combustion chamber.

Another has been the question of fly ash left after combustion—its disposition and its possible corrosive effect upon turbine blades.

The third has to do with the extremely high temperatures of operation. However, tests have shown that pulverized coal can be fed continuously to a combustion chamber and burned efficiently under a pressure of 60 pounds per square inch.

One of the advantages of the gas-turbine locomotive is that its power plant is extremely light and compact in comparison with the locomotive-type Diesel engine.

The 2,000 horsepower power plant now on test is only 26¼ feet long, 3½ feet wide, and 6 feet high.

Two such units might be placed side by side in a locomotive, with a center aisle, permitting 4,000 horsepower of prime-mover capacity in approximately 26 feet of locomotive car length.

This power plant weighs less than half as much per horsepower as the locomotive-type Diesel engine.

Another interesting fact is that the gas-turbine locomotive develops considerably more power in cold weather than in hot weather, because cold air is of greater density.

A gas turbine that develops 2,000 horsepower when the air is 80° (F.) develops 2,500 horsepower when the temperature falls to 10° above zero.

This characteristic makes the gas-turbine type of locomotive especially suitable for operation in cold climates.

These activities in the development of new types of coal-burning locomotives show that the railroads are doing their part to help coal retain its place as a source of fuel and power.

In this matter they have a stake of no small value.

In 1948 the class I railroads of the country hauled a total of about 8,700,000 carloads of coal (anthracite and bituminous), amounting to more than 500,000,000 tons.

From this coal traffic the railroads derived a revenue of more than $1,300,000,000, and because of the value of this traffic, they are putting their full weight behind measures to protect it.

In these activities of the railroads they deserve and ought to have—as I am sure they do have—the hearty cooperation of the coal producers.

These measures to protect the railroad industry include opposition to the construction of the proposed St. Lawrence seaway, which has been more aptly described as the St. Lawrence "iceway."

This project is estimated to cost this country, in addition to what has already been spent, anywhere from $573,000,000 to $1,049,000,000, depending on the depths of the channel.

These are estimates by the Corps of Engineers of the United States Army, and in the past their estimates have always proved to be subject to considerable increase when the bills came to be paid.

Among the important items of traffic which would be handled by the St. Lawrence seaway is foreign coal.

One student of the subject has estimated that if this project should be completed an immediate annual loss of from ten to seventeen million tons of coal exported to Canada can be expected.

Moreover, this loss would be exclusive of the actual coal imports into this country through the waterway, and also exclusive of the replacement of steam power by water power over a considerable area.

These losses would not only injure the coal industry but would bring with it the displacement of workers in the coal industry and on the railroads which carry the coal, and, as I mentioned, who purchased more than 100,000,000 tons of coal in 1948.

The interest of all coal producers in cooperating to help prevent this lavish waste of tax money to take away the livelihood of many of the taxpayers ought to be fully apparent.

Another step in which producers of coal ought to be glad to cooperate is in helping to improve the situation with respect to the abuse of the highways by huge freight trucks, in competition with the railroads.

This is another case in which the coal producers have a two-fold interest—as taxpayers and as beneficiaries from the use of coal by railroads.

Let it be understood at once, that there is no objection on the part of any fair-minded person to the use of the highways, and the terms on which they are used by farm trucks, city pick-up and transfer trucks, and the usual run of light trucks.

The only objections against the huge road-busters, which are estimated to comprise only about 5 percent of all the trucks on the highways, is that they are responsible, according to many authorities, including Governor Duff, of Pennsylvania, for major deterioration and damage of the highways.

It is only pointing out the truth—to suggest—that the taxpayers of the country—and that means just about all of us—have an important pocketbook interest in putting an end to this sort of damage.

Moreover, studies in several States have shown that in relation to the use they make of the highways, and the strains they impose on it, these roadbuster freighters pay less in taxes for highway purposes than the owner of a passenger automobile pays.

Moreover, truckers are constantly trying to have maximum load limits increased—so that they can impose even heavier loads on the highways—and do even greater damage to them.

Here in Pennsylvania, they are especially active in that direction, although Pennsylvania's maximum limit of 45,000 tons for tractor-semi-trailer combinations would appear to be liberal.

And even with this liberal weight allowance, there is constant chiseling by truckers to evade the law by overloads above the legal limit.

You can all recall the controversies with truckers on the Pennsylvania Turnpike in regard to these overloads.

In fact, at times their activities have practically amounted to defiance of the law, if not open revolt.

Aside from their damage to the highways, these big freighters also are the focus of the problem of diversion of freight traffic from railroads to highways. Statistics show that while these big highway freighters amount to only 5.2 percent of all trucks registered, they operated 29 percent of all truck-miles on main rural highways and carried 72 percent of all highway freight ton-miles in 1948.

As I have already said, railroads in 1948 used 102,000,000 tons of coal, or one-sixth of the total production. The trucking industry uses no coal. In the light of these figures, the interest of coal producers in helping to keep coal on the rails would appear to be obvious.

In my opinion, it behooves the American people, and especially those of us who belong to the great railroad family of America, to lend our assistance, to the railroad industry in its fight for what appears to be its very existence.

Those of you who are here tonight as employees of the B. & O. Railroad are to be highly commended for your keen interest in railroad problems.

I know you will continue this fine spirit of cooperation, which is so essential if the efforts to stabilize the railroad industry and safeguard the jobs of its employees are to prove successful.

How Far Should Government Control Go in Advertising?

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include

the following address of Mr. Daniel J. Murphy, Chief of Trial Division, Federal Trade Commission, before the Golden Jubilee Advertising Convention, School of Commerce, Accounts, and Finance, New York University, May 12, 1950, at the Park Sheraton Hotel, New York, N. Y.:

HOW FAR SHOULD GOVERNMENT CONTROL GO IN ADVERTISING?

May I, at the outset, refer to a definition of terms, "Government control." What do we mean by that expression? It appears to have rather sinister implications—to some it may suggest state socialism—in some new, real, or imaginary, form—to others, it may imply some new kind of governmental interference with the lives and affairs of its people. The word "control" may mean to govern, direct, rule, subdue. Surely the Government has not in the past and has no desire in the future to so "control" advertising. It only seeks to prevent or to lessen that advertising which is false and misleading. And in making this attempt the individual whose advertising practices and representations are questioned is afforded every guaranty of his constitutional rights and protection.

Thus may I suggest that here we are discussing governmental "regulation" of advertising rather than controls, and that the question should really be, "Should the Government go any further in the regulation of advertising?" Before answering this question, we should first examine a little historical background. The Federal Trade Commission is the only governmental agency equipped by statute, procedure, organization, and purpose, to protect the consumer and competitor from false and misleading advertising. Thus the Government acts through the Federal Trade Commission in attempting to regulate advertising in conformity with established law.

Prior to the establishment of the Federal Trade Commission, there was no such regulation of advertising. The prevailing practice was "Let the buyer beware." For example, in 1900, the United States Circuit Court of Appeals for the Sixth Circuit[1] refused to grant injunctive relief to a manufacturer of aluminum-faced washboards in restraining a competitor from using the word "aluminum" on boards which contained no aluminum, saying that "if * * * all persons (are) compelled to deal solely in goods which are exactly what they are represented to be, the remedy must come from the legislature and not the courts."

Following this decision there was a growing demand for legislation against untruthful advertising. Expressions of this demand were voiced increasingly in newspapers and trade journals. A few such expressions are as follows:

In 1904, the Atlantic Monthly magazine reported "Swindling in newspaper advertising * * * has grown to be a public menace."[2]

In 1905, editorials appeared in the Ladies Home Journal (by Edward Bok) dealing with patent medicine advertising and the dangerous character of some medicines, and the methods used to convince people that they had ailments for which the medicine was recommended as a cure.[3]

In 1914, an article in Inland Printer magazine, entitled "Death Knell of Untruthful Advertising," said, in part, "A wave of reform is now sweeping the country—with the purpose of sweeping it of all dishonest advertising."[4]

In 1914, the Federal Trade Commission Act was passed. Congress, in enacting the Federal Trade Commission Act, wrote into its section 5 the prohibition against all unfair methods of competition in commerce, stating in its Senate and House reports that it was not practical or possible to define all such methods and that if it did, new ones would continually arise. It left to the Commission for its determination what practices were unfair.

The Commission was organized March 16, 1915, and on November 23 of that year the Association of Advertising Clubs of the World, at a hearing before the Commission, urged it to take steps toward suppressing untrue advertising as a form of unfair competition. The first two formal cases decided by the Commission involved false advertising.[5] The first Commission case to reach the Courts involved the false advertising of food.[6] The Court in that case said:

"The Commissioners * * * are to * * * stop all those trade practices that have a capacity or tendency to injure competitors directly, or through deception of purchasers, quite irrespective of whether the specific practices in question have been denounced in common law cases."

The Commission has proceeded over the years to establish literally hundreds of new landmarks in the field of unfair competition for industry guidance and consumer protection, through the courts, until its right to proceed for consumer protection alone without proof of substantial injury to competition was threatened by the Raladam decision.[7]

The Supreme Court held in that case that false advertising must be shown by proof to threaten to injure or to injure present or potential competition.

This was remedied by the enactment of the Wheeler-Lea amendment in 1938, which did away with the requirement of the proof of injury to competition by making unlawful unfair or deceptive acts or practices. Thus the consuming public who might be deceived by false advertising was made of equal concern, before the law, with the merchant or manufacturer injured by the unfair methods of dishonest competitors.

A comparison of the present standards of advertising and business ethics with those prevailing prior to the enactment of the Federal Trade Commission Act clearly demonstrates a remarkable progress. It seems almost incredible that the high concept of responsibility on the part of business to the consuming public and to competitors as now exists were possible of achievement.

As a distinguished professor of law in a neighboring university in New York (Milton Handler, Associate Professor of Law at Columbia University, New York), in appraising the work of the Commission in the field of false advertising, said (1929):

"The Trade Commission has performed yeoman service, and, while it has attempted to stem a seeming Niagara, with proper judicial support additional prodigies are not beyond possibility."[8]

And after passage of the Wheeler-Lee amendment:

"The condemnation of false advertising constitutes one of the signal achievements of the Commission * * *."

"Despite the magnitude of the task, the Commission has made considerable progress in the elimination of false and misleading advertising. The fact that much still remains to be done does not detract from the importance of its achievement."[9]

And:

"The most fruitful as well as the most voluminous work of the Commission has been in this field."[10]

The Courts have also been generous in their praise of this phase of the Commission's work and have noted that the Commission is peculiarly adapted to do it.

Chief Justice Stone expressed this idea in these words, speaking of the Commission:

"It was created with the avowed purpose of lodging the administrative functions committed to it in a body specially competent to deal with them by reason of information, experience, and careful study of the business and economic conditions of the industry affected."[11]

In the Commission's work directed toward the stopping of false advertising or preventing its use, it follows three well-defined courses of procedure. One might somewhat descriptively refer to them as the consent method, the compulsory method, and the cooperative method.

The consent method may be used when the offender desires to agree voluntarily to discontinue the representations complained of, and to enter into an agreement, called a stipulation, to cease and desist from using them any more. When this procedure is initiated, the Commission's attorneys who prepare these agreements have before them the information which has been gathered by investigations of one sort or another. Since there is always the possibility that some of this may be incorrect or has been rendered out of date by advances in scientific knowledge, the advertiser is given the opportunity to come and discuss the matter with one of the attorneys of the Bureau of Stipulations and present his side of the matter. The procedure is quite informal, and if the advertiser can satisfactorily justify the representations he has made, he will be out of the woods. If he cannot do so, he may, if he elects, agree to cease and desist from their further use. If he continues to assert that his advertisements are not false, and the Commission is of the opinion that they are, the issuance of a complaint follows the compulsory method.

This opportunity to dispose of a matter by stipulation is not a matter of right, but a privilege extended by the Commission. It is the policy of the Commission to extend it only in cases where it is of the opinion that under all the circumstances, such a disposition will effect a prompt correction and fully protect and satisfy the public interest. It is not extended when the Commission is of the opinion that the advertiser has undertaken to perpetrate a deliberate fraud or when danger from the use of the product is to be anticipated.

If the opportunity to stipulate is not given by the Commission, or if it is offered and refused, a complaint is issued.

The law provides that the Commission shall issue and serve complaints whenever it shall have reason to believe that false advertising has been disseminated and that a proceeding in respect thereof would be in the public interest. Of course, the Commission would have reason to believe both of these things before the opportunity to stipulate was extended.

The complaint states the charges against the advertiser, whom we call the respondent, and is served upon him. He may be represented by counsel and file an answer to the complaint. Thereafter, hearings are held at which the testimony of witnesses is taken under oath. The proceeding is before an officer called a trial examiner, and the respondent has all the rights of any party to

litigation in court. The case ultimately comes before the Commission for its decision upon the record, briefs by both sides, and oral argument if requested. If the complaint has not been sustained, it will be dismissed. If it has been sustained, the Commission will make its findings as to the facts and issue its order to cease and desist, which is reviewable by the United States circuit courts of appeal or the United States Supreme Court if an appeal is taken from it.

A third procedure available for the elimination of false advertising and the consequent promotion of fair standards of business ethics is provided by the Commission in the trade practice conference plan. This is what I have referred to as the cooperative method. Such trade practice conference procedure has for its purpose the wholesale elimination of false advertising by industry-wide cooperation with the Commission and collaboration of all groups in interest in the formulation, establishment, and observance of fair-trade practice rules governing the conduct of the industry and trade in question. Under the plan, joint action among competitors with the supervision and aid of the Commission is possible, and experience has proved the efficacy of this method in more than 100 industries as an adjunct to the compulsory procedure which I have outlined. The Commission is now, with the sanction of the Congress, enlarging this method of procedure.

Conference proceedings are conducted on a basis of voluntary participation; though the Commission may initiate the conference, it cannot compel attendance or participation. Parties in interest are at all times free to advise and consult with the Commission's representatives in the matter. Where necessary or desirable, informal meetings or preliminary discussions may be arranged to formulate tentative drafts of rules or to develop, through an exchange of ideas, a clearer understanding of the problems involved and the assistance which can be rendered by the Commission in their solution. The conference considers and proposes rules for submission to the Commission for its approval. Before rules are finally approved or promulgated by the Commission, they are subjected to public hearings at which all interested or affected parties are afforded opportunity to present their views. They may submit such in writing or be heard orally as desired. Through such conferences and hearings, all groups in interest have the opportunity to be heard and to consult with us in the matter, even though they may not happen to be classed as members of the particular industry or trade involved.

In passing upon the rules proposed for approval, the Commission applies the test of law. In other words, the rules must not sanction practices which are contrary to law or which, when put into effect, may bring about a result which is illegal or opposed to the public interest. The purpose of this is, of course, obvious. It is not within our province to sanction violations of the law, but on the contrary we are directed to promote law observance, to the end that honest business may be liberated from the waste and fetters of unfair practices, and the rights of the public may be protected.

Advertising is big business. Approximately $2,000,000,000 are spent annually in advertising media—radios, television, newspapers, periodicals, etc. I think the average businessman wants to fairly and truthfully advertise his product. However, you will always find individuals in almost every industry who become a little slick in exaggerating and misleading in their advertising of their product. Sometimes this causes others in that industry who want to advertise truthfully to adopt a similar exaggerated and misleading course in order to keep competitive.

Under the regulations presently imposed by law, considerable progress has been made in seeing to it that advertising is truthful. The machinery set up in the Federal Trade Commission appears to be sufficient and adequate to enforce these regulations. In all probability, if the Federal Trade Commission had more money appropriated to it by Congress for this work, the regulations could be more extensively and expeditiously enforced. However, under all the circumstances, a good job is being done.

With the complete cooperation of business and its advertising advisers, specifically in the field of trade practice conference work, much more may be accomplished. Incidentally, let me here state that advertising agencies who sell advertising copy to business and persuade business to so advertise are just as responsible as business when that advertising is false and misleading, and advertising agencies would be so held to equal accountability.

Advertising is one of the, if not the, greatest living forces in business. Business, and that includes advertising agencies, and the Federal Trade Commission should cooperate to the fullest, not only in keeping advertising great but in making and keeping it truthful.

Labor-Management Responsibility—True Liberalism Which Exalts the Rights of Individuals Versus Phony Liberalism Which Subtracts the Rights From Individuals a Real Issue in American Life

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an editorial by that outstanding writer, David Lawrence, which appears in the United States News and World Report for May 19, 1950. Mr. Lawrence points out that political power calls for great responsibility to the public. The article in question follows:

POWER IS NEVER WITHOUT RESPONSIBILITY

Coal strikes, steel strikes, auto strikes, railroad strikes. Year in and year out, this is the spectacle of our postwar life. The power to strike has been utilized by some of the big unions to enforce demands beyond all reason and equity.

From compulsory collective bargaining, we are now but a short distance away from its dreaded sequel—compulsory arbitration. Reliance on reason and volition is less and less as reliance is more and more on coercion and compulsion.

So far as the Constitution is concerned, the Supreme Court of the United States is keeping in tune with the mood of the times, which recognizes the power of Congress to foist almost any form of restriction it chooses upon individual citizens. The gulf grows wider and wider between true liberalism which exalts the rights of individuals and the phony liberalism of today which at every turn subtracts rights from the individual.

We are faced with an era of coercion. Trade unions have only themselves to blame for this backfire because they have insisted first on the sanctions of the Wagner Labor Relations Act and now, with the support of a sympathetic administration, they have begun to tear down all safeguards against union abuses which the Taft-Hartley Act sought to correct.

The Supreme Court only last week unwittingly portrayed the lengths to which that institution is ready to go to uphold the power of Congress. A law to forbid labor unions to strike at all is within the power of Congress now. A law to forbid companies to choose as their executives men with a disbelief in collective bargaining is within the power of Congress now. Congress need only find that disruptive strikes can be the result of cherishing disbeliefs in collective bargaining or in any other device designated by Government to promote industrial peace.

The Supreme Court majority has said that Congress may require labor-union officers to take an oath saying they are not members of an organization which seeks the overthrow of our Government. But Justice Black, in his dissent, twits the Court for disapproving what our forefathers believed in 1776.

We can hardly deny in the face of the record since 1937 that the Supreme Court is following precedent in sanctioning the right of Congress to regulate all phases of labor-union activity. As Justice Jackson said last week in agreeing to ban from appearance before the National Labor Relations Board any union officers who refuse to take the non-Communist oath:

"I cannot believe that Congress has less power to protect a labor union from Communist Party domination than it has from employer domination. This Court has uncompromisingly upheld power of Congress to disestablish labor unions where they are company-dominated and to eradicate employer influence, even when exerted only through spoken or written words which any person not the employer would be free to utter."

But granting that Congress has the right to legislate a restriction, is such restrictive legislation imperative? It is—if reason fails, if freedom within labor unions disappears, and if elimination of Communist officers cannot be accomplished any other way.

The crux of the matter is in the development of a sense of responsibility by labor-union members and officers as well as by employers. Irresponsibility always leads to restriction of freedom because the alternative is chaos and the destruction of all liberty. We may all ponder, therefore, this warning which came last week from Chief Justice Vinson in that same opinion of the Supreme Court upholding non-Communist oaths:

"Under the statutory scheme, unions which become collective bargaining representatives for groups of employees often represent not only members of the union but nonunion workers or members of other unions as well. Because of the necessity to have strong unions to bargain on equal terms with strong employers, individual employees are required by law to sacrifice rights which, in some cases, are valuable to them. The loss of individual rights for the greater benefit of the group results in a tremendous increase in the power of the representative of the group—the union. But power is never without responsibility. And when authority derives in part from Government's thumb on the scales, the exercise of that power by private persons becomes closely akin, in some respects, to its exercise by Government itself.

"We do not suggest that labor unions which utilize the facilities of the National Labor Relations Board become Government agencies or may be regulated as such. But it is plain that when Congress clothes the bargaining representative 'with powers comparable to those possessed by a legislative body both to create and restrict the rights of those whom it represents,' the public interest in the good faith exercise of that power is very great."

The warning is plain—power begets responsibility, and irresponsibility leads to a forfeiture of power.

Commemorative Stamp in Honor of the Late Heywood Broun

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a resolution adopted by the American Newspaper Guild at the 1949 convention and another by the Newspaper Guild of Boston at a membership meeting, April 27, 1950, urging a commemorative stamp in honor of the late Heywood Broun.

So many newspaper men and other citizens all over the Nation are interested in the subject matter of these resolutions that I am bringing them to the attention of the House and referring copies thereof to appropriate officials of the Post Office Department, with the request that every possible action be taken looking toward the realization of the objectives set forth in these well-considered resolutions.

I am constrained to do this in response to urgent requests notwithstanding the present policy of the committee not to consider legislation providing for such stamps except in extraordinary instances with the thought that the Department may be disposed to initiate action.

The following resolution, presented to the American Newspaper Guild 1949 convention, was passed unanimously:

Whereas this year contains the tenth anniversary of the death of our beloved first president, Heywood Broun; and

Whereas December 18, 1949, will be the anniversary date; and

Whereas the United States Post Office Department is issuing a profusion of stamps commemorating various people representing a variety of phases of American life: Therefore be it

Resolved, That the American Newspaper Guild convention, in session at Columbus, Ohio, does call upon the proper officials for a bill in Congress to issue a commemorative stamp in honor of freedom of the press, with a likeness of Heywood Broun on said stamp; and be it further

Resolved, That the top officers of the guild contact proper officials and assist them in determining the design of said commemorative stamp; and be it also

Resolved, That the locals of the ANG contact their Congressmen when such a bill is introduced and request that they vote approval; and be it finally

Resolved, That copies of this resolution be sent to the proper officials, favorable Congressmen, known to the top officers, guild locals and to several of the larger philatelic magazines.

The Newspaper Guild of Boston, at a membership meeting April 27, 1950, on motion of Past ANG Vice President George A. Harris, passed by unanimous vote the following resolution:

Whereas the American Newspaper Guild has gone on record, by a unanimous vote of its 1949 convention, for the issuance of a Heywood Broun commemorative United States postage stamp; and

Whereas said resolution instructed its locals to contact their Congressmen with a view to obtaining assistance in the Government issuing such a stamp; and

Whereas the working newspapermen of the fourth estate have done much for freedom of the press and democracy in these United States; and

Whereas Heywood Broun is an outstanding example of the principles of newspaperdom, in that he represents the newspapermen in his works, deeds, and ideals: Therefore be it

Resolved, That the Newspaper Guild of Boston heartily affirms the resolution passed by the American Newspaper Guild convention, and respectfully requests that all Congressmen in the Commonwealth of Massachusetts receive a copy of this resolution, and lend their efforts, as our representatives, to placing a bill before Congress that will instruct the post-office officials to plan for and issue a commemorative stamp in honor of the late Heywood Broun. We also suggest that it be issued on December 18, 1950, the anniversary date of his death.

Water-Resources Projects and the Budget

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Elmer B. Staats, Executive Assistant Director of the Bureau of the Budget, before the fortieth annual convention of the National Rivers and Harbors Congress, Washington, D. C., March 24, 1950:

WATER RESOURCE PROJECTS AND THE BUDGET

I am very happy to have the opportunity to discuss before the Rivers and Harbors Congress some of the current issues before the Nation with respect to our water resources programs.

The President, in preparing his budget, faces few more difficult problems than the development of a balanced program for the Federal Government's part in conserving and improving our natural resources. As you know, he has expressed his belief on many occasions that these resources should work for human benefit. Only recently, he said: "In our present dynamic society, the task for conservation is not to lock up our resources, but to develop and improve them." Yet, in moving toward that objective, the President must constantly weigh and balance desirable proposals for resource development against many other pressing national considerations. While individual agencies rightly present specialized program viewpoints, the President's decisions, as reflected in his budgetary and legislative recommendations, must always be made from the standpoint of general welfare of the whole Nation.

The opportunity to address this convention is particularly welcome since it permits me to discuss the interest of the Bureau of the Budget in the field of water resources.

The Budget Bureau is the staff agency principally responsible for assisting the President in reviewing the budgetary and legislative proposals developed in the Executive Branch. Thus, it is our job to analyze and review the broader issues which the President must face in relating an individual program, like water resource development, to national programs and objectives. Today, I hope to discuss with you some of these objectives and show how they relate to current issues facing us in our water resources programs.

The Budget Bureau's responsibilities to the President in the field of water resources are unlike those of any other Federal agency. As the agency principally responsible for the coordination of water-resources programs proposed by other agencies, it is inevitable that the Bureau's findings and recommendations may differ with the findings and recommendations of the proponents of a particular policy or piece of legislation.

It is also inevitable, therefore, that in the minds of some people the Bureau is considered as being interested only in the dollar costs of such proposals—that we are unable to focus on anything except the possibility of eliminating or reducing items in the budget. However, I believe I can demonstrate that this view is erroneous and that the Budget Bureau understands that the sound development of water resources is far more complex than just the size of the budget estimate presented by the President to the Congress. Along with the operating agencies and the committees of the Congress concerned, we are seeking a positive, constructive solution to our water-resources problems, recognizing that there are many factors which must be taken into account other than the size of the budget.

For the next few minutes, however, I would like to discuss the fiscal and economic background against which all Federal programs must be measured at the present time.

Someone has said that we have lived 100 years in the last decade. Even a casual examination of our new national responsibilities and commitments would seem to bear out this statement. Within the past 10 years we have seen a dramatic change in the direction and character of the Government's activities. Today we are supporting programs at a level unthought of in 1939; we are moving forward rapidly in areas of human and physical development unknown 10 years ago. The new emphasis and increased size of the Government's activities have produced new problems and new challenges in the formulation of national fiscal policies and the creation of a properly balanced Federal program.

We cannot escape the sobering fact that it is not possible to view any Federal activity, including our water-resources program, solely from the viewpoint of its contribution to our economy or national well-being. Because of overriding national considerations, every decision on individual programs must be a compromise—a compromise between what we would like to do and what we actually can do in the light of existing commitments and the insistent demands from other segments of our society.

I am sure you are all familiar with the budget figures for the fiscal year 1951 which were transmitted to Congress last January. Under those estimates, the Federal Government's expenditures will amount to approximately $42,400,000,000 and receipts to $37,300,000,000. Thus, we face an estimated deficit of $5,100,000,000 for the year which ends June 30, 1951. The deficit for 1951 is expected to be only slightly less than the deficit of $5,500,000,000 estimated for the current fiscal year.

You may well ask why your Government is spending more than four times what it spent 10 years ago. The answer is not hard to find. In 1951 a total of $30,000,000,000, or approximately 71 percent of the money spent by the Federal Government, will go to meet the cost of past wars and to pay for insurance against future wars.

In terms of your understanding of the President's budget problem and your problem as citizens directly interested in a particular Federal program, that is the most important single fact in my statement today. It is the crux of the budget problem in these

postwar years. It is of fundamental importance to a discussion of the relationship of our water-resources program to our overall national interest and policy.

Specifically, we will spend about $13,500,000,000, or 32 cents out of every tax dollar, on national defense in this fiscal year. These are direct expenditures for defense. They do not include many other large Federal programs, which, while essentially civilian, are closely related to defense needs, such as the development of atomic energy, the maintenance of our merchant marine and the provision of strategic highways.

Another $4,700,000,000 is needed to meet p.esent commitments in the international field. The European-recovery program and our expenditures for government and relief in the occupied areas of Japan and Germany will account for most of this total. In terms of the budget dollar, our expenditures for international affairs and finance will amount to 11 cents.

Thus, two large Federal programs—national defense and international affairs—are consuming about 43 cents out of each dollar spent.

To meet interest payments on our national debt will require $5,600,000,000 or 13 cents of every dollar in 1951. This does not represent, of course, any retirement of the debt, but merely the payment of interest.

Finally, there is another large program which will take an additional 15 cents from each dollar. This is our program of veterans' services and benefits amounting to $6,000,000,000. Included in this program, as yo'1 know, are pensions, medical care, education, and other national commitments made to our veterans.

Those four programs—all of them related to past wars or our efforts to prevent a future war—amount to $30,000,000,000, or 71 cents out of every dollar the Federal Government will spend in 1951.

I might add, parenthetically at this point, that the income taxes which you paid this year, together with the income taxes paid by all corporations, after deducting refunds, are estimated to fall $2,250,000,000 short of paying for these four items directly related to past wars and efforts to achieve a peaceful world.

Out of the remaining $12,000,000,000—or the remaining 29 cents, if you will—all the demands of our highly diversified economy must be satisfied. This sum must finance all programs devoted to the development of our natural resources, to the advancement of health, welfare, and education, to the improvement of our transportation and communication facilities, and to carrying out the services which the citizen has long expected from his Government, such as carrying the mail, making and enforcing the laws, collecting taxes, and providing aids to industry and agriculture.

This $12,000,000,000 figure gives us a better perspective for considering our activities and commitments in the public-works field. Our public-works programs, drastically curtailed during the war, have been steadily expanding for the past 4 years. Despite a restrictive policy on new starts, the pressure to move forward on essential projects and the inauguration of programs arising from the war, such as atomic energy, have meant a constantly growing volume of public works under way. To maintain an economical rate of construction on these going projects, therefore, has required a steady rise in current expenditures.

For the 1951 fiscal year total civil public works expenditures under the budget will amount to $3,100,000,000. Thus, in relation to the $12,000,000,000 in the budget for essentially domestic programs, public works represent approximately 25 percent of the total. And within the total of $3,100,000,000, expenditures for water-resources development amount to $1,200,000,000. These are 1951 expenditure figures. It is also important to realize that to complete projects and other commitments already under way in the public-works field will require almost $12,000,000,000 in expenditures in the years ahead.

The decisions we make with respect to our policies for developing water resources and with respect to the rate of progress in constructing individual projects are highly important decisions. They vitally affect the size and character of the Federal budget not only for this year but for a number of years to come. They underscore the complex problem the President faces in preparing his budget under present-day conditions. He cannot escape the fact that the costs of four large programs related to past wars and our efforts to preserve the peace have increased to more than 11 times their 1939 total. All other activities of the Government are not quite twice as high as they were then.

Let me put it another, and perhaps more dramatic, way. The Government spent $8 for national defense in 1939 for each man, woman, and child in the country; in 1951 it will spend $89. The Government spent 15 cents for international affairs 12 years ago; today the cost is $31. The Government spent $4 for veterans' programs in 1939; in the 1951 fiscal year the cost to each person will be $40. To service the debt cost $7 per person before the war; it will cost $37 in 1951. For all other activities of the Government in 1939, the cost per person was $49. In 1951, in sharp contrast to other increases, that cost will rise only to $81 per person.

Let us look at that increase in all other Government costs from $49 to $81 for a moment. When we consider that in this 12-year period our population will have increased by over 20,000,000, that our national income will have more than tripled, and that the Government, like the housewife, must pay more for the goods and services it purchases, we can see how tightly the domestic activities in the budget have been held down.

These figures all serve to dramatize the fact that the fiscal limits within which the President must plan his domestic program are extremely narrow.

When the citizen, interested in an individual project or service which seems eminently worth while and a sound expenditure to him, hears that the Federal Government is spending $42,400,000,000, it is difficult for him to understand why that project or service, which may cost but a few thousand or a few million dollars, is not promptly provided.

The President, however, in considering each proposal, must not only weight it against similar proposals, but also against the demands of scores of other unrelated programs. I can assure you that if the President had accepted all the recommendations that were made to him for highly desirable expenditures in the fields of defense, natural resources, health, and many other activities of Government, the budget for the fiscal year 1951 as transmitted to the Congress would have been nearer $60,000,000,000 than $42,000,000,000.

Thus, the tremendous problem facing the President is the development of a domestic program which properly balances and adjusts these competing demands, for less than 30 percent of our total expenditures.

The budget process is the principal device available to him in achieving a realistic and proper balance among Federal programs. Viewed in this light, you can see that the budget of the United States is not an auditing report or an account of what has happened. Instead, it is essentially a statement of program recommendations. When the President transmits the budget and the Congress acts upon it, they are making decisions on how much of the Nation's resources should be devoted to each Government activity. Thus, the budget is a medium for bringing about balanced decisions in the light of economic, social, and political conditions in this country and throughout the world.

I stated earlier that the change in direction and size of the Federal program had produced new problems and new challenges in government. Let me enlarge upon that statement for a moment. Today, while the citizen is demanding increased governmental service on the one hand, he is, at the same time, becoming increasingly insistent that sound policies, sound organization, and sound performance characterize the services he is receiving. The work of the Hoover Commission is the result of this insistence, not the cause. Thirty-five years ago, when our national budget amounted to less than $3,000,000,000 or about 4 percent of the total national income, there was comparatively little interest in the processes of the Federal Government. Today, with a budget of over $40,000,0000,000 or about 18 percent of our total national income, the policies and performance of government are rightly receiving the attention of an increasing number of citizens.

The size and scope of Government activities today underscore the need for carefully interrelating desirable programs; for undertaking them in logical and orderly sequence; and for scheduling them to conform with the fiscal and other limitations. Even more basic, however, is the requirement that the policies and assumptions underlying these programs are soundly conceived.

Let me turn now to a consideration of our water resources programs as they relate to some of the larger national issues I have just outlined.

There is little question that there is a pressing need for a new examination of the basic policies and assumptions upon which our water-resources programs are built. Within the past year a number of unresolved issues have been raised which have repeatedly underscored the existence of basic conflicts in Federal objectives, as well as in agency jurisdictions. We have been unable, in the absence of a consistent statement of national water-resources policies, to evaluate certain individual proposals properly in the light of the national interest. An integrated resources policy is needed, therefore, if we are to promote and sustain a responsible, stable, and effective development program.

These problems come to our attention in the Budget Bureau not only because of our responsibility to advise the President on budget estimates, but also because of our responsibility to review and analyze, for the President, legislative proposals and proposed reports to the Congress on public works and other improvements.

In carrying out these responsibilities the Bureau's role is essentially one of coordination, review, and advice. It must be mindful not only of the specialized viewpoint of the individual agency, but of the broader national issues with which the President must deal. We recognize that national policies for the development and utilization of our water resources must constantly change as our needs change and our technical skills increase. Continuing review, analysis, and planning are needed if the various individual programs are to be based on common assumptions and are to yield maximum benefits to the broadest segments of our economy. In this process, the Bureau assists the President by bringing together, adjusting, and reconciling the views of the Federal agencies involved in the resources field.

Efforts have been made from time to time to adjust our resources policies to new concepts and new needs and to bring about the desired coordination and cooperation between agencies and interests. Generally, these efforts have been made in connection with individual project proposals, or from the point

of view of a single agency. While these efforts are commendable, they have not been satisfactory because of the absence of a clear-cut and established national policy covering the several benefits and objectives to be attained.

During the last session of Congress, the President on several occasions called attention to the lack of certain basic policies with respect to our expanding program of water-resources development.

Among the issues to which the President specifically called attention were the following:

First, what broad policies should govern in determining the use of water and land for purposes, other than agriculture, having important public values, such as flood control, hydro-power production, navigation, recreation, etc.? How does the increasing demand for water for industrial and other purposes affect these other demands?

Second, what uniform policies should be applied to the calculation of benefits and costs in general? What policies should govern customer preferences and the establishment of public power rates, repayment rates for reimbursable services, the allocation of water for industrial uses, and many other issues? What economic and social principles should govern the assignment of the burden of cost among the several beneficiaries of multiple-purpose projects?

Third, is there a governmental public-utility responsibility in hydroelectric power development in various parts of the country? To what extent should hydroelectric power revenues be used to defray the cost of other programs such as land reclamation?

Fourth, what are the proper considerations with respect to the timing of various resources development programs in order to promote economic stability?

The President on several occasions has expressed belief that, in some cases, to attack these problems on a piecemeal, or project-by-project basis, in the absence of established national policies, will only serve to confuse the basic questions involved.

With this in mind the President appointed on January 3 a Water Resources Policy Commission of seven members to study and make recommendations to him on existing Federal legislation and policies in the water resources field. He has asked that the Commission give particular attention to the extent and character of water-resource programs, the priority of these programs from the standpoint of economic and social need, and the criteria and standards for evaluating the feasibility of individual projects. This study is scheduled to be completed by December 1 this year.

It is recognized, of course, that permanent answers cannot be provided to our water-resources policies, any more than to any other area of governmental activity. However, the need today is for immediate answers to some of the more serious policy questions in order that Federal programs in this field may move continuously forward.

The need for carefully considered policies is also underscored by the tremendous expansion in these programs in the past 10 years. In 1939 water-resource programs accounted for $280,000,000 in the Federal budget. In 1950 these increased to approximately a billion dollars. In 1951 these programs, despite a highly restrictive policy on new starts, will involve expenditures, excluding operation and maintenance, of $1,225,000,000. It is interesting to note that expenditures for rivers and harbors projects have just about doubled, while the construction-cost index has risen at the same rate, leaving little net gain in physical volume. Flood control and Bureau of Reclamation expenditures, however, increased sevenfold and fivefold, respectively. This shift in emphasis reflects the growth of the concept of multipurpose river development.

The amount the President submitted for 1951 for water programs represents an increase over 1950 due to projects started in 1950 and the prior years. The rate of expenditures for 1951 for these projects has been held to a minimum, consistent with the most economical rate of construction. There are no new water-resource projects in 1951 except for additional facilities in power-shortage areas such as the Tennessee and Columbia Valleys. Expenditures for flood control were estimated in the budget to increase from $459,000,000 in 1950 to $534,000,000 in 1951 and will probably continue at this level in 1952, despite the fact that no new starts are contemplated in 1951. The Bureau of Reclamation's expenditures will increase within the same period from $307,000,000 to $354,000,000; similarly, small increases are projected for other programs. These figures reflect the policy set forth in the President's budget message as follows:

"Despite the large number of highly meritorious projects which have already been authorized for construction, we should not at this time add to the present high level of commitments This policy is necessary both because of our over-all fiscal position and in order to provide the greatest possible measures of stability, under present economic conditions, in the rate of Federal public works expenditures."

One of the major problems involved in the development of water resource programs is that we provide adequate funds for the continued orderly and economic development of all of the various phases of these programs, keeping in mind the element of time and the desirability of advanced planning and engineering. An adequate reserve of carefully planned public works is an important factor in obtaining a balanced and flexible program which will serve the interests of national security, provide for a means of productive economic development of the Nation, and a means for employment stabilization if and when the Congress determines that a major public works program is desirable to meet the general unemployment situation. On the basis of present prices, we now have nearly $11,000,000,000 of projects authorized but not yet started and $20,000,000,000 of projects under consideration but not yet authorized. These are principally water resource improvements. In addition, it will require more than $7,500,000,000 after this year to complete water resource projects already under way. Thus the implications for the economy and the fiscal policy of the Nation are great.

Now out of these figures and questions as to future policy I want to cite one governing consideration: The budget for water resource programs represents a major investment by our people in the economy and the future strength of our country. Whether we invest wisely or not will depend upon the understanding and assistance of groups such as yours and the full cooperation of the executive and the legislative branches. In the final analysis, the true test of a project is not whether it is a good project, but whether it is the best project possible, and whether it contributes the maximum amount to our national needs and the well-being of our people.

The Lippmann Thesis on Foreign Policy

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a portion of an article entitled "The Lippmann Thesis," which appears in the May 17 issue of the Christian Century. I commend it to the attention of all Members of Congress who are interested in the important problem of foreign policy in view of world conditions:

II

Mr. Lippmann has outlined his thesis for an intelligent and effective foreign policy in an article, Breakup of the Two-Power World, which appeared in the Atlantic Monthly for April. He has reinforced the arguments in that article in several of his syndicated columns which appear in more than a hundred daily newspapers. Briefly, the Lippmann thesis is this:

The Truman doctrine and the policy of a military containment of Russian communism are failures. They are not only failures; they have become irrelevant and outdated in the light of six major developments of the past year. These are (1) the Russian A-bomb; (2) China; (3) the dissolution of the British and Dutch Empires in south Asia; (4) the chaotic developments in Indochina, Malaya, and Burma; (5) Tito and the Titoistic tendencies in Poland, Bulgaria, Hungary, and Czechoslovakia; (6) the revival of Germany. The combination of these "has created a radically new situation that will compel all the governments to reexamine their estimates of the cold war and their calculations and their policies."

One thing these events show, says Mr. Lippmann, and that is that the assumption, made by both Russia and the United States, that the whole world must line up either in the Russian world or in the American is a fallacy. The common factor in all except the first of the six events listed is that one side in this struggle has lost control of an important region without the other side gaining certain and permanent control. This can prove true even in China. In addition, the loss of America's atomic weapon monopoly fundamentally alters the military situation, especially in Europe. It renders the North Atlantic Pact of very doubtful value, for the military stalemate between the American strategic Air Force and the Red army has been broken. If we invite nations on Russia's periphery to join us as military allies, we must now offer them defense not only against the Red army but against atomic bombardment. This we can no longer do. An invitation to a military alliance with us is an invitation to make themselves the bull's-eye for Russian atomic blasting. No nation in its right mind can be expected to be attracted by such an invitation.

What, then, is likely to happen? "The Germans are a highly intelligent people," writes Mr. Lippmann, "especially in military matters when they are not befuddled by demagogues like Hitler. They are confronted with a dilemma and they know it, and there is only one way out of it open to them which offers them any prospect—even if it is not a certain prospect—of security. The Germans will take that way out because there is no other way out. They will recognize that they lie between two armed coalitions, each attempting to win them over to it. They will exploit this middle position to recover their national independence by making demands and gaining concessions from both sides. They will shake off the controls of the occupying powers. They will get rid of the military occupation. Then they will develop their middle position in the heart of Europe outside either alliance, and in between both alliances, to regain their power and influence in Europe."

A similar policy, Mr. Lippmann believes, will evolve in most of the other nations which are now under pressure to join either the Russian or American power blocs. It is the policy already announced by India, Pakistan, and Indonesia. It is the policy

others are longing to adopt—and that includes Japan. "It is the policy of avoiding entangling alliances in a two-power world."

And what should American policy be if these things are true? Not to try to form a world-compassing, hard-and-fast global coalition against the Russians. To do so would be to hasten war, and at the coming of war most of our reluctant allies would be revealed as military liabilities. Our proper policy should be "to frustrate and to disorganize and to disintegrate any Soviet attempt to form a global coalition." "That would mean," says Mr. Lippmann, "that we put our influence and power behind the general tendency toward national independence, toward military neutrality, and toward diplomatic disentanglements—a tendency which is manifest in almost all of Asia, and in much at least of central and eastern Europe. I believe that in the last analysis the matter reduces itself to this: that since we cannot encircle the Soviet Union by a military coalition, we should cultivate and exploit all the national forces, all the human impulses to escape from the havoc of war, in order to prevent the Soviet Union from forming its coalition and in order to disintegrate its military alliances in eastern Europe and those which it hopes to achieve in Asia.

III

To us, this makes sense. And before the reader comes to a different conclusion, we trust that he will read Mr. Lippmann's complete argument in the Atlantic and follow with care the corollaries of that argument as he develops them in the daily press. If the Lippmann thesis does make sense, it follows that the premises on which the United States is proceeding at London are mistaken. The world need not be divided into two armed camps. The cold war need not go on until it turns into a hot war. The United States need not risk bankruptcy and ruin to pay for ghastly expensive military alliances as the only means of halting the Communist advance. There are far more promising ways to deal with the current world crisis than those which are now coming out of the Pentagon and State Department. And if the men who are meeting in London will not listen when a man with Mr. Lippmann's standing tries to tell them this, then we hope that at the next Assembly of the United Nations those countries which are being driven by our policy and Russian's between two lines of fire will seize that platform to make this thesis heard throughout the earth.

Soviet Gold Smuggling

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sylvia F. Porter from the New York Herald Tribune of May 16, 1950:

SOVIET GOLD SMUGGLING
(By Sylvia F. Porter)

Russia is now smuggling vast fortunes in gold bars and coins to her agents in key spots of the world—in Sweden, France, Italy, Switzerland, Tangiers, Hongkong, Macao.

Inside reports are that the Soviet's shipments of this most precious of all monetary metals just in the last 15 weeks run far above $200,000,000, may even surpass the $300,000,000 mark.

This places her gold shipments on an extraordinarily high level, for in these times, gold movements of this magnitude are rare for any nation except America.

They're virtually unprecedented for the Soviet Union.

The gold is being taken out of her metal reserves, is being loaded on Russian steamers, is being shipped from such ports as Vladivostock to such ports as Marseilles and is then being rerouted to the Soviet's financial agents in the chosen areas.

It is not being done officially; no announcement of the shipments has been made, of course.

But from Zurich comes the story of large arrivals of gold bars in transit. And the bars have been identified as Russian.

From Tangiers and Macao comes the tale of the sudden appearance of big bags of gold coins and bars. And the bags bear not only the stamp of the U. S. S. R., but also carry the stampings of the original owners—"Reichsbank, 1912." "Federal Reserve Bank, 1932." (It was in 1932 and 1933 that gold was fleeing the United States for safer havens.)

When General Eisenhower addressed the Nation's newspaper publishers in New York recently, he urged them to seek clues to Russia's plans in her commercial and economic transactions. For, often deals in this area reveal more than a thousand diplomatic maneuvers.

What then has the Politburo in mind here? What might these vast gold shipments imply to us?

We know how deeply the Soviet treasures her gold hoard—variously estimated at from 2 to 5 billion dollars. Why then is she sending such fortunes outside her borders and doing it unofficially too?

We know that spies are traditionally paid in gold and Russia surely pays off hers in metal as we surely pay off ours. But what sort of espionage could possibly warrant this level of smuggling?

I've been checking with financiers who study and deal in these mysterious markets. They see three explanations.

First, Russia is building up gold hoards in key spots for future dumping purposes—is getting set to dump gold in the global markets to drive down its price at crucial moments.

She already has dumped plenty of the metal. Her sales in Paris, Tangiers, etc., during February and March were a major factor in the sensational slump in the world black-market prices for gold.

The reason: To bewilder and terrify the industrialists of Europe and Africa who completely distrust paper money, have faith only in gold as a measure of value and their own fortunes. When the world gold price crashes, their confidence is bitterly shaken, their willingness to invest in and continue business activities is deeply undermined.

Officially, Russia would not sell gold on the black markets. Unofficially, she could—and she has dumped and she will dump to wage economic and psychological warfare on the West.

Second, Russia is creating these hoards in outside spots so she can pick up foreign currencies when she wants them—the pound, the dollar, etc.—at prices much below the official rates.

For gold still will buy any currency at a discount in the world markets. And again, the economic and psychological advantages to the Soviet are clear.

Finally, Russia is getting in position to wage a ruble offensive against the pound and the dollar, to back her currency with gold in fact as well as fancy—when and if she's ready to move.

The ruble bloc will go on the offensive against the dollar and sterling blocs when Russia can swing it. It is another clue.

This is international money juggling in the classical tradition. A pattern of competition and conflict is being drawn—and Russia is seizing upon every weapon the capitalist nations ever devised.

If we fail to act positively on our own in this sphere, we will commit an unpardonable blunder—no, a criminal blunder.

Winning a Defeat

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an editorial that recently appeared in the Milwaukee Journal. It points out that we are soldiers winning the war and our politicians have lost the peace at a terrific price. Now the facts are coming to light. Mr. Roosevelt who believed that he could mold Marshal Stalin in his own image and thinking, failed to do so, and in addition, Stalin walked off with half of the world at Yalta.

The editorial follows:

WINNING A DEFEAT

Having triumphantly won the global war this country is now—at enormous expense—ingloriously losing the global peace.

This is not the fault of our strategists. Their campaigns were ably organized and brilliantly conducted.

But our generals and admirals went where they were sent: they themselves were commanded by politicians, most of whom lacked military or diplomatic experience: and it was political leadership which, in the very course of victorious war, laid the bases for our ultimate defeat.

Obviously, therefore, if postwar disaster is to be averted, the wartime errors committed in our name must be understood so that their worst consequences may perhaps be tardily eliminated.

During the war, because of censorship and secrecy, the American people had virtually no knowledge of their political misguidance.

But the facts have been coming to light.

For example, the Atlantic Monthly has published and the Reader's Digest had epitomized, a revealing article entitled "Our Worst Blunders in the War" by Mr. Hanson W. Baldwin, military editor of the New York Times.

This article, with other writings, shows clearly that, by his political conduct of the war, President Franklin D. Roosevelt was mainly responsible for our postwar dangers.

The first error was Mr. Roosevelt's child-like belief in the integrity and good will of Marshal Stalin and the Politburo.

The President actually believed that Soviet Russia had forsaken its objective of world communism—and could be trusted.

The President actually believed that our wars could not be won without Russian support, when actually the opposite was true.

Influenced by these delusions, the President rejected the British plan for a Balkan invasion, which would have excluded Russia from central Europe, and bribed Russia—with gifts of Chinese territory—to enter the

Japanese war when Japan was already beaten.

Our political objective was speedy victories by any ruthless means, not a just and durable peace.

As a result, Russia stands poised today for the conquest of all Eurasia.

Two other political errors need to be considered.

One was the unrealistic doctrine of unconditional surrender lightheartedly proclaimed by Mr. Roosevelt at Casablanca.

This doctrine made a German surrender impossible until Germany had been totally wrecked.

And, in the words of Liddell Hart, the British expert:

"War to the bitter end was bound to make Russia top dog on the continent."

The second error—equally disastrous in Asia—was the Rooseveltian policy of anticolonialism.

Borrowed directly from Marxism, Mr. Roosevelt's insistence on the abolition of the colonial system was responsible for the revolutions in south Asia.

Hence has come about the great weakening of the British and Dutch empires—for centuries, stabilizing and civilizing influences in the east—which is truly one of the goals of communism.

There is still time to rectify—at least to modify—some of the evils caused by political mismanagement of the war.

But this will require a different kind of management from the kind we have now.

What a Farmer Thinks of the Extravagances of Truman and His Cabinet

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 16, 1950

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to say that Mr. Louis Bromfield in addition to being a very successful author of a number of popular books is also a citizen of Ohio and is a big farmer. A few days ago in his column he took upon himself the task of showing to the public the extravagances of the administration high officials. He does a fine job of it. The following is what he writes:

At last Congress has shown signs of moving in on the leaders of Mr. Truman's administration and the Democratic National Committee. For months and years now every taxpayer, regardless of his feeling toward Mr. Truman and his socialistic platform, has been paying his share of the expenses to promote Mr. Truman, his friends and his ideas. How? Through the old Pendergast ward politics system of charging up expenses of political campaigning to the Government itself.

Let's look at the record. For months now Mr. Brannan, Secretary of Agriculture, has been touring the country, making speeches, attempting to sell Mr. Truman and his welfare state to hundreds of thousands of citizens. There has been and there can be no pretense as to what he is doing. The attitude is wholly partisan both as to ideas and as to politics. The Democratic National Committee rather than the taxpayer should be paying the bill which runs in a year or so into hundreds of thousands.

Mr. Tobin, Secretary of Labor, has been following the same pattern, rarely making anything but partisan political speeches which sound as if he were a paid propagandist for the big officials of organized labor whom the Democratic Committee woo so passionately. Who paid for it all? You and I.

Mr. Ewing, Federal Security Administrator, tours not only this country but Europe with special attention to the socialist government of Great Britain. On his return he did quite a bit of traveling and talking in praise of British socialism and in particular of socialized medicine, which is simply a back-handed way of making hay for Mr. Truman and his program. Who paid for it? You and I.

And so on and on it goes throughout most of the Democratic officeholders in Cabinet and administrative posts. Virtually every one of them is guilty, and when we add up the total, including Government planes which are freely commandeered in the interests of the Democratic Party, the bill comes to many millions of dollars. Who pays for it? Not the Democratic Party campaign fund, but you and I every time we pay our income tax or go to a movie or send a telegram or ride on a train or buy a cigarette.

Under law and Constitution, all the posts represented in this spending of taxpayer's money for the benefit of Mr. Truman and his friends were set up as administrative posts, clearly established as nonpolitical. Under the long 17 years of the Democratic rule they have turned more and more simply into debased political sounding boards in which the administrators spend more and more time away from their inefficient, expensive, and confused departments in making political speeches.

The Department of Agriculture, for example, was clearly established by law, and for many generations by honest precedent, as an agency for research and education beneficial to American agriculture. The present Secretary is a New Deal Denver lawyer without direct contact or experience with agrituiture or any of the farmer's problems. How much time does he spend trying to straighten out the administrative mess into which his Department has been made by successive political appointees? How much time does he spend pressing research and education? And how much time does he spend on the road selling Mr. Truman, the welfare state, and Socialist ideas which would completely regiment the farmer in return for an inadequate check paid out of taxpayers' money?

Only recently at a Minnesota meeting, farmer members of the Production and Marketing Organization (incidentally the worst political set-up in our Government) were given per diem pay and expenses by car, train, and in hotel, to travel considerable distances in order to hear Mr. Brannan make a political speech in favor of the welfare State, the Brannan plan and Mr. Truman. Who pays for this skullduggery? Guess. It is not the Democratic National Committee.

The President himself is no better. Recently it was recorded that he winked at reporters when he mentioned his forthcoming nonpolitical trip to the Northwest and back again with speeches at every whistle stop. The trip will cost well in excess of a hundred thousand dollars. Who pays for it? Guess who. You and I. When clearly it should be charged to the Democratic Party campaign fund.

This is the kind of thing we get when we place in office men who are essentially professional and sometimes cheap ward politicians.

Fortunately Congress has begun to take notice of these practices which honest citizens can regard only as an outrage, not only against themselves but against decent democratic government. Mr. Stalin and his friends operate on the same system but more frankly and honestly. It might just be that this situation is a good subject for a letter to your Representatives in Washington. That's the only way we shall stop what is one of the cheapest and most shameful practices in American history, as subversive to good government and good democracy as anything the Communists have ever attempted to pull off in our midst.

Secretary Chapman Favors Arizona Despite Budget Bureau, Says Arizona Paper

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. ENGLE of California. Mr. Speaker, under leave to extend my remarks I include the following editorial from the Arizona Republic for May 12, 1950:

GAIN FOR ARIZONA

Arizona gained an advantage in the debate on the list of factual questions to be submitted for governmental agency answers before the House Public Lands Committee vote on the central Arizona project authorization bill. Not only are the questions the ones that are expected to produce answers favorable to the project, but they are going to a friendly camp—the Department of the Interior.

California's original success in pointing its list of questions to the Budget Bureau was swept aside in the latest conference. This agency at the beginning of this session of Congress virtually blackballed the project and was then persuaded to replace its blast with a second report from which the barbs had been extracted. Even in its revised form, it was politely non-committal, rather than favorable.

Since that time, a new Secretary of the Interior—Oscar Chapman—has taken his place in the Cabinet. He is known to be exceedingly friendly to Arizona. Besides, the questions probably will be answered by the Department's Bureau of Reclamation, which has warmly endorsed the project. Thus Arizona's best interests are probably served in by-passing the Budget Bureau.

By eliminating the policy questions that might draw unhelpful replies, and basing the requests for data on engineering and financial considerations from the Reclamation Bureau, Arizona's cause stands to be strengthened when the bill comes up for a committee vote after June 15. There is reason for optimism in that no other barrier seems to stand in the way of a committee recommendation at that time. A day or two may be required to go over the submitted material, but a vote could be expected soon after the project is resubmitted.

The only barrier then standing in the way of final acting in Congress will be getting a place for the bill on the House calendar. The measure having already passed the Senate, if given a favorable recommendation by the House Public Lands Committee, a place would probably be found for it.

References made by the President on his western tour indicate an apparent friendliness to reclamation projects such as the one Arizona sponsors. If it received an encouraging White House nod in June, the project might clear its high hurdles smoothly.

The Wounded Don't Cry

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. DAGUE. Mr. Speaker, in the furor that has been raised by the order inactivating Valley Forge General Hospital, which is located in my district, I have attempted to point out the economic fallacy in the closing of this fine institution and the evidence of political maneuvering in the simultaneous erection of another multimilion dollar facility in Philadelphia, less than 20 miles away. In this connection I cannot praise too highly the outstanding work done by our colleagues the Honorable L. MENDEL RIVERS and the Honorable LEON H. GAVIN, chairman and member, respectively, of the Armed Services Subcommittee, who have presented to this House such telling arguments for keeping Valley Forge open.

The one aspect of this closing order which has been generally overlooked has to do with the complete breakdown of the morale of our disabled servicemen who now face the bleak prospects of being shunted to remote hospitals, where they will be confronted with new and strange doctors and nurses, who, naturally, will not be acquainted with their cases. It is a sad commentary on a Government which seems to be ready to spend billions on the citizens of other nations but at the same time seeks to effect savings at the expense of those who continue to suffer from the wounds incurred in defending that same Government from those who would destroy it, in the helping of whom we are now so lavishly spending our substance. The most factual, and certainly the most poignant, picture of the plight of these displaced patients has been given us by Mr. Ivan H. Peterman in the Philadelphia Inquirer for May 15. I commend it to your attention as a recital of just how thoughtless bureaucrats can be in the prosecution of their ill-advised planning:

VETS GET DP TREATMENT IN VALLEY FORGE OUSTER

(By Ivan H. Peterman)

"The wounded don't cry," they say, and after 5, 6 or 7 years groping through war's aftermath, they don't talk much, either. If they did, some could recite a story of this great United States Government, which lavishes billions on others who never heard a shot fired, while shoving these, the most deserving, from hospital to hospital, with callous indifference.

For that is the story of Valley Forge General Hospital's new DP's—the legless, the armless, the incapacitated, and even the blind. Over the combined protests of relatives, friends, Gold Star mothers, welfare workers who in the postwar years have adopted many so that their life has become more bearable, over the American Legion's demurrer, and the efforts of Phoenixville's civic associations who now regard the "boys on the hill" as part of the town, the Defense Department is closing Valley Forge at the end of June.

Many familiar figures have gone. There are no blind boys fishing this spring in Dr. Gotwals' pond. They loved that. About the only sport a blind serviceman could enjoy. At the Army's center for the blind in Chicago, there is no fish pond. No country atmosphere. No familiar paths and walks which only time can restore to a man whose sight went with the blast of a shell.

But Secretary Louis Johnson, whose hurry-up economy order didn't pause to consult with medical officers of either Army or Navy, decided Valley Forge must close. When you call Washington to find out why someone didn't investigate first, or why some arrangement hasn't been made to keep these helpless near their friends and families, there's a lot of evasion, but few adequate answers. Nobody's very proud of this move.

Army and Navy have long been silenced by top administration order. Explanations, when given, don't face the issues. Office of Defense decided one military hospital—Walter Reed—was enough this side of the Mississippi. A few post hospitals like Fort Belvoir, and the residue—like those luckless lads found in burning Belle Vista sanitarium recently—shunted to private institutions. Some have been quartered at the State Hospital for the Insane in Norristown.

In the meantime, a new veterans' hospital is about to rise in Philadelphia. More efficient, requires less personnel, is the reason. But not long ago the Veterans' Administration was willing and ready to take over Valley Forge. Last October, the Army said it would remain. In February, Secretary Johnson changed his mind. On May 3 came the decision to clear out, if possible, by June 15.

The soldiers' wishes? The dilemma of dozens of veterans' families who, thinking Valley Forge was permanent, had bought homes and moved to Phoenixville to be near wounded husbands and sons? The whole problem of sudden, unexpected dislocation, breaking of companionships among the patients? There was no thought of this. And under the Fair Deal's growing gestapo fear, nobody had the courage to speak out. But nobody likes it.

Some were shipped to Chicago. Some to San Antonio and California. The Veterans' Administration, which at most had comparatively few patients in Valley Forge, on April 18 had only 54 patients there, all but 8 of whom were general medical cases. The public is widely mistaken on Valley Forge. It is not a Veterans' hospital at all, and most of the blind, orthopedic cases you've been seeing at Franklin Field, at the ball parks, the tracks and Arena, and Stadium, are technically not veterans, but still active service men, at service pay and subject to Army orders. The Veterans' Administration is wholly blameless in this matter. The order traces directly to the Secretary of Defense, and the wishes of President Truman.

It was the President, remember, who last week on his quarter million dollar, tax-paid junket, proclaimed that while he hoped some day to balance the budget, there would be no sparing of dollars at the expense of the people's welfare. That sounds mighty fine to uninformed listeners at a whistle stop. But it must bring bitter smiles to Valley Forge's 1,500 wounded of the Second World War, displaced by his own economy order.

But it's a long cry from a wounded vet's dull day to the high-pressure office of national defense. Louis Johnson, for all his qualities, never crouched in a wadi after bomb shock and watched the light fade at sunlit noon. I have, and I know the gratitude when you can see again, and the understanding you must always have for those who weren't so lucky.

If there's anything but politics left in Washington, those responsible for the Valley Forge situation will listen to public appeal, and rectify this hasty move. The State of Pennsylvania wants to take over the hospital; arguments that it is inefficient, a fire hazard, etc., are strictly phony. It's a splendid place for these patients. If Army medics can farm out such boys, they can also arrange to return or keep them at Valley Forge, pay their way in cooperation with the State, and avert one of the harshest deals yet handed those who all but died for the country.

Do I hear any objections?

Justice for Ireland

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include the address I delivered to the members of the Clan-Na-Gael at their annual banquet in Worcester, Mass., on the evening of May 14, 1950.

This meeting was held in commemoration of the Irish martyrs who gave their lives to perpetuate a great ideal, during the Easter Week uprising of 1916. The address follows:

Again we meet to pay reverent tribute to those Irish martyrs who gave their lives in the Easter week uprising of 1916 in carrying forward a great ideal. Men who passionately loved Ireland and human freedom; men who unselfishly dedicated their lives, their fortunes and their sacred honor in order that the bitter, bloody struggle of over 750 years should one day be crowned with the brilliant achievement of deliverance from bondage, and the glories and triumphs of self-government and independence.

These men sought no selfish gain nor personal aggrandizement; they sought no territorial conquest save what was their own. They sought what the human soul has sought since the dawn of history—the right to be free; the right to be delivered from cruel and tyrannical rulers; the right to speak their own minds, to worship the God of their choice; to set up the government of their own selection; in a word, to find self-expression, self-realization and self-development through the medium of free institutions.

Great events are often moved by a few. The people, as a whole, are often inspired by a small group. The number of these heroes of the Irish volunteers and citizens' army was not large, but the spirit of freedom, sacrifice, and gallantry which they displayed animated and infused their fellow citizens with an insuperable courage to go forward, never to give up the fight for freedom until it had been won, never to cease resistance until their liberties had been secured, never, never to know the meaning of the word "defeat."

From those dark days of 1916 there has been a steady march forward in the affairs of the Irish Government. Led by a succession of brilliant, far-sighted statesmen, endowed with great talents, zeal and courage, Ireland has steadily developed its free institutions, its resources, its native capacity for self-government, and today stands as a free and independent nation among the governments of the world.

Although Ireland is now enjoying a new birth of freedom, there is one essential characteristic of democracy that is still lacking.

and that is its God-given geographic unity. That right has been willfully and deliberately denied to Ireland in contravention of every principle of democracy, every canon of self-determination and every tenet of justice as they are known between men and nations.

Ireland was deliberately divided and partitioned by the designing and arbitrary action of a superior and powerful imperialistic force in 1920, when the British gave a separate government to the six counties in the north.

An imaginary geographic line was drawn across the nation in such a manner and with such a purpose as to include the maximum territory that could be included without endangering political control, and although the so-called great democracies of the world are decrying communism and fascism, this northern government has been operating on the Fascist model for over 27 years, and the British Government which set up and which supports it has not lifted a finger to do anything about it.

When I read of Ireland's reluctance to become a member of the Atlantic Pact, I could readily understand the reason. When we find signatories to that pact maintaining such monstrosities as the so-called government existing in the north of Ireland, originated as a result of crass gerrymandering, where the majority is being controlled by a minority, the explanation of the Irish attitude, on that score, is clear.

It is my considered opinion that the objectives of this organization have not been, and will not be, attained until we can persuade every lover of true democracy and freedom to do all in their power to bring about the elimination of the partition which now keeps the Irish people from being one nation, indivisible, with liberty and justice for all.

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the twenty-third article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

The record of American gullibility and self-deception concerning Soviet Russia is so remarkable that it would be incredible, except for the hard facts of public record.

No wonder Stalin was so confident of his power when he sat down at Tehran and Yalta with President Roosevelt.

He knew that he had before him the supreme example of that sort of American who had for 30 years been hugging illusions in the place of fact, concerning the Soviet system.

Consider here these known and public facts. The first Soviet Government took control of Russia by force of arms on January 18, 1918, after having lost the elections the year before.

It set about at once the suppression of all political activity in the Russian empire and instead, undertook to make a private organization, the Communist party, superior to the official government.

To understand the importance of this, you must keep in mind the actual structure of the Government itself. This, as organized by the Communists, was set up as a system of soviets, meaning councils.

These soviets were set up first in the villages and neighborhoods, with higher and higher ones made up of delegates from below.

The supreme Soviet, at the seat of the national government, combined within itself all three functions, legislative, executive, and judicial.

But were elections to any of these rising circles and councils free? Could anybody run for office? Could competing politicians organize in parties and contest for office with regular platforms, campaigns, and free speech to criticize and expose the acts of one another?

Could voters have secret ballots and private choice of their representatives?

The Communists, who had lost every election up to the day they were able to buy enough men and guns actually to seize the government offices and kick out the legally elected members of Parliament, made sure that could not happen.

One of the very first things they did was to declare all opposition a major crime.

They made their own rules from the top down as to who could qualify for membership in the Communist organization, itself. You couldn't just announce that you had decided to be a Communist, then roll around to the nearest party office, register, declare your allegiance, and ride the gravy train.

Oh, no. Joining the Communists was joining the aristocracy in power, and they took in members on a rule stricter than that of any private club.

Yet, through their use of the guns and the power seized by revolution, they made sure their private club actually had superior authority over the system of soviets supposedly the legal government of the nation.

Thus, in every soviet, it was not the actual membership in office that made policy, but the Communist fraction. Remember the word for it was in time to be a plague to American labor unions and all other organizations Communists would seek to dominate. The Communist faction gave the decisions and all the rest just rubber stamped.

Such was the government set up in Russia by Lenin, Trotsky, and the others who seized control in 1917–18.

It was a government in which the taxpayers not only were deprived of property and the privilege of free elections, but also had to pay through their taxes for the single political party that ran the Government from the top down, and elected its own membership into both Government and party, also from the top down.

All this was visible from the start. It was no secret. Indeed, Lenin declared that the Communists would by such means not only govern Russia but the whole world.

Could Americans fall for that after having been brought up in the tradition of government operated by checks and balances between independent branches of legislative, executive and judicial officials?

Could Americans abandon the proved value of keeping political parties in competition with one another and never allowing any one set of politicians to settle into power secure against exposure and dismissal by the voters?

Well, the Soviet system was hardly declared in Russia and the international Communist movement organized in Moscow before the uproar began here for our Government to recognize the Soviet system and make the Communist work for our destruction easier.

Now begins the story of the real Russian invasion. And in typical fashion it began by indirection. On May 6, 1919, there arrived in New York City one Ludwig A. Martens, presenting credentials as the diplomatic representative of the Soviet Union.

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the twenty-fourth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

Now in this strange, eventful history comes a chapter of events as ludicrous as they are bitter. It is the story of the American businessman taken for a sucker by the Communists seeking diplomatic status for their Soviet regime in Russia.

Well do I remember, in early 1943, the Honorable Averell Harriman reading a riot act to a number of us whose hearts remained hardened against his friend in the Kremlin.

Mr. Harriman at that time was the golden Ambassador of lend-lease in Moscow and his heart was full of simple faith. Five years later he testified to a congressional committee:

"Stalin is a greater menace than Hitler ever was."

But in 1943, Mr. Harriman's mission from Moscow was to make the ignorant in and around Washington realize that the Russians only needed a little loving kindness shown to become partners after the war.

They had known he was coming and had baked a cake.

Indeed, if you will trouble to look in the old World Almanac for 1928, you will see just how far back they had seen him coming. For the almanac of that year has the notes on a little venture organized in New York City by Mr. Harriman and friends, a corporation to explore for and mine gold in Siberia for good old Joe.

It was a great adventure, and fortunately the parties to it had plenty of shirt to lose. But it is something to think about, that so astute and experienced a banker as Averell Harriman could forget the events of 1926–27–28, in the fun of 1943.

All this fantasy of doing business with the Communists began in the spring of 1919 when one Ludwig C. A. K. Martens produced credentials as the first Ambassador from the first Soviet government in the world.

Marten's who had been here since 1916 as a Russian engineer, presented his credentials to the State Department on March 19, 1919, and was politely told to take himself off.

How did Martens get in here in the first place? This is one of the many little side mysteries of those days even yet not solved in full.

Make of it what you will, but one Leonid Krassin, another engineer, was one of the Communists' most famous secret prerevolutionary agents in Russia.

Krassin, like Alger Hiss, was outwardly the very model of respectability. Yet undercover he organized bomb throwers and illegal agents of all kinds.

He even turned in about $1,000 a month of funds to the Bolsheviks, furnished by his employer, himself one of Russia's idle rich in love with revolution.

As soon as the State Department declined Martens the status of diplomat he opened propaganda offices in New York.

He began a magazine, Soviet Russia, the ancestor of Soviet Russia Today that remains a chief apologist for Stalin to this

very day. And then he let slip the word that the Soviets intended to pick up where the Czars had left off, at granting foreign development companies access to Siberia.

Juicier than that, he invited manufacturers of everything from pig iron to iodine to come in and make him bids for sales contracts.

Before anybody could say "Dzughasvili," he had issued some $30,000,000 worth of these.

Unfortunately, all these contracts had a clause explaining they were at the moment purely tentative, and indicative, not hard-rock. The reason, of course, was that the United States and the Soviet government had no lawful basis for exchanging their separate kinds of money. Diplomatic status, he indicated, would cure everything.

But the United States of America, as a large creditor of the czar and the government that followed him, had on its mind something near to a couple of hundred million dollars' worth of private and public debts due from Russia.

Would the Soviet government honor these? It said it would not. Yet the businessmen who thought the Communists would soon come around, were jumping for contracts. Finally, the State department issued categorical warnings that any American extending credit or accepting any obligation to pay, by the Soviets, would do so at his own risk.

A New York State committee raided Martens' office. He was called down here before a couple of congressional committees, served with deportation warrants and generally made highly visible so that his agitation and propaganda work suffered. So on January 22, 1921, he gave up and went home. His place was taken by another curious character, Boris Skvirsky, of whom much more, later.

Nearly 15 years later, Martens was back in the news.

In Britain as in the United States of America, business and industry had been sucked into development work for Soviet Siberia. Somewhere around 1930, Stalin figured it was time to break off.

So then we hear of Mr. Ludwig C. A. K. Martens as a member of a people's court before which six British citizens, engineers for the famous Vickers company, were dragged on charges of espionage.

New Pattern for Democracy

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Altoona Tribune of May 15, 1950:

NEW PATTERN FOR DEMOCRACY

Government's refusal in recent years to follow the accepted American precepts of standing aside, protecting only the freedom of the American people to live, work, and do business lawfully, and their right to go about such business unhampered has resulted in a vicious circle, an apparently endless race by the American people to keep up to the cost of living.

Coupled with this is the Government's concern for foreign relations, which has been taken to the extreme length by the President of the fantastic point 4 by which Mr. Truman would have us pay to develop the underdeveloped portions of the globe.

Americans have been paying out billions in recent years to sustain European governments and economic systems, both of which are rotten in their underpinnings, and actually can be strengthened only by the unity of their own respective peoples.

From these two modern aspects of American Government has evolved an un-American governmental principle which appears to be a confused version of equalitarianism.

We find it emanating largely from Government officials and bureaus. While both spout democracy, they present it in the form of socialism, sharing-the-wealth Government-will-take-care-of-you programs, all overlaid with vague hintings against the prosperous or the wealthy, which is given point by the soak-the-rich theory.

In other words, the ultimate objective seems to be to reduce America, through this new democracy of equality to the place where every man earns the $4,000 a year suggested by Mr. Truman the other day, and probably, only the top upper crust of governmental bureaucracy may be entitled to attain to more than that, in either power or money.

We are presenting this as bluntly as we can, because we see the picture this way. The Government is not quite so frank. It talks about democracy, or democracy in action, while what it proposes is a paternalistic welfare state. The British, for example, don't quibble about it. They acknowledge they are trying a welfare state.

We are told, for example, by the State Department and the President, that we must make every concession we can make for world trade. Of course, trade is vital. But, if it costs us more than it repays, it certainly is not good for America.

Mr. C. W. Gustkey, of the executive committee, National Labor-Management Council of Foreign Trade, told a House subcommittee the other day that imported glassware last year cost American workmen $4,000,000 in wages. Wage losses this year, he said, may total $12,000,000. Employment in that industry, he said, has been cut in half by imports from Europe. He testified, in fact, that such imports threaten the very existence of the handmade glassware industry in this country.

From New York comes the report that threats of new competition from abroad are harassing the textile industry. It is estimated that at least 50,000 jobs in the textile industry are directly at stake through rising imports of cotton goods, and cuts in our own exports as a result of increased foreign production built up by United States dollars.

Coal industry estimates have suggested that some 50,000 miners will lose their jobs because of the importation of cheap foreign oil into this country.

From Czechoslovakia is coming a flood of felt hats, an increase of 300 percent last year. That hits American industry.

And, while famine haunts China, from some strange reason, our Government is importing dried eggs from that stricken land—some 2,000,000 pounds, the equivalent of 12,000,000 dozens, in 8 months. And the Government is loaded with surplus dried eggs it has bought from our own people and can't sell or give away.

Government warehouses are filled with surplus wheat, barley, and rye, but we are reported importing them, also.

What about a program for future world trade that is reducing American jobs now? What about a State Department theory of foreign trade that ruins American industry now with an influx of cheaper imports?

Will the net result of this Government policy, in all truth, be to reduce the American standard of living, to "equalize" the American people to the point where they have no opportunity, nothing beyond the calculated limit of earnings which the Government may allow them?

Is that the kind of democracy we are to have?

If so, a vast and terrible change will be taking place in our great free Republic.

McGregor Will Hold Conferences in District

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. McGREGOR. Mr. Speaker, since I have been in Congress I have always attempted to keep in close contact with the people of the Seventeenth Ohio District, whom I represent.

I have used many methods of obtaining their opinions on various matters, including the questionnaire, letters, and personal contact. Each year I arrange meetings in the courthouses of the six counties in my district, publish the dates of those conferences, and urge everyone to meet with me and talk over any subject they choose.

This year I will again follow this procedure during the period of our official congressional recess. I have made arrangements to be in the courtrooms of the six county courthouses from 9 a. m. to 5 p. m. each weekday. Saturday conferences will last only until noon when the courthouses close, and no sessions will be held on Sunday.

I have established the following schedule:

Monday and Tuesday, August 21 and 22, Ashland, Ashland County.

Wednesday and Thursday, August 23 and 24, Mansfield, Richland County.

Friday and Saturday, August 25 and 26, Mount Vernon, Knox County.

Monday and Tuesday, August 28 and 29, Delaware, Delaware County.

Wednesday and Thursday, August 30 and 31, Newark, Licking County.

Friday and Saturday, September 1 and 2, Coshocton, Coshocton County.

Many constituents have shown interest in these courthouse visits in the past, and I have been very pleased with the results. It is surprising how much can be accomplished when a citizen and his Congressman can sit down and talk over national and personal problems.

No appointments are necessary for these conferences, and I hope to see a large number of people. All of us have problems we would like to discuss, and this discussion will be of mutual benefit.

I urge any or all of my constituents to meet with me on the date most convenient to them. With the knowledge thus obtained, I know I will be better able to truly represent them in the Congress of the United States.

The Late Hon. Bainbridge Colby

EXTENSION OF REMARKS
OF
HON. WINGATE H. LUCAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. LUCAS. Mr. Speaker, Bainbridge Colby, the last Secretary of State in the late Woodrow Wilson's administration, died on April 11, 1950. In his long lifetime covering some fourscore years, Mr. Colby accomplished many things equal to the greatness of his capacity. But one of the most important faculties he possessed was his foresight and understanding of human emotions and desires.

Perhaps, if we had remembered in the thirties the warning that he issued in 1920, we would not have the trouble with Russia that we are having today. At that time, he issued a masterly summation of the reasons why we could not do business with Russia either economically or politically. His statement was a correct evaluation of Russia and Soviet psychology. I refer to the statement that Mr. Colby, as Secretary of State, made in a note to Baron Cammillo Romano Avezzana, the Italian Ambassador to Washington. At the time that he issued the note, negotiations were under way for settlement of the Polish-Russian conflict that followed the end of World War I on the eastern front. Poland had set itself up as an independent republic, and under the great Polish leader, Pilsudski, had attacked the Ukraine. The Bolshevik Government retaliated. It almost crushed Poland, and its armies reached the outskirts of Warsaw, the Polish capital. The Polish Government offered peace, and assistance from America staved off complete defeat for Poland at that time.

Italy, through its Ambassador here, inquired of our position in the matter. In substance, Mr. Colby replied that we favored maintenance of the territorial integrity of both Poland and Russia. Greatest friendship for the Russian people, as such, was expressed by our Government in the note which also stressed our friendly relations with them in the past. But Mr. Colby, speaking for our Government, said that entirely apart from the political views of the minority (Soviet group) which had seized power in Russia, we could not deal with them on the ground that they openly renounced adherence to the moral code which governs comity between nations.

I will not produce the entire text of the statement here, but just the pertinent excerpts. These excerpts show the wisdom of Bainbridge Colby as well as the lack of wisdom displayed by this Government when it recognized the Soviet regime in the early thirties. I commend to you the reading of these excerpts as follows:

It is not possible for the Government of the United States to recognize the present rulers of Russia as a government with which the relations common to friendly governments can be maintained. This conviction has nothing to do with any particular political or social structure which the Russian people themselves may see fit to embrace. It rests upon a wholly different set of facts. These facts, which none disputes, have convinced the Government of the United States, against its will, that the existing regime in Russia is based upon the negation of every principle of honor and good faith, and every usage and convention underlying the whole structure of international law; the negation, in short, of every principle upon which it is possible to base harmonious and trustful relations, whether of nations or of individuals.

The responsible leaders of the regime have frequently and openly boasted that they are willing to sign agreements and undertakings with foreign powers while not having the slightest intention of observing such undertakings or carrying out such agreements. This attitude of disregard of obligations voluntarily entered into, they base upon the theory that no compact or agreement made with a non-Bolshevist government can have any moral force for them. They have not only avowed this as a doctrine, but have exemplified it in practice.

Indeed, upon numerous occasions the responsible spokesmen of this power, and its official agencies, have declared that it is their understanding that the very existence of bolshevism in Russia, the maintenance of their own rule, depends, and must continue to depend, upon the occurrence of revolutions in all other great civilized nations, including the United States, which will overthrow and destroy their governments and set up Bolshevist rule in their stead. They have made it quite plain that they intend to use every means, including, of course, diplomatic agencies, to promote such revolutionary movements in other countries.

* * * * *

Inevitably, therefore, the diplomatic service of the Bolshevik Government would become a channel for intrigues and the propaganda of revolt against the institutions and laws of countries with which it was at peace, which would be an abuse of friendship to which enlightened governments cannot subject themselves.

In the view of this Government, there cannot be any common ground upon which it can stand with a power whose conceptions of international relations are so entirely alien to its own, so utterly repugnant to its moral sense. There can be no mutual confidence or trust, no respect even, if pledges are to be given and agreements made with a cynical repudiation of their obligations already in the mind of one of the parties. We cannot recognize, hold official relations with, or give friendly reception to the agents of a government which is determined and bound to conspire against our institutions; whose diplomats will be the agitators of dangerous revolt; whose spokesmen say that they sign agreements with no intention of keeping them.

A Very Bad Idea

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article taken from today's New York Herald Tribune.

Mr. Speaker, I realize that the House Committee on Ways and Means is putting in many weary hours trying to improve on our present tax laws. They have a terrific problem and in their effort to satisfy Mr. Truman to make up the loss in excise taxes, I fear the provision recently adopted to collect 10 percent from corporations to catch a possible $150,000,000 in dividends not reported will be expensive economy. A large portion of those dividends are going to institutions presently exempt. Without a doubt, many small stockholders depend on the dividends for day to day expenses. This move will only add confusion to an already chaotic situation and I hope the members of the Committee on Ways and Means will recognize this error before it is too late.

The article referred to follows:

A VERY BAD IDEA

The House Ways and Means Committee, seeking additional revenue to offset a billion-dollar cut in excise taxes, has hit upon a plan for withholding a 10-percent tax on dividends. The 10 percent would be collected directly from the corporations; they would mail a receipt to each stockholder with every curtailed dividend payment; the stockholder must save the receipts throughout the year, mail them with his March 15 income tax. If he owed no taxes on his dividends, the Income Tax Bureau would in due time mail a refund.

Here is new complication, new forms for the companies, new trouble for the taxpayers, more bookkeeping for the Treasury. Here, too, is hardship for the man of small income whose dividends will be cut whether or not he owes taxes upon them and whether or not he depends upon them for day-to-day needs.

What will be gained from this added trouble? Its sponsors say $150,000,000. They point to $1,400,000,000 paid out in corporation dividends which fail to show up on income-tax statements. A substantial amount estimated at close to half, of the "lost" revenue can be accounted for in the tax-exempt dividends paid to charitable, educational, and religious institutions, and there must be many small stockholders, among the retired, for instance, who have insufficient income to require a tax. Actually the device seems to be aimed at small stockholders, since corporations report all dividends of more than $100 for check against individual tax statements. One wonders, therefore, whether the Representatives have not overestimated that $150,000,000.

The House move is destined to make sorer one of the sorest spots in the whole tax field—the double levy on dividends. As every stockholder knows, the corporation itself pays up to 38 percent on the income from which dividends are paid, and they pay again on their income-tax returns. Withholding is, moreover, at best a device of expediency. We see no justification for its extension to a new field, or for further bedevilment of the taxpaying citizens.

Omnibus Appropriation Bill

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. HOLIFIELD. Mr. Speaker, the drastic effect of the Taber-Thomas and

Jensen amendments to the omnibus appropriation bill is becoming apparent.

An article in today's Washington Post by the able columnist, Jerry Klutz, analyzes some of the drastic effects.

The House and Senate conferees will, I hope, eliminate the provisions contained in these amendments.

The article referred to follows:

THE FEDERAL DIARY—POSTAL, VA SERVICES FACING DRASTIC CUTS

(By Jerry Kluttz)

The Senate Appropriations Committee yesterday was warned that the House-approved Taber-Thomas amendment by itself would:

Drastically reduce postal services; force the firing of about 57,000 postal workers, and cut the Department's budget more than 200 million dollars under present operations.

The committee also was told that the Jensen turn-over amendment, also approved by the House, by itself, would:

Force the Veterans' Administration to abolish more than 23,000 jobs during the 1951 fiscal year; 15,000 administrative, and 8,000 in its medical department, and cripple operations to the extent that service couldn't be given veterans as required by law.

And those cuts would be merely the beginning. Both VA and Post Office would have to make additional job cuts under a combination of the Taber-Thomas and Jensen riders, as would most other Federal agencies.

"The effect of the two amendments, taken together," Budget Director Frederick Lawton told the committee, "cannot be estimated and unfortunately will require additional personnel to assure compliance with the limitations.

"The effect," he added, "might well be even more serious than anyone presently suspects."

That's the tip-off that the riders would knock off far more than the estimated 200,000 Federal jobs in the next year.

In a 3-hour session with the full Senate Appropriations Committee, Lawton and his staff dealt mainly with the many confusing, bewildering, and conflicting problems raised by the two House economy amendments. He asked the committee for clarification on scores of points.

EFFECTS SUMMARIZED

The Jensen amendment, Lawton said, would have this effect on these few selected agencies:

VA: A total reduction of personnel in all programs of slightly more than 23,000. The amendment excludes doctors, nurses, and other medical personnel, but not service employees in the hospitals.

"It is obvious," Lawton said, "that these reductions to the programs for handling veterans' claims, insurance matters, applications for education and training, for loans, etc., will cripple the Administration to the extent that service could not be rendered to veterans as required and as is due them under laws enacted by the Congress.

"The reductions in the medical program," Lawton pointed out, "will make it absolutely impossible to activate new hospitals which will be available for operation during the 1951 fiscal year, will further curtail outpatient medical care to veterans with service-connected disabilities, and will tremendously increase the backlogs of veterans awaiting hospitalization or out-patient care."

HURT MILITARY POWER

Defense agencies: The Budget Director told the committee that they would be forced to fire civilians and to replace them with military people, thereby reducing military striking power. "This," he said, "would be in conflict with the existing policy against filling civilian billets with military personnel."

Lawton added that custodial help in ordnance plants and navy yards had a high turn-over which would result in maintenance problems. Also, that turn-over among skilled workers averaged about 30 percent annually. To cut this staff, he said, would have an adverse effect on the production, rehabilitation, and repair of weapons.

General Services: This agency, Lawton brought out, has a turn-over in custodial jobs up to 200 percent a year. As a result, he added, "it is expected that by the end of the fiscal year 1951 the level of maintenance and security operations in Government office buildings would be reduced to an extremely low level." He also said it would be impossible to maintain some operations on a 24-hour basis as they are now.

MUST FILL SOME VACANCIES

Post Office: The Budget Chief said that many of its 42,000 offices have less than 10 employees. "Inability to fill vacancies," he said "would present a major problem since the transfer of personnel between such offices would be difficult and expensive." He also said that rural mail routes were a one-man operation and unless vacancies in them could be filled that routes would have to be consolidated to an impracticable point.

It was clear that Lawton and his staff had far more misgivings about the Taber-Thomas amendment than the Jensen rider. He told the committee that he didn't know how it could operate in many circumstances. The committee, incidentally, has invited both Chairman CANNON, of the House Appropriations Committee, and Representative TABER (Republican, New York), to explain what the House had in mind when it approved the amendment.

Selecting a few agencies, Lawton told the committee the Taber-Thomas rider would have these effects:

Federal security: That St. Elizabeths and Freedman's Hospitals here would have to cut service to patients, and that Public Health hospitals would have to reduce food, drugs, clothing, etc., for its staff and patients. PHS doctors, nurses, etc., are exempt. A reduction would have to be made in the administrative staff of the old-age and survivors insurance despite the fact that their salaries are paid from a trust fund. This would result, Lawton said, in reduced service to beneficiaries who have contributed to the trust fund and who are entitled to prompt payments.

Defense agencies: Civilians serving in Army and Navy hospitals aren't exempt as are strictly medical employees in VA and PHS hospitals. The defense agencies also would have to put in an additional system of accounting to keep tab on the amendment.

FUNDS FOR RENT CUT

General services: The amendment cuts funds to pay rent. Lawton points out that 90 percent of the leases are on from 2 to 4-year terms, and that the leases can't be canceled without added cost to Uncle Sam.

Post office: A cut of $200,000,000 and 57,000 employees as noted above. Postal transportation costs couldn't be cut as required by the amendment as they are determined by volume of mail and rates fixed by regulatory agencies. Leases on already inadequate postal facilities would have to be canceled. The procurement of both stamps and money orders would have to be curtailed.

VA: Its budget would be cut about $53,000,000 and $35,000,000 of it would apply to personnel. So, an additional cut of 12,100 would have to be made; 7,600 in administration, and 4,500 nonmedical people in the Department of Medicine and Surgery.

DISTRICT OF COLUMBIA FUNDS DISCUSSED

Lawton asked the committee if reductions under Taber-Thomas would be made in appropriations for the legislative and judicial branches and the District of Columbia government, and by whom, if it is determined they are to be covered.

He points out that the Library of Congress, Government Printing Office and other such agencies appear to be covered by Taber-Thomas. On the other hand, the Jensen rider clearly exempts any agency in the legislative or judicial branches, or the District government.

"With respect to the District of Columbia," Lawton testified, "it is considered that the intended action should be clearly spelled out." He referred to the Taber-Thomas amendment.

The Jensen turn-over amendment exempts scientific and technical jobs in the Atomic Energy Commission and the armed services which Lawton said "indicates a desire not to jeopardize employment of such personnel in the interests of national defense."

But the Budget Chief explained that the Bureau of Standards, the National Advisory Committee for Aeronautics and the Research and Development Board does work for these agencies, and their personnel would be covered by the rider.

A copy of Lawton's statement on the House-approved budget was given to each member of the Senate committee. A committee member allowed this reporter to study his copy.

Living in a Glass House and Throwing Stones

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. REED of New York. Mr. Speaker, it is about time that the mask be stripped from our political and mud-slinging President. I am inserting an editorial from the Washington Times-Herald which at least has made a beginning in this important service to the American people:

DR. DREAMBOAT AND MR. PENDERGAST

Mr. Truman's speech at the Chicago stadium represented a tremendous effort to make people forget that he is the Pendergast gang's President, that he was a key figure in the Pearl Harbor conspiracy, that at Potsdam he was the architect of the brutal peace, and that his State Department is under the domination of the Communists and the English. It was an effort to make people forget the vast corruption and the vastly corrupting influence of his Administration.

TRUMAN ASKED FOR OPPOSITION

He should be promptly challenged by the Republican opposition on all of these charges and compelled to answer them—if he can. After all, Mr. Truman repeatedly asserted that he was talking facts and that he and his party "believe in giving the facts to the people." The facts about Mr. Truman are the facts he never mentioned.

It is all the easier for the Republicans to challenge Mr. Truman for he departed from his text to write the challenge. He expressed, as "a personal wish," the hope that the "opposition would come out for something and be a real opposition." Citing the death of parties in the past which failed to satisfy the people's needs, Mr. Truman said:

"We need a strong two-party system in this Republic of ours, and I sincerely hope the Republican party will profit by the examples I have cited."

That is a sufficient invitation for the Republican Party to start acting like an opposition, to forget the echoing "me too" of Willkie and Dewey, to throw overboard the Truman snare that it is high minded and patriotic to swallow the follies of the New Deal foreign policy by being bipartisan, and to challenge Truman on every one of the countless issues on which he is vulnerable.

Mr. Truman was not willing to discuss his lifetime association with the gunmen and vote thieves of the Kansas City mob. The Republicans should discuss it for him.

Mr. Truman was not willing to try to justify the monstrous deceit by which his predecessor and his party brought down the Pearl Harbor holocaust on America and threw this Nation into a war which has left the world immeasurably worse then it was before.

It will be remembered that, in 1945, when he finally released the secret reports of the Army board and Navy court which reported on the responsibility for Pearl Harbor, Mr. Truman said that the blame did not belong to his party and its leaders, but to the American people themselves.

"I think the country is as much to blame as any individual in this final situation that developed at Pearl Harbor," Mr. Truman said. "I came to the conclusion that the whole thing is the result of the policy which the country itself pursued."

REPUBLICANS MUST SPEAK

Mr. Truman in Chicago was unwilling to develop this thesis of the war guilt of the American people. It is the duty of the Republicans to counter this shameful libel.

Mr. Truman did not speak of his ratification at Potsdam of the Roosevelt deals at Tehran and Yalta which have sold half a billion of the world's inhabitants into the hands of the Soviet slavemasters—the very result which he is now using in justification of the outlay of more than $20,000,000,000 a year to prosecute the cold war. If he won't talk, the Republicans must.

Mr. Truman wended his way through the whole State of Wisconsin without ever once mentioning Senator MCCARTHY or the Wisconsin's Senator's charge that Communists have infiltrated his State Department and are determining policy there. It is up to the Republican opposition to bring out the facts. Mr. Truman says he likes facts.

Mr. Truman crossed the whole country without ever referring to the English parentage of his Secretary of State and of a policy pursued by that Secretary which preeminently and at all times is in the interest of England and is dictated by England when it is not being dictated by Communists. These are facts for Republican challenge.

Mr. Truman never discussed the enormous corruption which characterizes his administration, from petty smuggling and 5 percent rakeoffs by White House pets, through tolerated gambling which feeds the Democratic coffers in every big city and almost every State, down to the bribery of every segment of the body politic implicit in the operation of the Marshall plan.

He did not once talk honestly of the debasement of the currency through inflationary spending which robs every man, woman, and child of a little more of his savings each year this corrupt regime lasts.

If Mr. Truman won't speak, Republicans must.

Mr. Truman was willing only to talk about dream castles and to pledge himself to help everybody's dreams come true. Never could a stranger "genie of the lamp" be conjured up than this busted haberdasher who all his life has consorted with the scum of the Kansas City gang.

The New Deal, in fact, is less a political philosophy than a blight. It will kill the country if the country doesn't vote it out of power.

Blow to Kings Point

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks, I wish to set forth in the RECORD the following editorial which appeared in the May 14 issue of the Long Island Daily Press:

BLOW TO KINGS POINT

The end of monthly allowances for cadets at the Kings Point Merchant Marine Academy is a serious blow to that important institution in Great Neck.

In voting down an appropriation bill, Congress may have sounded the knell of training for merchant marine officers comparable to that given Army officers at West Point and Navy officers at Annapolis.

In any event the Academy cannot now fulfill commitments which induced many of the cadets to enroll there. At the same time, the end of the allowances may result in a sharply reduced enrollment in future classes.

In voting down the maritime training bill, Congress cut off the $65-a-month allowance to the cadets. It is that allowance which makes it possible for a large portion of the Academy's student body to attend classes there. Without it, many of them may be unable to go on with the specialized education the Academy offers. Boys who must have financial help if they are to enter the Academy no longer will be able to enroll.

The allowance ends July 1. If it is to survive, Kings Point will now have to seek applicants for admission whose family financial status makes it possible for them to attend college without the governmental allowance.

Defeat of the maritime training bill was a serious mistake.

Martin Gorski

MEMORIAL ADDRESS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 17, 1950

On the life, character, and public service of Hon. MARTIN GORSKI, late a Representative from the State of Illinois

Mr. REED of Illinois. Mr. Speaker, the sudden and unexpected death of our esteemed colleague, MARTIN GORSKI, filled my heart with sadness. Born in Poland, he came to Chicago at the tender age of three. Without the advantage of wealthy parents, he determined nevertheless to secure for himself a good education. After graduation from high school he attended first, a business college and then the Chicago Law School from which he received his bachelor of laws degree in 1917. These were evening schools and he was thus enabled to earn his way by working during the daytime. As a member of the Chicago Bar, his progress was rapid. He became successively an assistant State's attorney and master in chancery of the superior court of Cook County, which latter office he held for 14 years.

In 1942 the people of his congressional district chose him as their representative and he came to Washington as a Member of the Seventy-eighth Congress. He was re-elected to the Seventy-ninth, Eightieth, and Eighty-first Congresses. During the 7 years that he served he and I were drawn closely together. Although of different political faiths, we had a number of things in common. We were both from Illinois; we were both lawyers, and the congressional districts we represented, although not adjoining, were but a few miles apart. I had been a member of the Committee on the Judiciary for several years and was delighted when, during his first term, MARTIN GORSKI was elected to membership in that great committee. Then, again, he was immediately appointed by chairman Hatton W. Sumners, as a member of the same subcommittee to which I had been assigned. We served together on that subcommittee during the entire remainder of his congressional career and I came to know him well. He was modest, unassuming, conscientious, and gentlemanly. It did not take long for the members of our committee to appraise his real worth. That he was an able lawyer, there could be no doubt. Often he accepted assignments for special studies of proposed legislation and the opinions which he rendered on the legal questions involved, won for him the respect of every member of our committee. We have missed him since his demise and shall never forget his outstanding service. It was my sad duty to be one of the official party from this Congress to attend his funeral. The outpouring of people in all walks of life who assembled to pay their respects to his memory was ample evidence of the veneration in which he was held by those who knew him so well.

Some time, some day, our eyes shall see
The faces kept in memory;
Some day their hands shall clasp our hands
Just over in the morning land.

President Tells Western Farmers How He Would Run Their Farms

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. JENISON. Mr. Speaker, there have been some revealing results in the wake of President Truman's so-called nonpolitical trek across the country. One significant and encouraging result has been the increasing tendency of the people themselves to weigh more carefully the campaign oratory pouring from the rear platform of the cross-country train being financed by taxpayer dollars.

There is increasing evidence of determination to think through many of the pleasant-sounding proposals skillfully

compounded to attract votes in the President's expressed program to drive from the Congress those obstructionists who do not believe in squandering the resources of the present and the future to maintain temporary political power.

In the great middle-western agricultural belt the President had much to say about his newest bid for farm support, the Brannan plan. An interesting commentary on this is to be found in an editorial from the Danville (Ill.) Commercial-News, one of the Gannett group of newspapers, and the largest newspaper in the congressional district I have the honor to represent. Conscientiously devoted to the interests of the rich agricultural area it serves, the Commercial-News offers a revealing editorial comment on the administration's program deserving of consideration by all Members of the Congress. For that reason I am including it in the CONGRESSIONAL RECORD under permission granted to me in the House. The editorial follows:

PRESIDENT TELLS WESTERN FARMERS HOW HE WOULD RUN THEIR FARMS

The President, whose administration is spending in this one year more than the value of all the farms in this Nation, went out to Lincoln, Nebr., to tell the farmers how he'd run their business if they'll let him.

He acclaimed Federal farm policies as an unparalleled success, but admitted they have to be changed.

There is a great clamor, he said; production patterns have not been readjusted to peacetime needs—as, indeed, they could not under Federal price supports; stockpiles of wasted food threaten to become "too high" and farmer income has declined 20 percent in spite of $4,750,000,000 spent in taking food off the market and an additional $2,000,000,000 declared necessary for this year.

So without naming it, he again proposed the Brannan plan, which, he said, would check the decline in farmer income and at the same time make food cheap enough so that all the food products that cannot be put in caves will be used.

The Brannan plan is one that would continue price supports on basic crops—the President declined to specify which are basic—at a higher level than at present, and let perishables find their own level on a free market, the taxpayer paying to farmers the difference between the market price and a "fair return."

The President admitted that this scheme would require the Government to assume some measure of control over how a farmer could use his acres. But it would be nothing like, he said, those horrid labels that farmers themselves have attached to it—regimentation or socialization.

British farmers could dispel any doubts about that. They have been operating under a Brannan plan for some years and have no control over their plantings.

The President said this plan would swing more acres into production of livestock and animal products—a goal much to be desired. But he did not explain the first question that will occur to any Illinois farmer, namely, how to prop feed prices sky high and at the same time increase livestock production.

The Democratic Eighty-first Congress already has turned down the Brannan plan, even for a trial run. The major farm organizations oppose it. The citizens can only conclude that it is being urged by the President only because it is a politician's dream, a promise of high prices to the farmer and low prices to the city consumer.

Mr. Speaker, all of us are familiar with the wisdom of the familiar traffic warning—stop, look, and listen. In the present situation confronting the Nation, it is equally prudent to add one more word. We must stop, look, listen, and think. Our economic survival depends on it.

Explanation of a Proposed Bill To Establish a More Effective Secondary Market for Home Loans Insured or Guaranteed by the Veterans' Administration

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. HOLIFIELD. Mr. Speaker, the purpose of the proposed bill is to provide a permanent and more effective secondary market for veterans' home loans.

A section-by-section analysis follows:

Section 1 of the bill cites the contemplated act as the "Veterans' Secondary Market Act of 1950."

Section 2 of the bill amends section 301 (a) (1) of the National Housing Act so as to limit the purchases by the Federal National Mortgage Association to loans insured or guaranteed by the Veterans' Administration. The Congress would thus recognize that the 4 percent interest rate on the VA loan, having a less attractive yield than other Government insured mortgages, necessitates the support of a Government secondary market in order to maintain a reasonable flow of private capital into the veterans' housing program.

This section also declares that it is the intent of the Congress that the Federal National Mortgage Association so conduct its purchase and sales program as to more effectively operate a revolving fund for the purchase of GI mortgages.

Section 3 of the bill amends section 301 (c) of the National Housing Act by substituting the Chairman of the Board of the Reconstruction Finance Corporation for the Federal Housing Commissioner as the one in whom would repose the authority to dissolve the Federal National Mortgage Association. This is deemed advisable because for several months almost 97 percent of the association's purchasing activity has been in VA loans, and the bill would contemplate limiting the Association's activity entirely to VA loans.

Section 4 of the bill amends section 302 of the National Housing Act by increasing the authorization of the Federal National Mortgage Association to $3,500,000,000 from the present $2,750,000,000 and would require that the Association make available for purchase by the public, the notes, bonds, debentures, or other such obligations which it may from time to time issue. This would eliminate the necessity of reflecting the Association's increased authorization in the Federal budget.

Section 5 of the bill amends section 306 of the National Housing Act by clarifying the authority of the Chairman of the Board of the Reconstruction Finance Corporation with respect to the Association, by prohibiting liquidation or winding up of its affairs so long as sections 501 and 502 of the Servicemen's Readjustment Act are still in effect.

Let Congress Decide

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call the attention of my colleagues to an editorial that appeared in this week's issue of the Disabled American Veterans' Semimonthly entitled "Let Congress Decide."

There has been criticism directed at the proponents of the 16,000-bed hospital bill passed by the House recently. In my opinion, it has been unwarranted criticism and is due to a lack of knowledge of the facts as they exist.

There is not a Member of Congress who does not have hundreds of veterans' claims pending in his office—cases that at this moment are non-service-connected but after careful handling and proper presentation stand an excellent chance of being adjudged to be of service origin. A great many of these veterans are in poor physical and mental condition and need immediate hospitalization. It was to these sick veterans that I called the attention of the House when I supported the bill in question on the day it was before us. I stated then that the Veterans' Administration had a waiting list of 25,707 applicants for hospitalization, most of them potential service-connected cases. As vehemently as I could I called attention to the added burden that will be placed upon the VA hospitals through the closing of certain large service hospitals. I know that Congress does not intend that physically and mentally ill veterans should walk the streets without the care and treatment they deserve because of their war service.

The editorial follows:

LET CONGRESS DECIDE

A ray of sunshine brightened the critical VA hospital situation last month as the House passed a measure authorizing the restoration of 16,000 hospital beds eliminated by President Truman last year. Although the bill faces an uphill fight in the Senate, substantial progress was made in replacing these vitally needed facilities.

The bill had hardly cleared the House, however, when it was viciously attacked by the very man who should most want its provisions carried into law—that is, if he believes in performing the duties of his office. The person referred to is Dr. Paul B. Magnuson, medical director of the Veterans' Administration, upon whose shoulders rests the responsibility of providing adequate hospitalization and medical care for this Nation's disabled veterans. His immediate superior,

General Gray, also voiced opposition to the measure.

Unless someone is doing the thinking for these officials, their line of reasoning just doesn't make sense. With full knowledge of over 25,000 sick and neglected veterans walking the streets, dying with tuberculosis, and suffering from seriously aggravated mental conditions, these officials blandly state that additional facilities should not be approved by Congress.

These sick men who are presently walking the streets are the same men who sacrificed their health in defense of this country. It is a well-known but little-publicized fact that thousands of these so-called non-service-connected veterans have service-connected disabilities which are not yet adjudicated. Others have at least one service-connected disability but are denied hospitalization because the tuberculosis or mental condition they are afflicted with is adjudged non-service-connected.

The DAV claims service is constantly being flooded with letters, wires, and phone calls relating such tragic cases. Many are practically on their death beds before service-connection is granted. Many more are permanently removed from productive, useful lives because their disease is allowed to become chronic. They are granted non-service-connected pensions far more costly to the Government than prompt hospitalization.

Certainly this is not the kind of treatment expected or deserved by some 15,000,000 defenders when they were called into uniform to win World War II.

General Gray and Dr. Magnuson wail that it is impossible to staff the proposed 16,000 beds. Yet, with almost the same breath, they fire nearly 5,000 medical personnel. Although the layoffs have been postponed, the ax still hangs heavy over the heads of vital VA medical workers. We wonder if these officials think tactics of this sort will solve their problems in acquiring needed doctors, psychiatrists, and nurses.

The final decision must be made by Congress. If the 16,000 beds are to be restored and disabled veterans given a decent break, the DAV must offer these legislators conclusive proof that the situation warrants additional hospital beds. Our national commander and members of his staff have the proof and will present it to Congress.

President Truman's Address at Madison, Wis.

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the President at Madison, Wis., on Sunday, May 14, 1950, on the occasion of the dedication of Filene House, of the Credit Union National Association:

It is a pleasure for me to be here in Wisconsin, one of the great progressive States of the Union. And I am glad to be in Madison, a State capital and a university center in which so much has been done for the progress of our country.

I am happy to participate in dedicating Filene House, the international headquarters of the Credit Union National Association.

Credit unions offer people who have few resources a way of getting funds when they need them. I am told that last year, in the United States alone, credit unions had about 4,000,000 members and made loans totaling close to a billon dollars. This is a splendid record. It is a tribute to the values of thrift and self-help and mutual assistance.

This building will serve credit unions in the United States and Canada, and other areas in the Western Hemisphere. It will be a truly international headquarters—and, as such, it symbolizes the international character of cooperative activities. In whatever country they may be found these activities speak a common language and have a common goal.

Their common language may be found in the principles of self-help, mutual assistance, and democratic control. Their common goal is to solve, by joint action, problems which cannot be solved by acting alone.

The effectiveness of cooperative action has been demonstrated in many ways. In our country, farm cooperatives and cooperative stores have been successful. Use of the cooperative principle has brought electricity to rural areas. Use of the same principle offers new ways to solve the housing problem.

In a broader sense, moreover, cooperative action is the method we are using to solve problems we share with other nations.

Today, the United States is engaged with other free nations in a great cooperative endeavor to preserve freedom and achieve peace in the world.

This is the greatest problem we face.

We cannot solve it unless we work together.

No one nation alone can bring about peace. Together, nations can build a strong defense against aggression, and combine the energy of free men everywhere in building a better future for all of us.

That is the way to achieve peace.

That is why it is in the interest of each of the free nations to help one another.

The United States is a part of a world made up of many nations and many peoples. This world is constantly being drawn close to us by improved communications and improved transportation. It is also being drawn close—dreadfully close—by weapons of destruction which become ever more terrible.

We could not, even if we wanted to, go our own way and let the rest of the world go its own way.

You remember the situation when our own country was formed. There were 13 separate colonies scattered along the Atlantic coast. Each of them could have tried to get along as an independent nation. But they were wise enough to realize the folly of such a course. They decided to band themselves together in a common cause. And out of that decision has grown the greatest nation the world has even seen.

In many respects, the whole world is now in the same position in which those Colonies found themselves in 1776. Remember, you can now go from Madison to Moscow much quicker than a man could go from Philadelphia to New York in those days. We must recognize that the march of events has joined the peoples of the world together in a common destiny whether we like it or not.

And yet the nations of the world are not ready, as the 13 Colonies were ready, to join together in one single government.

Indeed, one nation today is doing everything it can, short of war, to prevent common international action among nations. For the Communist philosophy feeds upon suspicion and hate and disunity. And the Communists are doing their best to break down the strength of the free nations of the world in an effort to bring more people under the domination of their godless creed.

This makes it more than ever necessary for us to work together with the other free nations, to preserve our freedom and to increase our common welfare.

If we are to achieve these ends, the free nations of the world must demonstrate that freedom leads to greater strength and a better life for the people.

One of the most important tasks that we must accomplish together is to create a sound economic system in the world. And to do that, we need to work together for more production in the free countries and more trade among them.

Our own country has grown strong and great by increasing production in all parts of the country and by expanding our internal volume of trade. The same kind of growth can occur in the world. All countries will benefit from a growing volume of international trade.

But that trace has to be on a basis of fair competition and mutual benefit among nations that stand on their own feet. That is what we have been working for ever since the war ended.

Our first step was to aid the recovery of nations whose economic systems were shattered by the war. We have given substantial assistance in the restoration of devastated areas and in the rehabilitation of industry and agriculture. The greatest example of this type of activity is, of course, the Marshall plan.

That program has been an extraordinary success. Three years ago, many of the Marshall-plan countries were on the verge of collapse and absorption by communism. Today, with our help, every one of them is stronger and better able to resist communism than at any time since the war.

The success of the Marshall plan demonstrates the value of international cooperation. It demonstrates that helping people to help themselves is one of the best ways to maintain and strengthen freedom.

In the rest of the world, just as in Europe, joint action to increase production is the key to trade, progress, and security. One reason why there is so much unrest and insecurity in vast areas of the world, is their low productivity and their inability to trade profitably with us and with other countries.

The problem in most of the rest of the world is different from that in Europe. The primary problem in Europe is to reestablish and expand a modern industrial and agricultural economy. In the underdeveloped areas of the world, the primary problem is to build such an economy in the first place. And that requires a very different kind of action on our part.

The greatest needs of the underdeveloped areas are modern scientific and technical knowledge to increase their skills, and the investment of funds to increase their productive capacity.

Today, more than half the people in the world are undernourished. Millions of farmers in Asia and Africa and Latin America still turn the ground with crude wooden plows. They know little about improved seed. Their livestock is underfed and diseased. Many of them have never even heard of soil conservation.

As these people become better educated and healthier, as they get more roads and factories and power plants, as they increase their output of agricultural and industrial products, they will slowly but surely play a larger part in the community of nations. In that way, they can attain progressively better living conditions and renewed faith in the promise of the democratic way of life. In that way, too, the United States and other free countries can acquire new sources of the things we need and new markets for the things we produce.

I am very glad that both Houses of Congress have authorized the Government to increase our program for aiding the underdeveloped areas to progress toward modern standards of health, education, transportation, and production.

I am determined that this work shall go forward energetically. I regard it as one of the most important factors in promoting

trade and one of the main hopes for world peace.

These cooperative programs to build a world economy which will bring increasing welfare to all free people, are vital to world peace.

So also is the work we are doing to strengthen the common defense of free countries against aggression.

And so is the effort we are making to create an effective world political order through the United Nations.

All these steps are essential to freedom and peace. They are all ways of putting into practice, in our relations with other nations, the basic cooperative principles of self-help, mutual assistance, and democratic control.

The measures we are taking to bring peace to the world are necessarily imperfect. We are working to solve a problem larger and more difficult than any other we have ever faced. We shall inevitably experience setbacks, as well as successes.

But we must continue to move forward, strongly and steadfastly, in cooperation with other free countries.

We have no other choice.

Isolationism is no alternative. Isolationism is a counsel of despair. Isolationism would bring on another war, and it would be a war in which we might stand alone against the rest of the world.

In our own self-interest, therefore, we must cooperate with other free nations. We must join with them in a common defense against aggression and in providing greater opportunities for human advancement.

But there is another reason why we must work together with the other free nations.

We have a moral duty to protect the exercise of freedom here and in other lands. As a Nation we are committed to the principle of freedom because we believe that men are created equal. Freedom is a relationship between equals.

We believe that men are equal because we believe that they are all created by God. The religious traditions which have flowed together to make the foundations of this Nation all emphasize that every individual is an expression of the spirit of God, and should be respected on that account.

Because of that relation between God and man, we believe that each man in himself has dignity and individual worth.

Because of that relation, we believe that all men are brothers, who must strive to live together in freedom and peace.

We would be unworthy of our traditions—we would violate our fundamental beliefs—if we failed to acknowledge and to live by the principles of brotherhood which bind men and nations together.

We must continue to exert our energy and our will, in cooperation with those who share our beliefs, that together we may create on this earth a community of free men, living at peace with one another and working together for the common good.

We must not falter or turn back.

We must go forward, in the faith that we are following the commandments of God, who is the Father of us all.

Mothers Are Our Natural Peacemakers

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from Drew Pearson's last Sunday's broadcast over the American Broadcasting Co. network.

I was impressed by Mr. Pearson's tribute to mothers the world over, and for that reason I ask for and secured his permission to insert this timely Mother's Day statement in the CONGRESSIONAL RECORD.

It follows:

Sometimes as we look at the problems I've just described, I can't help but think that the world's diplomats, especially behind the iron curtain, could take a little advice from those we honor today—our mothers.

For mothers are our natural peacemakers. Because they bring forth life, they set the highest standard on life. They are diplomats in family disputes, chief of staff in the kitchen, wizards of finance; they can mend anything from broken toys to broken hearts. Yet they never get a Congressional Medal or a Silver Star for just being a mother. They accept criticism or complaint, thoughtlessness or selfishness, and just go on being taken for granted.

Mothers are pretty much the same the world over, because they have a common bond—the desire to raise their children in peace. And if we could apply their philosophy to the rest of the world—a little wisdom, a little patience, a lot of common sense and much goodwill toward men—that would be the greatest guaranty that peace and democracy would not perish from this earth.

The President's Message to 1950 Conference of Mayors

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the message sent by President Harry S. Truman to the 1950 annual conference of the United States Conference of Mayors which was held May 11 to 13, in New York City. This statement discusses problems of mutual concern to the cities and the Federal Government.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT TO THE ANNUAL CONFERENCE OF THE UNITED STATES CONFERENCE OF MAYORS BY THE PRESIDENT OF THE UNITED STATES

Last year when the United States Conference of Mayors met in Washington I had the opportunity of addressing your meeting in person. I regret that I cannot be with you this year again.

I understand that, as was true last year, you have with you distinguished municipal leaders from cities in other countries. To these I extend the cordial welcome of the United States Government.

Strong cities are essential to a strong nation and a well-ordered world. Our cities are vital centers of a peaceful society, where our democratic rights and opportunities are expressed and practiced. They are the heart of our commercial and industrial life. They are strategic cores of our national defense and our internal security.

We have passed the time when we can think of the various elements of our political economy as unrelated or conflicting. Each is an organic part of our national life, fed by a common bloodstream. Urban insecurity makes all of us insecure. Our cities, on the other hand, are dependent for survival on the preservation and use of our land and natural resources and on a sound national economy.

The national concern for the well-being of our cities was illustrated last July when I signed the Housing Act of 1949. That act enables cities to begin clearing their slums and to provide decent housing for more low-income families.

That legislation is now being carried into action as you in your home towns determine and develop your own plans for your communities. Last year you looked to Washington to get you the help you needed. Now you have the opportunity for action on your own part.

I am pleased to learn that you are meeting this responsibility. Nearly 600 communities have already officially applied for Federal aid to provide public housing for low-income families. Although the slum clearance and urban redevelopment program is new and complex, some 375 localities have expressed interest in undertaking local projects, and about 80, exclusive of Puerto Rico and the Virgin Islands, have already acted officially to obtain Federal funds for their initial projects.

This year, through the Housing Act of 1950, we have added to and expanded other types of housing assistance, particularly for lower cost and lower rental housing. That act has also set up practical machinery for further use and disposal of war and veterans' housing in your communities.

One proposal that I recommended this year did not pass the Congress—a proposal for Government help to housing for families in the lower middle-income range, particularly to cooperative housing. I am afraid the lack of such assistance may prove a real handicap not only to many families who need housing, but also to many of your cities in the relocation of families from slum areas you seek to clear. I am going to continue to seek more help for these families, but it is also partly your task to let the Congress know of the seriousness of this middle-income housing problem in your cities. We must not delay, however, in putting into effect the important housing measures we now have.

One of the major goals of our housing program is to increase the supply of rental housing and permit the orderly decontrol of rents without excessive hardship to tenants. As you know, I have recommended to the Congress the extension of rent control until June 30, 1951, as a protection to the tenant in a short housing market, and as a stabilization measure for the national economy. Along with the extension of controls we must continue our present policy of granting justifiable increases in rent to the landlord. Any rent-control policy must be fair to the landlord and to the tenant alike. Although it is, and will continue to be, our policy to decontrol rentals as the supply of housing in any community comes into reasonable balance with demand, it is estimated that as of June 30, 1950, 8,000,000 rental units in 40 States, 63 cities, and thousands of smaller communities will still require protection against the hazards of an acute housing shortage with all that portends for inflated rentals.

Under your vigorous leadership, I am confident that we are on our way to decent housing and better cities for our people.

Last year I discussed some of our joint financial problems. I am happy to report that progress is being made in developing proposals to alleviate tax losses that occur when the Federal Government acquires real

estate and reduces the property-tax base from which local governments derive their revenues. It is hoped that a legislative proposal may be ready for submission to the Congress at its present session.

Many of you are seriously concerned with prospective water deficiencies and are making great efforts to overcome them. The Federal Government is aware of the problems you face and has a very real interest in the availability of water for the peacetime needs of its citizens and for national security. Accordingly, you may be sure that the Public Health Service, the Water Resources Division of the Geological Survey, and other Federal agencies concerned with water, will be glad to assist you any way they can in solving your water-supply problems. In addition, I have appointed a temporary Water Resources Policy Commission to advise me on national policies in this field. I am sure that that Commission and all other Federal agencies will welcome suggestions from your group for ways to solve our water-supply problems better and faster.

I would like to call the attention of this conference to the national interest in peacetime planning for civil defense.

Civil defense is a mutual task in which the Federal, State, and local governments must share responsibility to the people. Since last October the Federal Government has transmitted a substantial amount of guidance material on the subject to the governors of the States for subsequent transmittal to their local governments.

Moreover, the Federal Government plans to release later this year a suggested plan for civil-defense organization which will serve as a guide to the States and municipalities.

In the meantime, I urge that you, as municipal leaders who will have primary responsibility for implementing civil-defense plans in the event of need, proceed with your local civil-defense planning in cooperation with State authorities and the Federal Government.

May I suggest, too, that in your city planning and building activities you pay particular attention to the municipal problems of strategic dispersion. Unless absolutely necessary, it is unwise to continue the building of vital municipal facilities in the center of cities already congested. The present trend toward municipal dispersion should be continued for civil-defense reasons.

The national interest is an inescapable part of your local responsibilities, just as the welfare of the community as a part of the responsibility of the Chief Executive. Your assistance to me, individually and through the United States Conference of Mayors, has been invaluable, and I am sure you know that my primary concern has always been the interest of the people to whom you and I alike are accountable.

Letter From Hon. William Benton, of Connecticut, Favoring FEPC Bill

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by our colleague the junior Senator from Connecticut [Mr. BENTON] favoring the FEPC bill, which was printed in the New York Times of yesterday.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEPC BILL FAVORED—SENATOR BENTON URGES ENACTMENT OF LEGISLATION ON CIVIL RIGHTS

To the EDITOR OF THE NEW YORK TIMES:

Arthur Krock's interesting column of May 11, criticizing my speech on the FEPC bill, should be contrasted by your readers with your editorial of May 10 on the FEPC. Reasonable and honest men may disagree on this issue, and Mr. Krock clearly seems to disagree with your editorial, at least in part. Your editorial says:

"Common sense, as well as experience in State and local legislation of this sort, indicates that the enforcement agency should be able to fall back on legal sanctions if its efforts at persuasion fail. There is no tyrannical power here, unless Congress and the Federal courts be viewed as instruments of tyranny."

The editorial further argues that an FEPC would "show the world outside our borders that we really mean it when we say that we believe in equality of opportunity." My Senate speech on May 9 documented the international implications of the legislation. Let me now answer those who object to the FEPC bill, as interpreted by Mr. Krock.

EXEMPTION OF EMPLOYERS

Is the exemption of employers with fewer than 50 employees unconstitutional? The Supreme Court upheld the Federal Unemployment Insurance Act, which exempts employers with fewer than 8 employees as well as all farmers and domestics. It upheld the Wagner Act, which applied only to employers, the Petrillo Act, which applied only to broadcasting employees; the Guffey Act, which applied only to the bituminous coal industry; the Sugar Act, which established quotas for offshore refiners but not for those on the mainland. We are all familiar with the many precedents upholding chain-store regulation and taxation according to size. Chief Justice Hughes said: "Congress may consider and weigh relative situations and needs. Congress is not restricted by any technical requirement but may make limited applications and resort to tests so that it may have the benefit of experience in deciding upon the continuance or extension of a policy which, under the Constitution, it is free to adopt. As to such choices, the question is one of wisdom and not of power."

Is the exemption of employers with fewer than 50 employees a "bad domestic policy"; is it either "a sham" or "an outrider for another bill which will affect all employers"? The opponents who are quoted by Mr. Krock have missed my point here. Although exempting the smaller-type employer, in store or factory or farm, the bill applies to around half of American nonfarm employees and this half is employed by a relatively small number of corporate units.

APPLICABLE TO LARGE GROUPS

By exempting employers of 50 or more, the bill brings the administrative problem within feasible bounds. But the exemption of smaller firms is based on policy more vital than mere administrative convenience. The bill is designed to apply only to the larger corporations and the labor unions, where the owners and bosses don't know and cannot know their employees. It is difficult for a small employer to fire an efficient worker because of racial prejudice, as it is difficult for him to desert loyal employees in ill health or old age. He knows his men and he has a feeling of responsibility and often of affection which vanishes in the personnel and employment offices of the big corporations, where employment policy tends to be discriminatory as well as soulless.

Are my conclusions sound as to the international impact of discriminatory practices at home? Here I can only refer him to the evidence exhaustively collected in my speech, including testimony by Dean Acheson, John Foster Dulles, and others responsible for our foreign policy. My position was not that we conduct our foreign policy merely in terms of its effect on Communist propaganda. Senator RUSSELL's query as to whether we should repeal our Constitution was of course a gibe rather than an argument. We can never hope to win Communist approval, no matter how spotless our record; but we cannot afford to give a whip with which to flay us to our enemies who would destroy us. Our failure to pass the FEPC Act will hurt us abroad among the very peoples whose alliance we most want and need in the cold war. We can no longer afford to give reasonable men anywhere the ground for reasonable suspicion or justified criticism in this vital area of civil rights.

ORIGIN OF BILL

Where in fact did the FEPC bill originate? Mr. Krock says that according to available records the modern drive for this legislative concept seems to have had its inception in the Communist Party platform of 1928 and in the Daily Worker of the same year. Walter White, president of the National Association for the Advancement of the Colored People, replies to Mr. Krock on this point in the Times of May 16 by tracing the movement back to 1909, and even before. I prefer to believe that the FEPC idea really began in the Book of Genesis itself, where it is written that God created man in his own image. FEPC is reflected in the Sermon on the Mount and in all true Christian teaching ever since. And FEPC was first translated into political terms by a document somewhat antedating the Daily Worker, a document which declared as a self-evident truth that all men are created equal.

Our unfinished business is all too obvious. The FEPC bill and the rest of President Truman's civil-rights program should be enacted into law. Entirely apart from the fact that justice demands it—that we betray our democratic ideals if we refuse it—our national security is involved to a far greater extent than has been publicly recognized. There is no time to lose.

WILLIAM BENTON.

WASHINGTON, *May 13, 1950.*

What's Good in Labor-Management Relations

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. KELLEY of Pennsylvania. Mr. Speaker, when we hear of strikes, we sometimes forget that most employers and most workers have peaceful industrial relations. We also tend to forget that it is collective bargaining in good faith between management and labor that avoids labor disputes and that settles strikes when they do occur.

On April 14, my friend, Millard Cass, addressed a church group here on "What Is Good in Labor-Management Relations." Referring to his speech, the Labor Leader, published by the Association of Catholic Trade Unionists, said:

Millard Cass, Assistant to the Under Secretary of Labor, gave an effective and common sense answer to the proponents of the

theory of continuing class-warfare in a talk 2 weeks ago.

I believe the Members of the Congress will find Mr. Cass' speech interesting and enlightening. Under permission to extend my remarks in the RECORD, I am including Mr. Cass' address as follows:

It is still dark most days when America's farmers rise for their chores. And it is not too much brighter when their fellow-workers start out to make our great industrial machine run. Hours later, when the sun has sunk below the rim of San Francisco Bay, the farmers and industrial workers who are the backbone of our country wearily seek the rest earned by honest labor.

Farmers and workers plant crops and run machines, harvest grain and assemble products, run tractors and build houses. From Bangor to Seattle, from Miami to Los Angeles, from Chicago to New Orleans, the heartbeat of our country is strong and warm and rhythmical.

Ours is a land of myriad differences and astounding similarities—but through it all runs a common thread. From the Atlantic to the Pacific, from the Great Lakes to the Gulf, we are a single, united people. We come from many lands, many strains, and many races, and we worship God in different ways. We speak the same language, but we speak it with a variety of accents. Nevertheless, in 48 States and the District of Columbia, the words "democracy" and "freedom" have the same spine-tingling effect. This is "the land of the free"—this is a people with a common goal and a great destiny.

Our greatness is not merely a matter of Federal and State constitutions and natural resources. It is primarily a matter of folks—farmers and workers and businessmen—millions of fine, independent Americans. They have a common interest in a better way of life for all our people. Those who have made our country great have a real community of interest—whether they be farmers, industrial workers, or businessmen. They grow the food, produce the goods, and consume the products of America's great agricultural and industrial machine. They constitute the consumer demand that makes us prosper.

Sometimes we forget these good things about our country and our way of life. All too often we take our great achievements for granted and merely criticize our imperfections and weaknesses. To be sure, a critical review of our society, our economy, and our democracy is always in order. Good as it is, our way of life is not perfect. Growth and development are a mark of the democratic system. We must be constantly vigilant to improve, expand, and strengthen our democracy.

Nevertheless we need not be unduly modest about our accomplishments. We would be unrealistic, unpatriotic and ungrateful if we did not feel proud of our democracy and our economy. In spite of its imperfections, ours is the greatest and best country in the world. Make no mistake about that.

We have been lucky. That we must admit. We are endowed with great natural resources, large and diversified areas and a wide and healthful range of climate. We did not suffer devastation from the two World Wars. Nevertheless, these factors do not even begin to explain or account for our greatness. Many other countries have all of these assets, but have failed to achieve our political or economic strength or our democratic freedoms.

We have been lucky, but we have also been industrious, courageous, and ingenious. We have worked and fought and sacrificed for what we got. We have developed the highest standard of living the world has ever known and the greatest productive machine extant. We have retained and protected individual freedom and kept our faith in God. And we are dedicating a significant share of our bounty to help other nations preserve their democratic freedoms and strengthen their economies. This is at the same time both an act of generosity and an investment in our own well-being.

With all this we sometimes tend to forget the good things about our country. This is as true in the field of industrial relations as in any other. We read about strikes and lockouts and hear about industrial disputes, but we seldom know when a contract is signed peacefully. We hear a great deal about disagreements between employers and workers, but we seldom are informed about labor-management cooperation. As a result, some people conclude that employers and workers are opposing classes having antagonistic interests. This was the false premise adopted by Marx and Engels over 100 years ago. It is even more wrong today than it was then.

There is in the United States a large and relatively unpublicized amount of labor-management cooperation. It is this industrial harmony that I want to discuss today. It is this good side of labor-management relations that has helped make us great. We could not have achieved our great production or distributed our largesse so widely among our people if we had not enjoyed a high degree of industrial peace and a large amount of joint endeavor by management and labor.

Labor-mangement cooperation is not dramatic. It seldom has news value, but that does not mean it is unimportant. Sometimes, our emphasis on news value warps our sense of lasting value. By devoting our attention to the sensational, we lose some of our sense of perspective.

We have carefully documented labor-management disputes, tried them in the newspapers, dramatized them with headlines, and compiled statistics with respect to their extent, duration, and cost in man-days of idleness. Only recently, however, has there been a widespread attempt to present the positive side of labor-management relations. It was the extensive and continuing dramatization of industrial disputes that led the National Planning Association, on the suggestion of Mr. Clinton Golden, to start a series of inquiries into the extent and causes of industrial peace. Some schools and colleges and some individuals from management, labor, and the Government have also decided to publicize the peaceful developments in the field of labor-management relations. Under the leadership of Secretary Tobin, the Department of Labor is taking an active interest in promoting and publicizing industrial peace. It is good to see that groups like your own are also interested in this positive side of industrial relations.

At the outset, it should be noted that union-management cooperation connotes an active policy of collaboration for the purpose of promoting the common interest of both management and the workers in a plant or industry. It is reflected by honest and sincere collective bargaining resulting in contractual relationships between the parties. It involves such things as participation by labor and management through joint committees in the elimination of wasteful methods of operation and plant inefficiency, in the introduction of new machinery or processes, and in the formulation of sales-promotion programs. It has even involved the lending of union funds to the company, the services of union specialists in production problems, and joint support of legislation in the interests of the industry.

Every year many thousands of collective-bargaining agreements between management and labor are peacefully negotiated. The number of such contracts has been variously estimated as from more than 100,000 to half a million. Tens of thousands of disputes and grievances are settled annually without a strike or lock-out. Hundreds of joint labor-management committees are still operating effectively. There are, under the auspices of the United States Department of Labor, 6,500 local joint apprenticeship committees. The 33,000 members of these committees, representing management and labor, work together to promote apprenticeship. Hundreds of persons from the ranks of management and labor are working together to promote industrial safety through the President's Conference on Industrial Safety. This is a continuing program sponsored by Secretary Tobin at the request of President Truman. In all of these fields workers and employers are working together to develop good human relations.

Shakespeare has said that: "The evil that men do lives after them. The good is oft interred with their bones."

This, unfortunately, seems to be the case in industrial relations. For example, how many of you know that the Crown Zellerbach Corp. and the Pacific coast pulp and paper industry have not had a single day's interruption of work for 14 years caused by a dispute between a paper mill and its employees? During this period only two grievances have been submitted to arbitration. No unfair labor practice charge has been filed under the National Labor Relations Act, and during World War II only one dispute was presented to the War Labor Board. All of this occurred in an industry which has region-wide collective bargaining. It occurred in a highly unionized industry where over 98 percent of the eligible workers belong to the International Brotherhood of Pulp, Sulphite, and Paper Mill Workers or the International Brotherhood of Paper Makers, which jointly possess the exclusive bargaining rights. Similar industrial peace has been achieved between the Hickey-Freeman Co. and the Amalgamated Clothing Workers of America, who have enjoyed a 29-year strike-free period of labor relations; the Nashua Gummed and Coated Paper Co. and seven AFL unions, which have had a 15-year-old collective-bargaining relationship with no strikes or lockouts; the Sharon Steel Corp. and the United Steelworkers of America, which have had only two strikes or work stoppages—both industry-wide steel strikes—during their 12 years of collective-bargaining relationship; the Lockheed Aircraft Corp. and the International Association of Machinists, which have settled 30,000 grievances over a 12-year period without a strike or lock-out; and the Dewey & Almy Chemical Co. and the International Chemical Workers Union, which have had a 9-year record of peaceful collective bargaining. These are a few examples of industrial peace taken from the studies by the National Planning Association on this subject.

The association has noted a number of factors normally existing in cases where there is a healthy labor-management relation. These are:

"Management—from top to bottom—genuinely accepts the process of collective bargaining, and the union as an institution.

"The union fully accepts private ownership and operation of the industry.

"The union is strong, responsible, and democratic.

"Mutual trust and confidence exist between the management and the union.

"Neither party has adopted a legalistic approach to the problems of collective bargaining.

"There have been no serious ideological incompatibilities between the company and the union leaders, nor within the union itself.

"Negotiations are 'problem centered'—the management and the union spend more time on solving concrete problems than they do on defining abstract principles.

"Grievances are settled promptly within a flexible procedure—many which could be processed through the grievance procedure clear to the top are handled quickly and informally.

"There are effective two-way communication channels between the management and the union.

"Management consults the union and encourages its participation in the making of important decisions.

"The line management organization, down through the foremen, fully accepts responsibility for industrial relations."

While emphasizing the absence of industrial disputes between the companies and unions which it is studying, the National Planning Association has noted that the lack of strikes is not the only criterion of healthy industrial relations. It has also noted that occasional strikes do not prove conclusively that labor relations are unhealthy.

Labor and management have a real community of interest, but their interests are not identical. As a result, there is bound to be some conflict in the course of day-to-day association in an industrial democracy. The important thing is whether the relationship which exists remains healthy, in spite of occasional conflict, or whether it deteriorates to warfare despite a common interest in industrial peace.

In this connection, it is worth noting that strikes today are very different from strikes a few years ago. As recently as the 1930's, strikes were frequently marked by violence and bloodshed. Today, on the other hand, peaceful labor disputes are the rule. Formerly the basic distrust and misunderstanding of the parties and the opposition of employers to collective bargaining by their workers made labor disputes virtually civil wars. Today, with each side recognizing the other, strikes are normally merely a test of economic power to achieve desired results and do not involve ancillary physical force. The result of this has been that strikes no longer breed the mistrust and hatred they formerly engendered. They no longer upset collective-bargaining relationships and disrupt them as they once did. The aftermath of strikes in continued grievances and continued suspicion has therefore, to a large extent, been eliminated.

In spite of the attention and publicity given strikes, they involve only a small percentage of the total work force and of the estimated total working time. In 1946 strike activity was at a peak. Even in that year, however, the percent of estimated working time lost by strikes was only 1.43. In 1949, when major stoppages accounted for over three-fifths of all man-days of idleness, only 0.59 percent of estimated working time was lost as a result of labor disputes. These work-stoppage statistics are an indirect method of demonstrating the high degree of labor-management cooperation during the year. By simple arithmetic, it is apparent that 99.41 percent of estimated working time was utilized productively, without work stoppages. That means that in 1949 labor relations were almost as pure as Ivory soap.

This labor peace reflects the desire of management and labor generally for industrial harmony. Both sides are well aware of the cost of strikes and lock-outs. They know that while the public suffers from labor disputes, it is the parties themselves who suffer first and most.

Workers do not treat lightly the stopping of their income, with all its attendant consequences. It is not easy to take a step that will cut off the funds necessary for food, rent, and clothing, and that may jeopardize the equity in a home or car, a radio or a refrigerator. Workers turn to the strike weapon only as a last and desperate resort. Strikes are not born full bloom. They grow from disputes, inequities, or injustices. They are a gamble on economic force to which workers sometimes turn when all else has failed to resolve a dispute.

Employers also have much to lose from industrial warfare. During strikes or lockouts, they find themselves without income but with continuing responsibilities and expenses. Owners demand profits, and stockholders require dividends. Competitive position can be impaired and markets for products can be lost during a prolonged cessation of operations. It is clear that economic necessity requires labor and management to seek industrial peace.

Richard Steele wrote in the Spectator in 1744 that "The noblest motive is the public good." This concept has been responsible for much industrial harmony. A trade-union statesman recently said: "In a free society, workers have the right to strike and employers the right to suspend an operation. But neither possesses the right to injure severely or irreparably innocent fellow men. Both owe a prior obligation to society." Recognition of this obligation has induced the parties in many instances to agree to voluntary arbitration, fact-finding boards, or postponements of strike action or shutdowns. Both sides have frequently demonstrated real statesmanship in this regard. One caveat should be noted, however. It is unfair and unwise to count upon workers or employers to shoulder the full cost of promoting and protecting the public interest. For example, if workers believe they need and deserve a wage increase, it is fine to say that they should not strike to get it because the public interest requires continued operation of that industry. From the employees' standpoint, however, it will appear that the public is demanding of these workers greater sacrifices for the public good than it is demanding of other segments of the population. The public should have as great an interest in right and fairness as it has in continuity of operations.

Mutual understanding is a prerequisite to labor-management cooperation. An industrialist recently stated that: "When management and employees understand one another, have mutual respect and mutual confidence in one another, and when both management and employees feel that they are getting a fair deal from the other side, * * * we have made one important step toward achieving labor peace." That need for understanding and confidence is a fertile ground for all who are really interested in industrial peace. There is still much to be done to bring the story of labor to management and the story of management to labor.

Development of mutual understanding is not achieved in one day. It comes from long and honorable association and is founded upon good faith. There can be no understanding where management is antiunion or labor is not sympathetic to the need for profit in a free enterprise economy. There can also be no continuing understanding where the rules of the game inspire distrust. Legislation that inspires animosity, distrust, and fear is, therefore, an impediment to industrial peace. It is for that reason, among others, that the Taft-Hartley Act has not promoted labor-management cooperation.

Mutual understanding must be based upon knowledge as opposed to ignorance—facts as opposed to fiction. It is up to employers and workers to supply each other with the information necessary to an understanding of their respective problems and needs.

I do not look at the world through rose-colored glasses. I did not arise this morning singing a song from Pippa Passes, and concluding that "All's right with the world." Nevertheless, I do believe that there is much that is good in labor-management relations. Emphasizing healthy industrial relations will not only help us see ourselves in truer prospective but will assist us in our quest for sound and enduring industrial peace.

The Statehood Bills

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Washington Daily News of May 16, 1950:

TIME'S RUNNING OUT

Several Members were absent when the United States Senate's Committee on Interior and Insular Affairs held its weekly meeting yesterday.

So the committee did not take up the bills, already passed by the House, to grant statehood to Alaska and Hawaii.

Senator O'MAHONEY, of Wyoming, the committee's chairman, said he hopes the statehood bills will be considered next Monday.

Surely they should be—and not merely considered but approved and made ready for an early vote in the Senate.

Time is running out. A few more weeks, and Congress will be itching to adjourn so its many Members who are seeking reelection can go home and start campaigning.

It will be a sad thing if the statehood measures get lost in the shuffle.

Sad for the people of Alaska and Hawaii, who are hoping that Congress at last will keep the promises of both major political parties and give them statehood.

Sad for the people of the United States, who need these two great Territories in the Union now as bastions of national defense and as evidence that America means what it says when it professes devotion to the principle of self-government.

Revision of Administrative Procedure of Customs Bureau

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the body of the RECORD, following this brief statement, the context of a resolution of the board of directors of the Greater Endicott Chamber of Commerce, of Endicott, N. Y., in opposition to a bill to revise administrative procedure in the Bureau of Customs.

Mr. CONNALLY. Reserving the right to object, is the matter which the Senator submits to be printed in the Appendix?

Mr. IVES. It is a resolution, Mr. President, from a chamber of commerce, and it is addressed to the Congress.

Mr. CONNALLY. Did the Senator request that it be printed in the Appendix?

Mr. IVES. I requested that it be printed in the body of the RECORD.

Mr. CONNALLY. I object.

Mr. IVES. Mr. President, so long as there is an objection, I am perfectly willing that the resolution be printed in the Appendix.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE BOARD OF DIRECTORS OF THE GREATER ENDICOTT CHAMBER OF COMMERCE

At a regular meeting of the board of directors of the Greater Endicott Chamber of Commerce held at the Hotel Frederick on the 12th day of April 1950, the following resolution was duly offered, seconded, and unanimously carried, to wit:

"Whereas it has become known that a bill to revise administrative procedures of the Bureau of Customs is now being prepared in Washington; and

"Whereas such bill provides, among other things, for the elimination of the American selling price principles as heretofore established and a reduction of the protective tariffs with regard to rubber and rubber soled canvas footwear; and

"Whereas such proposed legislation is contrary to the long-established tariff policy of the Federal Government; and

"Whereas such legislation if adopted, would directly affect the manufacturers of rubber and rubber soled canvas footwear in this community, and would eliminate the jobs of an estimated 1,500 employees: Now, therefore, be it

"*Resolved*, That the Greater Endicott Chamber of Commerce go on record as being opposed to the proposed changes above mentioned and that a copy of this resolution be forwarded to our Representatives in Congress and other interested executives of the Federal Government."

I hereby certify that the foregoing is a true and correct copy of a resolution duly adopted by the board of directors of the Greater Endicott Chamber of Commerce, at a regular meeting thereof held on the 12th day of April 1950.

FRANK J. BALL,
Secretary, Greater Endicott Chamber of Commerce.

Remarks of President Truman at Breckenridge, Minn.

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the remarks of our President, Harry S. Truman, which were made on May 13, 1950, on his visit to Breckenridge, Minn.

There being no objection, the President's remarks were ordered to be printed in the RECORD, as follows:

I am glad to be back here in Minnesota once more. I had a grand time here about 2 years ago, when I was running for office.

During the past week I have traveled across the great plains and the Rocky Mountains nearly to the Pacific Coast, and back again through Montana and North Dakota. I have been reporting on what the Government is doing and how it is working with your State and local governments to build a better America. In the last few days I have been talking particularly about reclamation and flood control.

What has been happening this last month in northern Minnesota, in North Dakota, and in Canada, proves the necessity of our going ahead with flood control projects on a national basis.

North of here, along the Red River a great many cities and towns have been overrun by devastating floods. The Army, the National Guard, State governments, the Red Cross and other agencies are all working together to relieve the distress. I have allocated $150,000 from the President's emergency fund to help restore some of the damage done by these floods in Minnesota. I have a very small emergency fund, and I have given you all I can.

But relief after floods have come does not help much more than locking the barn door after the horse has been stolen. These tragic floods bring home to all of us how important it is to prevent costly floods in the future. I have been glad to see your own Senator HUMPHREY taking the lead in working for flood-control projects. And he happens to be on the train with me tonight.

Unfortunately, there are always some people who are afraid to plan for the future. Every time the Federal Government looks very far ahead, some of our opponents will yell it costs too much, we have got to cut the budget. And they have been trying to cut my budgets ever since I have been President. They always come up with a little more than I ask them to give me on a subject that I am not interested in, but they try to cut the things that help the country.

I happen to know that some people have tried to say that to Senator HUMPHREY, but I am glad to know that he doesn't pay any attention to these cries of false economy. I am proud to say that he knows that a few dollars spent on flood control today will save a great many dollars in the future—not to mention homes, farms, industries, and even lives.

The same thing goes for all of our domestic and international programs. Some people cry that we should cut down on education, housing, and health. I say that this is the worst form of false economy. A few dollars spent here will pay rich investments in the future in building a higher standard of living, and a stronger Nation.

The economizers—they are not really economizers, they are anti-Trumanites—also cry that we must stop spending money on our national defenses and stop sending money abroad. This, too, is another form of false economy. It is going to be difficult and expensive—make no mistake about it—to get the world back on the road to peace.

But the expense is nothing at all compared with the catastrophe of a third world war. We have got to make sure that for every dollar we spend we get a dollar's worth of value. We have to have true economy by making sure we don't spend money on anything we don't actually have to have.

But we can't stand false economy if we are going to succeed in building a stronger United States and a peaceful world.

Now, I have been spending my time since Japan folded up in September 1945, trying to get a peaceful world. I have done everything I possibly can, and those who have been with me in the Cabinet have done everything possible, to obtain peace in the world.

Now, to obtain peace in the world, the United States must remain strong itself. In order to remain strong, we must have a national defense establishment which is strong enough to meet the aggressors. We must have an economic set-up that is strong enough to keep the country prosperous. That's all in the world I am working for.

I took this trip around the country just to explain to the people exactly what I am trying to do and what the Government is trying to do to obtain peace, and to maintain that strong economy.

You know the Constitution provides that the President of the United States once a year goes down and speaks to the Congress on the state of the Union. Well, now, what I have done since I left Washington, a week ago—it will be a week tomorrow—I have been facing the people and giving the people a message on the state of the Union, and what I think will be best for the welfare of this country and what I think will contribute to peace in the world.

I am here for that purpose, and I want you to see what I look like, and I want you to understand that I am not running for office. I ran for office in 1948 and had right good luck. I am merely reporting to you as the head of the Government and as your servant. The President and the Vice President are the only men in the United States who are elected at large by the whole people of the United States, and I think it is right and proper that a report should be made to you every so often, personally, by the man who is responsible for carrying on the executive branch of the Government.

I can't tell you how very much I appreciate this wonderful and cordial reception into Minnesota. This sort of reception has met me everywhere—at Galesburg, Ill.; in Ottumwa, Iowa; in Lincoln, Nebr.; in Casper, Wyo.; in Pendleton, Oreg.; and Grand Coulee Dam, in Washington—Butte and Grand Falls, in Montana; at Minot, in North Dakota. And at Fargo, N. Dak., just a while ago, they told me that they had the biggest crowd that Fargo had ever had in its history. And it looked to me like all the people in North Dakota were there.

Now, here I have come into Minnesota, almost at midnight, and it looks to me as if everybody in this great State of Minnesota is here. They tell me there are more people up ahead of the train than there are behind it. I appreciate that more than I can tell you, and I am more than happy to have your Senator HUMPHREY with me on the train tonight. Thank you very much.

I am sorry that I can't present to you Mrs. Truman and Margaret. They have had a most terrific day, and they had to go to bed.

Diamond Jubilee, Sons of the American Revolution

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Diamond Jubilee Convention of the Sons of the American Revolution, May 15, 1950, at the Claridge Hotel in Atlantic City, N. J.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Gentlemen, I want you to know that I feel deeply privileged by the invitation to address the diamond jubilee of the Sons of the American Revolution, an organization

which has always stood for America—American first, last, and always.

It is truly an honor to meet with you, the descendants of men who successfully fought against almost insurmountable odds to establish a free nation dedicated to the dignity of man and the freedom to worship God—you, whose forefathers established a free nation in a world of despotism, a nation which was destined to grow to be the most powerful on earth.

Your organization was born of a revolution—a revolution which gave birth to freedom and independence. Today the world is torn by another revolution, one which threatens to destroy what was won by your ancestors whom we today honor.

Before discussing this modern revolution of destruction and the impetus given it by some high officials in our Government, I would like to take a few moments to clarify two things which I am asked about most often.

The first has to do with the skeleton files which the President has given to the Tydings committee, which was created to investigate my charges of communism in our Government. Rather than take your time on the subject of files, or express my personal opinion thereon, I have made photostats of the reports made by the chief investigator of the House Appropriations Committee which investigated those files. This report is based partly on an FBI investigation of those files made shortly before that time. This FBI report, you understand, was made before the present fight about files. I have made sufficient photostats so that as many of you as care to may take them along with you. But for the benefit of the listening audience who cannot see those photostats, I might say that they set forth in some detail that the files were inadequate, in that many of them had been completely rifled, that practically everyone in the division had complete, free access to take material from the files whenever he cared to, and, in effect, that there is no way of knowing whether or not any file was complete. And, gentlemen, those are the files which the President is giving the committee.

That is one of the reasons why I repeatedly warned the committee that in order to arrive at the truth, they must get not only the skeleton State Department loyalty files, but the civil service and the FBI files. So much for that.

Another question often asked is in regard to the methods employed. A number of my friends say, "While we agree you are getting the job done, McCARTHY—a job that is 16 years overdue—we wonder if it couldn't be accomplished by some other method."

Gentlemen, this is the roughest fight I have ever been in—and it has only started. As we cut nearer to the quick and more seriously threaten the plans of those traitors to America, the squealing will become louder and the fight will become tougher.

Gentlemen, when I was a small boy on the farm, mother raised chickens. The eggs and meat furnished groceries and much of the clothing for our family of nine. We lived fairly close to the woods, and weasels, snakes, and skunks would steal the baby chicks from beneath the mother hen and kill them.

One of the jobs which my three brothers and I had was to dig out and destroy those killers. It was not a pleasant job—and sometimes we did not smell too well when the job was finished. But the skunks were dead and the chickens alive.

A much more dangerous and smellier breed of skunk is now being dug out in Washington.

And to those of you who say that you do not like the rough tactics—any farm boy can tell you that there is no dainty way of clubbing the fangs off a rattler or killing a skunk.

I intend to continue with this job. It cannot be done with kid gloves. It has been a bare-knuckle job. It will continue as such.

I have also been flooded with questions as to my reaction to the paranoic attack by Senator CHAVEZ last Friday on Louis Budenz, who testified that the State Department's high policy adviser, Owen Lattimore, was a member of a Communist cell.

CHAVEZ was supported on the Senate floor in his attack on Louis Budenz by the administration leader, Senator LUCAS, and the chairman of the investigating committee, Senator TYDINGS.

Obviously, in this rugged fight, the Kremlin is reaching into high places for dupes to spew its malignant smear.

On May 25 when I am to speak before an editors' convention, I intend to answer in detail this vicious assault made on a witness upon whom the Department of Justice and the FBI have placed great reliance in the prosecution of dangerous enemies of the country, like the 11 top Communist leaders found guilty before Judge Medina.

Had it not been for the hundreds of hours of help given by Louis Budenz to the FBI and the Department of Justice, many of the Communist conspirators now in jail would still be free to do their dirty work of undermining the United States.

I would like to discuss with you gentlemen today the details of a most dangerous hoax—a most vicious fraud which is being perpetrated on the American people by men of little minds who have been honored with important jobs in our Government. It is a conspiracy conceived in the dark, hidden corridors of communistic treachery—a conspiracy which, if not destroyed, will condemn to death millions of American young men. But the sands in the hourglass of time are fast running out. If this conspiracy is to be destroyed, the job must be done now; not years from now; not months from now, but within a matter of weeks, days, or even hours. Before spelling out the details of that conspiracy, let me first give you some of the background setting in which it was conceived.

Six years ago, at the time of the first conference to map out the peace (Dumbarton Oaks), there was within the Soviet orbit, 180,000,000 people. Lined up on the anticommunistic side there were in the world at that time, roughly 1,625,000,000 people. Today, only 6 years later, 800,000,000 people are under the absolute domination of Soviet Russia—an increase of over 400 percent. This indicates the swiftness of the tempo of Communist victories and American defeats in world war III.

While this is a long step forward in the Godless communization of the world—the avowed aim of the Communist Party—it cannot, of course, be successful until the United States is conquered. Twenty years ago the Communists officially decided that a necessary step prior to the destruction of the United States was the conquest of China—the remaking of it into a Red China, which could be controlled from the Kremlin—and then the transformation of the Pacific into a Red lake.

Communist determination to conquer America is not new. The determination to rip from the heart of America the rights for which freemen now stand is as old as communism, but yet as new as the latest edict from the Kremlin to its puppet traitors in our Government today.

A Red China and a Red Pacific are so necessary to the success of the Communist plans for world domination that Premier Stalin has always personally taken the responsibility for controlling the China and Pacific policy for the Comintern. In 1931, he instituted a most concentrated campaign to make the Pacific a "Red lake." In 1931 he moved the Pan-Pacific Secretariat from Shanghai to San Francisco. This meant that all the infiltration activities in the Asiatic colonial war, plus that into Japan and Australia, and the new infiltration into China was to be operated from the United States. This called for development of the Communist organization in the Northwest region of the United States, on the coast and in the Hawaiian Islands—all synchronized as closely as possible with the communization of China and the Islands of the Pacific. But the key to success was China and as Stalin realized without a Red China, his plans for a Red Pacific and world wide communism would fail.

Stalin's plan to create a Red China and to make of the Pacific a Red lake, as a prelude to taking over America, is no more secret than Hitler's aims were secret in Mein Kampf. No man who claims to be even remotely worthy of a job in the Far Eastern Division of our State Department can claim to be ignorant of that fact. It can be read in the official Communist program, which is available to anyone in the Department.

In this connection it is interesting to note that Senator STYLES BRIDGES, approximately 3 years ago, when questioning the fitness of John Carter Vincent, who at that time was head of the Far Eastern Division, pointed out in a letter to Dean Acheson that Vincent had been following the officially published Communist program for the conquest of Asia down to the last comma. The Secretary of State's answer was, and let me quote it:

"Mr. John Carter Vincent (Mr. Acheson's top advisor on Chinese affairs) advises me that he has never even read the two Communist documents under reference. I have never read them myself."

This coming from men who are supposed to be leading 152,000,000 people in a fight against Communist aggression—this coming from men in charge of the spending of billions of dollars to fight communism—certainly does not require comment.

Let me repeat Acheson's words:

"Mr. John Carter Vincent advises me that he has never even read the two Communist documents under reference. I have never read them myself."

To those in the State Department who say that Soviet Russia's aims have changed in the last few years and that she no longer wants to enslave America, let me quote what Stalin said, not 20 years ago, not 10 years ago, not during World War II, but less than 3 years ago:

"To think that the Communist revolution can be carried out peacefully, within the framework of a Christian democracy, means one has either gone out of one's mind and lost all normal understanding, or has grossly and openly repudiated the Communist revolution."

Gentlemen, can there be anyone here today who is so blind as to fail to see that the war is on? Unless we blind our eyes and close our ears, we must realize that the Communist world has said that the time is now—that this is the era of the Armageddon—that final all-out battle between light and darkness foretold in the Bible. This is not of our choosing, but face the fact we must.

Gentlemen, the chips are down; they are truly down. Unless we do face the facts as they are, not as we would wish them to be, we shall pay the price that is paid by those who wait too long.

Now, the Russians have one important task yet before the Communist waters of a red lake begin to wash our shore with their atheistic corrosion. That task is the destruction of the remnants of Chiang's anti-Communist armies—500,000 strong—the largest force which stands between the Soviet Union and total success in the entire Far East. The Communists have officially declared that the total destruction—the mopping up of those anti-Communist forces on the island

of Formosa—is the No. 1 plank in their platform; and, incidentally, as you know, this is the No. 1 plank in the written platform of the State Department adviser, its architect of our far eastern policy, Owen Lattimore.

How near the Communists are to having complete victory within their grasp is painfully clear. The extent of the aid which the Communists are getting from those who shaped our foreign policy for the Far East is equally clear.

As you know, we have been engaged in the difficult task—before a hostile committee and with all the power of the Government against us—to prove that some of these men were traitors and others were fools.

Today, however, I intend to discuss the results of their actions rather than their motives—for the results are the same regardless of whether they are the acts of traitors or dupes.

The only thing the big gangster in the Kremlin is interested in is results. He cares not how sanctimonious or how depraved are the men who get him those results—results which he certainly has gotten from dupes and traitors within our Government.

I said earlier that I wanted to discuss with you a vicious hoax and fraud that is being perpetrated upon the American people. Now let us take a look at the master plan for that hoax. It is the Lattimore-Acheson plan for the Pacific. It is a clever, evil thing to behold. It is gigantic in its fraud and complete in its deceit. It camouflages ruin. It will wreck nations and enslave millions. It deceives and betrays America and promotes communism. It is the strategy of the Lattimore-Acheson axis of hitting Communists at the front door with a silk handkerchief while they beat the brains out of your friends at the back door.

Mr. Lattimore master-minded it. He admits it. He not only has confessed, but he proclaims it as the child of his brain. Now hear this; this is Lattimore talking: "The thing to do, therefore, is to let South Korea fall, but not to let it look as though we pushed it."

Did you hear what Lattimore is saying? Does the hideous impact of that utterance hit you where it hurts? It should, for here in a sentence we have laid bare the whole scheme of ideological barbarism that would betray us.

This is what he means: Spend American dollars and American lives to hold South Korea, but just enough to make it look like we are trying.

"With my left hand," says Lattimore, "I will push Korea toward its doom into the hands of the Communist masters in the Kremlin, but with my right hand I will extend enough aid to camouflage the sell-out—to make it look good enough to fool the suckers paying for it—good enough to fool, if you please, those who shall die because of it."

This, gentlemen, is the plan conceived by Mr. Acheson's architect, Mr. Lattimore, conceived and publicly advocated by him for part of the Pacific area. Mr. Acheson has bought it and applied it to the entire Far East.

Now let us discuss this viciously deceptive plan of the Acheson-Lattimore axis. The plan which stated in its plainest terms is to deliver vast areas and millions of people into Communist slavery without, in the words of Lattimore, having it appear that we pushed them. That was the plan for China. That is Lattimore's plan for South Korea. That is now the plan of the Lattimore-Acheson axis for the entire Far East.

Now let us examine the details of the Pacific plan of the Lattimore-Acheson axis.

More than a year ago the American Congress voted $75,000,000 to fight Communists in the Pacific. As of today, not a cent has been spent.

Not a nickel has gone to the troops on Formosa, not an ounce of powder.

In this connection I would like to briefly quote from a story of January 6, which appeared in the Washington News, which set forth in detail the fact that the Defense Department strongly urged the necessity of this and other help to Formosa.

General Bradley, usually only a fair speaker, was reported to have made an impassioned plea for this aid at the National Security Council meeting at the White House.

Therefore, we find both the Democrats and Republicans of both the Senate and the House almost unanimously saying "give all the necessary aid to the anti-Communist fighting forces in the east." We find the Chiefs of Staff of our Military Establishment approving. All evidence points to the fact that General MacArthur considers Formosa in friendly hands vital to the defense of the Pacific. However, Mr. Acheson said, "No, not one ounce of gunpowder must be given to those troops who are fighting the Communists"—for, after all, doesn't Mr. Lattimore, his architect of our Far Eastern policy, say in his secret instructions to the State Department that those troops must be destroyed.

The Lattimore-Acheson axis then wrote Truman's declaration of January 5, which vetoed the intent of the House and the Senate—Democrats and Republicans alike—the declaration which vetoed the demand of the American people that we assist our allies in such a manner as to stop the forward march of communism—the declaration which vetoed our great war leaders who should certainly know better than the Lattimore-Acheson axis what is needed on the firing line.

Recently, however, public opinion has forced Mr. Acheson to make an about-face on the position he had followed during the sell-out to China, and to appear to be attempting to stem the flow of communism across the Pacific. And this is the point at which the Lattimore plan of "Let them fall but don't let the American people know we pushed them" suddenly developed full blown as the Lattimore-Acheson plan for the Pacific. But how to put it into effect so that it would not be too difficult? Mr. Acheson suddenly discovered there was a place called Indochina, an area in which there is no fighting force to even remotely compare to the troops on the island of Formosa, but a good vehicle for the new plan of murder, but make it look like suicide. Therefore, here is where he will dissipate American dollars and materials for defense—materials needed so urgently by the fighting forces on Formosa. But not a farthing, not one shot, not one ounce of powder will be sent to help the anti-Communist forces on Formosa. However, enough will be given down in Viet Nam to disguise the real motives and convince the American suckers that we did not push the vast Pacific into the Kremlin arms.

The plan of betrayal is the same as that used in China, but it is to be dressed up with a little more effective deception this time.

Now this, gentlemen, is the plan. Do we like it? Do we want more of it? Does the spectacle of men who screamingly proclaim their love of the flag which they are hauling down while they push free lands into the Kremlin net convince you that the time has come for action? By their actions those men have outlawed any right which they had to public confidence. They have outlawed their right to speak for America. They should be silenced, gentlemen. They should be silenced now.

To show the "Dutch Twins" type of thinking of the Lattimore-Acheson axis, let me quote briefly from the public utterances of these two men. First from Lattimore: In referring to the Communist victory in China, he says, "Throughout Asia there prevails today an atmosphere of hope not despair. What they (the people of Asia) see opening out before them is a limitless horizon of hope; a hope of peaceful, constructive activities in a free country, and peaceful cooperation among free peoples."

And now to the other half of the axis, Mr. Acheson: he says (on January 12 of this year before the National Press Club) "a new day has dawned in Asia. It is a day in which the Asian peoples are on their own and know it, and intend to continue on their own."

Gentlemen, those are their own words publicly spoken. Lattimore refers to the 400,000,000 people sold into communistic slavery as "free peoples"; Acheson says they are "on their own and know it." Acheson speaks of communism in China with bated breath as the "dawning of a new day"; to Lattimore it is a "limitless horizon of hope"—and unless the Lattimore-Acheson Pacific plan of "allowing our allies to fall to communism but not having it appear that we shoved them"—unless that plan is stopped in its tracks—unless it is stopped now, then as certain as you sit here today, gentlemen, Acheson's "great new day" and Lattimore's "limitless horizon of hope" shall dawn in the Philippines, India, and thence across the Pacific to our shores.

To give you an even clearer picture of the architect of this new Lattimore-Acheson Pacific plan and how he views communism, let me quote from a broadcast prepared under his supervision while he was head of the Pacific division of OWI, and beamed to the Asiatic people on July 23, 1944—and listen to this if you will—"The Chinese Communists have established four colleges. Education is compulsory behind Communist lines. The schools are free. Once this was a poverty stricken region. Today everyone works or fights. There is no opium traffic. There is little vice. There are no laggards, for only those who believe in the cause of Chinese liberation are here. This is the Chinese Communist Government. The Communists have worked out the problems of all the people, living, working, and fighting together. * * * If we are to succeed, we must organize the workers politically. The Chinese Communists want political rights for themselves and all the people. They want a thorough-going Democracy."

Gentlemen, this tops the pinnacle of all the foul products of fouler corruption.

I have on numerous occasions discussed in detail a third member of the Lattimore-Acheson axis. I would like to very briefly deal with some of the facts concerning this man. He is Phillip Jessup, another of the great experts on the Far East—the President's roving ambassador.

I have presented to the committee checks totaling $3,500, which represented Communist money paid to his organization, the Institute of Pacific Relations, whose publication was being supervised by Mr. Jessup. This money was paid prior to and during the time that this publication was being used to spearhead the smear against the anti-Communist forces in China and to sell to the State Department and the American people the idea that we must cast our lot with the Communists in China because they were not Communists at all.

Testimony has been presented to the committee that some 17 Communist writers were used by this publication to sell the Communist Party line. Since I appeared before the committee I have gotten photostats of additional checks which now total $6,500 of Communist money paid his organization. The checks are signed by Frederick Vanderbilt Field, who has proclaimed himself as the Nation's leading Communist and who has been named by Louis Budenz as a Soviet espionage agent. When the original checks totaling $6,500 were called to the President's attention, by way of answer he immediately

gave Mr. Jessup top-secret clearance to all A- and H-bomb information—dangerously mischievous playing with the security of 152,000,000 people.

I have here with me several hundred photostats of those checks if any of you care to take them along with you.

Mr. Truman, the time has come to stop your whistle-stop campaigning and come home.

But before you come, Mr. Truman, look into the faces of the mothers standing by your train tonight. Are they to weep again for their sons who must fight and die for the failures of dishonest or incompetent men? Are their sons next when the Red hordes trample over the bodies of 500,000 Chinese dead who perished for lack of arms?

Come on home, Mr. Truman, you have a lot to do. Tell Mr. Jessup, for instance, that this Government no longer has a place for men whose organization takes money from Communists. You can tell him you have the photostats of checks from Communists paid to the publication he served—the publication that peddled the Communist cause. I am sending them to you, Mr. Truman.

Come home, Mr. Truman, and halt Mr. Acheson's veto of everything America stands for.

Come home, Mr. Truman, and tell the Lattimore-Acheson axis to give effective aid to the anti-Communists in Asia. Order them to supply the rear guard on Formosa with the sinews those fighting men need.

Come home, Mr. Truman, and fire the Pied Pipers of the Politburo. Fire the headmaster who betrays us in Asia. Fire the collectors of corruption, those prancing mimics of the Moscow party line in the State Department.

Policies and Procedure in Income-Tax Fraud Cases

EXTENSION OF REMARKS

OF

HON. PAT SUTTON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1950

Mr. SUTTON. Mr. Speaker, the Members of Congress and numerous taxpayers over the Nation will be interested to know the policies and procedure in connection with income tax fraud cases. The Honorable Turner L. Smith, Chief of the Criminal Tax Section of the Department of Justice, is recognized as an authority on tax problems. Because of his vast experience as a lawyer and as Chief of the section which he heads in the Department of Justice, he is probably more qualified to speak on the subject of procedure and policies concerning income tax fraud cases than any other man in public life.

On May 6, Mr. Smith delivered an address before the Second Annual Legal Institute sponsored by the College of Law, University of Notre Dame, in conjunction with the Indiana State Bar Association.

Since Mr. Smith discusses his subject in great detail, I am placing his remarks in the RECORD, and congratulate him upon his fine work.

His address follows:

Gentlemen, I am delighted and honored to have your invitation and be present on this occasion to take part in the Second Annual Legal Institute as sponsored by the College of Law of the University of Notre Dame and the Indiana State Bar Association.

When your kind invitation came through the dean of Notre Dame, I gathered from his communication that it was the plan of those arranging the program to focus attention this year primarily upon the side of the actual general practice of law, as distinguished from addresses on highly technical or specialized subjects.

With this thought in mind, I have attempted to prepare for this occasion a paper which might be helpful to you practicing lawyers when you are employed by a taxpayer to represent his interest and defense at the time a criminal-tax case is under consideration for prosecution by the Department of Justice.

Until very recent years there were comparatively few Federal prosecutions for income-tax evasion. It is unlikely, therefore, that all of you here today have had occasion in the past to represent a client who was on the verge of a tax-fraud prosecution. Since this crime now seems to be on the increase, the probabilities of your being so employed are considerably strengthened.

It would thus seem appropriate for me to anticipate some of the questions arising in your mind as you undertake to prepare administratively to defend the client before the Government agency making the decision for or against prosecution. Undoubtedly, some of the questions you would ask yourself in the first instance of employment would run along these lines:

Can I go to Washington and by offering to pay to the Bureau of Internal Revenue or Department of Justice any and all tax deficiencies, penalties, and interest, save my client from indictment and prosecution? Will any Government attorney listen to any defense I may have to offer? If so, to whom should I write or communicate with to assure a hearing before an indictment has been sought? Should I seek to get character letters and otherwise document the good name and reputation of my client in preparation for a hearing at the Department of Justice, or would my time and energy be more profitably spent in studying taxpayer's books and records to determine if there is defense in merit to the Government's claim that my client intentionally and with deliberation understated his income? Should I prepare for oral presentation alone or should I take along a brief with affidavits and exhibits setting forth in writing the taxpayer's position?

Is it of any advantage to me if I learn that my client is suffering with a severe heart ailment or other serious illness; and if so, what should I do about it?

Under what circumstances and conditions will the Department of Justice accept an offer in compromise in a criminal tax case? Before which Government agency should I urge the defense of voluntary disclosure?

To what extent will the Government reveal its case at the conference in Washington? After studying client's tax affairs and upon concluding that no reasonable defense can be offered, will I be permitted to waive indictment and enter plea to an information; and if so, will the Government accept a nolo contendere plea, and in what type of cases?

Some or all of these questions which have been selected and set down at random will arise in every criminal tax case in which you become engaged. I am not addressing here, of course, the courtroom conduct of your defense. These remarks apply entirely to what is commonly referred to as administrative tax practice.

So it is with these general and essentially practical problems in mind that I discuss briefly in this paper what happens when the Department of Justice is working on a tax-fraud case. And what you can do about it.

From the moment of receipt from the Bureau of Internal Revenue of a tax-fraud accusation by the Tax Division of the Department of Justice, its handling is vitally affected by a number of administrative policies. These policies have developed or have been adopted in an effort to make the enforcement of the criminal laws for the protection of the revenue both fair and effective. If, however, these ends are to be attained, the policies and procedures of the Tax Division must not remain hidden in the files of the Department; they must be known by the members of the legal and the accounting professions who represent taxpayers accused of criminal fraud.

ORIGIN OF CASES

It is perhaps needless to relate for the benefit of tax practitioners that tax-fraud cases are not initiated in the Department of Justice, that is to say, Justice has no investigative force with general authority to unearth, investigate, and report on alleged evaders. These audit and investigative functions are vested respectively in the revenue agents and the special agents of the Bureau of Internal Revenue within the Treasury Department. Bureau agents alone initiate and conduct audits and fraud investigations. Every practitioner should know such investigations are thorough; that they are summed up in carefully prepared reports, and backed up by a file of evidence. It is only after the reports and exhibits have been reviewed in the Penal Division of the Bureau and formally transmitted by a letter from the Commissioner of Internal Revenue recommending prosecutive action that the Tax Division of the Department of Justice takes complete jurisdiction of a case.

The number of income-tax evasion cases received from the Commissioner of Internal Revenue has increased significantly during the past 8 years, as demonstrated in the following table:

Calendar year:	*Number of cases*
1942	79
1943	93
1944	71
1945	203
1946	241
1947	523
1948	691
1949	420

This very substantial increase in the number of cases referred for prosecution is variously attributable to the increase in tax rates, the excess-profits tax on corporate income, and the prevalence of black-market operations which participants sought to conceal during the period of the OPA. Not to be overlooked also is the very large addition of agents in recent years to the Bureau's enforcement staff.

Taxpayers, it seems, wished to hang onto a larger proportion of war-boom receipts. At the same time, the wartime and postwar need of the Government for increased revenue became greatly enlarged. As a result, the processing of the tax-crimes case load has now become a major activity of the Tax Division.

Each case transmitted by the Bureau of Internal Revenue to the Department of Justice is assigned to an attorney in the Criminal Section of the Tax Division. It then is his responsibility to review completely the reports of the special agent and of the revenue agent and to determine from those reports and the supporting exhibits whether, in the light of the law involved, a case can be made out which can reasonably be expected to result in a successful prosecution.

CONFERENCES

In the usual case, the attorney assigned is materially assisted in reaching a sound conclusion by a conference with counsel and accountants representing the taxpayer. Defense evidence which may have been overlooked by the investigating agents is often so convincingly presented that the Division

attorney recommends that prosecution be declined. On the other hand, he may be able to dispel a supposed defense by an explanation to defense counsel or by a supplemental investigation. This may result in the taxpayer ultimately entering a plea of guilty, thus obviating the mutual expense of a trial which would most likely result in a conviction.

It was formerly the practice in the Tax Division to afford conferences to taxpayers' representatives only if requeseted. Then, as now, alert attorneys sought to press their defense in conferences at every stage, in the agents' offices, in the regional offices of the Bureau's decentralized Penal Division, and in the headquarters of the Penal Division in Washington. In such cases, the Tax Division has generally received a written request for a conference by the time the file is referred to it by the Commissioner, and oftentimes a year or so in advance of referral.

But it was found that many times taxpayers without counsel first learned that they were subject to a Federal tax-evasion indictment when the United States marshal hauled them unceremoniously before a committing magistrate. The present head of the Tax Division, Assistant Attorney General Theron L. Caudle, felt that a disparity of treatment necessarily resulted when some taxpayers had counsel and conferences in the division and others had neither—much less notice that they were in trouble. In this connection, it should be borne in mind that tax investigations usually involve returns dating back 1 to 5 years; that a year or more can and does pass before the results of investigations reach the stage of consideration for prosecution in the Justice Department; and that, unlike the celebrated prosecution of Al Capone, the usual tax evader is not an underworld character or criminal in the usual sense.

The temptation to cheat on taxes, it appears, preys on respectable citizens, the business man, the professional man, yes, even lawyers, doctors, accountants, and judges. Mr. Caudle, therefore, established the policy that, when it did not appear from the file that the taxpayer had had the benefit of counsel, the Criminal Section attorney assigned to such case must notify the taxpayer that prosecution was being considered. This notice includes an offer of an opportunity for a conference in the Department if one is desired. Should distance, or the relative lack of means of the taxpayer (the file reflects this occasionally), or the necessity for speedy handling to avoid the bar of the statute of limitations make an offer of a conference in Washington impracticable, then the United States attorney is asked to afford the necessary preprosecution conference opportunity. While this policy puts an added burden on the Tax Division staff, it has been generally recognized as a contribution to the fair administration of criminal justice in the tax field. Hence, the first action taken in the department is to find out whether the taxpayer has an attorney and whether a conference request is pending.

NUMBER OF CONFERENCES

It is also the policy that conferences should, as far as possible, be limited to one. Only where the necessity for the presentation of substantial additional evidence becomes apparent at the first conference is a second one properly granted. Memoranda recording conferences are written by the staff attorney, and these are available to the section chief, the first assistant, and the Assistant Attorney General when the staff attorney's analyses and recommendations are forwarded for review and for ultimate approval or disapproval by the Assistant Attorney General. There is, therefore, little purpose to be served by successive conferences over the same material with the reviewing officials. There is even less utility in successive platoons of counsel asking a hearing on identical contentions.

DEFENSE CONTENTIONS

This suggests that a comment is here in order concerning what is expected of taxpayer's representatives when they appear for conferences. As already noted, the tax division has before it a considered recommendation of the Commissioner of Internal Revenue, based on reports that almost universally show arduous, careful investigative work. The supporting exhibits give tangible proof of something seriously wrong, taxwise. This is what the taxpayers' counsel must be prepared to explain away, preferably by equally tangible proof. If a legal argument is to be made, it is expected that it should be sound enough to bear submission in writing. The attorneys in the criminal section are well experienced and disposed to consider reasoned documented contentions. But practitioners are apt to find something less than an interested reception if they present only a dissertion on what a good churchgoer the taxpayer is, how well respected he is, or that he is not the type to have an intent to evade. That taxpayers are likely to lose a business or a license to practice, or that a jail sentence will disgrace their families or work a great hardship on minor children are considerations which are properly for a court at the time of sentencing and could have weight on a decision to prosecute only when the merits of the substantive case for prosecution are in doubt.

HEALTH CONSIDERATIONS

If a case is made out in the reports and exhibits which cannot be explained away, policy requires that a prosecution be undertaken, unless it appears that the individual taxpayer's life will be endangered by criminal prosecution because of some serious mental or physical condition. The prosecutors in the tax division and the several United States attorneys do not want to be responsible for the death of a taxpayer. The Bureau of Internal Revenue has a like policy. The revenue does not need such protection. Hence, a documented contention by defense counsel that a taxpayer is dangerously ill and that he could not survive a trial will be scrupulously examined and given thorough and serious consideration. A Public Health Service medical examination will be conducted, and sometimes because of distance or other factors arrangements are made for the United States attorney in the taxpayer's district to select an outstanding medical specialist to conduct the necessary examination at the taxpayer's expense.

When all other defense positions advanced by taxpayer's counsel appear to leave a decision by the Department to prosecute unchanged, it has been a growing practice on the part of the tax bar to urge the bad health of the taxpayer as a last resort. Permit me, therefore, to spell out this health policy by saying: one, that this defense to prosecution will not be considered unless a private doctor has in the first instance certified in writing to the fact of a serious illness involving a probable ultimate loss of life; and two, prosecution will not be declined until this private medical report has been verified by a thorough examination of the taxpayer by some doctor, likely a specialist in his field, selected and appointed by the Government to conduct the examination, and make a report.

Thus, it may be stated in summation, that the decision by the Department to prosecute or not to prosecute rests entirely and squarely upon the merits and evidence available in a particular case, excepting only in circumstances where a competent doctor conducting the examination at the Department's request certifies that prosecution and trial would constitute a clear and present danger to the prospective defendant's life.

This one exception to prosecution noted here does not embrace, of course, the voluntary-disclosure policy which has been enunciated by the Treasury Departmuent and which has no application to the case once it has been transmitted to the Justice Department.

VOLUNTARY DISCLOSURE

Another bar to an otherwise apparent fraud case is the so-called voluntary-disclosure policy of the Treasury Department. The contention is frequently raised during the consideration of an income-tax evasion case in the Tax Division of the Justice Department that the taxpayer had made a voluntary disclosure. It goes without saying that in tax-practice parlance this means the policy of the Treasury Department to grant immunity from prosecution to tax evaders who within the period and under the conditions prescribed by that Department make a clean breast of their misdeeds. Former Secretary of the Treasury Vinson, in a press conference on May 28, 1945, crystallized this practice into definite policy. But, observe that this immunity to timely repentant tax evaders is strictly the policy of the Treasur Department. It is absolution implemented solely by this agency, and the means of implementation is simply not to send voluntarily disclosed tax-fraud cases to the Justice Department for prosecution. There is, therefore, a reciprocating policy in the Tax Division in Justice to accept the decision of the Bureau of Internal Revenue as to whether a voluntary disclosure has or has not been accomplished. If the record coming from the Bureau does not disclose a decision on this point, the fact of referral of a case is considered to evidence such decision. Only the possibility that the agents may have elicited the necessary incriminating evidence by an express or implied promise of immunity can be properly considered by the Tax Division. As a matter of policy, again, the Department of Justice will be reluctant to prosecute if there is persuasive evidence that such a promise of immunity was given.

OFFERS IN COMPROMISE

Still another administrative defense approach to the Department is by way of an offer in compromise of the criminal case, together with the civil liability. In criminal cases the policy of the Department has received some airing among the practitioners and in legal periodicals. Despite this, the attorneys in the Criminal Section of the Tax Division are constantly asked whether "we can't compromise this case by paying the tax and penalties." They must answer this by saying that the policy of the Attorney General and Assistant Attorney General Caudle is not even to consider compromising a criminal tax case except when the defendant couples his offer to pay the tax or such portion of it as he has ability to pay at the time with an unconditional offer to enter a plea of guilty to a major count of the indictment. In short, compromise of a criminal case must result in a conviction. But whether that portion of such an offer as concerns the tax liability will be accepted is, as a matter of policy, usually dependent on whether it is acceptable to the Bureau of Internal Revenue. That agency is primarily responsible for the collection of the tax and the civil penalties. Its recommendation is always sought on offers in compromise and is followed save in the rarest of exceptions.

SUBMISSION FOR PROSECUTION

After a criminal section attorney has reviewed a case in the light of all the defense contentions raised, he submits a recommendation through channels to the Assistant Attorney General. If he finds that the evidence discloses a violation of the evasion

statute (26 U. S. C. 145 (b)), or the failure-to-file statute (26 U. S. C. 145 (a)), or the false-execution statute (26 U. S. C. 3809 (a)), or the aiding-and-assisting-in-the-false-preparation-and-presentation statute (26 U. S. C. 3793 (b) (1)), as the case may be, and that there is a reasonable probability of a successful prosecution, then he will recommend submitting the case to the appropriate United States Attorney to institute criminal action. This recommendation is reviewed by the Chief of the Criminal Section and by the First Assistant in the Tax Division, and a final decision is then made by the Assistant Attorney General, on whose approval the case is transmitted to the United States Attorney concerned and counsel are notified.

In the usual case, the United States Attorney proceeds in due course in his district to obtain an indictment, and then to trial if no guilty plea is entered. At this stage, after transmittal of the file to the District Attorney, the Tax Division is frequently importuned to grant a further conference and to recall the file. There is a policy on this, too: it is that the file will not be recalled from the United States Attorney. If weighty reasons are given for a conference, the United States Attorney may be asked to defer action, but the delays involved in recalling the file and in again resubmitting it are scarcely ever incurred. Generally, the taxpayer's representatives will be told that further conferences in the Department would be fruitless and that any further conferences should be with the United States Attorney.

CONCLUSION

This discussion of policy should not end on the preceding stony-hearted note. It can be stated by way of conclusion that, in considering cases with defense counsel, there is a general policy to discuss rather more freely the merits of the proposed tax case for prosecution than the usual criminal case. This statement should not be construed as a commitment to reveal fully the Government's hand. An honest effort is made, however, to outline the Government's contentions, so that conferences are not sterile and in order that the possible existence of bona fide defenses may be explored. Common sense dictates the limitations on the disclosures made to counsel, but in this, as well as in the formulation of the other policies and procedures mentioned, the objective is the fair and efficient conduct of the prosecutor's duties.

Such Is a Union's Power

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an editorial appearing in the Kansas City Star of May 13, 1950, entitled "Such Is a Union's Power."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUCH IS A UNION'S POWER

Slowly the wheels of industry are dragging toward a stop along the lines of four major railroads. At this early stage 200,000 persons are out of work. Unless the latest move for a quick settlement succeeds this is only the beginning.

The railroads are the lifeline of our national economy. Without the cars to move coal the mines shut down. Without the flow of their materials factories must close. Along the Santa Fe lines farmers are worried about the movement of the wheat crop. The inconvenience to railroad passengers is a small thing compared with the silence in the freight yards.

The firemen's brotherhood has cut the lifeline provided by four roads. There is talk of moving on to other roads to make the paralysis complete. But this far the brotherhood has already gone to put a third man in every multiple unit Diesel locomotive.

It has nothing to support its argument except force. This is no complicated, highly technical argument involved with a lot of "ifs" and "buts." It comes down to a simple proposition of what a third man could do. And the answer is "nothing."

Two presidential fact-finding boards have heard the brotherhood's argument of additional safety and found nothing to support it.

The union leadership is prepared to spread this devastation to have its way without an argument, without logic or a moral principle to support it.

Such power in the hands of one organization is an omnious thing to this land of the free. What it can do on four roads it can do on all roads. This is a demonstration of power for the American people to swallow.

As of today there is no greater power on the side of the people—definitely not the Government of the United States. President Truman has said he lacks the power to take action and, as far as we have heard, he hasn't asked for more power. Publicly he has shown no concern. Congress can do nothing except write new legislation, and there appears to be some real interest in Senator DONNELL'S compulsory arbitration bill.

But for today there is no way to meet force with the force of public interest. The hope for the national economy along four major railroads rests entirely with the talks around the table.

Regardless of the outcome of this strike the demonstration should have been driven home to the American public. Over its vital economic lifelines no little group of men can be permitted absolute power.

Amendment of Social Security Act

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, yesterday I issued a statement announcing that I would introduce a bill to amend the Social Security Act extending the public-assistance provisions to the people of Puerto Rico and the Virgin Islands. This would be in accordance with the action already taken by the House. I ask unanimous consent to have printed in the Appendix of the RECORD my statement, which also includes some comments on the social-security bill reported by the Senate Finance Committee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR HERBERT H. LEHMAN ON SOCIAL SECURITY AMENDMENTS TO H. R. 6000 AS REPORTED BY THE SENATE FINANCE COMMITTEE

A number of aspects of the amendments to the Social Security Act reported out by the Senate Finance Committee are very disappointing to me, although the action by the committee in working out this difficult and complex piece of legislation was, on the whole, very constructive and salutary.

I expect to introduce a number of amendments from the floor and to join with other Members of the Senate in urging increased benefits and expanded coverage.

One point on which I have already expressed myself very strongly and on which I propose to insist as vigorously as I know how is the extension of the provision for public assistance to the people of Puerto Rico and the Virgin Islands. If there are any groups of American citizens who are particularly in need of the aid extended by this provision, it is the people of these islands who, through no fault of their own, are confronted with economic conditions with which the local government can deal only in part.

The local governments in Puerto Rico and in the Virgin Islands have made outstanding progress toward the solution of basic economic problems. The extension of the public-assistance provisions to the Social Security Act to these people would be a notable and constructive contribution and would, at modest cost to the Federal Government, provide essential support to the efforts which the local governments are making to bring to the underprivileged groups on these islands the basic needs of livelihood.

Approval of this extension of coverage, as already agreed to by the House, would signify to all the people of Puerto Rico and the Virgin Islands the fundamental desire of the Federal Government to grant equality of treatment to all its citizens and special consideration for those citizens who are in particular need through no fault of their own.

I am not urging the Senate to approve this on the basis of charity or beneficence, but rather on the basis of right. I think these American citizens have a right to the same treatment by the Federal Government as the American citizens on the mainland. I hope the Senate will amend the action by the Finance Committee and restore coverage to Puerto Rico and the Virgin Islands.

Boys' Clubs of America

EXTENSION OF REMARKS
OF
HON. HARRY DARBY
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. DARBY. Mr. President, Hon. Herbert Hoover, former President of the United States, and Director J. Edgar Hoover, of the FBI, are among the most distinguished Americans who have rendered valuable service to their country in assisting our youth to become better citizens. The former President has served as chairman of the Boys' Clubs of America for 14 years, and last night awarded to the Director of the Federal Bureau of

Investigation the coveted Golden Keystone Award for his splendid contribution to the Boys' Clubs of America. The Honorable Herbert Hoover and Mr. J. Edgar Hoover both made fine and appropriate addresses on the occasion of the final meeting of the annual convention of the Boys' Clubs of America in Washington on May 18, and I ask unanimous consent to have these addresses inserted in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HERBERT HOOVER

PAVEMENT BOYS—WHAT WE ARE DOING

I am proud that this is my fourteenth year as chairman of the Boys' Clubs of America. We have doubled in potency in this period. But the real record is that of your president, William E. Hall. He entered that office 34 years ago and has nursed this effort up from its swaddling clothes. But Mr. Hall and your directors and I are unanimously agreed that the greatest punch and spirit of this national organization comes from your director, David Armstrong, and his able staff.

The Boys' Clubs of America are a great school. They might even be called the university of the pavements, for our purpose is mostly directed to the pavement boys in our congested areas.

Here are linked together over 325 institutions with 300,000 to 350,000 boys, with an equipment that $60,000,000 could not replace and with an annual budget of $7,000,000. There were 24 building projects nearly completed in 1949 and 18 more are under way, costing a total of about $5,000,000. All these great sums are made possible by generous people who love boys.

If you need some more statistics, I may tell you that there are 35,000 adults giving generously of their time to the Boys' Clubs as boards of directors or auxiliary organizations. The clubs are guided by over 6,000 trained adult leaders who are the "faculty."

This education includes self-organization and their own discipline in the conduct of their clubs. It includes testing out their natural bents in shops, crafts, music, and the professions. It includes medical inspection and training in health. It involves every known indoor and outdoor game and sport, except horse racing and golf. It even includes the flying trapeze.

There is no discrimination as to religion or race. Theirs is that equality which is the foundation of free men. The greatest moral training, except for religious faith, comes from training these boys in teamwork and sportsmanship.

We do not claim that the boys' clubs substitute for either mother or the public schools. We are concerned with the kid from the hour when school is out until he goes to bed or when he gets a holiday. When a boy is inside our doors, mother has no worry. The police have no worry from some of his primitive instincts.

We have a right to brag a little. We have produced some major league ball players and some great editors and artists. In the last war draft the total number of rejects among our graduates was less than 5 percent as against the national average of over 30 percent. I could tell you of districts where we have reduced delinquency by 75 percent. Over the years we have brought joy into the lives of millions of boys.

You will anticipate my next remark. We need more money and lots of it, for there are 2,000,000 of these pavement boys whom we have not taken care of.

HIS RIGHTS, CHARACTERISTICS, ENVIRONMENT, AND HOPES

The work of the boys' clubs is geared to certain ideas.

First. When the founding fathers announced the unalienable rights, they laid proper emphasis on the pursuit of happiness. I have no doubt any lawyer would construe that as especially intended to include boys. However, we are not so worried at the moment with his unalienable rights to the pursuit of happiness as we are with his processes in the pursuit.

Second. In pursuit of happiness, the boy has two jobs. One is being a boy and the other is training to be a man.

When the boys' clubs contemplate his jobs, we take into account certain characteristics of the animal and his environment. Some years ago I made some observations on these essentials. I have combined them with some further observations to bring you up to date in this important matter.

Together with his sister, the boy is our most precious possession. But he presents not only joys and hopes, but also paradoxes. He strains our nerves, yet he is a complex of cells teeming with affection. He is a periodic nuisance, yet he is a joy forever. He is a part-time incarnation of destruction, yet he radiates sunlight to all the world. He at times gives evidence of being the child of iniquity, yet his idealism can make a great nation. He is filled with curiosity as to every mortal thing. He is an illuminated interrogation point, yet he is the most entertaining animal that is.

The whole world is new to him. He must discover it all over again. All its corners and things must be explored or taken apart. Therefore his should be a life of discovery, of adventure, of great undertakings. He must spend much time in the land of make-believe, if he is to expand his soul. One of the sad things in the world is that he must grow up into the land of taxpayers.

He is endowed with a dynamic energy and an impelling desire to take exercise on all occasions. He is a complete self-starter, and therefore wisdom in dealing with him consists mostly in what to do with him next. His primary instinct is to hunt in a pack and that multiplies his devices. He and his pack can go on the hunt either for good or evil. Our first problem is to find him constructive joy, instead of destructive glee.

To complicate this problem, this civilization has gone and built up great cities. We have increased the number of boys per acre. We have paved all this part of the land with cement and cobblestones. Of these human organisms, perhaps two and a half million must find their outdoor life on these pavements and confined by brick walls. Much of their life is concerned with stairs, light switches, alleys, fire escapes, bells, and cobblestones, and a chance to get run over by a truck. Thus these boys are today separated from mother earth and all her works, except the weather. In the days before our civilization became so perfectly paved with cement, he matched his wits with the birds, the bees, and the fish. But the outlet of his energies in exploring the streams and the fields is closed to him. The mysteries of the birds and bees and fish are mostly denied to him.

The normal boy is a primitive animal and takes to competition and battle. If he doesn't have much of a chance to contend with nature, and unless he is given something else to do, he is likely to take on contention with a policeman.

I dislike to refer to these boys as underprivileged. That is only a part truth. He has better facilities for education and better protection of health than boys in any other country in the world. He suffers less from mumps and measles than his grandfather did; more quickly do we heal his broken bones. He will live longer, and if his start is blighted, the Nation will have to board him longer in jail.

He has other gains. The electric light has banished the former curse of all boys, of cleaning lamps and everlastingly carrying them about. The light switch has driven away the goblins that lived in dark corners and under the bed. It clothes drab streets with gaiety and cheer by night. And it is the attraction of these bright lights that increases our problem.

But we are concerned with the privileges which all these bricks and cement have taken away from him. The particular ones with which we are concerned bear on his character and moral stature. This brick and cement foundation of life is a hard soil for his growths. Somebody will say morals are the job of parents. But the best of parents cannot keep him indoors all the time. And the world in the streets is a distorted and dangerous world which the parents cannot make or unmake. So it becomes a job of public relations.

But there is more than that. The fine qualities of loyalty to the pack are not so good on the pavements. For here the pack turns to the gang, where his superabundant vitality leads him to depredation. And here we make gangsters and feed jails. The way to stop crime is to stop the manufacture of criminals.

This is only a marginal problem to the total boys in the United States. If we can start this marginal group right on the road to character, we will have done more to cure our national ills than either subsidies or so-called security.

And there is more to this than even exercise and morals. There is the job of stretching his vision of life. The right to glimpse into constructive joy, the right to discover an occupation fitted to his inclinations and talents, and the right to develop his personality. The priceless treasure of boyhood is his endless enthusiasm, his high store of idealism, his affections, and his hopes. When we preserve these with character, we have made men. We have made citizens and we have made Americans.

ADDRESS BY J. EDGAR HOOVER, DIRECTOR, FEDERAL BUREAU OF INVESTIGATION

The Golden Keystone Award is indeed a cherished honor. As its recipient I know that this great honor would never have been accorded me had it not been for the tireless and unselfish assistance and devotion to duty of my associates in the FBI. For them, as well as for myself, I accept this honor with pardonable pride and gratitude.

The fact that the award is presented by Hon. Herbert Hoover, chairman of the board of directors of the Boys' Clubs of America, gives it even greater significance to me. It has been my distinct privilege and pleasure to have served under Mr. Herbert Hoover for many years in my official career and later to be associated with him in the boys' clubs work. His life symbolizes the precepts of this great Nation. Inspired by our finest traditions of liberty and freedom and justice for all, he stands foursquare against every disrupting force. His contributions to our Nation's welfare have been outstanding; his great heart and soul are attuned to the needs of humanity which he has served so nobly over the years. May God grant him many years to counsel our country through these troubled times.

There is a parallel between the aims of the Boys' Clubs of America and the FBI. We work on different fronts, but toward a common objective—a more secure America. One of the great tragedies of our generation has

been our lack of vision. As a people we have prospered materially. We have harnessed our vast industrial potential; we have penetrated the mysteries of science. We have achieved a standard of living which is unequaled the world over. The defects of our social order are gradually being overcome. We have more leisure time and opportunities for recreation than people in any civilized land in the world. But we are sadly neglecting our most precious asset—the citizen of tomorrow.

We are witnessing, too often, a gradual dissolution of the traditional American home. The American home too frequently has become merely a place to eat and sleep instead of a place of moral development and spiritual growth. Adult America in too many instances has failed miserably in its responsibility to youth.

The tendency to coddle youth or treat their problems with indifference manifests itself in too many communities. Instead of giving young people leadership through example and discipline, too frequently we permit them to run rampant in the uninhibited expression of their impulses—a practice which has led to disastrous consequences.

The awesome spectacle a few weeks ago in one of our cities, of scores of young people swept by a mob spirit flaunting the forces of law and order by rioting in the streets, and equally startling and frightening spectacles in other cities, are sufficient to make us pause and take stock. The unlawful activities of too many of our young people are a national disgrace. We who are engaged in law enforcement see the results daily in the ungoverned activities of teen-age boys and girls who are responsible for a percentage of crimes out of all proportion to their age group. This is indeed a serious indictment of parenthood.

In fact, some 50 percent of all crimes against property are committed by young people under 25 years of age. In 117,562 cases last year involving young people under 21 years of age, law enforcement agencies regarded the offenses sufficiently serious to take the fingerprints of the offenders for inclusion in the fingerprint files of the FBI. These represent some 15 percent of all persons arrested. Yet, as a group, persons under 21 years of age accounted for 43.8 percent of all persons arrested for auto theft; 38.2 percent of all persons arrested for burglary; 30.4 percent of all persons arrested for rape; 26.7 percent of all persons arrested for robbery; and 11.9 percent of all persons arrested for felonious homicide.

This sad spectacle of misdirected energy is an unwholesome blemish on the American scene. Perhaps the disappearance of the woodshed of my generation has had its effect. I have heard too many sorrowful confessions of parents who "spared the rod and spoiled the child" not to be convinced that a firmness and a determination to enforce discipline and order have their merits. There is no satisfactory substitute for discipline in developing character. Hard work, even if it is considered old-fashioned in some quarters, is a stepping stone to achievement.

The breakdown in some of the homes and the lack of facilities in the schools to fully administer to the fundamental needs of youth have made necessary such a youth-serving agency as the Boys' Clubs of America.

In the brief span of their existence, the boys' clubs of the Nation have left an indelible imprint for good upon the 325 communities where they exist. The 330,000 members of the boys' clubs are being given opportunities which they would not otherwise have. Make no mistake—each of these boys will become a better citizen because some adults have had vision and have been willing to devote their time and energies to providing these young men with opportunities which are their inherent right.

The program of the boys' clubs has conclusively proven its worth by satisfying the basic desires of youth in offering opportunities for new experience, recognition, response, and security which come from group activities. In making this possible, I want to commend the 6,088 professional and volunteer workers who have carried forward this program in 37 States. Back of these men who give of their time and energies is another group, totaling some 35,000 members of boards of directors and auxiliary organizations in the various communities where boys' clubs flourish.

These men, many of whom are here tonight, by their daily deeds are living up to the responsibilities of good citizenship. Their contribution toward the building of a better America sets an example for others. The achievements of the boys' clubs invite the scrutiny of every community in the land. The annual expenditure of some seven million dollars—the cost of maintaining the boys' clubs—is returned manyfold in the results of its constructive work. The experience of one neighborhood where the number of juvenile delinquents dropped from 222 to 28, an 87 percent decrease, after a boys' club moved into the community, I am sure, is the rule rather than the exception.

The operation of the Boys' Clubs of America is basically American. They embody some of our finest traditions by working in the locals where they can render the greatest service. Our Nation has flourished because of that principle—the serving of local needs. In the final analysis, America is the aggregate of all of our people; it is the aggregate of all of our towns, cities, counties, and States. America is only as strong as all of our people and our communities working together in unity toward a common goal.

Good citizenship, like charity, begins at home. That is why, for example, I have always opposed the concept of a national police force. The best type of law enforcement is the home-town police. Any other system would be alien to our American way of life. Each community not only deserves exactly what it receives in terms of law and order, but also has within its power the ability to have law observance and good law enforcement if it so desires.

There is not a city, town, or hamlet in the Nation which could not strike a telling blow against the forces of lawlessness within 48 hours if its people had the will and determination to eradicate the breeding places of crime. The law-enforcement agencies in the land, with few exceptions, are thoroughly competent and capable. They are willing to do their job if they are unshackled and supported as they should be by an aroused citizenry which will brook no interference and tolerate no alliance between the upper world of officialdom and the underworld of corruption.

Similarly, the youth problem in crime would disappear quickly if each parent and adult recognized his responsibility and made an honest effort to do his duty. I look forward to the day when the number of Boys' Clubs will double, triple, and quadruple. A crying need exists for an extension of this most worth-while endeavor. You, the leaders of this movement, have done your job well but you have scarcely scratched the surface. There is still much unfinished business.

Now is the time for action. The need for giving American youth what is justly his—guidance, training, discipline, proper surroundings, incentive, moral and spiritual development—is more important than ever before in the history of our Nation. The strength, the security, and the future of America depend upon the character and the quality of our youth. In the face of attacks from subversive forces which would destroy our American way of life, we must strengthen and expand those organizations which aid in molding our youth into good citizens.

The Boys' Clubs of America must go forward if other boys are to be given the opportunities of democracy in action—the type of democracy which flourishes in the atmosphere of liberty and freedom in the United States.

Protection of Wisconsin Dairy Farmers

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. WHERRY. Mr. President, I was glad to note in the May 15, 1950, issue of the newspaper Herald-Telegram, published in Chippewa Falls, Wis., a very fine and deserved editorial entitled "Waging Courageous Fight," recounting the splendid work of our colleague the senior Senator from America's dairyland, the State of Wisconsin [Mr. WILEY]. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WAGING COURAGEOUS FIGHT

Senator ALEXANDER WILEY'S courageous fight in the United States Senate to aid Wisconsin dairy farmers was called to the attention of the local Kiwanis Club and their farmer guests Wednesday night at Eagle Point.

Milo Swanton, executive secretary of the Wisconsin Council of Agricultural Cooperatives, praised Wisconsin's senior Senator for what he termed his yeoman service in the farmers' battle against the manufacturers of dairy substitutes.

Swanton's remarks drew spontaneous applause from the more than 100 men present at Wednesday night's meeting, indicating that the farmers were appreciative of WILEY'S fight for the dairy industry.

Now, a communication from Washington reveals that the Badger Senator is waging a terrific fight on the floor of the Senate on behalf of boot and shoe manufacturers in his home State.

This should be of particular interest to Chippewa Falls businessmen, since huge numbers of some of the finest boots and shoes in the United States are manufactured right here in our own community.

Senator WILEY is genuinely alarmed at what he terms the indiscriminate lowering of trade barriers, which allow cheap foreign-made boots and shoes to flood American markets.

The Senator read into the CONGRESSIONAL RECORD a letter received from the Boot and Shoe Workers Union, Local 705, South Milwaukee, Wis., in which the workers complained of the steady flow of foreign shoes into the country at prices far below the domestic retail price.

WILEY, in presenting this problem to the United States Senate, has this to say, and there is no question but what his remarks are well worth repeating for readers of the Herald-Telegram:

"Our basic obligation is to afford reasonable and legitimate protection for American jobs and American producers, as against unfair competition from floods of cheap foreign imports.

"To the greatest extent possible, consistent with that point, it has been my aim to try to increase trade with other countries, particularly in commodities that are not produced here at home, and where there is an unfulfilled need.

"I have received many messages from Wisconsin businesses which are deeply concerned with recent policies adopted by the administration for the reckless slashing of trade barriers. These folks, both businessmen and unions, as well as individual workers, are concerned lest in our zeal to promote world commerce we lose sight of the following facts:

"(a) America has the highest standard of living in the world.

"(b) American wages are, generally speaking, the highest in the world.

"(c) The largest element in the cost of any commodity is, generally speaking, the cost of labor.

"(d) If foreign countries using inexpensive labor at what amounts to serf prices, can have tariffs lowered appreciably, they can literally flood many American items off the markets.

"Mr. President, I am not an alarmist, but I do not want to underestimate this situation * * *. I have protested many times to the United States Tariff Commission against particular tariff slashes, but usually my protests have fallen on deaf ears, and the same holds true in the case of my appeals to the White House."

Senator WILEY then read the Boot and Shoe Workers' letter into the CONGRESSIONAL RECORD, commenting that "the letter speaks for itself about cheap foreign shoes flooding American markets, and that is why I have requested unanimous consent that it be printed in the RECORD."

It is encouraging to note that Wisconsin's very able senior Senator has taken up the fight for the State's boot and shoe workers with the same zeal and enthusiasm which characterized his fight for the dairy farmers of Wisconsin.

Manufacturers, individual workers, and the State's thousands of farmers should take heart in the knowledge that Senator WILEY is doing more than just passing the time of day in the United States Senate. Residents of Chippewa Falls should be doubly proud of the courageous fight which ALEXANDER WILEY is waging to protect the interests of his constituents.

Force Against the Public

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent that there may be inserted in the Appendix of the RECORD an editorial appearing in the Kansas City Times of May 11, 1950, the concluding sentence of which refers to the firemen's recent strike, saying:

If the Federal Government is unable to protect its people in such an emergency, the time has come for new legislation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FORCE AGAINST THE PUBLIC

On an outright featherbedding issue the firemen's brotherhood has stopped service on four major railroads. From coast to coast hundreds of cities and towns are left without railroad service. Industries depending on these four lines face the prospect of shutdown. Passenger travel is disrupted.

The responsibility for drastic action checks to Washington. If the President has no power to act, as he claims, then the issue is in the lap of Congress.

Until now there has been no way to compromise with the union. It has delivered an ultimatum and stands on it. The key demand which is a third man on each Diesel locomotive, is the strategic point of attack in a general movement to spread the featherbedding practice through the Nation's railroad systems.

The brotherhood couldn't have chosen a clearer example to show the American public how featherbedding works.

A second man, a firemen, is already carried on a Diesel as a safety factor. An engineer alone could operate the locomotive with normal safety. If he should suffer a heart attack or lose his faculties for any reason the automatic device is on hand to stop the train as soon as his foot leaves the pedal. But where many lives are involved the precaution of an extra man is justified. Automatic devices sometimes fail. So a second man is on hand for some rare emergency.

A third man could serve no purpose whatever. He would just go along for the ride and draw his pay. That is featherbedding. The third man on all the Diesels would account for an annual expense of $40,000,000 a year.

If the firemen's brotherhood can have its way on this issue it has softened the resistance to many other demands. Its drive is to make jobs for extra men. The only way the railroads could pay such mounting costs is by increasing freight rates and fares that are already too high.

The claim for a third man on a Diesel has not been supported anywhere outside the brotherhood's leaders. It has gone to two Presidential fact-finding boards and has been turned down by both.

The movement started back in 1939. A board appointed by President Roosevelt held that no purpose would be served by a third man on a Diesel. The demand persisted. In 1949 a board appointed by President Truman heard the arguments and found against the brotherhood.

This is no ordinary labor dispute in which you have good arguments on both sides. Left without any support for its argument the firemen's brotherhood is determined to have its way by force. The victims are literally millions of people who depend directly or indirectly on the service of four major railroads.

If the Federal Government is unable to protect its people in such an emergency the time has come for new legislation.

Point 4 and Southeast Asia

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. KILGORE. Mr. President, when President Truman launched the idea of the point 4 program, to give technical assistance to underdeveloped areas of the world, he summed up the American hope for world stability in these stirring words:

Democracy alone can supply the vitalizing force to stir the peoples of the world into triumphant action, not only against their human oppressors, but also against their ancient enemies—hunger, misery, and despair.

These words gain their fullest meaning when the problems of the underdeveloped areas are brought out into the open and studied from the viewpoint of the people in those areas.

Raden Sudjatmoko, acting chief of the Indonesian Observer's Mission to the United Nations, made a statement on April 15, 1950, before the fifty-fourth annual meeting of the American Academy of Political and Social Science, giving his own viewpoint on the point 4 program in its relation to the problems of southeast Asia.

Because I believe our participation in the point 4 program must be guided by the fullest knowledge of the problems we face, I wish to call attention to Raden Sudjatmoko's views and ask unanimous consent that excerpts from his address Point Four and Southeast Asia may be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

POINT 4 AND SOUTHEAST ASIA

Before beginning my remarks, I want to make it clear, that what I have to say tonight is entirely my own personal view, and does not in any way reflect the views or opinions of my government.

Point 4 is the assertion of faith in a world based on the recognition of mutual interdependency of all nations, economically and politically. It is inspired by the belief that if a new world is to emerge from the present chaos, it will have to be a world of peace and general prosperity so that the peoples of the world can live in freedom and dignity. The opportunities are there. In southeast Asia especially, where the people have shaken off their chains and laid the first political foundations for such a life, they are eager to get to work and reap the material and spiritual fruits which freedom can bring.

The opportunities are tremendous, the responsibilities are equally great. Once this program is undertaken, we cannot afford to fail. The political loss to this country, to the nations which would benefit from this program, and to the rest of the world, would be far too serious.

All this puts a burden of tremendous responsibility on the governments and peoples which will participate in this venture. For the United Nations, this means the necessity of reconciling the basic conceptual differences still present despite the unanimous vote of acceptance of the United Nations technical assistance program. It will be the task of the United Nations to keep this endeavor as much as possible out of the areas of conflict besetting the world organization.

For the governments of the underdeveloped countries participating in this program, the responsibilities are equally clear. These would entail the necessity of achieving political stability, the necessity of fulfilling honorably and scrupulously their international obligations, and the early establishment of well-functioning administrations. But they also entail their responsibility toward their own peoples, the necessity of ensuring their own economic development and the raising of their own peoples' standards of living. It will be the responsibility of these governments to carry through those changes in the social and economic structure which

are indispensable for solving the problems of poverty in these areas, and to stimulate and channel the constructive forces in this direction.

* * * * *

The reemergence of Asia in the world is a permanent phenomenon. Asia's political crystallization and stabilization, its economic development are bound to take place in the irreversible course of history. The big question facing both the peoples of Asia and the peoples of the economically more advanced countries is how this crystallization and stabilization and how this economic development will be consummated, and in what direction they will go. The political and social forces now at work in southern Asia push for an early solution to the problems of immense poverty aggravated in many parts of that area by a tremendous population pressure, to the problems created by the out-dated, out-moded methods of production and the general low productivity of labor, to the problem of land tenure, and in general to the problems created by the distorted colonial economy, and to the problems arising out of the aftermath of World War II. No government in that area of the world can hope to achieve stability if these problems are not faced and solved in some manner or other. It was the fact that these problems could not be resolved within the framework of the colonial relationship that made the revolution in Asia a historical necessity. Now that the release from colonal domination has been won, the answers to these problems can only be found within the framework of a new society, through social reforms, and through economic development. But how can these goals be achieved? Once this is clear: The main burden will fall on us, but the question of whether we will be aided by other countries in this process will be of crucial importance.

* * * * *

The problems of southern Asia are there, cold war or no cold war. The question of how we will solve these problems, how soon, and by what means, the answers to these questions will determine what southeast Asia's position will be in the struggle between dictatorship and democracy. Therefore, the fate of southeast Asia will not be determined by its alinement with any power blocs but by the outcome of our own war, our own war against poverty and misery. Or, to put it another way, the political and social structure with which Asia will eventually emerge will be that structure which gives the answer to the problems of poverty.

It should not be overlooked that by the very nature of the revolution in Asia, which is a struggle for a life of freedom, there is an inherent determination to reject subservience to foreign domination or foreign influence, be it from The Hague, London, Paris, Washington, or Moscow. It is perfectly clear that one of the elements of the upheaval in southern Asia is the desire for greater popular self expression, and therefore for democracy. Thus, the best contribution that southeast Asia can make to the cause of peace and democratic development is to answer successfully the immediate political and economic problems with which she is confronted. This preoccupation with national problems is not only justified, but is the only course open, and no government there could survive the relegation of these problems to a secondary level. Therefore, attempts to draw the countries of southern Asia into the immediate orbit of the cold war, as, for example, the pressure on these countries to recognize Bao Dai, can only deflect them from following the sole constructive course open to them.

It is against this background that point four has been launched. The psychological and political pattern of the southeast Asian scene demonstrates that in the eyes of the peoples of southern Asia, point four cannot be separated from their reactions to other policies toward this area. If point four is launched on the assumption that economic aid is the best means of bringing about early stabilization and democratic development, then it should be made clear to them that the other aspects of American policy in southeast Asia are consistent with this program. The time is past when policy with regard to southeast Asia could be based exclusively on the requirements of policy in Europe.

These political realities must be taken into account; they have to be dealt with before we even start thinking about implementing point four. But apart from these political factors, there are also equally important social and economic factors involved in the revolution in Asia, and planing for point four must embrace consideration of these factors as well.

Colonial society, the legacy left to us, was a plural society without any organic coherence. It was comprised of distinct social strata, fundamentally separated by the differentiation of economic functions, a division which actually tended to fall along racial lines. There was the top layer composed of Europeans, who maintained the estates or other businesses, or were involved in the administration of the colonial government. The middle class consisted almost entirely of nonindigenous Asians, usually Chinese or Indians, who were mainly concerned with local retail trade. On the bottom layer was the native population which was tied up with the economic machinery only insofar as that contributed to the functioning of foreign capital enterprise. In many ways this third layer lived in an entirely different world, in a precapitalistic one, on the fringes of the economic processes taking place in that country. Because there was no organic coherence among the social strata, the different races lived side by side, tied to each other only by the common desire for gain. The center of economic and political activity was located entirely in the European upper class and the foreign Asiastic middle class. The native population played a passive role: they were the object of economic forces over which they had no control. On the part of the native population there was no sense of participation in or responsibility for the functioning of the machinery of state or its economic processes. Life for the native was senseless and purposeless.

The total reaction against this personal and collective frustration is the most dominant and the deepest-rooted feature of the present revolution in Asia. The reach for power on the part of the native population is in fact the reach for a new life. It is the dominating urge of a people for self-expression. The revolution in Asia was born out of the peoples' desire for responsibility for their own lives, opening up old sources of creative energy. This psychological element in the rebirth of Asia should not be underestimated in any evaluation of the forces at work in Asia today. Collectively this upheaval in Asia also means a new surge toward unity, toward social coherence, a desire to break up the social organization and stratification of the past and achieve a new social reintegration. It means the formation of a society which will be the expression of the indigenous peoples themselves, a society in which the people can participate fully with a true sense of purpose. Social change is therefore the essential, the premordial element in this re-emergence of Asia.

* * * * *

The direction in which the political and social forces in Asia move, is clear. To cope with the present situation in Asia, any government will first of all have to exert every effort to transform the distorted colonial economy into a well-balanced, diversified one. The choice of the resources to be developed must be determined by the human needs of the area involved. Never again will alien economic forces be permitted to work without social control, taking into account their responsibility for the social and economic consequences of their activities for the indigenous peoples. There must be found a new and equitable balance between the function and the remuneration of foreign capital. All economic enterprise will have to be part of the total economic and social fabric and cannot be allowed to operate as alien entities. Economic processes in these new states of Asia will have to encompass the people as a whole. One cannot underestimate this trend. It is a fact, it is one of the fundamental realities of the situation in southern Asia. It reflects the fundamental attitudes which were conditioned by the bitter experiences of our own contact with outside economic forces in the colonial era in the past. Now we will have to find a new basis for our relationship with foreign capital, a basis which at the same time would provide foreign capital with a foundation upon which it can fruitfully and safely build for mutual benefit.

To ignore these trends as they present themselves in southern Asia would mean building in the air. Instead of thinking in terms of the interests of the foreign investor exclusively, as was the case under the colonial set-up, we should now think in terms of mutual interests. Instead of exclusive foreign ownership of the new enterprises we should rather think in terms of joint ventures, providing opportunities for indigenous capital accumulation, local managerial training and the development of local skills. We will also have to find those forms of economic enterprise in which the population itself will participate to a greater degree. Such joint ventures will be an important contribution to over-all stability. In this way foreign capital's apprehensions about the dangers of nationalization will be greatly diminished.

It will also be necessary for the local government to stimulate indigenous economic endeavor. Because of the lack of local capital, it may be necessary in the beginning for the Government to step in temporarily to provide the necessary capital. The Government shares of such enterprises could then be floated at a later date. Those forms of economic enterprises will then have to be found which will leave a sufficient margin for capital accumulation for the indigenous economy. The absence of any native economic bargaining power will make it impossible at this moment to work on the basis of an economic free-for-all. It is essential that those goods be produced and those resources developed which are most needed by the people. A system of priorities will therefore be necessary.

* * * * *

Economic development necessarily brings in its wake social dislocations of a more or less serious nature. In fact, the whole process is in the first place a social process, the speed and success of which are determined not only by purely economic factors but by the factors which are related to the psychological atmosphere, the level of education, the level of health, etc. Because of this wide impact, the whole process of economic development calls for an integrated approach. In many ways we will have to find, as we go along, those forms of economic enterprise which are equally beneficial to the foreign investor and to the indigenous peoples, and which still retain sufficient attractiveness for foreign capital.

Incentives for foreign capital will not be lacking, incentives in the form of transferability of a substantial part of the profits, and repatriation of invested capital. The

governments will also have to safeguard the interests of foreign investors and guarantee that there will be no expropriation without fair and reasonable compensation. The procedure for nationalization is not, after all, an arbitrary step taken by a government, but a parliamentary measure. The investor should have guaranties from the Government that when, for reasons of public interest, nationalization must be decided upon, the investor would receive compensation in the currency of the original investment and not in local currency.

But the best guaranty for safeguarding foreign interests is sound political development. Foreign investors cannot fail to realize that the raised standard of living and the increase in political stability in these areas will lead to greater markets and a tremendous expansion of world trade. But it only stands to reason that before private capital can really begin to operate on projects of sufficient maturity, the basic human and material resources of many parts of that area will have to be developed first, for example the harbors, roads, communications, public health programs, education, etc. The development of these fundamental resources will of course not be sufficiently attractive to the average private capital investor; therefore public or private loans on a long-term basis will be needed to meet these ends. At the same time, part of the expenses of these basic projects will have to be met through domestic financing.

The legislation on point 4 now under discussion, envisages a program for technical assistance and measures intended to widen the powers of the Export-Import Bank. The export of technical skills to these underdeveloped areas will be invaluable for coming to grips with the problems before us. But without a revival of the flow of investment capital to these nations, there are definite limitations to what this technical assistance can achieve. The fate of the point 4 program, therefore, will not be determined primarily by the degree and amount of technical assistance available, but rather by the question whether enough capital will move into these areas, and under what conditions it will operate. The question of the revival of the flow of private capital, under the terms of the present proposals, will be dealt with at a later stage after a favorable atmosphere for foreign investment will have been created.

I think it is clear from what I said before about the nature and the elements of the upheaval in southern Asia, that the old concepts regarding private investment find no place in the world today. Capital coming in under point 4 should not merely replace colonial capital. What is needed instead is a new outlook, a new concept of investment for the underdeveloped areas all over the world. The concepts and the forms of economic enterprise of the colonial era have become obsolete with the disappearance of that era. These forms of economic enterprise are no longer politically acceptable to the underdeveloped countries. Foreign capital investment will have to take place in such a way that the necessary social changes in these areas will occur and will be stimulated, not impeded, by the role of foreign capital.

* * * * *

The success of point 4 in southern Asia, insofar as it is launched as an American program, will depend on whether the political background of southern Asia and also the implications of United States foreign policy in that area, are fully understood. It is essential that southeast Asia should not be left in any doubt as to America's intentions in her approach to the problems of that area, and that the United States, recognizing the facts of the situation, is willing to come to grips with the problems of southeast Asia as problems in their own right. This means that the plans for economic development and the time schedule envisaged in this program of aid should not be determined by the cold war. Thus, for example, what is required in southern Asia is not merely the reaching of prewar levels of production, nor the rehabilitation of the old economic framework as a useful factor in the cold war in Asia or Europe. What is needed, instead, is a complete revision of the production patterns and of the resources which are to be developed. Foreign capital cannot afford to insist upon conditions which would perpetuate rather than change the old colonial social and economic structures. The United States must identify herself with the necessity for social change, and the abolishment of colonialism.

The opportunities which lie before the entire Western World as a result of President Truman's bold new program, offer a challenge not only to America but to all the west in dealing with the rest of the world. This is the challenge which will have to be met for the survival of freedom and democracy in this world. The opportunities to find new foundations and new bases for cooperation between the developed and the economically underdeveloped areas exist. It is the obligation of the governments and the peoples of both groups of countries to work together to seek to build upon these foundations. The stakes are high. This is the challenge for freedom.

Plight of Dairy Farmers in New York

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I have recently received a very interesting letter from Mr. William E. Maier, one of my constituents who is a subdistrict president of the Dairymen's League Cooperative Association.

Mr. Maier, who is a highly respected dairy farmer in Cattaraugus County, wrote to me concerning the plight of the dairy farmers in New York, with special reference to two resolutions I have introduced on this subject.

His letter is so pertinent that I ask unanimous consent to insert in the Appendix of the RECORD pertinent excerpts from this letter.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

DAIRYMEN'S LEAGUE COOPERATIVE ASSOCIATION, INC., DISTRICT NO. 18,
East Otto, N. Y., May 10, 1950.

Certainly we must do everything in our power to protect and preserve our animal agriculture, of which dairying is such a vital part.

India and China are today the most famine-ridden and disease-ridden countries in the world because they have allowed their animal agriculture to disappear.

Is it any wonder that the Communists have taken over China and are attempting the same in India?

Communism thrives in the heavy clay of hunger, want, suffering, and hardship.

Today, our American animal agriculture is providing our Nation with the finest diet of any country in the world. It is also maintaining and improving our soil fertility with indispensable organic fertilizer in the form of livestock manure.

We Cattaraugus County dairy farmers sincerely thank you for your deep and abiding concern over our industry and our welfare.

While you were Governor of our State, you signed the Rogers-Allen law and the State milk marketing order No. 127.

Today, these laws are still operative and as a result we dairymen, whose milk is marketed in Buffalo and Rochester, are enjoying the best prices of any major market.

Again, let me thank you, on behalf of the other 700 league farmers in my county for the great service you are rendering dairymen.

Would appreciate your keeping me informed on the progress of Senate Joint Resolution 162.

Sincerely,

WILLIAM E. MAIER.

The Railroad Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I have secured unanimous consent that an editorial of May 17 with respect to the termination of a strike, the unemployment caused by which appeared to have passed the 200,000 mark be inserted in the Appendix of the RECORD. On this day, May 19, I ask unanimous consent that there be inserted in the Appendix of the RECORD a news article in this afternoon's Evening Star of Washington, D. C., entitled "Switchmen's Strike 'Wholly Unjustified' Railroads Protest." This article refers to a strike threatened to begin at 6 o'clock in the morning of Tuesday next, the twenty-third of May.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SWITCHMEN'S STRIKE "WHOLLY UNJUSTIFIED," RAILROADS PROTEST

CHICAGO, May 19.—The threatened strike Tuesday of A. F. of L. switchmen against 10 railroads "is wholly unjustified," the Western Association of Railways said today.

"This strike threat," the association said in a statement, "is a reckless drive for prestige—an attempt by one small union to outsmart and outdo a big rival union."

Only Government intervention could avert the scheduled walkout—set for 6 a. m. (local time) against the 10 Midwestern and Western lines. Although no word came from the White House after the strike call Wednesday night, the National (Railway) Mediation Board was expected to be called in and attempt to settle the wage-hour dispute.

WAGE INCREASE INVOLVED

The A. F. of L. Switchmen's Union of North America said the strike would involve 6,000 members. A rail spokesman said 4,000 would be affected. The union's principal demand is for a 40-hour work week at the pay now received for 48 hours.

Daniel P. Loomis, the association's chairman, said the union's demands also include a 44 percent increase in the basic daily wage rate and other items which are equivalent to a wage boost of about 50 percent.

Mr. Loomis said the switchmen's union represents less than 5 percent of the ground men (not yard engineers and firemen) in

switchyards throughout the country. The other 95 percent, he added, are represented by another operating union, the Brotherhood of Railroad Trainmen. A few are members of the Order of Railway Conductors.

"The railroads involved are caught in the middle," Mr. Loomis said.

SAYS UNION HAS COMPLIED

Arthur J. Glover, switchmen's president, said the union had complied with all mediation requirements of the Railway Labor Act and was free to strike legally.

Roger I. McDonough, chief justice of the Utah supreme court and chairman of the fact-finding board, said: "If the switchmen strike, they walk out without ever having presented the merits of their case to our board."

Lines involved in the dispute are: Chicago Great Western; Chicago, Rock Island & Pacific; Davenport, Rock Island & Northwestern; Denver & Rio Grande Western; Great Northern; Minneapolis & St. Louis; Northern Pacific Terminal of Oregon; St. Paul Union Depot Co.; Sioux City Terminal Railway and Western Pacific Railroad.

The Siren Song of Socialism

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I have just quoted, word-for-word, an editorial which appeared in the Indianapolis Star under date of Tuesday, May 16, 1950. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which also appeared in the Indianapolis Star on the same date, the editorial being captioned "The Siren Song of Socialism."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SIREN SONG OF SOCIALISM

President Truman dropped all pretense about the "nonpolitical" nature of his barnstorming trip at the taxpayers' expense last night. Accompanied by a rain of $2 bills to lure his audience, by a 21-gun salute, a $250,000 political sideshow, a torchlight parade, and cowboys and Hollywood girls, Harry Truman launched into one of the most partisan political speeches he has made yet.

He called for reelection of Senator LUCAS, of Illinois. He called for a Fair Deal rubber-stamp Congress. He told his audience that the Democratic Party has been responsible for every progressive Government action in American history and that the Republican Party is made up of reactionaries and doubting Thomases.

He then appealed to every special interest group in the Nation, to small businesses, to farmers, to labor, to the aged, the sick, the minority groups and the educators by offering them bigger and better bribes in return for votes. The bribe has become the most potent political weapon in the Truman war chest. It was quite fitting that his party should give away $2 bills to attract a big audience to hear the party's leader. What else might you expect from a Pendergast politician?

The President not only gave the Democratic Party credit for everything good that has happened to America since Jefferson's day. He also gave himself and his administration credit for the profits of industry and the wages of labor, profits that were earned in spite of the highest corporation taxes in history through the genius and planning of American business, and wages that were earned in spite of the highest income taxes in history by the most productive labor force in the world's history.

The President promised a wonderful future for America to be achieved by him and by the Democratic Party. He has forgotten that the wonderful past and present of America were made possible by the absence of the very burdens which he proposes to impose upon our free system—taxes, deficits, Government controls, state ownership of power, labor monopoly, and the socialization of medicine.

"Give me the votes, give me the money, give me the power," he is saying to us, "and I will make you happy." He is asking us to sell ourselves into total dependence upon him and upon Government for our lives, our property, and our liberties. He sings the siren song of socialism, and if we listen and follow, we shall, like every other people before us, end on the rocks of poverty and slavery.

Acheson Must Go

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Washington Times-Herald on May 19, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ACHESON MUST GO

Secretary Acheson has set up at London the framework of a world-wide Communist state.

It is not enough to call it socialistic. The Truman-Acheson regime was recently termed by John Strachey, the former Communist now in the British Labor Cabinet, as "more to the left" in economic views than most continental European governments. He didn't know the half of it. Mr. Acheson's program would go beyond this to concentrate power in a western imitation of Moscow's Politburo.

SUPERGOVERNMENT IS NOW PLANNED

This affection for Communist methodology comes naturally to Acheson. He was up to his ears in the Hiss case, and has kept himself involved in it by his voluntary public statements.

He is the most dangerous man in America. If Truman won't fire him, Congress should impeach him or cause his removal by withholding funds from the State Department and its projects.

In view of the scandals within his department, Acheson obviously felt the need of a diversionary tactic, in the form of some spectacular proposal at the London foreign ministers' council. The plan he has brought forward is an effort to smuggle the United States into a world supergovernment through the back door.

By his promises of more American billions, Acheson won the approval by the European foreign ministers of a committee of "supercitizens," as they were described by Arthur Veysey of the Chicago Tribune London bureau, to rule both the military and economic affairs of the 12 Atlantic-pact nations.

An American is to be chairman, since we shall be putting up the money, and a civilian is suggested, but Gen. Eisenhower is named as the probable nominee in the next breath. Presumably a couple of years on the Columbia University campus makes a civilian of a nonretired general of the Army.

At a time when Congress is growing more and more restive over the Marshall plan waste, Acheson won support for his proposal by suggestions that the United States not only will increase its present gift of a billion a year for European arms, but will continue Marshall-plan subsidies to European living standards after that plan expires in 1952. He admitted that he could not bind Congress, but he held out the warmest hopes, nevertheless.

When the Atlantic pact was presented to the Senate for ratification anyone should have been able to see that it was only nominally a military alliance. In addition to putting us into any European war at the first shot, it pledged signatories to safeguard the freedom, common heritage, and civilization of their peoples and to promote stability and well being in the North Atlantic area.

The treaty provided for continuous and effective self-help and mutual aid—with conspicuous lack of any reservation confining that aid to the military field.

It is idle to think that control of economic affairs of this Nation can be turned over to an international committee without yielding political sovereignty to that body.

HE'S PLAYING STALIN'S GAME

If there is any doubt as to what Acheson has in mind, it should be resolved by the statement of the correspondent of the New York Times, a fervent supporter of his policies, that the scheme involves some sacrifice of national sovereignty.

This is a magnificent understatement. The Constitution of the United States and the Acheson politburo cannot exist in the same world, but the means that will be used in the attempt to reconcile them can be predicted with some confidence.

Obviously no international committee can commandeer the resources and men of this country, but Congress will be told that the committee, acting under a treaty that is the supreme law of the land, has made drafts that cannot be refused without national dishonor.

Congress will be told also that it must go along with Acheson's folly or destroy the confidence of the world. Any attempt at objective consideration of the scheme will be cried down by the administration propaganda machine and the internationalist press as playing Stalin's game.

Actually it is Acheson by his efforts to destroy constitutional processes and bleed America white, who is playing Stalin's game. Unless the Nation is freed of his false leadership, we may yet fall, exhausted, to the Communists.

Removal of Exemption Applicable to Public Contracts Performed in Puerto Rico and the Virgin Islands

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement I

issued yesterday commenting on a proposal by Secretary of Labor Maurice J. Tobin to remove the administrative exemption which has been applicable to public contracts performed in Puerto Rico and the Virgin Islands. I also ask consent to have included in the Appendix, in connection with this statement, the announcement by Secretary Tobin.

The VICE PRESIDENT. Is there objection?

Mr. CONNALLY. Mr. President, reserving the right to object, is it made clear that the insertion is a statement, not a speech? The Senator stated he had issued a statement.

Mr. LEHMAN. I issued a statement.

Mr. CONNALLY. Will it appear in the the Appendix of the RECORD as a statement, not a speech?

Mr. LEHMAN. It will appear as a statement, together with the order which was issued May 17, 1950, by the Secretary of Labor.

Mr. CONNALLY. Very well.

There being no objection, the statement, together with the announcement by Secretary Tobin, was ordered to be printed in the RECORD, as follows:

STATEMENT OF HERBERT H. LEHMAN ON ACTION OF LABOR DEPARTMENT TO REMOVE PUBLIC CONTRACTS ACT EXEMPTION FOR PUERTO RICO AND THE VIRGIN ISLANDS

I was pleased to note the announcement by Secretary of Labor Maurice J. Tobin that the Labor Department proposes to remove the administrative exemption for public contracts performed in Puerto Rico and the Virgin Islands.

I have long felt that there should be no distinction whatsoever between the application of the Walsh-Healey Act to Puerto Rico and the Virgin Islands and to other parts of the United States. This act already applies to the Territories of Alaska and Hawaii. I see no reason for making a distinction between the Territories, or for that matter, between the Territories and the mainland of the United States.

I understand that every opportunity will be given to interested persons to submit arguments on the proposed change. I certainly support Secretary Tobin's action in this regard and shall express to him my strong feeling that his proposal be given final effect.

I would urge this both in my capacity as a member of the Labor Committee and as a Member of the Senate from New York, many of whose citizens are of Puerto Rican origin. I do not think that any distinction should be made between Puerto Ricans in New York and Puerto Ricans in Puerto Rico. The same goes for the Virgin Islands. They are all citizens under the American flag whether they be in New York or in Puerto Rico or the Virgin Islands.

My attitude is the same whether it involves the Public Contracts Act or social security. I think Secretary Tobin's act is a hopeful augury for the removal of all discriminations of this kind.

[U. S. Department of Labor, Wage and Hour and Public Contracts Divisions, Washington, D. C.]

SECRETARY TOBIN WOULD REMOVE PUBLIC CONTRACTS ACT EXEMPTION FOR GOVERNMENT CONTRACTS IN PUERTO RICO, VIRGIN ISLANDS

Secretary of Labor Maurice J. Tobin today announced his proposal to remove the administrative exemption under which the Walsh-Healey Public Contracts Act has been inapplicable to contracts performed in Puerto Rico and the Virgin Islands.

Effect of the proposal would be to make the act, which provides labor standards for Government manufacture or supply contracts of more than $10,000, apply in Puerto Rico and the Virgin Islands to the same extent that it applies in the continental United States and in the Territories of Alaska and Hawaii.

The administrative exemption for Puerto Rico and the Virgin Islands has been in effect since 1936. Secretary Tobin pointed out that information currently available indicates no compelling reasons why the exemption for contracts to be performed in Puerto Rico and the Virgin Islands should be retained.

Formal notice of the Secretary's proposal is scheduled to appear in the Federal Register on Thursday, May 18. Interested persons will be given until June 15 to submit data, views, or arguments pertaining to the proposed change.

The Railroad Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, on May 16 the people of the United States learned that there had been terminated the firemen's strike, because of which the total unemployment appeared to have already passed the 200,000 mark. I ask unanimous consent that there be incorporated in the Appendix of the RECORD an editorial appearing in the St. Louis Post-Dispatch on the next day, May 17, 1950, entitled "Now That the Strike Is Over."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOW THAT THE STRIKE IS OVER

Trains on the New York Central, Pennsylvania and other affected railroads are moving again after having been strike-bound for almost a week. Needless to say, this is good news, especially for the thousands of persons who, while in no way parties to the dispute, were seriously hampered by it.

The Brotherhood of Locomotive Firemen and Enginemen has announced a "modification" of its demand for a second fireman on multiple-unit Diesel engines. The issue in its reshaped form is to go to an arbitration board, and its decision is to be binding on both sides.

So, once again, the old question arises: If this solution is as good as both sides now seem to feel, why did they not resort to it sooner? Why did there have to be a strike? If this had been a private head-butting contest between two stubborn adversaries, the public might have refrained from asking the question.

But there can be no such indifference toward a strike which impinges on the public interest—especially not when one party does not make a stronger case than that of the firemen. The harmfulness of railroad strikes was recognized long ago and railroad labor was made the subject of special Federal legislation.

We do not say that this legislation has always been an automatic guaranty against injustice. In recent years many complaints have been made—especially against the slowness of its administration. But a strike such as this one does not help. It ought to be all the inducement Congress needs to see whether the machinery of the Railroad Labor Act may not be improved.

A better law may be no consolation to a fireman who faces the loss of his job. Nor will it help him much to point out that the Diesel engine is not the first technological improvement which threatened to displace labor. Almost all such improvements opened up more jobs in the long run than they wiped out. Unfortunately, an individual cannot live in the long run. Good personnel practice certainly indicates the desirability of finding a useful place for him in some other capacity. But a strike is hardly calculated to bring about such a policy.

Perhaps those involved have salvaged some measure of good will by calling off the strike when they did. If so, we hope that it will help toward a solid solution of their problems—the kind of solution which seldom comes from industrial warfare.

Helping the DAV and DAV Service Foundation

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD an appeal which I have made in the past and which I am happy to renew now for the purpose of mobilizing aid for the DAV organization and for the DAV Service Foundation.

There being no objection, the appeal was ordered to be printed in the RECORD, as follows:

HELPING THE DAV AND DAV SERVICE FOUNDATION

Mr. President, on June 17 it will be my pleasure to address the annual convention of the Wisconsin Department of the Disabled American Veterans. There are many fine groups in the State of Wisconsin whom it has been my privilege to appear before, but I must confess that I get a particular thrill when I talk to the group of heroic men who bear on their bodies the scars and wounds of battle in the uniform of their country.

What higher honor can there be for me as a citizen who has been elected to serve his people than to appear before those who preserved their government and their free way of life by their sacrifices? What greater honor can there be to come to a human being than to comrade with the men who preserved mankind's freedom—the freedom of civilization—on the land, on the seas, and in the skies in two global wars?

Mr. President, I express therefore this sincere tribute to this organization and to the trustee of the DAV, the Disabled American Veterans Service Foundation.

MY PREVIOUS TRIBUTES TO DAV

It has been my privilege on several previous occasions, for example, on July 2, 1945, on June 8, 1948, on May 6, 1949, to call attention of the Congress to the work of the DAV. I have on these occasions made an exception to a rule which I personally have followed, of not discussing the financial needs of a private

organization on the floor of the Senate or in the CONGRESSIONAL RECORD. This exception has been made because I think that certainly if there is any private organization whose financial needs should indeed be discussed, it is the DAV Service Foundation, which, in turn, meets the needs of America's war-wounded and disabled veterans.

How can anyone say such an organization is "private" when, obviously, its responsibility to the heroes who carry wounds and scars of battle is our responsibility? No, its so-called private role is indeed a semipublic or truly public role. Why? Because if this Nation were ever to forget its public debt to those who saved it by offering their very lives to shot and shell, then our country would be on the road to extinction.

LET'S NOT FORGET HOSPITALIZED VETS

Here is a question which I submit to every American: Have you ever visited a veterans' hospital? You know, my friends, it is 32 years since the guns ceased firing in World War I. It is 5 years since the cannon were stilled in World War II, but in a certain sense, the sounds and sights of war can still be heard and seen in the veterans' hospitals of America, and, for that matter, in hundreds of thousands of private homes where men bear with them the broken limbs, empty sleeves, the sightless eyes, the scarred features, the paralyzed organs, the shattered minds, the pain, the hurt, the suffering of weapons of steel.

While not all Americans could answer the question "Yes"—that they have visited a veterans' hospital, there isn't a man, woman or child among us who has not seen a wounded veteran walking down the street in our home town, living as every other ordinary American, and yet in a certain sense, and inevitably so, in a class apart because that veteran's body has been the target of shot and shell.

WORTHY DAV APPEALS FOR FUNDS

About a year ago, I advised my colleagues that the incorporated trustee of the DAV, the Disabled American Veterans Service Foundation, was then dramatizing its appeal for much-needed funds by full-page display advertisements in many magazines and newspapers, featuring 330 cash prizes, totaling $100,000, which were awarded in an intriguing mosaic patterned word-puzzle contest. So successful was the DAV Service Foundation in this new formula of raising badly needed money for a worth-while cause that it acquired more than $2,000,000 net profits from its first two annual contests, out of which its board of 13 trustees has so far allocated the sum of $1,100,000 to the national headquarters of the DAV for its Nation-wide service activities on behalf of war-disabled veterans and their dependents.

THIRD PUZZLE CONTEST UNDER WAY

This successful experience encouraged the DAV Service Foundation to conduct a third word-puzzle contest, which started during the latter part of January 1950, to which original puzzle-solution entries were submittable up until before midnight of May 1, 1950. Judging by the full-page display advertisements that have appeared in many prominent magazines and metropolitan newspapers throughout the country, the third national puzzle contest conducted by the DAV Service Foundation will probably also prove to be successful.

JUNE 30 DEADLINE

I understand that official substitute solutions may be submitted by the contestants up until June 30, 1950, after which there will be an evaluation of the relative solutions, with the possibility that the top tied valid high scorers will have to compete in the solution of from one to four sets of five tie-breaking puzzles before the winners of the 1,002 cash prizes, totaling $100,000, and of the three automobile promptness prizes will have been awarded.

FAIR HANDLING OF CONTEST

Inasmuch as my long-time friend, the very able Millard W. Rice, is the executive secretary of the DAV Service Foundation (he was formerly national commander and national service director of the DAV, as well as national legislative director of the VFW), I am particularly confident that very meticulous care will be taken in the evaluation of the relative solutions by the contributing competitors in this third puzzle contest—just as was the case as to its first two puzzle contests—in determining the final winners. This will be in accordance with the rules of the contest, without any consideration whatsoever as to the location, race, creed, color, or financial or educational status of the respective contestants, but only on the basis of their relative skills in their valid puzzle solutions, which should have been completed by sometime next fall.

I am sincerely hopeful that the DAV Service Foundation will have been enabled to raise several hundred thousand dollars from its third puzzle contest, just as it did on its 1948 and 1949 contests, notwithstanding the fact that other organizations have patterned after the formula thus proven to be feasible for raising funds for service-giving purposes.

DAV IDENTO-TAG PROJECT

Many of my colleagues will no doubt recall having received miniature automobile license tags during the last several years, from the Disabled American Veterans. This is another unique and highly constructive method of raising funds. The DAV endeavors to send out such Idento-Tags to all automobile owners, as a result of which it returns about 5,000 sets of keys each month to their respective owners—a very effective Nation-wide key insurance—which results in substantial net profits to the DAV, after payment of all expenses incident to the accurate manufacturing and assembling of the individualized Idento-Tags, processed mostly by handicapped veterans and the dependents of veterans.

I would like to point out that if 100 percent of the recipients of these neat little key ring Idento-Tags were to return 50 cents or more, the DAV would have no financial problem in maintaining its staff of nearly 300 full-time national service officers.

These two unique methods of raising funds have heretofore made it possible for the DAV to maintain its invaluable Nation-wide service activities. But such finance-raising projects have not yet been sufficiently successful to enable it to build up as extensive a service set-up as the needs warrant or to build up a much-needed reserve trust fund for the future.

Judging by the experience as to World War I veterans, it will be necessary to maintain expert national service officers for the benefit of our World War II disabled veterans for the next 30 years or more.

Although most of my colleagues in Congress, as well as State and local governmental officials throughout the country, probably already know something about how ably and faithfully the DAV serves those Americans who were wounded, injured, or disabled while fighting in our country's wars, I believe that because of the magnitude of its task it is desirable to explore the subject more fully.

OUR GOVERNMENT'S LIMITATIONS

Although virtually all Americans believe that one of the primary obligations of the Government should be to see to it that all of our country's disabled war veterans and their dependents should be adequately provided for, I fear too many of them have erroneously assumed that such obligation must have been already fulfilled. Much as our Government has done for veterans, it has not, cannot, and really should not be expected to provide for an automatic solution for all of the problems of all disabled veterans and their dependents.

It is neither practicable nor desirable that the Government should underwrite all of the problems of all disabled veterans; such an easy method would be detrimental both for the disabled veterans themselves and for America's taxpayers.

The Government could not, and should not, provide sufficient compensation to every disabled veteran to obviate completely the necessity for receiving income from other sources.

The several Administrators of Veterans' Affairs, during the past 30 years, have repeatedly stated that the task of rendering adequate service to America's disabled veterans is a job far greater than can be taken care of merely by the Veterans' Administration.

The services of a nongovernmental congressionally chartered, volunteer organization, such as the Disabled American Veterans, are essential, if our disabled veterans are to become and to remain adjusted to useful civilian living, through suitable, gainful employment. Only thus can our disabled veterans be saved from dependency upon Government compensation, and be enabled to live as happy, self-supporting Americans.

ASSURING GAINFUL JOBS OUR RESPONSIBILITY

If American citizens, as employers, should fail to provide ample opportunities for the suitable employment of partially disabled veterans, then obviously such disabled veterans would have no other alternative than to seek to become completely dependent upon Government doles. That is not the American way. That is one of the reasons why I have introduced in the Eightieth and Eighty-first Congresses legislation to encourage employers to hire handicapped veterans.

Less than 7 percent of the nearly 2,000,000 service-connected compensated disabled veterans are rated by the Veterans' Administration as being totally disabled. The remaining 93 percent are considered as only partially disabled and therefore receive lesser rates of compensation. Their inadequate income from disability compensation must obviously be supplemented from some other source, preferably from suitable, useful, gainful employment.

WHY GOVERNMENT NEEDS DAV HELP

In accordance with its congressional charter, the DAV cooperates with the United States Veterans' Administration and all other public and private agencies devoted to the cause of improving and advancing the condition, health, and interests of wounded, injured, or disabled veterans.

The fact that America's war-disabled veterans saw fit to form their own organization—the Disabled American Veterans—should not, therefore, be regarded as an implied criticism against any Federal agency.

During the last 30 years, the DAV has been extending, free of any charge, much needed advice, counsel, and assistance to scores of thousands of disabled veterans in technically establishing their legal entitlement to governmental benefits to which, under certain legal limitations, restrictions, requirements, and provisions, they may be lawfully, equitably, and factually entitled.

Acting as the defendant, the Government is called upon to pay the damages—in the form of disability compensation for service-connected disabilities, medical treatment, hospitalization, vocational training, and other benefits provided by law—to the successful claimants.

It would be very inconsistent to expect the Government also to furnish the attorney for the claimant.

OFFICIAL COMPLICATIONS UNAVOIDABLE

Officials and employees in governmental bureaus must necessarily operate under complicated, technical regulations, legal interpretations, precedents, schedules of disability ratings, service letters, and other guiding policies and procedures in their administration and application of the some 800 laws pertaining to veterans and their dependents.

Lest he encroach upon the jurisdiction of some other governmental official within his own section, division, or agency, or with the policies and procedures of some other Federal agency, the jurisdiction of any one governmental official or employee must, naturally, be narrowly circumscribed.

My colleagues have all had sufficient contacts with governmental officials to be well aware of the full significance of this division of responsibility. No matter how much we might simplify government—as constantly advocated by myself and by my colleagues in the two Houses of Congress and outside of Congress—such division of authority is, to some extent, unavoidable.

PROCEDURE BAFFLING TO VETERAN CLAIMANTS

It just is not, and probably never will be, completely feasible for any veteran to go to one governmental official, or even to one Government office, to find out what he may be entitled to under any one or more of the numerous laws which might be pertinent, any more so than such an ideal situation can ever prevail as to any corporation which conducts business operations in more than one State.

Our Federal Government is exceedingly complicated, and its requirements are oftentimes utterly baffling to the average disabled veteran. He needs expert counsel as to the proper preparation, presentation, and prosecution of his claim for any benefit, privilege, or preference, to which he may be potentially entitled under any appropriate Federal law.

WHY A DAV

It was because of the realization of this difficulty—that the Government could not, and should not, be expected to take care of all of the complex, varied problems of America's disabled war veterans and their dependents—that the DAV was formed, some 30 years ago, by distressed, disappointed, disillusioned, disabled veterans of World War I.

Distressed disabled veterans need the helping hand of their own organization, the Disabled American Veterans, formed in 1920, congressionally chartered in 1932, and specifically designated in several Federal laws as a spokesman for America's war-disabled veterans.

THE DAV'S SERVICE SET-UP

Consisting exclusively of America's war-wounded and disabled veterans, the congressionally chartered Disabled American Veterans has, for 30 years, been specializing in extending its vital rehabilitation services, free of charge, to all disabled veterans and their dependents.

The DAV has been freely extending badly needed services to scores of thousands of disabled veterans each year, through its nearly 300 trained, experienced, full-time national service officers (all themselves disabled veterans) stationed in DAV service offices located in all of the Veterans' Administration's regional, district, and central offices throughout the country. Supplementing their work, the DAV also has more than 1,600 department and chapter service officers.

All of these service officers are skilled and experienced in the work of helping disabled veterans technically and factually to establish entitlement to any governmental benefits to which they may be lawfully and equitably entitled, such as service connections, disability compensation, medical treatment, hospitalization, and vocational training.

These service officers also use great resourcefulness to assist their disabled buddies to acquire and to retain adjustment to usefulness and self-support through suitable productive employment.

Let me point out that the peak service load will probably not be reached until 1960. Moreover, it is a fact that inasmuch as sharp curtailments in its budgets have caused the VA to trim its staff of contact men, a heavier load has been assumed by the volunteer service organizations, of which the DAV is outstanding.

Specifically designated in several Federal laws as a spokesman for America's war disabled veterans, and dedicated to the program of rendering needed service to, for, and by America's disabled war veterans, the DAV has been serving the men to whom the Nation owes a debt beyond payment.

The DAV maintains national headquarters at 1423 East McMillan Street, Cincinnati, Ohio, and its national service headquarters at 1701 Eighteenth Street NW., Washington, D. C.

Its immediate past national commander is that great American, Gen. Jonathan M. Wainwright, the hero of Bataan and Corregidor. David M. Brown, a World War I disabled veteran, of Akron, Ohio, is its present national commander. Vivian D. Corbly is the national adjutant. Its national legislative director is Francis M. Sullivan; its national employment director is Kenneth C. Bradley; and its national director for claims, Cicero F. Hogan.

The organization publishes a newspaper—the DAV semimonthly—devoted to the interests of disabled veterans.

INCORPORATED TRUSTEE FOR DAV

As related in my statement concerning the same question 5 years ago, the DAV decided, back in 1931; that the potential donors who support its service program should have the assurance of a continuity of policy as to the expenditure, by the DAV, of all funds contributed. Therefore, the DAV formed a trusteeship, under the laws of the State of Ohio, known as the Disabled American Veterans Service Foundation.

The primary purpose of the DAV Service Foundation is to receive donations from interested social-minded Americans, and then periodically to make allocations, from its accumulated trust funds, to the national headquarters of the DAV—as the operating congressionally chartered membership organization of America's disabled defenders—to enable it to continue to maintain and further to expand its Nation-wide set-up of full-time, expert national service officers, national civil-service officers, and national employment officers.

In order to be enabled to carry on this service activity on a basis commensurate with the responsibilities assumed, the DAV, it has been estimated, should be enabled to expand its service budget up to at least $2,500,000 per year.

Under the terms of a trust agreement with the DAV, all foundation funds are placed into separate State trust-fund accounts, according to the States of origin of the funds raised.

The activities of the foundation are under the supervision of 13 trustees, 10 of whom each serve for 5-year periods, 2 expiring each year, with the other 3 consisting of the incumbent national commander and the chairman of the national finance committee of the DAV, and 1 other.

The president of the foundation is Miles H. Draper, a prominent attorney and friend of mine, of Tampa, Fla. Maj. Gen. Irving J. Phillipson, of New York City, director of industrial relations of Botany Mills, is chairman of the foundation's finance and budget committee, with Lewis L. Clarke, former president of the American Bank of New York City, and Arthur W. Procter, New York attorney, as fellow members.

Daniel Bell, president of the American Security & Trust Co., of Washington, D. C., is the chairman of its trust-fund investment committee, with Gen. Frank T. Hines, former Administrator of Veterans' Affairs, and Mr. Lewis L. Clarke as fellow members.

The DAV Service Foundation maintains offices at 808 Seventeenth Street NW., Washington 6, D. C., and also at 11 West Forty-second Street, New York 18, N. Y.

NEEDS ARE GREAT

According to the trustees—all prominent and conscientious civic-minded citizens—a trust fund of several scores of millions of dollars should be built up to provide for the DAV's needed annual service budget of $2,500,000 in future years.

Every social-minded individual and corporation has the opportunity to support this important work through generous donations—to the DAV Service Foundation—of money, real or personal property, shares of corporation common stock, preferred stock, bonds, and debentures, assignment of Government bonds, designation in insurance policies and wills, by purchase of its permanent personalized service plaques, by becoming a contributing competitor in its annual puzzle contests, and by other methods.

Other constructive plans of raising funds are now being considered by the DAV Service Foundation; and if the public is fully informed of the purpose of such funds, I am sure an enthusiastic response will follow.

CONCLUSION—LET'S CONTRIBUTE GENEROUSLY

As a United States Senator and as an American, I urge my fellow citizens to contribute out of their generous hearts to the need of our disabled veterans. I know how the average citizen these days is overwhelmed by many appeals from worth-while organizations. I know too that the average citizen has his own financial problems during these inflationary times.

But we must never forget that we would not be enjoying our liberty today but for the fact that these veterans were willing to sacrifice their health, their bodies, their very lives on the land, on the sea, and in the sky in order that this Nation might endure.

It is our creed, therefore, that we must fulfill the needs of those men who came back from the war with the scars and pain of battle. Let us fulfill our creed by our deeds. Let us honor our dead heroes by serving our surviving disabled war veterans. Let us help America's disabled veterans to help themselves. Let's not just pay token tribute to disabled veterans. Our ex-servicemen don't need a lot of hot air. They don't need a lot of talk, however sincere. They do need constructive aid to help make them self-supporting Americans. They ask so very little and gave us so very much.

We here in the Congress are challenged to enact legislation that will assure their welfare. Over in the House of Representatives now pending before the Veterans' Affairs Committee are a considerable number of bills in their interest. I personally, as I have indicated, have introduced legislation to help them and I will continue to do all that is within my power. It was my pleasure to address the graduation class here in Washington, D. C., of a service officer class—many young men who had lost an arm or a leg and yet who are functioning as whole men, stout-hearted, grave, conscientious, and who were embarking upon careers to help their buddies, yes, to help make their buddies adequate.

In the interests, therefore, of our disabled veterans, I have taken the liberty of referring to this organization and indeed to its financial needs. I know that the American people

will endorse my action just as they endorsed in hundreds of letters my previous statements pointing out very frankly the problems of this great group of veterans, the DAV and the DAV Service Foundation.

I believe the following endorsements will be of real interest to my colleagues and to the American people because they indicate the tremendous and unanimous support of outstanding authorities in this field:

ENDORSEMENTS OF DAV

Gen. Carl R. Gray, Administrator of Veterans' Affairs:

"Veterans who are disabled as the result of service in the defense of our Nation can never be repaid for the sacrifices they have made. In acknowledging this, our Government accepts a sacred obligation. That obligation is embodied in Public Law No. 16, which provides for the physical and occupational rehabilitation of disabled veterans whose abilities for earning a livelihood have been weakened or destroyed through service to the Nation in war.

"The Veterans' Administration is dedicated to carrying out to the utmost the determination of the American people to provide practical and permanent rehabilitation "for those who gave most," the disabled veterans of our Nation.

"In this task the Veterans' Administration is receiving valued cooperation from veterans' organizations, employers, and public and private agencies in local communities throughout our land. The help afforded by the Disabled American Veterans is an essential part of this common American enterprise.

"As Administrator of Veterans' Affairs, I know what the cooperation of the Disabled American Veterans has meant to Veterans' Administration in fulfilling its mission. I am sure that the help that the Disabled American Veterans Service Foundation gives to our disabled veterans is an important service to the cause of veterans' affairs."

Gen. Omar N. Bradley, former Administrator of Veterans' Affairs:

"The Disabled American Veterans represents in its name, in its purpose and its accomplishments those veterans who have been disabled in the service of their country. They—more than any others—deserve first call on all we can do.

"The DAV has been a great help to us in this important work. We welcomed this help in the past. We count confidently on it for the future.

"I am pleased to add my endorsement of the National Service Fund of the Disabled American Veterans. Certainly, this program, which has for its objective the rendering of service to those who served, is a worthy one. It merits the support of all who are interested in the welfare of our disabled ex-servicemen. Your efforts are commendable and I wish for your program the success it deserves."

O. W. Clark, Deputy Administrator, United States Veterans' Administration:

"The job of providing physical and occupational rehabilitation for America's war-wounded and disabled veterans can be accomplished only with the effective cooperation of many other public and private agencies, citizens, and employers. Among the cooperating associations, the Disabled American Veterans has been outstanding.

"The DAV helps the Veterans' Administration to help America's war-disabled veterans. Its incorporated trustee, the Disabled American Veterans Service Foundation, in turn helps the DAV to maintain its Nation-wide set-up of nearly 300 full-time, trained national service officers. Their technical information, advice, and assistance to individual disabled veterans, and their practical liaison with governmental agencies and prospective employers, has been of such great value as to have justified the Veterans' Administration in furnishing office facilities for them in all of its regional, district, and central offices.

"Generous public support of the DAV Service Foundation will assure continuance of the DAV's valuable service activities for the benefit of America's war-wounded and disabled veterans and their dependents."

Oscar R. Ewing, Federal Security Administrator:

"I want to express to you my admiration of the services which the Disabled American Veterans is giving to disabled veterans. Being a World War I veteran and also a lawyer, I can appreciate what your organization is doing.

"It stands to reason that if such disabled veterans are to obtain the full protection that Congress intended, many of them will need the advice and help of persons fully familiar with the laws governing the rights of veterans. I do not believe that this is the type of service that usually could be rendered by the ordinary practicing lawyer. Too often the time spent by the lawyer would be out of all proportion to the amount involved and either the lawyer would be underpaid or the veteran overcharged.

"It has been suggested, I know, that the Government might employ persons to act as counsel for the disabled veterans. This would, I am sure, be impracticable. Such employees of the Government almost inevitably develop a psychology which causes them to try to save the Government money instead of seeing that absolute justice is done to the veteran.

"Your organization's method for solving this problem is admirable, namely, the training of war-handicapped men as specialists in veterans' legislation who can advise and help a disabled veteran in securing the benefits that Congress and a grateful America want the veterans to have. Your program deserves the support of all."

GENERAL EISENHOWER'S COMMENTS

Gen. Dwight D. Eisenhower:

"I am delighted to hear that you are taking effective steps to raise substantial sums for this purpose. Your efforts will be fully rewarded in the lasting appreciation of veterans who will have sacrificed so much for the cause for which we are fighting."

Gen. Douglas A. MacArthur:

"I accept life membership in the Disabled American Veterans with a sense of distinction. Membership in no group in the world carries greater honor than does membership in the Disabled American Veterans."

AFL AND CIO PRESIDENTS' MESSAGES

William Green, president, American Federation of Labor:

"Be assured that we of the American Federation of Labor who have long relied upon the principle that unity develops strength look with favor upon the valuable service-giving activities of the Disabled American Veterans organization."

Philip Murray, president, Congress of Industrial Organizations:

"This is to express my appreciation for the important work undertaken by the DAV, on behalf of those who have given more to their country than can ever be fully repaid. Labor's heart goes out to the disabled veterans, many of whom come from its own ranks, and we are eager to do everything we can to help those handicapped veterans and their dependents to secure the fair and generous treatment to which they are entitled."

Robert R. Wason, former president, National Association of Manufacturers:

"The DAV is not appealing for your sympathy nor to your patriotism, but is presenting a practical plan for making useful, independent citizens of our disabled veterans. It is to be commended for its excellent work."

Editorial, the New York Times:

"The Nation's first obligation surely is to stand by its fighting men disabled in the line of duty. The DAV's success in this drive should be desired by all citizens, for an adequate DAV staff will mean that those who have bravely fought and bled for us all will not be disinherited and forgotten. Many pleas are made to the American public. This is one campaign that surely merits the generous support of every one of us."

STATEMENTS BY TWO PRESIDENTS—ROOSEVELT AND TRUMAN

The late President Franklin D. Roosevelt:

"The purpose of your Nation-wide rehabilitation program * * * to extend needed assistance to members of our armed forces who became disabled, as well as to disabled veterans of the World War and their dependents, is, indeed, a worthy one and merits the full support of our citizens."

President Harry Truman:

"The Disabled American Veterans are performing a most useful function in helping disabled comrades to help themselves. As I told you during your visit to the White House, our disabled veterans deserve every assistance within the power of the American people.

"Surely, in this postwar reconversion period there is no more important and timely work to be done than that of assisting disabled veterans. All Americans should cooperate in the great task of helping these veterans to make as complete a transition as possible to productive civilian life.

"I feel certain that all organizations and individuals who are interested in the welfare of our country will assist you."

GENERAL WAINWRIGHT'S MESSAGE

Gen. J. M. Wainwright, past national commander, DAV:

"The DAV maintains a Nation-wide staff of trained service officers. These men, disabled veterans themselves, are on constant duty in all Veterans' Administration offices * * * to help their disabled buddies with all their problems * * * employment, compensation, insurance, hospitalization, and social. They have rendered effective, material assistance to more than a million disabled veterans in their fight to regain independence, security, and happiness, to again lead normal, wholesome, productive lives.

"So, as a good American, will you cooperate by helping us to continue this vital, humanitarian work for the boys who fought for you?"

Citizens who are grateful for the sacrifices of America's disabled veterans will, I feel sure, generously support the vitally important service program sponsored by the Disabled American Veterans Service Foundation.

Toilers in the Theater

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. JAVITS. Mr. Speaker, the bills for a national theater introduced by me in the House and by Senators IRVING M. IVES and ELBERT D. THOMAS in the Senate have aroused much interest and discussion. The appended article is very valuable as defining the position of the

actor in the theater today and in a national theater:

TOILERS IN THE THEATER

(By Louis M. Simon, executive secretary, Actors' Equity Association

Opportunity to see legitimate theater has shrunk so much and has become so expensive that it is very doubtful that any large part of the wage-earning population knows much about it except as a remote and possibly glamorous tradition.

Loss of patronage from among the ranks of the average workingman and his family has seriously crippled the theater. For the number of union members who struggle to earn a living in the theater has not diminished in the same proportion, nor have these members' earnings increased in a ratio proportionate to the increased cost of theatergoing or to the cost of living.

The result is that in times that are considered to be very prosperous generally, the theater continues in its chronic state of distress and unemployment—chronic because it has improved only very slightly since the worst days of the bitter depression of the thirties.

It is obvious that the theater has had to meet tremendous competition in the form of movies, radio, and, more recently, television. Nevertheless, it will be worth while to examine a little more carefully into what the results of this competition actually have been.

It has been going on ever since 1915 when movies emerged from their nickelodeon stage of development. Yet during the fabulous twenties, when motion-picture exhibitors, backed by tremendous capital resources, built strings of luxurious movie theaters throughout the land, there was no noticeable shrinkage in theatrical production.

As a matter of fact, during the twenties production reached all-time highs and in New York, at least, theater construction continued at a headlong pace. But throughout the rest of the country a very significant change was occurring. Legitimate theaters were being turned into picture theaters at a very rapid pace.

Perhaps the boom conditions in New York were responsible for blinding New York managers to the significance of what this evaporation of stock companies and road houses really meant. It meant, for one thing, that jumps between engagements were so large that touring an average show became impossible. And as the country became a theatrical desert, the entertainment habits of the country were being radically altered. A whole generation grew up to whom movies—and then radio—became the major source of family recreation.

Theatrical management apparently forgot that even in New York long runs were not sustained solely by the metropolitan audiences but were supported to a large extent by out-of-towners who attended legitimate theaters when they came to New York. New York used to be the mecca for large numbers of people of relatively moderate means who were theater-minded, who knew the tradition and lore of the theater and who quite naturally wanted to see the latest in the theater when they came to New York. Even the average tourist used to flock to the theater the way the present-day tourist flocks to Radio Center. The thirties gave radio its big chance to build because it was free to the consumer. Then the war years, which were again boom years for the New York theater, finished the road completely because of the restrictions on travel.

Today we find professional theater pretty well confined to New York and further confined to an avid audience who want to see only the hits and whose pocketbooks allow them to indulge in the fantastic prices that must be paid to see the half dozen hit shows.

It would be easy enough to sum this situation up merely by reiterating the truism that theater is a hand-made product rapidly losing out in a world of machine-made product, and let it go at that, except for one remarkable fact. Theater, the fabulous invalid, refuses to die. Curiously, the theater has resisted following the pattern of the horse-drawn vehicle, the pot-bellied stove, and other such relics of former and less progressive or, more correctly, less efficient times.

Although ailing for three decades, the theater has refused to die completely because it is something more than a utilitarian development of mankind. Although it cannot be classified as utilitarian in the narrow sense of the word, the theater nevertheless serves a useful purpose.

Theater is a social activity of mankind that answers a basic need in all peoples, no matter what stage of cultural or economic development they are in. Its roots lie in the same impulses that make religion a necessary expression of man. And, of course, theater in its earliest forms was indistinguishable from religious ceremony. (This is neither the time nor place to explore these psychological aspects of the theater, but I mention them to explain the fact of the theater's survival at all under economic conditions which rationally do not permit of its survival.)

At the psychological level there is no real comparison between the experience of seeing a movie or a telecast or listening to the radio and that of going to the theater. It would be like trying to compare the experience of going to church with that kind of listening to a fine sermon delivered over the air. The whole inexplicable experience of participation just isn't there when it comes to the mechanically reproduced or mechanically distributed media of entertainment.

* * * * *

This article cannot attempt to discuss differences in artistic or cultural values as between the amateur and the professional theater. Its fundamental purpose is to disclose the fact that the emotional experience of theatergoing is not one which the American people will deny themselves, no matter how many or how excellent the various mechanical substitutes may be. Too many people want to go to the theater as well as to see movies and television.

Proof of this lies in the fact that the Federal Government is collecting many millions of dollars in excise tax on legitimate theater tickets, of which more than half is collected from admissions to nonprofessional legitimate theater. From this indication alone we can see that the vacuum that was created when the professional theater virtually disappeared from the smaller cities of the country was rapidly filled by the amateur theater.

* * * * *

Actors' Equity does not want to stifle this theater, nor should the other crafts of the theater. For the past year Equity has been studying this whole situation very intensively in the expectation that eventually, through cooperation with the more enlightened managements of college and community theaters, and with equal cooperation from the other craft unions concerned, an intelligent solution can be found.

At the present time many so-called little theaters are anxious to have Broadway stars play with local amateurs. Actors' Equity considers each of these requests very carefully and, if conditions warrant, we allow our stars and featured players to accept engagements with an amateur company.

We know that in some quarters this practice is frowned upon. But we consider that our people have become very good ambassadors for the cause of trade-unionism. In many instances Equity members are succeeding in breaking down the psychological barriers that have created antiunion feelings among the nonprofessionals. Furthermore, in this way we are able to collect valuable data. For permission is never granted to a member to play in a nonequity company unless we get all the economic facts that govern the operation of the theater in question.

In time we hope to create a much larger traffic in the employment of our members with amateur companies. By the same token, we hope to stabilize some of these theaters and to raise both the financial and artistic levels on which they operate, and eventually it is expected to make the process one of gradual but complete unionization that will prove its benefits not only to Equity members but to all our fellow union members as well.

It is fitting that this process begin with the actor because the actor is the most indispensable worker in the theater. Without in any way belittling the contributions made by any other worker in the theater, we must realistically make use of this advantage. We know that the public is drawn to the theater to see a given cast of actors performing a given play. The actor may even be considered to be more essential than the dramatist. Given a good company of actors, there are plenty of plays of the past that can be performed. But the dramatists of the past cannot have their works performed without living actors. It is a singular fact, peculiar only to the performing artist, that the public pays only to see him at work. He has no physical product to put on a counter for sale nor does the public want anything else from him. Herein lies his strength as well as the torturous dangers of the most erratic of all professions.

Another and more distant horizon toward which Actors' Equity has turned its gaze is the Federal Government. Joining with the American National Theater and Academy, we are now making plans for holding a national theater assembly in Washington next January.

We are confidently expecting that this assembly will focus the attention of the lawmakers on constructive ways in which the American theater can be resuscitated.

In England the Arts Council is doing a very able job of preserving the heritage of theater of which our English cousins are so justifiably proud. From Equity's point of view, the most admirable feature of the Arts Council program is that, in giving financial aid to any qualified theater group, it makes the maintenance of trade-union wages and working conditions a primary requisite.

We could do far worse in this country than to examine carefully the progress that has been made in England and to profit, whenever we can, by the example they have set for us.

Against Postal Cuts

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial entitled "Against Postal Cuts," which appeared in the Worcester (Mass.) Telegram, Thursday, May 11, 1950.

The editorial follows:

AGAINST POSTAL CUTS

That nine-to-nothing vote of the Senate Post Office Committee in sending to the Senate floor legislation to countermand Postmaster General Donaldson's sweeping cuts in postal service was a direct reflection as to how public opinion has rallied against any reduction of post-office service.

This vast country economically dependent on speedy means of mutual communication, not only wants, but must have, a post-office service of the best possible kind—something it already pays well for.

If Postmaster Donaldson's motive was to shock the country into a realization of its post-office service, he succeeded all right. When people began to realize that mail deliveries would be drastically reduced, and that post-office service windows would close down early and at inconvenient times, they became keenly aware of what the post office means to them in their everyday life and work. If the Postmaster General's intention was to blackmail Congress into restoring a Post Office Department budget cut, then his scheme has boomeranged right in his face in a way that may produce a real explosion in his whole department.

For Mr. Donaldson did succeed in focusing the eyes of the whole country on this particular Government department. The taxpayers have heard—many of them for the first time—about the antiquated bookkeeping system, dating back to the early years of the 1800's, by which the Post Office tries to keep its accounts straight. People have heard emphasized the Hoover report recommendations by which the Post Office Department could, if it would, save millions of dollars without impairing service to the public at all. Efficiency in its operations should be the watchword of the Post Office Department—not curtailment of its public service.

The Senate committee vote, of course, does not force the Postmaster General to restore full service. It will take action by both Houses of Congress to do that. Just the same, it is a sign that the people want good post-office service. In efficiency may be found the economy that Mr. Donaldson professes to want.

The St. Louis Star-Times Receives Missouri University Award

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, May 19 (legislative day of Wednesday, March 29), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Elzey Roberts, publisher of the St. Louis Star-Times, upon the occasion of the St. Louis Star-Times' being honored as the American newspaper to receive the 1950 Missouri University award for distinguished service in journalism, at the University of Missouri, Columbia, Mo., on May 5, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Dean Mott, ladies, and gentleman, since this audience includes a large number of graduates about to enter newspaper work, it occurred to me that you might like to hear a few words on what it is really like inside the newspaper world from someone who has been in it for quite a few years. I will tell you briefly how the newspaper now known as the St. Louis Star-Times came into being. Then I will relate several episodes that served as milestones in its history. And I will wind up with a few thoughts on what is happening to newspapers in general.

My father, John C. Roberts, one of the founders of Roberts, Johnson & Rand Shoe Co., the predecessor of International Shoe Co., came from a farm in Tennessee, but it was in St. Louis that he made his fame and fortune. He was greatly disturbed by the way selfish interests were throttling the natural growth of his adopted city. He wanted to own a daily newspaper that would give him the power to do something about it.

At that time the Terminal Railroad had a monopoly which enclosed St. Louis in a ring of steel. It was levying tribute on every ton of freight moving in or out of the area. This levy was called the bridge arbitrary charge.

Also, in that day a group of financial interests, frequently called the Big Cinch, controlled a number of St. Louis industries. Their only wish was to perpetuate their hold on the community. They wanted to keep out competition.

In addition, there was an alliance between politicians and criminals, whose members were called "boodlers." They could be roughly compared to the members of the politico-criminal combinations that are active in Kansas City and St. Louis today.

John C. Roberts wanted a newspaper to combat these evils. He almost bought the old St. Louis Republic, which died about 31 years ago. He would have done so, except that he made the mistake of consulting me about it. Although only 18 years of age at the time, I dissuaded him from purchasing it.

Perhaps that is why in 1913 he bought the St. Louis Star without letting me know anything about it. The first I knew of it was through reading it in a St. Louis newspaper when I was a sophomore in Princeton.

During the 11 years that my father lived after the purchase of the old St. Louis Star he imbued it with the same high purpose that had moved him to buy it. He surrounded himself with a group of men stimulated by that same spirit of accomplishment. They worked together as a team and started the newspaper on the path of progress it has followed ever since.

I want to describe to you some of the characteristics of the Star-Times and the philosophy behind them.

The Star-Times has always shown great concern for good local government. It has taken pride in being a crusading newspaper, both in its news and its editorial columns.

I could cite various Star-Times campaigns that were successful in bettering the community. For example, the fights to break the prohibition against the employment of married teachers in St. Louis, for a clean restaurant law, for a standard milk ordinance, for the improvement and protection of civil service. But these are not the kinds of incidents that in retrospect make an interesting talk. Instead, let me use the basic formula of newpapermen—human interest.

Back at the time of World War I, a 3-year-old girl named Hellas Mattler was kidnapped in St. Louis. After a 5-day search the police were without clues. The veteran reporters of the Star also found themselves up blind alleys. At that point the managing editor called in a cub who had been graduated only a year before from a copy boy. He followed a lead given him by a streetcar conductor—a lead which the police had spurned. It took him to Granite City. He found that a girl answering the description of the missing child had been there at a cheap hotel with a man and woman. The couple, however, had checked out the day before the cub reporter arrived. The reporter found them, and then posing as a bill collector he gained admittance to their room and saw the child. He phoned his city editor, and within minutes detectives closed in and arrested the kidnappers. The child was returned unharmed to her parents. All this had been accomplished within a space of 5 hours.

I tell this story because that cub reporter, Aaron G. Benesch, is now the city editor of the Star-Times, the same man who, the day after the bodies of Charles Binaggio and his bodyguard were found, revealed that Binaggio had known for 3 months that he was going to be murdered. According to the story, Binaggio had collected money from the underworld during the 1948 campaign on his assurance that if the Democrats won the Governorship St. Louis and Kansas City would be opened up to the gamblers; he was unable either to deliver on his promise or to return the money; he went to St. Louis in an attempt to make peace with his fellow gangsters and gamblers; instead they read him his death sentence. This Star-Times story hit the front pages of nearly every large newspaper in the country. It was carried in great volume over the wires of all the press associations—credited to the Star-Times. It was top news for the big broadcasting chains.

Incidentally, Mayor Kemp, of Kansas City told almost the identical story before a United States Senate Committee a week ago today.

In the early twenties another bad gang situation existed in St. Louis. An open feud was fought in the streets by the rival Egan and Hogan gangs. The Star induced the leaders of both gangs to sign a dramatic peace pact. The signing took place on an Easter Sunday. Later the Star persuaded Ray Renard, the Fox, chief lieutenant of the Egan gang, to confess his organization's crimes. Renard's confessions ran daily in the Star. As a result of them, 22 murder mysteries were solved, and bank, pay roll and mail robberies totaling more than $5,000,000 were cleared up. Renard's testimony in Federal court convicted every member of the Egan gang except one, who fled from justice.

The Star's reporter who served as peace emissary between the gangs and who persuaded the Fox to confess was Harry T. Brundidge. This same reporter, posing as Harry Thompson, became a full-fledged "doctor of medicine" in 57 days during the fall of 1923. In this time, besides learning all there was to know about medicine, he learned the inside of the diploma mill racket that was grinding out murderous quacks upon the American public. As a result of the Star's exposé, the United States Senate investigated the teaching and practice of medicine. Hundreds of quacks were eliminated from practice in Missouri, Kansas, Connecticut, New York, Massachusetts, Arkansas, California, Florida, and elsewhere. Ringleaders of the racket were convicted and sent to prison. Low-grade medical colleges throughout the land were closed.

A series of news stories and editorials in the Star-Times about the spread of marijuana traffic among St. Louis youth moved the State of Missouri to pass a law in 1935 outlawing the cultivation, possession, gift or sale of this harmful drug.

Undoubtedly some members of this audience, when members of the Armed Forces, found themselves personally concerned about how good a job the people who made arms and munitions were doing. Well, late in 1942 the Star-Times investigated reports that thousands of defective cartridges were being passed as good ammunition by inspectors at the St. Louis ordnance plant. Our reporters interviewed numerous employees of the plant. They collected many statements supporting the charges. The Star-Times printed its disclosures based on the affidavits

of five inspectors at the plant. As a result of the exposé, a special board of ordnance reviewed the plant. A change in the command of the plant took place and nearly a score of improvements in production and inspection methods were made. For this the Star-Times and two of its reporters won the National Headliners' Award for outstanding public service during 1942. The two reporters also were given the Sigma Delta Chi award for distinguished service in general reporting.

Another characteristic of the Star-Times is its championship of civil liberties, particularly when the rights of the so-called little man are being violated and when the freedom of the press is in danger.

In the summer of 1947, a Negro by the name of Harvey Jones, an ex-GI living near Ahoskie, N. C., held a $1 lottery ticket on a Cadillac automobile. He won the automobile, but when the award committee found out he was a Negro, it drew again, and awarded the Cadillac to a well-to-do white doctor.

Despite a law denying the use of mails to newspapers carrying news about lottery awards, the Star-Times printed the story. We did so, not because it concerned a lottery, but because it related an injustice. Many large newspapers did not dare touch the story. The St. Louis postmaster wrote The Star-Times a letter stating that we had violated the law and warning us not to do it again. The Star-Times publicly announced its intention to continue printing such news even though they might involve lotteries and in the following words defied the Post Office to do anything about it: "The Constitution of the United States guarantees a free press, Mr. Postmaster. It is not a free press when any public agency attempts to tell a newspaper that it cannot inform the public of discrimination against a Negro because of his race."

Other newspapers, Senators, Representatives, labor leaders, businessmen, citizens from all walks of life rallied behind the Star-Times. Exactly 29 hours after this incident the Postmaster General reversed his interpretation of the law so that newspapers could mention lotteries incidental to other issues.

Note that in this case the Star-Times was championing not only the rights of a Negro who had been deprived of his rights because of his race, but also the rights of all the newspapers that had failed to publish the story out of fear of the Post Office Department.

In this instance, freedom of the press really was involved. Unfortunately some newspapers sometimes cry "wolf" when there is no wolf. A newspaper is at the same time a business like other businesses and a unique public service. Some publishers and editors try to gain special privileges for their newspapers as businesses by wrapping them in the Bill of Rights. Our formula for the preservation of the freedom of the press is, first, don't abuse it; second, don't pretend that it is in danger when it is not; and, third, fight with everything you have when it is at stake.

The last characteristic of the Star-Times I shall mention is its independence. We have supported both Democratic and Republican candidates for the offices of President, governor, and mayor.

The essence of the story of the Star-Times is competition. When it was purchased 37 years ago a dying paper suddenly became a vigorous young challenger. Not only did it serve the community, but also it caused competitors to report facts they had previously ignored and to champion causes they had formerly opposed or been indifferent toward.

I believe that competition is essential to keep the bloodstream of newspapers virile. A city seeking its news through a single newspaper ownership is like a one-eyed man, whose vision lacks perspective even though the single eye may be good. Yet 20 American cities of more than 100,000 population have a single newspaper ownership. These cities are Memphis, Louisville, Atlanta, Norfolk, Richmond, Va.; Reading, Providence, Worcester, Springfield, Mass.; Utica, Rochester, N. Y.; Toledo, Duluth, Minneapolis, St. Paul, Spokane, Omaha, Des Moines, Kansas City, and Oklahoma City.

The impact of this development in the field of journalism will be felt, not only by you who will devote your business lives to newspapering, but by every man, woman, and child in the United States.

In 1937 there were 1,933 English-language daily newspapers of general circulation in the United States. According to the Editor and Publisher Yearbook, as of January 1, 1950, there were only 1,780, a loss of 153.

The situation is worse than the statistics suggest. Twelve States suffered a decrease of one or more dailies during 1949. This is hidden by several factors—the starting of dailies in towns or small cities that used to be served by weeklies, the transferring of publication from Saturday or Monday to the Sunday field, corporate mergers that end editorial competition even though no newspaper is discontinued.

Nineteen fifty has already seen two famous casualties. On January 4 the New York Sun sold out to the World Telegram. March saw the announcement that the Atlanta Journal had merged with the Constitution, dropping one Sunday paper. The trend toward monopoly situations is growing at such a rate that if it is not stopped it may change the whole complexion of American journalism.

The two most important factors heightening the expense of publishing a newspaper are, of course, labor costs and the cost of newsprint. The men and women who make newspapers have a most demanding and most important job. They are and should be paid well.

The March Survey of Current Business, published by the United States Department of Commerce, lists the average weekly earnings in American newspapers during 1949 as $78.50, the highest in all the classifications of employment in the highest-paying Nation on earth.

Just how far the newspaper wages can run ahead of wages in comparable industries and still leave the newspaper industry solvent is something for the statisticians to figure out. But the principle of competitive costs is no different in newspapering from what it is in, shall we say, the coal industry.

John L. Lewis has taken the wages of the coal miners from poverty to high hourly pay. When one considers the toil, the discomfort, and the hazards of their occupation, no one will say the miners are not worth it. But is coal as a fuel worth it? Aren't natural gas, electricity, and other sources of energy steadily forcing coal into the background so that it is now a sick industry, one of the Nation's top economic problems?

The same thing, I believe, is happening to newspapers. The monopoly that newspapers had on news was broken years ago when radio came into being. Radio was able to take hundreds of millions of dollars from newspaper advertising without vitally affecting the newspaper structure. The fact that this loss could be borne showed the underlying stability of the newspaper industry.

But there is a limit somewhere to what newspapers can stand in the way of increased costs that must ultimately be passed on to the reading public and the buyers of advertising. Newspaper publishers should be proud that they pay the top wages of any big industry in the country. But they should be fearful lest these wages mount so high that their readers and their advertisers refuse to bear them. I believe the death of the New York Sun, the merger of the Fort Wayne newspapers into a single publishing company, and the merger of the Atlanta Journal with the Constitution attest to this fact.

A companion factor in the increased costs of publishing a newspaper is the rise in the price of newsprint. As recently as 1945 newsprint was selling at $59 a ton. Within 5 years the price had jumped to $101. Whether or not $101 a ton is too high or too low a price for newsprint is a question I shall not attempt to answer. It is plain, however, that the newspapers of America are paying about 70 percent more for every ton of their basic raw material than they were paying in 1945. Anyone familiar with the newspaper business knows that few have had revenue increases even closely approaching this increase in the cost of newsprint.

Of course, newspapers in the monopoly cities can pass this cost along to their advertisers and readers. Also the huge newspapers that own their own paper mills are utterly unconcerned about the increase in the price of newsprint. The higher it goes, the more money they make, and the tougher things are for their competitors. But most newspapers must make up the difference between cost and revenue from their resources, not from their earnings. How long they can endure this load is something for the future to reveal.

I have alluded, by analogy with the coal industry, to competitive methods of accomplishing what the newspaper does today. I want to touch on this factor now.

There have been important changes and many refinements in the methods of publishing a newspaper since the invention of linotype, but the basic machines of about 60 years ago still remain. There has been no technological revolution comparable to what has taken place in the metals industry, in chemistry, plastics, and farming.

For example, the New York stock table is taken from the stock exchange ticker in New York; transmitted line by line over a telegraph wire; received on another telegraph printer, sent to an editor, from the editor to the compositor, who sets it line by line, from the compositor to a proofreader, who reads it line by line and marks errors; sent back for resetting as many times as necessary; and the type finally arrives in a form on the make-up table. That performance, repeated in hundreds of newspapers, could be obviated entirely by the simple process of setting the New York stock table once in the city of New York and sending it by a refined method of wirephoto. There are other processes as simple as wirephoto that could be adopted tomorrow if newspapers were not wedded to horse-and-buggy methods.

Some of the blame for this backwardness must rest on the many publishers who have been more interested in using newspapers for purposes other than as a public service and a private livelihood. Part of the blame must rest on restrictive agreements between management and labor. But the consequence is that newspapering is technologically archaic. It stands on the brink of vast technological changes. Some of these changes are in the realm of photographic reproduction; others are in the realm of electronics. I want to mention just one of the latter kind.

Right here in Columbia there has been under way for the past 2 years the study of a new method of producing and distributing newspapers. I refer to facsimile newspapers—newspapers broadcast over the air and reproduced in the home. About 5 years ago a number of newspapers joined together to see what could be done with facsimile as a new method of newspaper reproduction and distribution. These newspapers included the New York Times, the Washington Post, the Chicago Tribune, the Boston Globe, and the St. Louis Star-Times. I cannot

truthfully say that we accomplished very much toward commercial realization of the project. Later the Star-Times turned its facsimile equipment over to the Missouri School of Journalism for experimentation, and for nearly 2 years now the work we initiated has been continued on this campus.

I have never felt that the individual production of a newspaper on a facsimile machine or by any other method could compete with mass production of newspapers as long as they are circulated in a densely populated area. I still doubt it. Those of you who have toured the Star-Times plant have seen new presses in operation each of which can turn out newspapers at the rate of 45,000 an hour. While the actual production, of course, does not reach this capacity figure, it comes fairly close to it, because the presses are equipped with devices which change 2,000-pound rolls of paper at nearly full speed.

However, in this atomic age it may be that survival will be possible only by spreading out our factories, our vital facilities and our residences over large areas. Perhaps, instead of being bunched in thickly populated centers that are attractive targets for an atomic bomb and even more attractive for a hydrogen bomb, we will be scattered over miles and miles of countryside. It is not inconceivable that in such a day it will be more feasible economically to deliver an individual newspaper on a facsimile machine.

I do not pretend to know what the future holds in store. But I do know that we must keep up with progress and changing social conditions, and that is what the Star-Times had in mind 5 years ago when we joined with other newspapers in trying to develop facsimile.

And that is also what we had in mind a few years ago when the Star-Times became the first newspaper in the world to use two-way radio-telephone equipment in our news gathering operations. Today such equipment is also in the automobiles used by some of our photographers and circulation department employees.

I could speak for another half hour—don't worry, I shall not—on the virtues of the American press and prove to you that regardless of the tribulations it faces it is still the best in the world. I have merely been concerned with the problem of keeping it that way.

A democracy to survive must look to its arms. A free press to survive must look to the soundness of its economic foundation. However, the military arm must serve the civilian body, and not the other way around. Similarly, the free press must serve the public. Editorial integrity is an asset that cannot be measured in circulation figures or advertising lineage, but only editorial integrity can win public confidence. With public confidence a newspaper can weather many dark days. Without public confidence a newspaper is dying, even though it may appear in the fullness of its strength. It may take years for a once-great newspaper that has lost its editorial integrity to wither, just as it takes years for a giant oak to fall. And it may take years for a young or revitalized newspaper to build itself up, just as it takes years for an acorn to grow. Editorial integrity is to a newspaper what the essence of life is to a tree.

To you young people who have decided on newspapering as a career, I say, based on a lifetime of work in journalism: You have made a wise choice. You will have a ringside seat at the battle, the tragedy, the comedy, the circus of life—call it what you will. Whatever it is, there you are in the front row.

The rings are not merely three—they are beyond counting. The daily shows are not two, but a continuous one, day and night, never ending, of infinite variety, ranging from the simple routine of the humblest to the pomp and pageantry of the most mighty.

You will find high monetary compensation compared to other industries. But you will find also the satisfaction of taking part in one of the most important and interesting forms of work in the world. I can wish no more for any one of you than that you may receive this satisfaction as fully as I have.

The Country Needs H. R. 7151

EXTENSION OF REMARKS
OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. PATTERSON. Mr. Speaker, to date, no committee action has been taken on H. R. 7151, and the copper market is being adversely affected. Congress must take cognizance of the dislocations which will result from failure to continue suspension of the tax on copper imports, and remedy this situation by enacting H. R. 7151 in the immediate future. Two statements in this vein are inserted; one, an editorial from the American Metal Market and the other a news story from the May 18 issue of the New York Times:

[From American Metal Market of May 3, 1950]

CONGRESS SHOULD PASS H. R. 7151

The bill H. R. 7151, introduced into the House by Representative PATTERSON, which would insure the tax free entry of copper into the United States for a period of another two years from June 30, 1950, should receive the hearty support of the great majority of the members of the industry and of the Congress. If this bill fails to pass, an import-excise tax of 2 cents per pound under the Reciprocal Trade Agreement will take effect as of July 1.

We are urgently in need of a great deal more copper than our mines can supply and a protection of 2 cents would probably have only a negligible effect in stimulating production. Let it be remembered that from February 1942 through 1945 when premium prices were paid, almost 80 percent of the country's output sold at the OPA ceiling price of 12 cents and on less than 2 percent was a premium of more than 5 cents paid. The production figures were as follows:

[In tons of 2,000 pounds]

	At ceiling price 12 cents	At premium price 17 cents	At premium price 17.01 to 27 cents
1942 (February to December)	881,711	102,352	716
1943 (full year)	841,286	217,382	14,003
1944 (full year)	722,791	194,483	26,168
1945 (full year)	561,851	179,389	22,917

The figures for 1946 and for the first half of 1947, when the payments of premiums ceased, are not comparable because with the lifting of price controls in November 1946 the copper market underwent a considerable advance.

Up to the outbreak of World War II in 1939 the United States had always been an exporter of copper, but in latter years its production has fallen far short of home requirements although augmented by the great recovery and reemployment of scrap. In 1949 our imports of refined copper, plus the metal content of ore, matte, and blister amounted to 545,000 tons against which 137,000 tons were exported in the form of refined ingots and bars and some 50,000 tons in the form of rods, sheets, etc. It is estimated that this year we will have to import between 350,000 and 400,000 tons on balance if industrial and stockpiling needs are to be met.

With the metal commanding 19½ cents, it cannot be argued that domestic producers are in need of protection as was the case during the height of the depression in 1932 when an excise tax of 4 cents was first imposed. At that time the price was at its historic low level of 5 cents with a thoroughly unhealthy situation prevailing as an aftermath of the abortive attempt in 1929–30 to peg the market at 18 cents. But while this 4-cent protection effectively prevented foreign copper from competing with domestic producers in the home market, it did not correct the supply and demand situation and the United States continued to export copper on balance. In other words, the foreign producers were barred from entry into our market but our producers continued to enjoy the right to invade other consuming markets, particularly in Europe, and availed themselves of same. The exports of domestic produced copper continued, and in 1934 when the price here was 8½ cents they amounted to 125,000 tons, while in 1938 and 1939 they averaged about 130,000 tons a year.

What gave the copper market its first boost was the Government-sponsored trade restriction action under the NRA code whereby all except blue-eagle copper was outlawed from home usage and a fixed price of 9 cents was maintained from April 26, 1934 until May 27, 1935, when the legislation was ruled unconstitutional. This recital of past events is for the purpose of emphasizing how radically different the situation is today than what it was when copper producers called for help and received same.

From the beginning of the century up until 1947 there were only 5 years when copper averaged more than its present price of 19½ cents, namely in 1906–7 when Amalgamated Copper Co. was manipulating the market, and 1916–18 during World War I when at one time the Allies were forced to pay the atrocious price of 37 cents. If the 2-cent duty is reimposed, it may enable United States producers to get a higher-than-necessary price for their product or what is more likely, will short-change those countries upon whom we are dependent for supplies. The principal countries shipping copper to us are Chile, Canada, Peru and Mexico, all good neighbors. It would be impolite, to say the very least, if we were to slam the door in their faces when they are bringing us materials which we need so badly. We also depend on them as outlets for a good portion of the manufactured articles which we make from the raw materials they send us.

A large part of their dollar incomes is derived from the copper which they export to the United States. The Chilean Government, in particular, derives a large measure of its revenue from the taxes paid by the American-owned copper companies. Cut off this source of revenue and the present government which is favorable to the United States will be seriously weakened financially. The strong Communist element which exists in Chile might not lose any time nor spare any effort to throw the country into political turmoil. What is true in Chile is also true to somewhat lesser extent in the other countries south of the border which could not be expected to greet with open arms the prospect of a substantial reduction in dollar income.

Canada depends on the dollar income from the sale of copper and other raw materials to provide the means to buy from us many manufactured articles which are the necessary adjuncts to a civilized life. The passage of H. R. 7151 will help to keep the copper coming down here and the dollars flowing

northward only to return in exchange for the products of our manufacturing plants.

The passage of H. R. 7151 will not only have an effect on the Western Hemisphere but will also have a beneficial effect on the countries of Europe outside the iron curtain, and may even have some influence in keeping the iron curtain from further encroachments on western Europe. We are supplying a very great number of dollars to the Marshall plan countries. They in turn are buying from us many items designed to help them get back onto their own feet. Among these items are electrical machinery and other goods which contain appreciable amounts of copper. Once in possession of more of the guts of production it will not take so long for the western European countries to become self-supporting—and the sooner we will be able to stop sending monetary aid. With the ability to stand on their own feet, the free countries of Europe will be better able to face the pressure from Russia.

The Department of the Interior, the Department of State and the Department of Commerce have all gone on record in favor of the continued suspension of the excise tax on copper imported into this country and the Munitions Board has stated that its passage will not have any ill effect on stockpile objectives. In view of all this supporting material for the passage of H. R. 7151, it would be a shame if it were defeated.

[From the New York Times of May 18, 1950]

COPPER DUTY SEEN COSTLY FOR CHILE—CONSUL GENERAL HERE SAYS UNITED STATES REINSTATEMENT OF LEVY WILL MEAN $5,000,000 BURDEN—ECONOMIC PACT IS PRAISED—COMMERCE AND INDUSTRY GROUP TOLD THAT IT IS SOLUTION TO PROBLEMS ABROAD

Automatic reinstatement of the United States duty of 2 cents a pound on copper imports on June 30 will be a severe blow to Chile, Alfonso Grez, Chilean Consul General in New York, said yesterday.

He told a meeting of the Commerce and Industry Association, 233 Broadway, that failure to continue suspension of the duty would cost Chile $5,000,000 yearly on the present tonnage of copper shipped here.

Chile, he said, already is hard pressed by a dollar shortage, and the extra $5,000,000 burden of the copper duty will be in addition to a dollar deficit of some $38,000,000 in the 1950 budget of the country.

"When the President of Chile, Gabriel Gonzalez Videla, returned after his recent visit to this country he believed the United States duty on copper would not be reestablished," Mr. Grez said. "However, the prospects have changed and it appears that Chile would get a slap in the face."

Mr. Grez said "political considerations" were to blame, attributing the likelihood of the duty reinstatement to Senators from the copper-producing States in this country. He pointed out that "positive action" by Congress was necessary to continue suspension of the duty, and unless such action was taken the duty would become effective.

As a result of the dollar shortage, he continued, Chile is "tightening its belt" in order to be able to pay for the goods it buys in the United States. He said import controls restricted purchases here to essentials. He added that the recent drop of $12 to $13 a ton in the price of synthetic nitrates here was another severe blow to the Chilean economy. One bright spot is the production of oil in the southern part of the country. This oil being sold to Uruguay.

ECONOMIC UNION PRAISED

L. C. Ameye, economic adviser to the Banque de Bruxelles, another speaker at the meeting, said that the proposal to extend the Atlantic Pact to the economic field was one of the "best solutions" put forward to solve the European problem.

President Truman's Sophistry

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1950

Mr. REED of New York. Mr. Speaker, no matter what form it may take, inflation is the most ruthless destroyer of savings and of liberty yet devised by man. Inflation is insidious and steals upon a nation like a thief in the night. Mr. Mark Sullivan, with his usual power of analysis and clarity of expression, brings the Truman sophistry of the Truman Fair Deal into full public view.

Under leave to extend, I am inserting in the RECORD the article of Mark Sullivan published in the New York Herald Tribune under date of May 19, 1950:

TRUMAN 10-YEAR ECONOMIC PLAN CALLED PERIL TO NATION'S SAVERS—MARK SULLIVAN SAYS PROGRAM, MAPPED BY FAIR DEAL SOPHISTICATES, WILL MEAN HARDSHIP TO MILLIONS

(By Mark Sullivan)

President Truman has now stated, with a definiteness achieved by much repetition, his appeal to the people to vote for a Congress favorable to him; it amounts to an economic plan for the next 10 years. Without jibing at all—this is no time for jibing—it is material to say that the program Mr. Truman put forward is not one evolved by him; it is the creation of persons in the Fair Deal administration or of persons having access to it, who are sophisticated ideologically. The role of Mr. Truman, for which he is adapted by both his temperament and his limitations, is that of folksy salesman to the people.

The program, and the salesmanship, are illustrated by two sentences in the speech Mr. Truman made at Pendleton, Oreg., May 10:

"Our goal over the next decade should be to lift every hard-working American family to an income of $4,000 a year. * * * One out of every four American families now has an income of less than $2,000 a year."

It is of the utmost importance that our people examine this prospect with exact thought: that they dismiss for the moment theoretical considerations about what a fair wage should be under given conditions; that each individual dismiss for the moment the application of the prospect to himself personally, that he think of it in relation to the economic good of the people as a whole, the general welfare. This calls for a difficult and not often practiced intellectual exercise—to shift one's thinking from terms of dollars to terms of goods, and to see that what is income to one is outgo to another.

SAVINGS NOT AFFECTED

The $2,000-a-year worker today, whom Mr. Truman proposes to elevate, now works for $1 an hour. Anyone who buys his services, who hires him, pays him a dollar an hour directly. Anyone who buys goods that he makes, as in a factory, likewise pays him a dollar an hour indirectly.

Now turn to the end of the 10 years of Mr. Truman's plan. The worker we are speaking of has now become a $4,000-a-year man, he gets $2 an hour. Anyone who buys his services, who hires him, pays him $2 an hour directly. As to anyone who buys goods made by this worker in a factory, there may be by 1960 improvements in industrial processes which may increase output of a worker. Yet, broadly speaking, anyone who in 1960 buys goods made by the factory worker here used as an illustration, will pay him $2 an hour indirectly.

Mr. Truman, commending his plan to double the wages of workers, says that "we will all benefit * * * for the incomes of the rest of us will rise, too." But there is one large class of our people who cannot share the benefit Mr. Truman envisages, whose incomes will not rise. These are savers who depend for their living on their savings or on the income from them, and whose savings are in bonds, life-insurance policies, and the like. The interest on a bond does not increase, nor does an annuity received from a life-insurance policy. Such persons will at the end of Mr. Truman's 10-year plan have the same incomes in dollars, but the purchasing power of those incomes will, according to Mr. Truman's prospect, have been cut in half.

LOSS TO SAVERS NOTED

This has already taken place in the past. In Mr. Truman's presentation of his plan he dealt with total national income. He said that by 1960 this will have increased from a present two hundred and thirty-four billion to three hundred and fifty billion. To show that this can happen in the future he cited the past, he pointed to an increase of over a hundred billions in national income during the 10 years since 1939.

But what has happened to the saver during that 10 years? A person who in 1939 put a hundred dollars into a bond, put in terms of dollars say one-tenth of the price of a good automobile. Today that hundred dollars is only about one-twentieth the price of the same automobile. What has happened to savers during the last 10 years was stated by Mr. Bernard M. Baruch in a speech made during the same week as Mr. Truman's:

"Every form of savings has been depreciated—life insurance, Government bonds, thrift accounts, annuities, and pension funds. Week after week, bit by bit, these sums were put aside by millions of persons for their old age, for buying a home, for sending a child to college. To the extent that these savings are cheapened, the ability of these millions to care for themselves and their families is weakened. * * * They have been made more insecure."

It is not merely the hardship brought upon millions of savers. The great danger is that the people may become discouraged about the worth-whileness of saving, that saving as a foundation stone of the national economy may be impaired.

I Am an American Day

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to say that the third Sunday in May has been designated as "I Am an Amercan Day" by act of Congress of May 3, 1940, and this year this day will be May 21.

Mr. Speaker, I have been thinking of something appropriate to say to bring this special day to the attention of the Congress, and I am frank to say that I have found no words more appropriate at this time than the immortal words of Rev. Samuel Francis Smith, who in 1832

wrote the words for our national hymn America, as follows:

AMERICA

My country 'tis of thee,
Sweet land of liberty,
Of thee I sing;
Land where my fathers died,
Land of the Pilgrim's pride,
From ev'ry mountain side
Let freedom ring.

My native country, thee,
Land of the noble free,
Thy name I love:
I love they rocks and rills,
Thy woods and templed hills:
My heart with rapture thrills
Like that above.

Our fathers' God, to thee,
Author of liberty,
To thee we sing;
Long may our land be bright
With freedom's holy light,
Protect us by Thy might,
Great God, our King.

Less Mail Service

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. MICHENER. Mr. Speaker, Members of Congress are receiving many, many letters protesting against the curtailment of mail delivery service pursuant to the economy order of Postmaster General Donaldson. Employees of the post office affected by the order are violently protesting. Indeed, in some localities friends of the employees are circulating petitions among patrons demanding that the former scheduled deliveries be reinstated. On the other hand, I have received numerous letters telling me that the writers miss the extra delivery service, but complimenting the Postmaster General on his courage in instituting this economy measure. These writers want the budget balanced and our expenditures brought within our income before we have mail delivery service that is not essential, even though it is desirable.

My attention has just been called by a writer from my district to an editorial appearing in the Adrian (Mich.) Daily Telegram. In keeping with permission granted by the House, I am including that editorial which is as follows:

LESS MAIL SERVICE

The curtailment of mail service as ordered by the Post Office Department will determine just how badly Americans want economy in government. The orders of Postmaster General Donaldson provide for substantial cuts in postal service. One delivery a day will be the rule in residential areas. The post-office windows will be open shorter hours. Mail will be picked up less frequently. Postal staffs will be reduced in numerous cities.

The purpose, of course, is to cut the costs of the Department. The United States post office is one of the biggest businesses in the world. About 500,000 persons are employed in 42,000 branches with 24,000 buildings. The Department owns 10,000 cars and trucks, with an average age of 15½ years. About $1.3 billion a year is spent in operating this business. The Department has been a notorious money loser. In 1949, for example, the losses were estimated at about $500,000,000. Americans made up the deficit out of tax money—income taxes, luxury taxes, and dozens of other taxes levied by the Federal Government.

The post office delivers 37,000,000,000 pieces of mail every year and handles 800,000,000 other items like money orders. It operates a savings bank with 4,000,000 depositors. Almost every department of the postal business loses money. Air-mail services went into the red about $32,000,000 last year; $155,000,000 was lost on second-class mail service; $30,000,000 on money orders; $45,000,000 on postal cards; $87,000,000 on third-class mail, and more millions on insurance, c. o. d. mail and postal orders.

Some of those losses probably can be traced directly to poor management. The Hoover Commission said the Department could save a great deal of money by good management. Still more money could be saved by modern methods and tools in handling mail and increased rates for some types of service. The Hoover Commission said that the Department should be out of politics; that postmasters should get their jobs on the basis of ability. It would also cut down the 900-page book of rules for the operation of the Department.

Well, it looks as if Postmaster Donaldson is taking the bull by the horns in the order curtailing service. That is one way to reduce expenses. It also is a quick way to cut costs and reduce the Department's huge deficit. There are two other methods that can be applied. Congress can adopt some of the efficiency suggestions proposed by the Hoover Commission. They probably would require time and more study. Congress also could cut post-office losses by increasing postal rates.

The mail service curtailment order in the long run should be beneficial. It will help crystallize sentiment among all those who use the mails—and that includes just about everyone in the Nation. A great many complaints over reduced service already have been received. Reduced service may bring more pressure for the incorporation of the Hoover Commission's suggestions in the operation of the Department. It also will let Government officials know whether the public wants the service it has been receiving at the expense of an increase in rates. A little experience with one mail delivery a day and shorter post-office hours will enable the public to reach the right verdict. The test period may show that we need a little of everything.

The Evils of Communism

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. MORRISON. Mr. Speaker, what is communism? What is its background? How does it affect us today? The world is groaning under the burden of the disastrous results of communism, nazism, and fascism. The United States is the only major country that is not scratching in the earth to find means of building up a broken economy. The crumbling walls of ruined cities cry out to the beholder: "Shame to civilization." Standing amidst a rubble and stained glass windows, lonely church spires seem to reach to God for help.

In our land of plenty, granaries are bursting at their seams and with a new golden crop in the offing. Our factories, humming with activity, are producing those things that make for progress as well as the finer things of life. And of this we are ready to share with suffering nations for in the abundance we have we can help build other nations to be self-sufficient. This is one mode of attack against communism in countries who are too weak to protest against the inroad of its infestation. In free countries lies our strength.

COMMUNISM NOT AN IDEOLOGY

Communism is not an ideology born of the Russian Revolution. It has existed since the early days of history when people lived in groups for protection against enemies and they shared equally in land and produce. Some planted, some produced the necessary things for households, some fished and hunted for game, and others were used as guards to protect the community. From this ancient civilization grew the desire to better their condition in agriculture, achitecture, maritime activities, the arts, and so forth.

Some people were laggards and they lived in want, while others worked diligently until they had worldly goods pleasing to mankind. From this point capitalism began. But the condition of the poor grew worse and, eventually, in some countries they constituted what could be called slaves in some sections.

RUSSIAN REVOLUTION

When the Russian Revolution came ending czarism, it brought into power Bolshevism, later called communism. This change of government gave some relief to many of the lower class or proletariat but greater power to those in high government offices. Under this dictatorship came the great purge in which thousands of the bourgeoise were imprisoned or liquidated, their property confiscated to become Government property. Those holding office were directly responsible to Stalin. In fact all Russians were ruled with an iron hand to such an extent that one word or act against the Government meant prison or death. The banks, factories, and all business was taken over by the government. It is that way today with favoritism shown toward few but a desolate way of life for the many.

If communism were to be our mode of government let me list a few burdens we would have to bear. We could own no land or property, for it would belong to the Communist Government. You could rent the land but would be told what to plant and then what to sell the produce for. Your bank account would be taken from you, leaving you only a small amount. Police permission would have to be obtained in order to travel from one place to another. Practically all churches would be closed and used as buildings and storehouses. Children and adults would not be allowed religious training. All Bibles would be destroyed. There would be no church weddings, baptisms, or funerals. Priests and ministers of the Gospel would be

persecuted and all church property would be taken over by the government. All fraternal organizations like the YMCA, American Legion, Rotary, and Chamber of Commerce, would be destroyed. The Communist government would limit education and designate what should be studied and how long a student may study. Lenin has said, "Give us a child 8 years and he will be a Bolshevik forever."

ELECTIONS A FARCE IN RUSSIA

Elections would be a farce, as in Russia today. There would be only one political party, namely, the Communist Party. Even music composers in Russia are censored and compelled to write only music with a rhythm that workers could keep time to or hum as they work in order to increase production. Even the code of morality and ideals are dictated by the communistic government. The communistic picture is complete when all freedom is destroyed.

Have you heard of the Parade of the Happy Workers? In Moscow these parades last as long as 5 hours and all men and women from all the factories, fields, and so forth, must march or they will lose their day's pay, besides being fined. Imagine trudging along for 5 hours and being happy about it. This is one of the supposed pleasures or recreations. Old women do all the street cleaning. With crude brooms made of switches tied to a handle, they sweep the streets, many of them cobblestone. In winter they shovel all the snow, which is pushed down manholes. Women run all the streetcars, clean locomotives, paint, and even do building, including scaffolding.

Soviet Russia proclaims everything is being done for the benefit of the proletariat, or the poor class, but it takes people who have lived there to see the falsity of this. The proletariat are exploited; men and women are in rags with nothing to change to. In winter the men tie rags about their feet and legs for protection. Quilted cotton coats are the only warmth the average Russian woman has to shield her from the bitter cold Russian winters. As for food, cabbage and black bread are principal foodstuffs. Foreigners coming from there say they will never eat cabbage again for they saw so much of it. Cake is made of cornstarch and is very unpalatable.

The proletariat buy at certain designated stores and pay enormous prices for what little food they can afford to buy, standing for hours in a long line to be waited upon.

RUSSIANS ARE HUNGRY

Russians are so hungry for the good things of this world and they have so little. When a Sears, Roebuck catalog gets into their hands, they are astounded that Americans can buy all the things listed.

One observer attended one of the few churches in Moscow, and he said he was amazed at the grandeur of the church and the richness of the priests' robes, while outside the church the poor stood in rags. Can this be called communistic equality?

In 1935 the Seventh World Congress of the Communist International met in Moscow. The streets were gay with red bunting while pictures of Stalin were in every shop window. It has been said that pictures, 30 feet high, of Stalin were hung from many buildings. Thousands of delegates from countries where communism had taken root were present at this great demonstration. Among the delegates were Earl Browder, general secretary of the American Communist Party; William Z. Foster, James Ford, and other noted Communist members sat on the speakers' platform with Stalin. At the end of a 2-hour speech George Dimitroff, a Bulgarian Communist, told the story of the Trojan horse, comparing it to the strategy that Communists must use to overcome the enemy in foreign lands. This idea he evidently put across because that is the method that the Communist Party has used so successfully here and elsewhere.

AMERICAN YOUTH CONGRESS

An important Communist group was organized at the New York University, New York City, in 1934, called the American Youth Congress. It was instigated by Miss Viola Ilma. Many youth groups were represented. It started out with high ideals for the advancement of youth, but, by the usual subversive procedure, the group in time came under the control of the Communists and was used to cover up un-American activities.

In 1937 the American League Against War and Fascism changed to the American League for Peace and Democracy.

The third annual congress of the league decided as their main issue that more groups of the Communist Party were to organize and work in factories, especially munitions plants, and to organize the league among marine and transport workers.

The Communist program is based on the teaching of Karl Marx, founder of the International; Friedrich Engels, also an important member of the party; Vladimir Lenin, founder of the Third Communist International and first Premier of the Soviet Government; and Joseph Stalin, now Premier. The movement meant the complete social control of economic life, including ownership of all property by the Government and the revolutionary reaction for the violent overthrow of capitalistic society.

HISTORY OF COMMUNISM

Let us trace the history of the Communist movement in the United States. It held its first convention in September 1919. Most of the delegates were foreigners. On September 18, 1945, the Communist Party celebrated its twenty-sixth anniversay at Madison Square Garden in New York City. Later the American Communist Party—United Communist Party—was raided by Attorney General A. Mitchell Palmer and had to hold secret meetings. Later two parties were formed, the Workers Party of America and the Communist Party of America, which was finally combined to form the Communist Party of America. In 1948 at a convention the Communist Party of America was reconstituted, and Earl Browder was replaced by William Z. Foster as leader.

The American Communist Party platform is—

First. An organization operating under centralized discipline, subordinated to the Communist Party of the Soviet Union, the single and ruling party of that country.

Second. A section of the World Communist Party, controlled by the Communist Party of the Soviet Union.

Third. An organization whose basic aim, whether open or concealed, is the abolition of our present economic system and democratic form of government and the establishment of a Soviet dictatorship in its place.

Fourth. An organization resorting to deception, evasion, illegal methods, violence, and civil war.

The Communist Party of the United States is a division of the International Communist Party founded by Vladimir Lenin during World War I.

First of all, he sought to destroy the capitalist system and government under which it operates, in order to include the nations of the world in the Socialist Soviet Republic. Again, he wished to defend a wobbly Soviet Government by causing dissension among hostile nations and bringing about strife. Later the party took the name of the Russian Communist Party. The Russian Revolution aided in the growth of the party in other nations. A large sum of money was assigned to carry out propaganda in foreign countries. Strikes were incited in Berlin, Glasgow, London, and Liverpool through Communist efforts.

HATRED OF FREE ENTERPRISE

The party principles indicated a hatred of free enterprise or capitalism. Members were not required to observe honesty and though taking the oath of allegiance, they need not stand by it. The party stood above all. Members were taught sabotage, spying, use of passport frauds, counterfeiting, rioting, disloyalty to army, navy, and air force. They were instructed to stay within the law and outside the law, to work for key places in schools, farm organizations, labor unions, and so forth.

The Scientific and Cultural Conference for World Peace met in New York City in March 1949. The purposes of the meeting were:

First. To provide a propagandist forum against the Marshall plan, the North Atlantic Defense Pact, and the American foreign policy.

Second. To promote the foreign policy of the Soviet Union.

Third. To mobilize intellectuals for their program, teaching civil disobedience against the United States Government.

Fourth. To prepare for the coming world peace conferences, with promotion of communism in view.

Fifth. To discredit American culture.

The State Department indicated that—

None of the cultural leaders of eastern Europe who attended were free to express any view other than that ordered by Moscow.

The three professors dismissed from the University of Washington were on

the speakers' platform, all having had connection with the Communists.

Dr. Ernest Boas, of Columbia College of Physicians and surgeons, said that in the Soviet Union—

Science has become the servant of the state to such an extent that the only science is that approved by the leaders of the state.

COMMUNISM INCREASING IN UNITED STATES

Communism is increasing here in the United States in great and alarming strength. Working as they do in secret groups, carefully selecting and training men and women and placing them in strategic offices in organizations, they build from these small cells until control is obtained and honest, patriotic workers are crowded out.

Members of the party are sent to the Lenin Institute, in Russia, where they are trained in sabotage, to capture railroads, shipping, radio stations, power plants, in fact everything that could paralyze a nation in time of war or revolution. There have been a large number of schools of such training here in the United States sponsored by the party. They teach members to fill key positions in organizations, factories, and so forth. The party pays all expenses. The United States Government closed 29 of these schools in 1949, many of which were named after famous American people as a cover-up of the communistic doctrine they were teaching.

The Daily Worker is the Communist paper in the United States, and is published in New York. Articles in the Daily Worker by many well-known Communists were the means of finally proving their connection with the party, in spite of denials. That is what is so dishonest about the Communists. Truth means nothing; lying, deceit, and subterfuge are their watchword for the progress of the party.

COMMUNISTS ARE SLICK AND TRICKY

Another trick of the Communists is to hide their activities behind the skirts of some organization with a high sounding patriotic name and have innocent and prominent men who are non-Communists address the meeting. Outstanding Americans often are used as dupes.

Pending legislation in Congress compells all Communists to register with the Attorney General and indicate all propaganda as their own. Passports are forbidden to Communists and they cannot work on United States Government jobs. It also states that it is illegal for anybody to set up in the country a totalitarian dictatorship having any connection with a foreign power. In spite of this, many Communists obtain false passports to foreign countries, some members having made trips a number of times on false passports. Families of Russian Embassy employees are not free to be brought over to the United States. The freedom and the pleasant way of living in the United States is too much of a contrast to that of Russia. The friendliness of the Americans reaches out to all. The restaurants do not find Russians sitting on one side of the dining room and Americans on the other. There is free exchange of speech and sociability. The Russians can make real friends here while in Russia sociability is rare and dangerous to both Americans and Russians alike for the MDVK is ever on the alert for spies and sabotage in Russia.

COMMUNISTS ARE WELL TRAINED

There have been many cases of espionage in the past months brought before congressional committees. There have been many accusations of espionage among intelligent and brilliant men. But so well trained are the Communists that their statements, at the hearings, tell little of the truth. A good definition for Communist would be: "A Communist is a person who sells his soul for the advancement of his party."

Russian espionage is the great concern of the day. And, in spite of all precautions, there have been leaks in this country. Men and women of unusual intelligence and personality give or sell information to the Communists. They seem to have no fear of the law of God or man. It is to Soviet Russia they appear to owe their allegiance.

The peculiar thing about communism is that brilliant men and women from many walks of life are included in the party and though they take an oath of allegiance to the United States, that means nothing to them except that all suspicion as to their loyalty be allayed. Here we find professors, writers, and a whole host of others, representing some of the best intellects in our Nation.

Communists are known to be in cable offices, radio-control towers, merchant ships, and commercial air fields. In case of war or revolution within our country, these men hold positions that could result in terrible catastrophes to our country. As mentioned before, the Soviet Union has ordered members to infiltrate into all important positions, to be ready in case they are needed for revolutionary purposes.

HOOVER HAS DONE A REMARKABLE JOB

J. Edgar Hoover, head of the FBI, to whom this Nation owes so much, has done a magnificent job in using his most efficient organization to drive out communism. He explains it is the duty of all loyal citizens to act before it is too late. I quote Mr. Hoover:

I have always entertained the view that there are few appellations more degrading than Communist and hence it should be reserved for those justly deserving degradation.

California University has just ruled that all members of faculty should pass the loyalty test or be dismissed. University of Washington and Washington State College have followed suit. All such organizations and institutions should demand the loyalty test and stand by to enforce it to the limit.

This is a country of plenty and everyone has a right for redress of wrongs, we have more freedoms than any country on this earth. Let us keep it free for our children and posterity.

Until recently little has been known of the concentration camps and slave labor camps of Russia, but escapees from these places of horror, tell of the cruel treatment received at the hands of guards and of the thousands who die yearly from overwork, illness, and starvation diets. Hundreds of thousands of prisoners are forced to work on gigantic projects such as building railroads in Siberia, canals, and working in mines, etc. The Russian Government has been able to accomplish a great deal with no expenditure for labor, only expenditure of human flesh and life. Often half of the workers are women who toil with the men. Long columns of ragged women marching four abreast under armed guards are familiar sights in Russia.

PEOPLE COMPLETELY DISAPPEAR IN RUSSIA

When there is need of enlarging the number of forced laborers, men are arrested on city streets and under pretext of having committed some crime, are sentenced to these slave camps. Relatives never see them or hear from them again. This is just an inkling of what takes place behind the iron curtain. We understand the dead of Russia are cremated. Do you wonder, with all the millions of people dying or being liquidated each year that every foot of Russian soil must cover a skeleton.

The Russian people seem to be stricken dumb with fear and want. Affection in home circles is chilled by the oppressive atmosphere, where secret police prey upon innocent and guilty alike.

God forbid that that should be our lot. It will be if we are not on the alert. Stalin's evil forces are on the alert to make us and the rest of the world subservient to Soviet Russia, if they can.

From a small beginning, communism has reached gigantic proportions. It will work as insidiously and fast as a cancerous growth to sap the life of our liberty-loving Nation, if we do not gather all our forces together to defeat it.

William Penn once said, "Men must be either ruled by God or they must be ruled by tyrants." We, the people of America, believe that with wisdom and godliness, courage and self-reliance together with tolerance, our Nation will stand indestructible with liberty and justice for all. We prefer to be ruled by God.

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mrs. ST. GEORGE. Mr. Speaker under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the twenty-fifth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

Communists in the United States of America have been singing low now for 20 profitable years about taking the Government by force and violence. Since F. D. Roosevelt's day they have found it easier to work within our Government than to try knocking it down from the outside.

But back in 1919 they were less sophisticated.

After all, they were a newly formed and inexperienced force then, pulled together out of a menagerie of anarchists, Socialists, IWW, and syndicalist bomb heavers and the inevitable covey of Harvard radicals.

One of the most interesting of all histories on the organizational operations among the Communists of those times was put together by—believe it or not—John L. Lewis, president of the United Mine Workers.

He did it to show the Communists were to blame for the "Herrin massacre" of July 1922, in which some 22 miners not out on strike with the UMW, were shot dead at Herrin, Ill.

His account was first published by the UMW in newspaper advertisements, then finally as an official pamphlet of the United States Senate (S. Doc. 14, 68th Cong., 1st sess.), on January 3, 1924.

It is one of the ironies of our time that Lewis, who told a documented and impressive story in 1924 of the Communist drive to capture the American labor movement and lead an open war on the Government, would, in 1934, invite the Communists to come on in and organize the CIO for him.

He can offer only one possible explanation, if not excuse.

The President of the United States had by then let the Communists in on the Government itself.

But in 1924, Lewis' published record not only made a national sensation—it confirmed in detail an already obvious fact.

Lewis told how the Communists in 1919, led by one William Z. Foster, had precipitated strikes in the meat-packing and steel industries, not to advance the interests of the workers but to cause riots and death in the streets. They were all too successful in that.

He told of the railway switchmen's strike of 1920 and the railroad and coal strikes of 1922, all run by the Communists to the same end, and of $1,100,000 sent in from Moscow by way of Canada for buying control of the UMW.

He quoted the famous declaration of Gregory Zinoviev, president of the Communist International, on the mission to arouse "the revolutionary spirit of the workers and prepare them for the coming revolution in America."

People in America had plenty of reason to know that Lewis had the facts.

The period, 1919–1920, had been one of real and reasonable national alarm. For instance, somebody put something like 30 bombs in the mail in New York City in April 1919, addressed to prominent citizens all over the country. Most were discovered in time, but one actually exploded in the home of a Senator and wounded a maid.

On September 16, 1920, there was the episode of the bomb in Wall Street that blasted the Morgan corner, knocked chunks off the buildings that can be seen to this day, killed 30 and hurt 100.

The whole Nation was seriously disturbed. After all, the government of a great empire, Russia, had been overturned in just such a kind of uproar, and here were people in our midst declaring their intention to do as much here.

And so, in 1919–20, while the earlier mentioned Ludwig Martens was whipping up agitation for United States recognition of the Soviet Union by conjuring up dreams of rich business for United States industry, one J. Edgar Hoover, then a young lawyer in the Department of Justice, was preparing briefs for the deportation of undesirable aliens.

Hoover's job was the presentation of cases for the Department of Labor, then in charge of immigration and deportation. One William J. Flynn was head of the "United States Bureau of Investigation," now the Federal Bureau of Investigation.

Flynn made wholesale arrests, Hoover made enough cases stick, and boatloads of queer fish were sent outward-bound, among them Emma Goldman and Alexander Berkman, the most widely known of all the anarchists.

Emma went to Russia expecting to find one thing. What she found she told in two books, My Disillusionment With Russia, and My Further Disillusionment With Russia.

That was all in print by 1924, when John L. got his own version into the form of an official United States Senate document.

You may ask why I drag out all this mention of things past.

It is simply to show that when F. D. Roosevelt came to the Presidency in 1933, no American could say that the facts on communism were in doubt. Yet they were ignored.

Export Trade Support of the International Trade Organization

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. JAVITS. Mr. Speaker, recognition is becoming general that the freeing of the channels of trade of the free world so essential to our own security and that of the world is directly tied into the approval of the International Trade Organization charter. The appended editorial from the May 1 issue of the authoritative journal, Export, Trade, and Shipper, makes this clear:

DESPITE ITS OBVIOUS IMPERFECTIONS WE URGE SUPPORT OF ITO

The Habana Charter for the International Trade Organization is currently under consideration by Congress. Its ratification has been urged by administration spokesmen including the Secretary of State. William L. Batt, as chairman of a committee which includes many of this country's most prominent and active business leaders, has presented strong testimony in its support.

It is common knowledge that opinion is rather sharply divided for and against ratification. Several national business and trade organizations are on record against it. Significance of their opposition is offset, in part, by the approval of other organizations, but more effectively by the fact that many of the most prominent members of the opposing organizations are among the most ardent supporters of the Charter.

Nobody claims that the Charter as now drawn is ideal. It is loaded with exceptions, reservations, and escape clauses for a number of which the United States itself is responsible, which weaken its effectiveness. Were there an alternative proposal, less vitiated by loopholes, we might well prefer it to ITO.

No such alternative plan, however, has been suggested. Rejection of the Charter would, therefore, be tantamount to deciding in favor of bilateral deals, at a time when American world traders are in fact bitterly opposed to bilateralism. Failure at this time to establish an international body, through which to attempt the ironing out of world trade problems on a multilateral basis, would in our opinion constitute a serious setback to the general program for world economic recovery.

We have heard no valid arguments against ITO based on any positive threat or danger. Intelligent criticism has been directed rather at the weaknesses and omissions in the proposed Charter. These defects, we believe, are readily susceptible to gradual correction and improvement, after the Charter has been adopted. A start must be made and now is the obvious time to make it. We favor ratification of ITO.

Stonecutters Ask Tariff Protection To Preserve Their Jobs

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter which I have received from the employees of the Adolf Meller Co., of Providence, R. I. These workers are semiprecious and synthetic stonecutters. They are asking a tariff adequate to preserve their jobs. It is a new industry and has already been obliged to reduce its force 50 percent. The letter follows:

ADOLF MELLER CO.,
Providence, R. I., May 17, 1950.

Hon. JOSEPH W. MARTIN, Jr.,
House of Representatives,
Washington, D. C.

DEAR SIR: We, the undersigned, who are semiprecious and synthetic stonecutters, living in Providence, R. I., are the remaining help left from a large force of employees formerly employed by the Adolf Meller Co. This concern fabricates and cuts genuine black onyx and synthetic gem stones.

We have signed this petition requesting you to oppose any legislation which would further reduce the already low tariff on synthetic gem stones, which, in turn, affect our job security.

Our livelihoods are already threatened by the disastrous effect which has been brought about due to the existing large-scale importation of synthetic gem stones.

We respectfully petition the tariff committee to increase tariff on synthetic gem stones to offset the wide fluctuation of German currency in relation to the dollar, the low standard of living, and wages paid in this similar industry in Germany.

Thanking you for your interest in behalf of our families, we remain

Sincerely yours,

Robert Meller; Helen L. Bamford; Delia R. Dube; J. Gertrude Fitzgerald; Mary Izzi; Paul Pollak; Raymond J. Kern; Martin Himmels; Mary Teafford; Mary A. Hannon; Lean Celona; Henry Hamburger; Arthur Zander; Anthony Del Greco; Agnes Kemma; Anna Izzi; Mary DeCecio; Joseph St. Laurent; Carl Pickert; A. Lincoln Clark; Joseph E. Iavarone; Joseph Silva, Jr.; John Killon, Jr.; Edward J. Gendron; Mario A. Aetruda; Theodore Grenier; John Basmajian; James L. Oliver; Floyd H. Graham; Walter Bond; Eugene C. F. Cameron; Anthony D. Santis; Theodore Zimmer; Moses N. Perry; Edward C. Hamburger; Max E. Meller.

Woman's Place in Government

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mrs. KELLY of New York. Mr. Speaker, under leave to insert my remarks in the RECORD, I include the speech, Woman's Place in Government, by our distinguished colleague the Honorable MARY T. NORTON, at the National Democratic Conference and Jefferson Jubilee in Chicago, May 14, 1950. Mrs. NORTON knows her subject well, having devoted the major portion of her life to politics.

The speech follows:

I am deeply grateful to you, Mr. Chairman, and to the Chicago Host Committee for the privilege of addressing this distinguished audience of Democrats from all over this country. In appearing before you I feel quite at home and that I am among dear friends. You have sent able and distinguished men to the Senate and to the House of Representatives. They have been my colleagues during my long service in the Congress. Tonight you have on your program our beloved Vice President. I am sure he will discuss some of the issues of the campaign this year. Any discussion by me would therefore seem superfluous, and I shall confine my remarks more particularly to the women present. I feel so strongly that our woman power could be used more effectively to advance the Democratic Party, if women would realize how deeply Government cuts into their own personal lives, and how very much President Truman's program will help them to achieve the things they so ardently desire for themselves and their families.

Thirty years ago a vast responsibility was thrust upon the women of America when through the nineteenth amendment we were given the right of suffrage. Up to that time men alone had controlled politics from the beginning of the Republic and the entrance of women into this field was a new experience for them, too. We came to the men of our party unhampered by any traditions, unbound by any pledges. We had high hopes that women everywhere would respond to the privilege of voting and answer the call for service in politics. In fact, we even looked forward to the day when women would be actively considered in framing party policies, and dreamed of the time when many women would be given consideration in the selection of candidates for public office.

The history of the past 30 years has shown how disappointed we have been in these hopes. Women have not achieved their rightful and true place in the political arena. Unfortunately, it is still a man's game, with women playing all too minor a part. Although we women may be prone to feel that the men of our party have lost none of their strength in party circles, I believe we must face the issue squarely and ask why women have not made more progress. I think that we can blame ourselves that so few of us have been elected during 30 years to public office, where our influence could be felt.

While it is true that in some parts of the country women have been discouraged from seeking party nominations, I feel that if their hearts were involved in their desire to become candidates, they would succeed in reaching their objective.

Recent elections have shown that women make sincere, intelligent and vigorous candidates, who can carry a message to the people as enthusiastically as men.

During my years in Congress, I have received a great many letters from women evidencing their interest in politics and asking how they should proceed in attempting to enter the field. Of course, like any other goal, there are a great many ways of reaching this objective, but to all inquirers, I can give only this sure reply—to work within our party and work just as hard as we would to gain success in any other field. There is no royal road to success. In politics, as in every other activity, work and more work is the answer. I realize that the path is often rough and difficult and the goal apparently too distant to attain. I, myself, have often become discouraged but I say, after 30 years in politics, that the objective is worth every effort expended.

This particular year offers an excellent opportunity to any woman who is anxious to assume her full share in party work and especially to a woman who aspires to public office, because in these complex times there have developed so many problems which touch her personally—and foremost of all is the goal so precious to all women—the problem of a lasting peace in the world, and what we can do to strengthen that instrument for establishing the peace, the United Nations. If only women would give their wholehearted and active support to this organization, its position in the world today would be so much stronger and its program so much more effective. Women did not share the responsibility for the "death" of the League of Nations, but if the UN should fail in its lofty goal, women cannot cast aside the blame which would be theirs in not supporting it to the fullest.

Statistics have shown that there are more women in the United States eligible to vote than men, yet women so far have failed to organize their strength to sway public opinion. There is no doubt that women want peace, but how indifferent they often are to the forces which seek to destroy it.

Nor have women in general used their strength to support qualified women candidates for public office. I have often said that a woman should not be supported in an election because she is a woman but because she is as well qualified, and sometimes even more capable, than the man who is opposing her. The record of the number of women in public office is not one to which we can point with pride. Even in 1949 only 214 women were elected to State legislatures and in 1948 only eight women to the House and one to the Senate. In fact, in 30 years only 39 women altogether have served in Congress.

In view of this sad picture, my purpose in addressing you tonight, and I am speaking especially to the women present, is to urge you to do all in your power to organize women to become active in the Democratic Party. What organized women can accomplish was ably demonstrated 2 years ago in Maine when a woman defeated two other strong Republican Senatorial candidats, both men, in a vigorous State-wide campaign. I am hoping that the same result will be achieved this year in California where a well qualified woman, HELEN GAHAGAN DOUGLAS, is a candidate for the United States Senate.

Our party has much to offer women and has demonstrated during the last 18 years that there is a very definite place in its economic and humanitarian objectives, where women are particularly fitted to serve—for example, our labor, health, social security, foreign aid, school, and children's programs, all of which require the type of ability so many women possess. I believe that it is generally conceded that women have contributed much not only to the initiation of these programs but to their successful operation.

We are happy that in the past few years and under the leadership of President Roosevelt and President Truman, women have been recognized and appointed to positions of great importance and responsibility. We earnestly hope that as these women "make good" in their different positions, the President will be encouraged to name more qualified women to high office. Women presently in politics and Government by their splendid example of public service can be the opening wedge whereby many other women will find their true place in public life. Success among these women will engender interest among their sisters in the causes of civic improvement, honesty in politics, and good government.

While it is true that every woman cannot be a leader, it is also true that every woman has something to contribute to government and in the precincts and wards of our cities, there is much to be done to spread the gospel of democracy. Women must not only vote themselves but must enlist the votes of other women who may still be reluctant to use the privilege they gained through the nineteenth amendment. There are still far too many women who do not use this prerogative on election day.

In a practical way, women can do much of the so-called spade work in their home communities. They can take an active, intelligent interest in all issues involved, can disseminate literature, organize, and address meetings, pull doorbells and be missionaries for the Democratic Party even among their neighbors. Every individual in her own way can help and it is a well known fact that the work done by devoted women who love our party has paid great dividends in votes. To these unselfish women I would like to pay my tribute of appreciation for the big part they have taken in promoting the Democratic Party and rolling up the majorities which have made victory possible. Many of these women are here tonight.

May I at this time plead with you to continue your efforts in a cause which will mean so much to every American this year—the election of a Democratic Congress to give the President the necessary tools with which to work, and enable him to insure the success of his great Fair Deal program.

The President deserves the whole-hearted support of every individual who believes in freedom of opportunity in a peaceful and free world. I know all women sincerely believe in that principle. President Truman has done much to promote freedom throughout the world, and we, who have the blessings of liberty, must stand with him in the magnificent program to which he has dedicated himself. His great courage and steadfast purpose should be an incentive to every person who loves democracy. As long as democracy prevails, we need have no fear of communism. There is no place for any foreign ideology in the Americanism which President Truman represents, regardless of the hate propaganda that has been organized and disseminated by certain bitter Republicans and, I regret to say, a few Democrats. These venders of hate stop at nothing to attain their objective and it is well for the women of the country to be aware of this type of attack. We are experiencing something in our American life which is very dangerous. How long will we be able to enlist the services of men to accept high office in government when they know that their regard will probably be savage attacks from those who disagree with them. It is not difficult to destroy the reputation of any man and apparently there are people in public life who do not hesitate character assassination to gain for themselves a doubtful type of publicity. However, I do not think that the women of the country are easily sold to that type of propaganda and I am sure that the campaign of hate that is so well organized to defeat the objectives of President Truman in his desire to give the

people of the country the kind of administration they so ardently desire will not be successful. Those of us who remember the bitter fight on the League of Nations cannot avoid comparing it with what is going on today to try to destroy the United Nations.

President Truman is our great leader in the fight to maintain a free world, a world we women sincerely want for ourselves and our children. We are convinced that this goal can be best attained by the program of the Democratic Party and by the election of a Democratic Congress. Our job this fall is a big one and is a battle in which every individual can contribute a share. Our course is clear. We must not fail.

Resolution by Hadassah on Arab Arms

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 4, 1950

Mr. MULTER. Mr. Speaker, I have spoken out on a number of occasions in recent months on the question of Britain's rearming of the Arab states and the threat this action entails for the future existence of Israel as an independent state. I have asked time and time again that our Government take the necessary steps to insure lasting peace in the Middle East by bringing together the Arab states and Israel for the purpose of peace negotiations and final peace agreements between them.

Israel is anxious for peace and would rather invest its limited funds into aiding the hundreds of thousands of immigrants who have entered the Jewish state in the last 2 years to establish themselves on the farms and in the cities, than spending that money on military equipment. One of the organizations that is doing a marvelous job in aiding the newcomers to Israel, particularly in providing them with medical care, is the women's organization in this country known as Hadassah.

There is a very fine chapter of this organization in my district, the Bensonhurst Group of Hadassah, which numbers 885 members. At their meeting on May 10, 1950, this group adopted the following resolution, which I desire to place in the RECORD:

RESOLUTION ADOPTED BY THE BENSONHURST GROUP OF HADASSAH (885 MEMBERS) AT A MEETING ON WEDNESDAY, MAY 10, 1950

Whereas for some time it has been known that Britain has been engaged in the arming of Arab countries much beyond the need for local or internal security; and

Whereas such arming by Britain has been publicly acknowledged by the United States Government; and

Whereas there exists a very definite threat by the Arab League to organize all the Arab states in a strong united front militarily and economically against the young struggling democracy, Israel; and

Whereas we are profoundly convinced that our Government is greatly concerned about the peace and security of the Middle East: Be it therefore

Resolved, That we of the Bensonhurst Group of Hadassah at a meeting assembled on this day of Wednesday, May 10, 1950, do solemnly call upon our Government to make good its avowed purpose of maintaining the peace in the Middle East by approving Israel's persistent pleas for permission to obtain arms here for defensive purposes, the only course best calculated for the maintenance of stability, peace and security in the strategically important Middle East.

ELSIE STRYKER,
President.
BELLE KIMMELFIELD,
Chairman, Public Relations.

Why Penalize a Reserve for Being a Reserve?

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 15, 1950

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks, I present an advance copy of an article which will appear in the June 1950 issue of the Reserve Officer magazine, the official publication of the Reserve Officers Association of the United States. This article is entitled "Why Penalize a Reserve for Being a Reserve?" by Col. Melvin J. Maas, United States Marine Corps Reserve, a former member of the Congress of the United States. The article is as follows:

WHY PENALIZE A RESERVE FOR BEING A RESERVE?

(By Melvin J. Maas, colonel, U. S. Marine Corps Reserve, chairman of the legislative committee of ROA)

There is wide divergence between the services in the matter of adjusting the position of their Reserve officers when called to active duty. The Army and the Air Force credit only active duty performed in grade toward arriving at the relative precedence of reserve officers among themselves and with Regulars when the Reserves are mobilized or otherwise report for active duty. The Navy and the Marine Corps in general, place their Reserve officers on the precedence list according to the dates of their commissions.

What this means is that a Reserve officer of the Army or the Air Force, with only the usual 2 weeks' annual active duty, will be ordered to active duty way down on the list of officers of the same grade and date of commission in the Regular services, and, as to Reserve officers of like service in the Navy and Marine Corps.

As an example: Officer "A," a captain in the Army Reserve, whose commission is dated July 1, 1946, has had 15 days' active training duty in 1946, 1947, and 1949. He has, therefore, performed a total of 45 days' active duty. Officer "B," a captain in the Air Force Reserve, also commissioned a captain on July 1, 1946, performed 2 years' active duty, and on July 1, 1948, went on inactive duty. Officer "C," a captain in the Marine Corps Reserve, with the same date of commission as his brother Reserve officers "A" and "B," performed 15 days' active duty during each of three intervening years, so he, like "A," has a total of 45 days' active duty.

On July 1, 1950, all three are mobilized. Let's see what happens to their relative precedence.

"A" takes his place in the Army behind the captain in the Regular service who was promoted to captain 6 weeks before: That is the middle of May 1950. "B" takes his place in the Air Force behind the Regular who was made captain July 1, 1948. "C" on the other hand ranks with a Regular Marine captain commissioned July 1, 1946.

"A" has lost all but 6 weeks of 4 years on the lineal list. "B" has lost 2 years. "C" has lost nothing and has kept up with his running mate in the Regular Marine Corps. (The Naval Reserve officer of comparable rank has held his Regular Navy running mate like the Marine Reservist.)

A more extreme example but a typical one would be—

An Air Force Reserve captain who reached that rank on July 1, 1946, has had 2 weeks' active duty each subsequent year or a total of 2 months. An Army Reserve captain was promoted to the grade on April 1, 1950, and immediately reported for 90 days' active duty. They are both mobilized on July 1, 1950. The Army Reserve captain immediately takes precedence over the Air Force Reserve captain who was promoted to captain nearly 4 years after the Air Force Reserve officer.

Apparently the theory of the Army and the Air Force is that only active duty contributes to the value of a Reserve officer for his war assignment.

The Navy and Marine Corps on the other hand believe that a Reserve officer is growing and expanding in his general knowledge, abilities, and capacity for leadership. They believe that a successful civilian career also contributes to a Reserve officer's ability to quickly adjust himself to the new problems of the military which always develop in time of war. They are also new to the Regulars.

Those officers of the Regular Establishment who insist on denying parity to Reserve officers in time of war, use as their main argument that a Reservist, training only part time, cannot possibly be as competent as a Regular who puts in full time in the military. This is not necessarily true at all. The Reservist certainly is not so well trained as the Regular, but this is not necessarily a gage of either's competence, once in a war. None of us contend that the Reserve officer is as well trained as the Regulars, grade for grade, but that is not the issue. The test should be rather—is the Reserve officer competent to perform the duties of his rank?

If he is not, he should not be continued in the Reserve at all.

It is up to the Regular Establishments to institute and conduct training programs that will qualify the Reservist for his duties and which will also result in a constant weeding out of those who are found unwilling to or incapable of becoming competent.

This is exactly the attitude and program of the Navy and Marine Corps for their Reserve. In this policy the Naval and Marine Reserves concur wholeheartedly. The Navy does not expect its Reservist to be the equal of their Regular running mates upon mobilization. They do expect the Reservist to be capable of performing the duties to which he will be assigned.

They expect to eliminate the incompetents among us through the selection-for-promotion system. This will produce a Reserve capable of immediate and complete integration with the Regular Establishment upon mobilization. So thoroughly does the Navy believe in this that they propose that there be no distinction whatever upon general mobilization and then the Reserves become in every sense part of the Regular Navy and Marine Corps during their war service. To have such a Reserve requires that the date of commission of the Reservist determine his position on the combined lineal list in peace and in war.

Any other system results in a Reserve officer being from two to five or more years older than his contemporary of the regular service. From the highest authorities in the Navy came testimony after World War II that Reserve officers, 3 months after mobilization, were indistinguishable from Regulars in the duties for which they were assigned. Thereafter, both Regular and Reserve learned their war duties from the war itself.

No less an authority than Admiral Nimitz made this statement repeatedly. If this is true, then there is no justification for permanently penalizing the Reserve officer from 2 to 5 years of age in grade compared to the Regular. The result is that a Reserve officer of the Army or Air Force upon reporting for active duty is penalized thousands of numbers on the precedence list which is far, far more drastic than a stiff court martial would award as disciplinary punishment. Once lost, these numbers cannot be made up.

This penalizes a Reserve officer for being in the Reserves in peacetime. A civilian commissioned during a war, suffers no such penalty. The day he is commissioned and reports for active duty, determines his place on the lineal list. The Reserve officer who has contributed liberally of his time and effort during peace to prepare himself for war, may be placed with a regular who is years his junior.

Such a system as is in force in the Army and Air Force does not assure getting the most competent officers into the right spot. A lieutenant colonel in the Air Force Reserve, who has commanded an Air National Guard squadron, for instance, for 6 years with the usual 15 days annual field training would immediately become junior and lose his command to a Regular major who had only reached the rank of lieutenant colonel 3 months before and had never had command of a squadron. Who will say that the Regular under such circumstances, 6 years younger and with little if any squadron command experience, is better qualified to command the squadron than the Reserve who has had 6 years experience and training in actual command. Yet that is what the Air Force says. The Army likewise contends that a Regular lieutenant colonel who has just been made colonel a few months before is more competent than a Reserve or National Guard colonel who has been commanding a regiment for 7 or 8 years. I don't believe it, and furthermore, the record doesn't warrant the conclusion reached by the Army and the Air Force.

The "only active service" theory of the Army and Air Force as applied to Reserve is narrow and unrealistic for at least two apparent reasons. First, a comparatively small amount of a Regular's service is spent in strictly field military duties or with troops. Actually, taken all in all, much of an officer's career in peacetime is spent in administrative and other duties. Secondly, there is so much that is fundamentally the same in civilian experience and the military service in time of peace that both the regular and Reserve come out at any given time with pretty much the same basic mental equipment, that there is no justification for the vast gap created between the two as results from the present Army and Air Force system.

Of course, the Regular service provides more valuable training for war than is possible in the Reserve, but we don't maintain the military for the prestige or personal aggrandizement of the individual, whether he is a Regular or a Reserve. The Regular's compensation is a paid career. The Reserve, on the other hand, contributes his time from his career and family life in order to prepare himself for war. The drill pay that a portion of the Reserves receive, doesn't constitute even a semicareer compensation. It seldom covers the actual expenses of a Reserve for participating in the program.

These factors should not enter into the question of an officer's place on the lineal list. The governing factor should be the officer's value to the over-all war effort. We think that this being true, there should be no penalty imposed upon a Reserve officer by reason of his being a Reserve officer and that the precedence of all officers should be determined by the date shown on the commission.

For Action on Coal

EXTENSION OF REMARKS
OF
HON. EDWARD BREEN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. BREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dayton (Ohio) Daily News of Tuesday, April 25, 1950:

FOR ACTION ON COAL

During the recent coal strike, many Congressmen were extremely critical of the President. They accused him of dallying with the issue, of waiting too long to invoke the Taft-Hartley law, of letting the crisis swamp him, and finally forcing a power solution that increased the strength and prestige and arrogance of John L. Lewis.

For this criticism there was some justification.

But when the President did come to grips with the crisis, he did one important thing. He looked beyond the symptoms of the coal disease to the causes. He saw that coal was a sick industry. He realized that, although stockpiles dwindled dangerously when the industry was on strike, they accumulate dangerously when the industry is in full production. He recognized that there are simply too many mines and too many miners when measured against the market—a market which the irresponsible actions of John L. Lewis, to be sure, had played a part in shrinking.

Taking the long view, the President asked Congress to create a fact-finding commission to survey the entire coal situation and make recommendations in terms of economic, social, and national security. This was a proposal which had been made as long ago as the 1946 coal strike by former Gov. James M. Cox, of Ohio. But the coal industry had been left to rock along from crisis to crisis. The President finally put the weight of his office behind the search for a comprehensive, clinical solution.

It has been almost 2 months now since the end of the coal strike. What has happened to the Congressmen who were so critical of the President for doing nothing? As far as meets the eye, nothing has been done by Congress toward creating a long-range coal commission. Yet already the industry is slipping back into crisis.

Stockpiles have been rebuilt to the point at which the market is failing. In terms of tonnage, the industry has not yet made up the losses of the strike period, but in terms of market—allowing for the relatively slim demand of spring and summer—it has more than covered them. Companies which sought to raise the price of coal, to cover the wage and pension benefits won by the mine union, have had to retract the increases. In some cases they have cut prices to a level lower than they were before. Miners have been laid off in West Virginia. Some of the marginal mines have been closing.

In 1947 America's 8,000 mines and 400,000 miners produced 631,000,000 tons of coal. Last year 430,000,000 tons were produced despite the strikes. Yet the estimated current market is now around 400,000,000 tons annually. It is going to go lower, due to progressive conversion to oil and gas by industries, railroads, public utilities, and householders. If John L. Lewis doesn't close the mines for a portion of 1950, the operators will have to. If they don't there will be mass mine failures and random unemployment that will leave the industry in chaos.

The National Coal Association estimates that 50,000 miners will be without jobs in the coming months, in turn throwing out of work some 50,000 transport workers who haul coal from mine to market. Dr. James Boyd, Director of the United States Bureau of Mines, has warned the industry to get ready to retrench.

What will have to be done, of course, is to make a long-term adjustment of production to sales potential. This will mean squeezing out the marginal, high-cost mines, letting their employees drift into other employment. It will mean also squeezing some of the workers out of the healthier mines. Operators will have to mechanize increasingly and to learn to produce at costs that have a chance of holding coal's competitive position.

The only question is whether this is to be done in an orderly way or whether it is to be done in a chaotic way that might easily wreck the industry and cause heartbreaking dislocation in the lives of 100,000 or 200,000 men who mine coal.

Is our record on coal to be summed up in the old saw:

"The Devil was sick, the Devil a monk would be;
The Devil got well, the Devil a monk was he."

Are we going to wring our hands and call frantically for action when the coal crisis erupts in strikes that are inevitable in the present situation, and then sit back complacently between strikes and do nothing to arrest the disease?

Tribute to Maximilian Moss

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1950

Mr. MULTER. Mr. Speaker, one of the finest citizens of Brooklyn, Mr. Maximilian Moss, has been reelected for a second term to the high and responsible post of president of New York City's Board of Education. It is an unpaid post, which involves painstaking work and great civic responsibility, both of which Mr. Moss ably discharged during the past year. An able lawyer by profession, Mr. Moss is active in various philanthropic and civic groups, and is president of the Brooklyn Jewish Community Council.

I take this opportunity to extend my felicitations and good wishes to him for the coming year. A fine tribute has been paid to him in an editorial published in the Brooklyn Daily Eagle, May 12, 1950, which follows:

THE REELECTION OF MR. MOSS

One of the most difficult and most thankless jobs in the city government is that of president of the board of education. Of late, its duties seem to have become even more onerous than ever. It is therefore most fortunate that the man who has been occupying it the past year, Maximilian Moss, of Brooklyn, has been especially conscientious and hard-working. Certainly the members of the board used fine judgment at this week's meeting in reelecting him for a second term as their president. Words of the highest praise were spoken about Mr. Moss' ability and of his work. In contrast to the bitter division of a year ago, there was no other

candidate and all those present—two being absent abroad—voted for him. They are to be congratulated, as is also Mr. Moss.

In view of the constant parade of highly controversial problems in the board, one would hardly be expected to be in agreement with all of Mr. Moss' decisions and policies. But in some of the most vital ones he has certainly been completely right, especially in his warm support of Superintendent William Jansen's current endeavors to oust pro-Communist teachers.

Mr. Moss is one of Brooklyn's ablest lawyers, is a devoted charitarian and is president of the important Brooklyn Jewish Community Council. He is a firm but fair presiding officer—and he has certainly had to handle some tough situations that would try the patience of a Job. How he is able to devote such a large share of his time to this job without affecting either his law practice or his health we do not know.

And it must be remembered that this is an unpaid post and President Moss' painstaking discharge of his duties is in actuality unassailable evidence of the seriousness with which he takes his civic responsibilities. The city could use many more like him.

Segregation in Swimming Pools in Washington, D. C.

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. BARRETT of Pennsylvania. Mr. Speaker, I want to sound a loud alarm to those people of America who are convinced that any weakening of our democratic way of life in these anxious days constitutes an added danger to our Nation. I want to let them know that, even as we struggle to meet the onslaught of totalitarian ideals and methods from without, there is occurring in Washington a series of shameful events that is opening a wide crack in the foundation of our democracy.

I know that our citizens, no matter where they live, will raise their voices in a mighty protest when they understand the real design and purpose of the bill, H. R. 5968, reported out by the House Committee on the District of Columbia. I am equally certain that they will want and demand to know the attitude of the Commisisoners of the District of Columbia on the issue of racial segregation which forms the background of this proposed legislation.

This bill is designed to transfer control of the Capital's swimming pools, built by money from taxpayers of all races, colors, and creeds, from the United States Department of the Interior to the District's Recreation Board. On its face it appears innocent in motive and without mischief, and thus masquerades as a mere organizational shift of responsibility. Behind it, however, is a history of broken faith, autocratic order-giving, vicious racial intolerance, and a gratuitous judgment-of-men-by-men wholly offensive to the spirit of our Declaration of Independence and our Constitution, and in direct contradiction to the established policy of the President.

This bill, if approved, will put the stamp of the Congress on the transfer of these pools from Interior to the District's Recreation Board. Is this all? It is by no means all. If the Congress grants this transfer, it will be giving its approval to a completely undemocratic and dangerous solution to a problem which the Department of the Interior has already settled in a completely democratic manner. Even more deplorable will be the implied reinforcement by the United States Congress, before the eyes of the world, of the blatant intolerance which their "servant," the District of Columbia government, has seen fit to permit.

The Department of the Interior has offered to turn over the operation of these swimming pools with one proviso—that they be opened on a basis of nonsegregation. The District's Recreation Board has stated its desire to engage in such operation, but has refused flatly to be responsible for them unless races are segregated.

This stand has been taken in spite of the prevailing pattern of use of Federal lands in the District by all races. In August 1949, the Recreation Board entered into a formal agreement with the Department of the Interior to conduct recreational programs in various Federal parks and grounds, agreeing to the stipulation that all recreational facilities were to be on a non-segregated basis. As early as 1939, the Department of the Interior had ordered a discontinuance of compulsory racial segregation in the use of picnic groves.

My colleague from Pennsylvania, Representative CHUDOFF, reported to the House on May 9 the glowing success of those recreational programs in the District which have been continuously pioneered by the Department of the Interior. Operated without segregation, these are programs in which all may participate without some being branded by ostracism as second-class citizens. He has told of the unhampered and free activities of all groups utilizing the public lands which belong to them all—utilizing them without conflict or strife. Adults and children, white and Negro, have accepted the real meaning of democracy in this use of the parks and grounds for which all have contributed, and they have done so with a fine respect for the rights and the happiness of each other. There is no argument involved—these things that belong to the people are used by the people, and color or race cannot determine whether a person can play tennis or golf, or whether he can build a picnic fire and enjoy what the Creator provided for all.

The decision of the Recreation Board respecting the publicly owned swimming pools of the District is as destructive of a fine and proven tradition as it is offensive to decent men and women. It proclaims that the land may be used by all, the trees and flowers seen by all, the birds and the waterfalls heard by all, and the warm green grass touched by all. But the water—this, it believes, is for the white only, unless those whose skins are colored are willing to paddle around in water prepared for them alone.

Have the gentlemen of the Board forgotten that the Negro children, as well as the white children, suffer from the heat of Washington? Can they truly search their souls and find justification for insisting that Negro children merely stand and look through the fence as the children with white skins enjoy the pools which the money of all has constructed? This, Mr. Speaker, is not the kind of democracy I believe in.

To give protective color and logical justification to this despicable prejudice the Recreation Board states that it fears an opening of the pools to persons without regard to race or color will result in violence. It contends that its decision for segregation is in keeping with the community standards of Washington, despite overwhelming evidence to the contrary. As a last resort it announces piously that, if Interior opens the pools to all citizens without manufactured restrictions, the Board cannot be responsible for what may occur.

The Secretary of the Interior, Oscar Chapman, has announced that these pools will be open to all Americans this summer in keeping with the completely satisfying pattern soundly established for other recreational facilities.

The House Committee on the District of Columbia now reports out its bill to transfer the pools to the District—and the nefarious and undemocratic game of the Recreation Board is almost played out to its end.

I think, however, that the game will not be finished. Any proposal as repugnant as this to the men and women of good will who are the fiber of our democracy must be repudiated by the collective sense of decency of our Nation. I call upon our citizens to whom democracy is a living and vital way of life to join me in protesting the proposed passage of this bill, H. R. 5968. In so doing, they can know that they have strengthened democracy before all the peoples of the world; yes, even before the eyes of those black, brown, and yellow men and women whom we invite to become democratic nations along with us that together we may save our way of life.

I do not personally intend to stand by silently when I sense an opportunity to aid in keeping communism from America by strengthening our democratic patterns and by making the fruits of democracy available to all men, regardless of race or creed. And as a representative of our people, I believe that this is the growing determination of America. This bill must not pass.

Against those spokesmen for the District government who have been responsible for establishing and maintaining this undemocratic and intolerant prejudice I have described, the American community should feel a deep resentment.

The people of the United States who help to support the District of Columbia government in the management of their Capital have a particular right and an obligation to insist that the District's official representatives observe the strictist adherence to those democratic ideals and provisions which our Constitution has established.

This issue, exploited by the Recreation Board, has stirred up unnecessarily passions of hate, fear, and intolerance at a

time when the Department of the Interior had resolved it in an atmosphere of calm and peaceableness and in a manner fully in keeping with our established and cherished democratic traditions.

The time has come when the people of America should be informed of the position the Commissioners of the District Government take on this issue. They have been strangely silent in the face of this assault on our democratic way of life. On May 9, a resolution was introduced before the Recreation Board which would offer that Board's full cooperation to the Department of the Interior in its operation of these pools. It is indeed significant that the District Government's official representative successfully opposed this resolution, stating that the public judges us by our actions, not by resolutions.

Does this statement by their representative mean that the Commissioners themselves uphold this vicious policy of segregation and undemocratic discrimination? In view of their silence, do we not rightly assume that he was speaking for them, and that they condone his attitude as their own?

Have the Commissioners forgotten that the President has stated the policy of the Federal Government to be strictly against discrimination in any form? As employees of the Federal Government, how can they explain this overriding of the President's policy? Do they consider that, in dealing with the District's problems, their judgment is superior to that of the President? Apparently they assume that they have the authority to revoke the President's policy on any matter where their judgment differs. I think there is no room for insubordination on this issue.

Does the District government work for the people of this country, or does it serve only certain special groups from chosen races?

These are questions that the people want answered, and democracy gives them the right to have them answered. It is time for the Commissioners to state whether the views of their representatives are actually their own views, and whether he was speaking and acting for them. The people who breathe the air of freedom in this Nation must demand and insist that the District of Columbia government cease for all time the toleration of official views that democratic principles must not pollute the air over Washington. I think the people want to know, and want to know now, exactly when the District government is going to begin to demonstrate that it acts for democracy, and not for some shoddy system of regulations and rules that veer dangerously toward the concepts of totalitarian states.

Mr. Speaker, we all know that every possible inducement is being offered to ordinary people, in this Nation and throughout the world, to move over to the side of the Communists to seek security. We know that democracy will win this battle for men's minds only if it demonstrates that its precious gifts of freedom and equality truly exist for all men and women without distinction.

Every new evidence of discrimination in this country, and every story of the parceling-out of freedom, is immediately spread throughout the world as a symbol of the fallacy of democracy's strength. We can be sure that the nations whose people have a color that is not white are not closing their ears to this kind of propaganda.

We cannot afford discrimination among our people on the world's stage today, if for no other reason than that of our own security. We certainly cannot afford it morally, for intolerance and racial segregation eat out the fiber of our human conscience until suspicion and hatred start to grow within us. Democracy is based upon the essential dignity of all men, not just some of them. Each time that we deny that dignity we weaken democracy even as we keep on trying to build it.

The bill coming before us must be defeated. I call upon all men and women of good will and decency to join me in making known their demands for its defeat before we drill another hole in the structure of our democracy.

And I also call upon them to demand that the District of Columbia government abolish forever the support of a system that tries to establish second-class citizens, and that it remove from office forthwith any of its representatives who find democracy painful and offensive.

Red Proposals Selfish

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial that appeared in the Daily Evening Item of Lynn, Mass., May 13, 1950:

RED PROPOSALS SELFISH

Two new Russian proposals, one on Berlin and one on the long-delayed Austrian peace treaty, show very neatly how hard it is to negotiate seriously with the Soviet Union.

On Austria, Moscow wants any pact to be preceded by Allied troop withdrawal from Trieste, former Italian port slated to be a free territory. This is demanded as evidence of good faith that "under one pretext or another Austria shall not also be transformed into an Anglo-American war base."

Never before, in all the years an Austrian treaty has been hanging fire, has Russia dragged Trieste into it. Now it suddenly becomes a critical point on which the whole issue pivots.

As for Berlin, the Soviet Union has accepted the idea of city-wide elections but has laid down seven specific conditions which must be met before the balloting can begin.

It isn't necessary to examine the full list. The Russians want all occupying powers to remove their forces from Berlin. They call for abolition of the so-called occupation statute under which the western nations govern their control zones of the city. They ask that "democratic" organizations be given freedom of activity in those zones.

The tricks in these proposals are pretty obvious. If Russian troops left Berlin, they would still be on the outskirts of the city in the Soviet-controlled eastern portion of Germany. But withdrawing Allied soldiers would have to pull back more than 100 miles to the main western area of the country.

Freedom for "democratic" groups in all Berlin means license to Russian-inspired Communist activities aimed at bringing the city completely under Moscow's domination.

Like the Austrian suggestion, these conditions are all designed to weaken or eliminate western control of critical European sectors. What the Russians could not accomplish by the Berlin blockade they now would seek to gain by other means.

It is not likely the Russians expect us to take these proposals to heart. They are following their usual formula of asking, as a very minimum, sacrifices they know the West cannot afford to make.

The newest moves are just further threads in the skein of propaganda by which Moscow eventually hopes to weave strong pro-Communist support in Germany—against the day when Russia's chances of taking over might be stronger. They know the Germans want foreign troops out of Berlin and ultimately off all their soil.

In the case of Austria, the Soviet leaders apparently have no real desire to negotiate a treaty, since that would compel them to remove their own troops from adjoining Hungary and then Rumania. When you do not want to do something, it is not hard to find excuses for inaction. That is, if you are a Russian.

Some Figures on British Arming of the Arabs

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. MULTER. Mr. Speaker, the question is often raised about the extent of British arming of the Arab States. I am placing in the RECORD an editorial on the subject of Arab armament which contains some interesting figures relative to the supply of arms to the Arabs and the type of such arms. I believe these figures speak for themselves. If today anyone still questions the truth about British arms shipments to the Arab States and the extent of such shipments, these are some, though not all, of the figures. Since these figures became known, we have also learned that Britain is building a factory in Egypt to produce jet planes.

I desire to commend to the attention of my colleagues the following editorial from the Jewish Advocate of Boston, May 11, 1950:

ARMS FOR ARAB STATES

Middle-eastern policy is one of the items on the agenda for the meeting of the Foreign Ministers in London, and it may well be that as a result of the discussions, particularly between Mr. Bevin and Mr. Acheson, some new approach to this problem will emerge.

In spite of de jure recognition of Israel by Britain, there is as yet no indication that British policy in regard to the supply of arms to the Middle East is changing. The Foreign Office has, however, shown some signs of embarrassment at the unceasing campaign in London, Tel Aviv, and Washington against the supply of arms to the Arab States while they are still refused to Israel and has been put on the defensive

by the repeated publication of the alleged quantities being sent to Egypt and elsewhere.

In the House of Commons, Mr. Churchill referred to 110 jet planes supplied to Egypt. Last week, a Reuters story from Tel Aviv said that "sources close to the Israel Foreign Office" alleged that Britain had intervened to stop a west-European country from selling jet planes to Israel and had exerted pressure on the United States to prevent the sale of arms to Israel.

Israel military experts claimed, the Reuters story continued, that 48 jet aircraft—18 Vampires and 30 Meteors—had been delivered to Egypt since January and that 12 of each were ready for delivery. Britain had also, it was stated, delivered to Egypt a number of Lincoln bombers and Mosquitoes, six Furies, and three Tempests. Besides purchasing aircraft and arms from other sources, Egypt had received from Britain up to February 1950, 150 Bren carriers, 90 heavy-armored cars, 50 artillery vehicles, 30,000 Enfield rifles, and 10,000,000 rounds of ammunition; 1 destroyer, 1 sloop, 4 frigates, and 1 corvette.

In addition, it had bought a small frigate from America and a number of torpedo boats elsewhere. It was also alleged that Egypt had earmarked nearly £10,000,000 for armaments, had purchased a small-arms factory from Krupps at the end of 1949, a cartridge plant from France, and an explosives factory from Sweden and was negotiating with Italy for the purchase of a machine-gun factory.

It was also stated in Tel Aviv that although there were no treaties with Lebanon or Syria, Britain was building up a small Lebanese air force and had already delivered to Syria six jet aircrafts, with eight more to follow. Syria was also making purchases elsewhere, while Britain had sent 270 armored cars to Jordan last year and 200 this year; four Fury aircraft and 20 tanks to Iraq.

So far as Israel is concerned, one of the main considerations prompting the Foreign Office refusal to sell arms was stated to be that Israel could obtain them from other sources, which the Arab States, being short of currency, were unable to do. In the opinion of the Foreign Office, Israel is already well armed; and to supply her with further quantities would only foment an arms race in the Middle East.

Our correspondent in Tel Aviv reports: A further Israel Foreign Office statement issued here reaffirmed that "a west European country" had offered jet fighters to Israel, provided that Britain did not object to the sale, and that when approached officially by the Israel Government the British had prohibited the transaction.

Address by Dr. Walter Adams, Assistant Professor of Economics, Michigan State College, at the Annual Convention of Independent Bankers Association, Des Moines, Iowa

---

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. MORRISON. Mr. Speaker, I wish to include in the RECORD the following article by Dr. Walter Adams:

Mr. President, officers of the association, ladies and gentlemen, "Truth," said Mr. Dooley almost half a century ago, "is a cruel boss. He don't even pay you board wages and if you go to work for him you better have a good job on the side." The fight against monopoly falls in much the same category; for, while there are many who pay lip service to the idea of free enterprise, there are few who are willing to support effective measures to preserve it, especially when their own vested interests are at stake. Nevertheless it seems to me that if we are to perpetuate our system of economic, political, and social values—the kind of values that have made America great—we must avoid the road to further concentration of power, the very road that has led to disaster in Italy, Germany, Russia, and Japan. And if our businessmen are to avoid suffering the same fate as did their brothers across the sea, it seems reasonable that the enforcement of free competition is the least regulation that they can expect; it is a minimum amount of regulation which, for the sake of survival, they must accept and accept cheerfully.

As a nation we have traditionally been suspicious of concentrated economic power whether such power is in the hands of the Government, individuals, or large corporations. We have feared concentrated economic power because it eventually tends to result in centralized political control—fascism or communism at worst or democratic socialism at best. That is why, in contrast to most other nations in the world, we have tried to curb not only excessive governmental power but also excessive private power; we have tried to maintain and preserve a system of free competition in industry, trade, and finance on the basis of the fundamental belief that enterprise which is not competitive cannot for long remain free. It is for this reason that our Congress passed the first antitrust law in 1890.

Yet today, 60 years after the Sherman Act became law, we are confronted with a concentration of economic power unparalleled in our history. What is worse, the trend in that direction has been accelerated in recent years. Independent businesses are succumbing to the encroachment of their larger rivals at an alarming rate. In industry after industry, a handful of concerns enjoy an exclusive position or are sufficiently dominant so as to enforce conformity among their smaller competitors. Whether we turn to steel or aluminum, to automobiles or petroleum, to motion pictures, or cigarettes, to chemicals or tin cans, there is the same sad tale of overwhelming size and entrenchment in strategic economic position. So serious is the situation that poor economics instructors are hard-put to find concrete examples of old-fashioned price competition with which to illustrate their lectures.

To be sure, we no longer have to contend with monopoly in its cruder forms. No longer is our economy infested with organizations like the pre-1911 Standard Oil and American Tobacco companies. No longer is monopoly of the simple variety where a single firm dominates an industry. What we are confronted with instead is a type of market organization where a few sellers are dominant—the so-called Big Four and Big Five; a type of market organization where the entry of newcomers is effectively deterred—not so much by the threat of economic reprisals as by the size and entrenched power of existing firms. It is a type of market structure under which a seller no longer can afford to be independent in his price policy and under which he must, of necessity, take the reaction of his rivals into account. Thus United States Steel, for example, knows that price cutting will inevitably cause its large competitors to follow suit with the result that the market is shared as it was before—only at a lower level of prices and profits. It is this certainty that price cuts will eventually be met; it is this fear of retaliation, that leads to conservative and nonaggressive price policies in industries dominated by the Big Four and Big Five.

The result is a system of friendly competition. The result is a situation similar to that which would obtain if but a single concern dominated a field. Thus we get collusion—not in the common sense meaning of the word to be sure—but parallel action, nevertheless, as far as the effects of market behavior are concerned. As a very astute economist has observed recently: "A covenant signed with blood, an agreement signed with ink, an understanding without written words, concerted acts approved by a wink or a nod, a common course of action followed without physical communication—these may be different methods of collusion but the differences are irrelevant if the effects are the same."

The dangers implicit in this system of friendly competition, this concerted action in the market place, should be abundantly evident. Where a handful of firms are in a position of dominance, consumers are not always protected—as under competition—against excessive prices and artificial shortages; the public is not assured that technological innovations will promptly be introduced and the economy allowed to remain dynamic and progressive; newcomers, while enjoying legal freedom of entry into markets and access to raw materials, are often deprived of the economic freedom to introduce themselves, their organizations and their ideas.

It is the last point which looms especially significant, because the preservation of free enterprise requires that new men and new ideas and new firms constantly have the opportunity to challenge the position of those already entrenched in an industry. It is this freedom of opportunity that has permitted America to climb to a position of preeminence in the field of industry, commerce, and finance. It is this freedom which must be maintained and expanded if we are to perform as well in the future as we have in the past. And in order to do this, in order to keep the channels of opportunity open and free, we must make sure that power remains essentially decentralized and that the right to make decisions in the field of industry, commerce, and finance is dispersed among as many individuals and corporations as possible.

Let me illustrate what I mean by drawing an example from a field with which you are especially familiar—the field of finance. Under a regime of competition, we assume that producers are responsive to the wishes of consumers as expressed by the latter's choices in the market place. We assume, for example, that if the demand for nylon increases, the price of nylon will rise, the profits of manufacturing nylon will also rise, and that new producers will therefore be attracted into the nylon field, with the result that nylon production will increase and the price of nylon and the profitability of nylon making will return to normal again. While new resources flow into the nylon field they will be drawn from other fields—say silk—where consumer demand has gone down. Thus, under competition, the kind of goods which consumers desire will be produced and they will be produced in quantities which consumers, through their choices in the market place, have indicated they want.

There is only one hitch in this scheme of things. In order to embark upon a career of producing nylon—assuming the absence of other artificial restraints—a new firm needs financing. If it can obtain such financing from a large number of soures, it is not dependent on the whim or caprice, the doubts or conservatism of any individual banker. But when the supply of loanable funds is concentrated in the hands of a few, a potential newcomer to an industry might no longer be able to obtain the needed funds. He might find that insurance companies, investment bankers, or other large financial

institutions are already allied to existing nylon producers and therefore reluctant to provide the funds with which their previous investments would be jeopardized and with which their older clients would be made to suffer the unpleasantness of competition. They might be reluctant to deal with a little fellow, preferring to lend out their money in large chunks to big boys who can afford to borrow in quantity. They might be reluctant to venture forth into the hinterlands where the little producer is located, preferring to protect the interests of a region or locality with which they have been affiliated in the past. For these and similar reasons, loanable funds may be withheld from potential newcomers in industry when the supply of such funds rests in the hands of a few. For these and similar reasons, competition in industry may be restrained and the freedom of economic opportunity curtailed, simply because the decision to lend or not to lend is a matter of discretion for a few people or concerns to exercise.

That this is not idle speculation is borne out by the facts. Thus it is a fact that the 16 largest insurance companies in America control over 80 percent of insurance-company assets. It is a fact that of the 730 members of the Investment Bankers Association, 38 houses transact 91 percent of the investment banking business, and the Big Six of Wall Street 57 percent of the total business. The significance of this financial concentration was stated by the Justice Department in 1947 when it asked a grand jury to return an indictment against 17 Wall Street houses. The Justice Department at that time charged the investment bankers wtih power to decide which industries were to be helped in expanding and which industries were to be retarded. The Department accused these bankers of determining areas for competition and monopoly, of fixing prices, of deciding which technological improvements and patents should be made available to the public and which to be retarded or suppressed altogether. The Department concluded that here, at the pinnacle of industrial and financial power, there was almost complete monopoly, there was suppression of free enterprise, and that all this was being accomplished in violation of our antitrust laws.

In the commercial banking field similar tendencies are making themselves felt—as you know from your personal experience. Here the onslaught of monopoly is being led by branch banking, chain banking, and holding-company banking, which have an especially strong foothold on the west coast. I need not elaborate on this subject any further in view of the fact that your organization was formed for the express purpose of preserving our system of independent banking by keeping the ownership and management of banks well diffused. It is your organization which has realized that if banking becomes closely held and a few large systems dominate the banking field of the country, we will eventually wake up to a banking monopoly that would dwarf into insignificance any monopoly so far seen—a banking monopoly that would extend into all other segments of our economy as well.

Granted then, that concentrated economic power—whether in the field of industry, commerce, or finance—is dangerous for the continued existence and health of a free-enterprise system; what can be done about it? Can the trend be reversed and can it be reversed without resorting to Government ownership or strict Government control? I think it can be and on the basis of this belief I have, last December, presented a proposal for a new antitrust law to the Congress of the United States.

My proposed law, which would deal with nonfinancial corporations only, has a double purpose: To preserve, wherever feasible, a competitive structure of industry while at the same time providing safeguards against an interference with business efficiency. In cases where these basic goals come into conflict, the proposed law would forsake competition and choose efficiency as the objective of public policy.

Specifically the bill provides that corporations which control 10 percent or more of a commodity's supply (or corporations with assets totaling more than $25,000,000) must register with the Securities and Exchange Commission. These corporations must then file pertinent data so that the Commission can determine—in a case-by-case approach and in accordance with specific standards set forth in the bill—whether the corporate structure of a given firm, its position in the industry, or its business policies and practices have a detrimental effect on the interests of investors, consumers, or the general public. If they do, the Commission can, after opportunity for hearing, order the dissolution of such a firm or the divestiture thereby or divorcement therefrom of any property, assets, securities or other holdings which are not reasonably incidental, or economically necessary or appropriate to its efficient functioning * * * or which tend to hinder, obstruct, impede or render difficult the maintenance or achivement of effective competition in one or more lines of commerce.

This simply means that, if the Commission were to discover that the du Pont control over General Motors and United States Rubber was not economically necessary or appropriate to the efficient functioning of a chemical firm—or that such control was motivated primarily by a desire for monopoly—the Commission might order du Pont to rid itself of the General Motors and United States Rubber holdings. Similarly, if the Commission were to find that General Motors was indeed an efficient producer of automobiles but that its manufacture of Diesel locomotives, refrigerators, electric appliances etc., merely represented an attempt to aggrandize the firm's size and economic power, the company might be forced to confine its operations to the automobile field. Finally, if the Commission were to find that a firm like United States Steel could operate as efficiently but less monopolistically at one-third its present size, an order to that effect could be issued.

Here then is the central provision of the proposed law: It permits an administrative authority, subject to judicial review, to order a giant firm to "unmerge," wherever the effect of such an order is likely to stimulate competition and/or increase efficiency. But the bill goes further. It leans over backward to afford companies protection against wanton and arbitrary atomization. This protection is provided in the form of escape clauses under which an industrial giant can avoid dissolution or divestment orders by the Commission, if it can demonstrate that its present size is necessary for the attainment of efficiency or that its business performance in the past has materially benefited the general public. Contributions to the public interest can be established simply by showing that the company in question has participated in technological progress, passed on savings in cost to consumers, provided enough plant capacity to fill consumer needs and actually used such capacity to the fullest, earned a normal rate of profit as compared to competitive industries, and has benefited consumers by price reductions as well as by advertising competition. When a company, judged by these standards, can show that the manner of its past performance has been in the public interest, it escapes dissolution or divestment—regardless of its monopolistic position in the economy.

The main advantages of the proposed bill are threefold: First, it is not a general dissolution decree against all industrial giants. It is not a death sentence for big business merely on the grounds that it is big. Instead, the bill provides for a careful, selective, case-by-case approach to cope with such concentrated economic power as is conducive neither to a maintenance of efficiency or the encouragement of competition. Secondly, the bill proposes to benefit not only consumers and the general public but corporate investors as well. It does so simply by requiring that no business be so big that its component parts could function more efficiently as separate units than as parts of the whole. That this is not an idle claim was amply demonstrated in the public-utility field where a similar law (the Public Utility Holding Company Act of 1935) produced a considerable increase in efficiency of operation. This was reflected by the security values of those operating companies which were divorced from their parent organizations. Thirdly, the bill implements dissolution proceedings by more sophisticated techniques than the hammer and tongs method available under the Sherman Act. Whereas the Sherman Act equips the Justice Department with a blunt ax, this bill provides the enforcement agency with a set of fine surgical instruments. By contract with the Sherman Act, it sets up standards which are sufficiently clear and concrete to obviate confusion and uncertainty as to what is lawful or unlawful conduct in the market place. In this connection it might be noted that Senator TAFT recently recommended that our lawmakers "should consider whether we should place a limit on the proportion of any industry which can be controlled by any company and whether it is possible to make the Sherman Act more definite and effective." While my proposed bill is by no means a panacea for our monopoly problems; while it should not preclude adoption of measures designed to aid the small-business man or to reform the patent laws; while it should go hand in hand with statutes designed to prevent further concentration in the financial field; it must, nevertheless, constitute the core of any comprehensive antitrust program.

In conclusion, let me repeat the warning of Senator MURRAY who some years ago said: "If we believe that our system of free enterprise should be preserved, if we believe that the American economy should be the expression of a free society, then we cannot stand idly by and watch the march of monopoly to power. We cannot risk the consequences—for in this struggle, if we are too little and too late, there will be no second chance."

Rural Electrification and Rural Telephones

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. CHRISTOPHER. Mr. Speaker, electricity has become a necessity of modern life. Cheap electricity to the consumers of this country will make it possible for them to use the appliances that are so necessary to make their home pleasant, comfortable, and attractive and relieve the burdens of drugery which the average housewife, without electricity, is compelled to endure. I have no apology for the battle I have waged for REA and Southwestern Power. TVA is the outstanding development of its kind in the entire history of the world and many other rivers are being and will continue

to be harnessed to serve mankind by generating cheap hydroelectric power. The forces of greed and exploitation will fight a losing battle against these great public improvements. The water power of this land belongs to the Federal Government and the current generated by the multipurpose dams constructed by the Army engineers belongs to the people of the United States and not to the Power Trust. REA Co-ops are preferential customers under existing law.

The electrification of farm homes in my State is little more than half completed and, like JOHN RANKIN, of Mississippi, I want the fight for REA and rural telephones to continue until a rural telephone line and REA line reaches every rural home that a draft board can find in the time of war or a tax collector can find in time of peace.

Residential users of elctric current in the State of Missouri in 1948—which is the last year for which I have complete figures—paid $36,185,900 for electrical current. If they had been able to secure that current at TVA rates it would have cost them $20,227,918, or $15,957,982 less than they paid. If the commercial users of electrical current in the State of Missouri in 1948 had been able to secure the current at TVA rates, they would have saved $15,781,867. The industrial and other users of electrical current would have saved another $14,258,713, which makes the staggering total of $45,998,562 that the Power Trust overcharged the users of electrical current in my State during the year of 1948, measured by the TVA yardstick. It is out of that overcharge that the cost of full-page ads, appearing in hundreds of papers all over the State, are being paid. With an overcharge like the above which runs to the staggering total of $2,097,071,724 for the United States as a whole—no wonder the Power Trust can buy full-page ads, keep the mails full of propaganda, and employ lobbyists in the Nation's Capital, the yearly salaries of some of whom run as high as $6[illegible],000 per year plus an expense account. It is the overcharge to the consumer of electrical current that is presently financing the propaganda of the Power Trust in the press, the radio, the mails, and personally in the cloakrooms of the Nation's Capital.

So long as the Power Trust was confident that it would be able to grab at the busbar every kilowatt-hour of current generated by the hydroelectric dams, they were in favor of the Army engineers continuing to build these dams. But now that it appears that there is more than a possibility that REA will be able to pick up at least a part of this cheap current at the dams, they are turning their attention to attempting to kindle widespread opposition to any further construction by the Army engineers.

If private power companies would sign a contract with the REA co-ops in the State of Missouri binding themselves to furnish to these co-ops all the firm current they needed for a period of 30 years at 6 mills per kilowatt-hour, wholesale, and deliver the current to the points of need, I would see no reason for the construction of the two proposed lines across the State of Missouri. But I see no indication that the power companies would be willing to sign such a contract or that they would be able to make good on it if they did. A great hue and cry has gone up against the building of those two lines in Missouri and the construction of the two steam plants to firm up current from Bull Shoals and Norfolk on the White River.

Forty-two cities and towns in the State of Missouri have municipal plants and generate their own current. My home town of Butler, Mo., has such a plant. The list includes such towns as Carthage, Chillicothe, Columbia, Hannibal, Higginsville, and even Independence, and it should be remembered that Independence is so close to Kansas City that the towns have built together until you have to watch the markers on Truman Road in order to know when you leave Kansas City and enter Independence. These forty-two towns and cities in my home State have every right to generate their own electrical current and incidentally they feel they can generate it more cheaply than they can buy it. But, if it is all right for these towns and cities in my home State to own their plants and generate their current why is it socialism, communism, and boondoggling for all the farmers in all the State of Missouri to borrow enough money from the Federal Government to construct two lines across the State and two steam plants to firm up the hydroelectric current generated by the White River so that REA may have dependable sources of cheap electrical energy that they know will not be taken from them?

Do not let anyone tell you that these lines and plants will be built by the Government and given to REA. REA will pay for the current generated on the White River, to energize these lines the same as any other purchaser. The money used in the construction of the lines and the two plants will be repaid with interest to the Federal Government. REA has been and is ahead on its payment schedule and will continue to maintain that position unless throttled and strangled by the power trust. We are only seeking in Missouri, as well as other places all over the United States, to get for REA a dependable source of electrical energy at a wholesale cost that will permit the co-ops to buy it and repay the Federal Government the cost of constructing their lines so that the farmers of America may own their electrical system.

I want to impress on all farmers, and those in my home State particularly, that there is a tremendous battle being waged between REA co-ops and the interests that seek to maintain and continue their monopoly on the current that is and will continue to be necessary to keep the lines energized. The average farm user of electrical current will be using 2 to 10 times as much current 5 years from now as he is today if he can get that current at a price he can afford to pay.

The power trust is planning a propaganda program, the cost of which will run into the millions of dollars. It has been reported that a motion-picture film is to be made the title of which will be, **If You Don't Watch Out.** This film is purported to depict what the Power Trust choose to refer to as "galloping socialism." This shows the length to which the power monopoly is willing to go to deceive the American public. Users of electrical current should remember that they are being forced to pay for this propaganda barrage that is being used against them. It will be well if farmers who have REA service and other farmers who hope to receive such service in the near future will make enough inquiries that they will know who are their friends and who are their enemies.

The figures quoted above are taken from tables presented by the Honorable JOHN E. RANKIN, of Mississippi, and made a part of the CONGRESSIONAL RECORD on Friday, July 1, 1949.

Tariff Tinkering

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. GRANT. Mr. Speaker, there is scheduled to be another round of tariff tinkering in September. Our working people and manufacturers are threatened with possible plant closure, personnel reduction and competition most difficult to meet.

We cannot maintain American standards on a basis of foreign manufacturing costs. That is a self-evident fact. To flood our markets with cheaply produced foreign products is to strike a blow, for some a death blow, to our economy.

The Committee for Reciprocity Information will begin hearings on May 24. This committee is charged with the responsibility of holding hearings with regard to tariff changes, to gather information and to digest and transmit it to the Committee on Trade Agreements, which is the same group as the Committee for Reciprocity Information. The Committee on Trade Agreements has served notice of intention to negotiate with 17 other countries in England in September, under provision of the Trade Agreements Act of 1934, as amended.

A lengthy list of products imported into the United States on which United States tariff concessions may be considered touch many industries—chemicals, metals and manufacturing, agriculture, textiles and ceramics.

Wholesale large-scale reductions would open our doors to a dangerous flood of cheap foreign products and might well mean disaster to many of our industrial plants and the loss of jobs to millions of workers, both skilled and unskilled.

I represent a district in which numerous textile mills are located. I feel these mills, already threatened with shrinking domestic markets, with a shrunken American dollar, with increasing unemployment and blighting competition from Japan foisted by our military government in that country, should be spared further harassment and material

difficulties. I oppose with all the vigor I possess, any further lowering of our tariffs until conditions are more equitable as between the participating nations and the resultant competition of a more legitimate and reasonable nature.

I do not subscribe to the philosophy of "letting the manufacturer look out for himself—he is able to do it," when that doctrine might throw millions of workers out of employment. It is a blighting philosophy.

I should like to read you some of the messages I have received from my district regarding this important matter:

Here is one from Mr. A. C. Smith, president of the First National Bank, of Greenville, Ala.:

Local unit of Alabama Mills is devoted exclusively to manufacture of corduroys. This payroll is a vital factor in economic welfare of Greenville and Butler County. Understand Committee for Reciprocity Information to make recommendations to President for reduction in tariff on corduroy. Important that tariff not be reduced. Would seriously affect mills operation and payrolls. Please do what you can to prevent changes in present tariff. Advise us.

And here is a wire from the Greenville Junior Chamber of Commerce:

Please refer to plan of Committee for Reciprocity Information, advising President to reduce tariff on corduroy. This action seems unfair and discriminatory. We request you oppose this matter. Our local mill with $750,000 annual payroll will be closed or greatly handicapped.

Another one from Mr. Howard Haygood, secretary of Greenville Chamber of Commerce:

Please refer to plan of Committee for Reciprocity Information, advising President to reduce tariff on corduroys. We consider action damaging, unfair, and discriminatory and urge your opposition and efforts against same. This telegr.m authorized by 143 members of chamber of commerce as it will probably close local mill with $750,000 annual payroll.

And here is one from Mr. Jeff P. Beeland, a businessman of Greenville:

In 1934 Congress gave the President authority to increase or decrease tariff rates on goods coming into this country from foreign countries. Present information is that the Committee for Reciprocity Information will recommend to the President that the tariff be removed from corduroy. There are very few manufacturers of corduroy in America, and our manufacturers of this fabric will be compelled to curtail, or even shut down, if the President decides to eliminate the tariff on corduroy. The local mill, which has an annual payroll of $750,000, will very likely be forced to close. Surely this is damaging and harmful authority that seeks to establish the textile industry of Japan in competition with American labor. We can readily see that if applied to all textiles it would ruin the laborers of America. If carried out on one textile, it is certainly discriminatory. It should not be permitted, and with all sincerity I urge your untiring efforts to assist in preventing same from happening. Will you introduce a bill, remove this authority, and place such authority back in the hands of Congress? This should be done for the protection of the laborers of America. Will you do it?

Mr. Speaker, I hope this threatened assault upon the working people and the businessmen of America will not be perpetrated.

"I Am an American" Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following timely editorial that appeared in the Boston Daily Record of May 18, 1950:

"I AM AN AMERICAN" DAY

The American people, by their annual observance of "I Am An American" Day, which will be observed next Sunday, earnestly and enthusiastically welcome all new citizens to active participation in the affairs of the Nation.

There are many millions of such new citizens each year, mostly by virtue of the fact that so many young men and women become of legal voting age and thus enter upon the estate of active and responsible American citizenship as a matter of heritage.

But, in addition, a large number of foreign-born residents of the country have made themselves competent to perform the duties of citizenship and have made themselves worthy of the high estate to which they have aspired.

The pride with which every American is able to accept and discharge the responsibilities of citizenship is properly and rightfully expressed on such an occasion as "I Am an American" Day.

Those of us who were born to that estate of patriotic responsibility should be mindful of the debt of gratitude we owe to the happy circumstance of birth which has no greatly enriched our lives.

Those who achieve that place among us of their own volition, and are only asked as a condition thereof that they pay the tribute of loyalty to their adopted country, are often first among us in their understanding and appreciation of what a good and grand and beautiful thing it is to be an American.

Such a man was the late Emil Schwarzhaupt, a native of Germany who died this year after 40 years of residence in the United States as a naturalized citizen.

Mr. Schwarzhaupt prospered more than most men in consequence of his life in America, but it was not his great wealth which marked him for national attention at the time of his death but the legacy of appreciation and gratitude he left as an example and inspiration to all who have the right to call themselves Americans.

The truly precious and priceless thing about America which had been disclosed to him was the gift of dignity and of opportunity and of challenge to personal worthiness attendant upon American citizenship.

So the bulk of his fortune, more than $4,000,000, was set aside for the establishment of the Emil Schwarzhaupt Foundation, to which he ascribed the following purpose:

"The upbuilding and betterment of American citizenship and increasing among all American citizens and especially among the foreign born the knowledge of the history of the United States Government and the meaning and obligation and privileges of citizenship in the United States of America."

The purpose and spirit of "I Am An American" day have never been given better expression than by the proud and grateful words of this man who became an American by his own choice.

Let all of our new citizens be made welcome and given a special place of honor among the patriotic people of our land.

Let "I Am An American" Day be observed by all of our people with respect for the free institutions of our country and with reverence for the traditions of human brotherhood and justice which distinguish and sustain it.

Honor to Mr. Whittington, Chairman, Public Works Committee, House of Representatives

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. LARCADE. Mr. Speaker, under authority granted to extend my remarks in the RECORD I wish to call to the attention of the Congress the crowning accomplishments of a service rendered to his country at the end of his retirement from the Congress by a distinguished American, Hon. WILL M. WHITTINGTON, chairman of the Public Works Committee of the House of Representatives.

Mr. Speaker, since 1928 Mr. WHITTINGTON, as a member and as chairman of the Flood Control Committee, and presently as chairman of the Public Works Committee of the House, has guided every piece of legislation in regard to flood control through the Congress.

On May 17, the President signed H. R. 5472, the omnibus flood-control and rivers and harbors authorization bill of 1949–50, included in which are projects in every State in the Union amounting to $1,731,251,825, and the President presented to Mr. WHITTINGTON one of the pens with which he signed the bill.

Mr. Speaker, today Mr. WHITTINGTON, as chairman of the Public Works Committee, has most ably presented the Federal-aid road bill providing for $660,000,000 Federal aid to the highways of the Nation, and the bill was passed almost unanimously.

Mr. Speaker, no encomium is required by me for the work in the Congress of Mr. WHITTINGTON, for I think that the demonstration several days ago in the House by his colleagues is sufficient testimony of the appreciation and esteem in which he is held by the membership. I would like to submit a copy of a resolution adopted by the National Rivers and Harbors Congress at its annual convention in Washington, as follows:

RETIREMENT FROM CONGRESS OF HON. WILLIAM M. WHITTINGTON

Since the Government of the United States has recognized its obligation and responsibility in regard to the development and utilization of our water resources, and over a period of nearly 30 years in the Congress of the United States there is one man who, at great personal and financial sacrifice, over and above all others has made the greatest contribution in the study, initiation, securing authorizations, appropriations and completion of the great programs and projects of navigation, flood control, power development, irrigation, and water resource development.

During the long period of years as member and chairman of the Flood Control Committee of the House of Representatives, and later upon the reorganization of House committees, as chairman of the Public Works Committee of the House, his unlimited energy, outstanding ability, sound judgment, administration and guidance has made possible great public works which will inure and endure to the benefit and protection of our country and people, and which will be living and lasting monuments to their author and champion.

In our organization his service covers State vice president for the State of Mississippi, national director, and senior national vice president.

The National Rivers and Harbors Congress regrets profoundly the announcement of the decision of Hon. WILLIAM M. WHITTINGTON, of Mississippi, to retire as a Member of the Congress of the United States, for especially at this time the country can ill afford to lose in the Congress the presence and influence of such a statesman and patriotic American of the stature of our friend and coworker.

Our gratitude goes to Mr. WHITTINGTON in his unselfish contribution to the cause to which he was devoted, and we extend our sincere wishes for his health and happiness, and notwithstanding the above, we express the sincere hope that it may yet be possible for him to reconsider his decision to retire.

Mr. Speaker, as a further evidence of the esteeem in which Mr. WHITTINGTON is held, I wish to say that on the occasion of Mr. WHITTINGTON'S seventy-second birthday, on May 4, 1950, the Members of the House Public Works Committee tendered a testimonial dinner to Mr. WHITTINGTON at the Statler Hotel, and I would like to include an excerpt from the remarks of Mr. DONDERO, ranking minority Member speaking for the committee, as follows:

It is with deep personal emotion that I rise to extend greetings and congratulations to my personal friend, my illustrious colleague, and my noble and able chairman, the Hon. WILL M. WHITTINGTON, on this, the seventy-second anniversary of his birth.

His has been a successful and distinguished career—teacher, lawyer, State legislator, and Member of Congress for a quarter of a century. He has contributed much to leadership and legislation of national importance—legislation which has been of great benefit to the Nation.

There is one thing that is admired above all others in men, and that is success. There is an old saying that "nothing succeeds like success." It matters little along what line of human endeavor a man's talents lie. The fact that he succeeds is the all-important thing. It proves that in his field of activity he did "build a better mousetrap than his fellow man."

We respect his ability and his zeal. He is a benefactor to mankind not only for his contribution to the enterprises of the world but for the inspiration we derive from the lofty example he sets for others.

All that I am saying in truth represents our distinguished colleague.

Many people believe success is largely due to luck or to birth or to circumstances. But it takes ability to shape circumstances. It is true that there is a tide in the affairs of men which, taken at its flood, leads on to fortune. Only an able and wise man, however, knows when the tide is at its flood.

Our friend and colleague, our distinguished guest and chairman, has achieved a large measure of success. His success has been political, legislative, and material. But that success was not achieved by luck. I am sure it came as the result of hard work and diligent application.

Undoubtedly, early in his life he learned one thing that is now one of his fine characteristics, namely, thoroughness. He has earned true greatness and we, his friends and colleagues, who have been so closely associated with him, at least for a part of his life, rejoice that this is so.

We are honored by his presence here tonight and, also, that of his family. We hope that this modest occasion is expressive of that esteem and affection in which he is held by all of us who know him so well.

I can think of no word or line more appropriate on this occasion and, in contemplation of his withdrawal voluntarily from public life and in contemplation of his return to his Mississippi home where he and his good wife walked in full strength of their years, than the sentiment expressed by General Lee to his army at Appomattox, when he said: "You will take with you that satisfaction which proceeds from a consciousness of duty faithfully performed."

Speaking for the committee, of which you are our honored chairman, I congratulate you again upon your seventy-second birthday. Somewhere the poet has said:

"Age is a quality of mind.
If you have left your dreams behind
And hope is cold;
If you no longer look ahead
And your ambition's fires are dead;
Then you are old.
But if from life you take the best
And in life you see the jest,
And love you hold;
Then no matter how the birthdays fly,
No matter how the years roll by;
You are not old."

Address of Hon. William J. Green, Jr., of Pennsylvania

EXTENSION OF REMARKS
OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. WILLIAM J. GREEN, JR., Congressman, Fifth District of Pennsylvania, at the forty-eighth annual convention of the Pennsylvania Federation of Labor at the Benjamin Franklin Hotel, Philadelphia, May 8, 1950:

Mr. President, honored guests, and friends, at the very outset, let me remind you that this is a political year. Instead of being coy and shadow-boxing, I will tell you right now that my remarks will be largely political. Everything that labor has gained over the decades has been achieved through wise labor leadership and by the ballot box. So there is no more appropriate place to talk politics frankly.

In a world which never before knew such fear and uncertainty, it is a pleasant contradiction that organized labor is in better shape than at any time in its history. This is a tribute to many leaders and workers who have crossed to the great beyond and also to men like Jim McDevitt and you who are still fighting the good fight. America is strong economically and politically. Never before was our wealth so widely diffused, and at no time have we been as free from the menace of "isms."

There are far more employables now than in previous times, which explains in large measure the unemployment picture. But every responsible adviser believes this lag is on the way to being wiped out. Ordinarily I avoid quoting statistics in a speech. But here are a few which are dramatic in their importance. They cover most of the very 48 years in which you have been meeting annually. You and your predecessors did much to bring them about.

Columnist Sylvia F. Porter, writing in the Philadelphia Inquirer, said:

"For a long time I have been seeking some hard facts on the buying power of work, then and now, for that is a major yardstick by which to measure the true prosperity of the majority of Americans. Today I have those facts * * * via the National Industrial Conference Board * * * which has just finished surveying what an hour's work would buy in 1914 and what it would buy in 1948. At the start, let us say the disclosures are exhilarating. For, since 1914, the purchasing power of an hour's work in our country has just about doubled. In this period the average factory worker's wages have risen twice as much as prices. Today's factory worker has to work only about half the number of hours that the 1914 worker did to pay the family bills. * * *

"Today's Americans are so far ahead of their 1914 equivalents that any nostalgia about the good old days is ridiculous. In those good old days of 1914 the average wage earner had to work over 51 hours a week, and some other member of the family had to earn additional income to supply the average amount of goods. He received 25 cents an hour and earned a total of $12.72 a week. He needed $16 to support his family, however. So, to make ends meet, other members of his family had to work an extra 14 hours. Today's factory worker has to work only 34 hours to supply his family with the higher living standard now considered average. He receives $1.47 an hour and earns a total of $58.52 a week. Thus, he has a surplus he can use for saving or for improving his living standard.

"Consider food costs as an illustration. The dollar cost of food has skyrocketed since 1914. As I read some of the food prices prevalent then, I find it difficult to believe they were real. But the average food basket cost the average worker 29.4 hours a week. Today's typical basket costs today's worker 12.4 hours. Or consider clothing costs * * * and, again, the soaring prices of the last decade have obscured the basic long-term gains. To clothe himself and his family cost the average factory worker 9 hours in 1914. Today's wage earner can finance his clothing expenses with less than 5 hours a week. And so the comparisons go down the line in housing, transportation, fuel and light, household operation, and furnishings. And they are still valid after deduction of the income tax, our new form of family expense."

Now, these figures deal with the average American who is a worker. They depict better than any oratory how the average employee has improved his lot since 1914. Most of that progress has been made since the Wagner Labor Relations Act was written into law. Labor unions, bargaining within its framework, have been the force which brought it about. This fine statement of our economic health is made just 18 years after Herbert Hoover predicted that grass would grow in our streets and that America was about to embrace state socialism. Mr. Hoover will be remembered for many things, but I always think of him as the man who gave Republican candidates their bird call.

Little city children who never heard a screech owl, or a whippoorwill, or a robin in its vesper song, are familiar with the Republican candidates cry of socialism. It is uttered in a loud voice, from the bottom of the throat, each October and early November; it becomes particularly shrill in the week imediately preceding the Tuesday

after the first Monday in November. This is usually followed by a great hush which occurs on Tuesday night or Wednesday morning. In 1948 the bird cry grew dim after midnight and at five in the morning was reduced to a whisper. As an indication of the fall season you can be more certain of this call than the frost upon the pumpkin, or the world series.

They cried "socialism" when we wrote the Social Security Act. They cried "socialism" when we wrote the Wagner Labor Relations Act. They cried "socialism" when wages and hours standards were set. They cried "socialism" when the security exchanges were regulated. They cried "socialism" when decent housing became a matter of Government interest. And without benefit of a crystal ball we can predict that the old familiar bird call will ring out when they discuss the welfare state next fall. They will still yell "socialism" in spite of the steady earnings and dividends and the backlog of orders in business. They are still in charge of their businesses and Government imposes regulations only when it is in the public interest. And that is a duty of government.

When the cry of "socialism" pierces the autumn air I think the orators should define the word for us. Certainly any Republican candidate should be willing to accept Senator TAFT's definition, given in a recent telecast. He said: "Socialism is where the Government runs everything." That is terse and accurate. It has no application to a welfare state which both Churchill and Attlee endorsed. They divided on the Government taking over businesses, which is socialistic. This has been done in Great Britain to perhaps a degree of 20 percent. The conditions which brought it about are strictly British and have no counterparts here.

Before the Republican candidates practice their bird call let me tell them this: I have never met and talked with a responsible Democrat, from President Truman down, who would not bend every effort to prevent socialism from replacing our private enterprise system. I talk to many labor leaders and I have yet to encounter one who would change our private enterprise method. I will go further; I have many conversations each day with just plain Americans, and I have yet to meet one who wants socialism. And let me add, after 18 years of the same dismal November wail, nobody is scared any more. We are doing too well.

I recently passed a Carnegie library in my district. It brought to mind the many surveys covering the first half of the century, which appeared in our newspapers on New Year's Day. The little steelmaster was an industrial giant during an important part of that period. He left library buildings to perpetuate his memory. He built the enduring part of his monument. And with Scotch canniness, let the city taxpayers provide the perishable books. It is unfortunate that the library did not evoke the thoughts of fondness and endearment which monuments usually do. Instead I kept thinking of how the Carnegie fortune was amassed. In the place of pondering on Mr. Carnegie my thoughts dwelled upon his ruthless era. Here was the trickle-down period when great fortunes were set up for the few, with the thought that some small portion would trickle down to the rest of us. This was the heyday of Republican high protective tariffs, maintained long after our industries needed protection. Through this Republican device, Mr. Carnegie sold steel for cheaper prices in Europe than you could buy it in Pittsburgh.

I thought of how ready Republican Governors always were to call out the National Guard in a strike. My mind dwelt upon those dismal company towns with their racketeering company stores, their heavily armed company police and sometimes, even a company-dominated church. I thought of how Mr. Carnegie's companies kept labor under thumb by recruiting in European countries. Ellis Island was the convenient answer to any labor unrest. Also to mind came thoughts of blacklisting, yellow-dog contracts, labor spies, and strikebreakers, at a time when Republicans were elected in Pennsylvania with sickening regularity.

And that fact brought to mind the ballot-box frauds in Philadelphia and other cities of our State. Also the Bois Penrose assessments upon members of the Pennsylvania Manufacturers' Association to pay for all this. During this shameful period in Pennsylvania labor history, we had nothing but Republican Governors, yet you have been gracious in inviting our present Governor and he has shown typical consideration in accepting. But as I review the labor record of his party, I feel something akin to sympathy for him. Despite his well-known calm, he or other Pennsylvania Republican politicians must feel very much like a whisky distiller addressing the Women's Christian Temperance Union, when they talk to a labor group.

Next November Republican money will be poured into this State by interests opposed to labor. When the familiar bird-cry is at its loudest it is possible that you may read of some alleged labor leader who has decided to throw his influence (which is usually negligible) to the Republicans. He will claim that he is doing this in the cause of the workingman. This will fool nobody. He is acting in his own personal interest. For the moment he will achieve headlines and then sink to well-earned oblivion.

Right now there is a primary fight between two factions of the Republican Party backed by Mellon, of Pittsburgh, and Grundy, of the Pennsylvania Manufacturers' Association. This is the equivalent of choosing between smallpox and diphtheria. Neither the tycoons, or the candidates they endorse, have ever shown any interest in the workingman, except in November.

In Senator MYERS you have a definitely known quantity. Read his voting record and then emphasize it among your worker friends. FRANK has become a real power in Washington and he has won that high esteem in the short space of 6 years in the Senate service. No matter where you live in the State, make it your business to know your Congressman's voting record in the House.

Statewise, we never entered an election with as much confidence. You will hear that Richardson Dilworth should serve out his term as Philadelphia city treasurer. Even as a candidate for that office he advocated that it be abolished. He said then, before his election, that the treasurer was only a glorified cashier and urged that the office be absorbed by the comptroller. Dick really ran last November to show what a shellacking he could administer to the Philadelphia Republican gang. It is the one they will never forget and may not even survive.

What a competent Governor Dilworth will make.

In closing, let us reiterate to each other that we want no part of socialism and that welfare features do not produce that kind of government. Neither do we want any return to that form of rugged individualism that became too rugged for us under Hoover. We are all out for enterprise that is decent, that serves the people well, and which accords labor the dignity to which it is entitled. With the memory of the Eightieth Congress and the infamous Taft-Hartley Act, we know that this position can only be maintained by voting the straight Democratic ticket.

Speeches by Hon. Joseph E. Casey

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein two excellent speeches delivered some time ago by my valued friend and our former colleague, the Honorable Joseph E. Casey, my distinguished predecessor as Representative of the Third Massachusetts District:

SPEECH MADE ON THE DAY THE UNITED STATES DECLARED WAR ON JAPAN

Mr. CASEY of Massachusetts. Mr. Speaker, prior to yesterday we were a divided Nation with respect to our foreign policy. That division of sentiment has interfered with the efficient marshaling of our energies and our resources. America has been a sleeping giant. This attack by the Japanese has awakened us. We are no longer divided. We are one people. We are a Nation galvanized into action. The whole world will soon learn that a truly peace-loving Nation can strike with awful force when thoroughly aroused.

Mr. Speaker, we, Americans all, at this critical hour in the life of our Nation, place all that we hold dear—our lives and our sacred honor—upon the altar of our country and at the feet of our country's cause. God helping us, we will not fail. (Source: CONGRESSIONAL RECORD, House, December 8, 1941, p. 9521.)

[From the CONGRESSIONAL RECORD of March 31, 1939]

Mr. CASEY of Massachusetts. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

"Amendment offered by Mr. Casey of Massachusetts: Page 1, line 8, strike out '$825,000,000' and insert in lieu thereof '$850,000,000', and in line 9 strike out '$100,000,000' and insert '$125,000,000.'"

Mr. CASEY of Massachusetts. Mr. Chairman, this amendment in the sum of $125,000,000 offers us on this side of the aisle a common ground upon which to meet. Make no mistake about it, this is an important vote, an important vote for those who come from the industrial centers of the country and an important vote for those who come from the agricultural districts of the country. More than that, it is an important vote so far as the Democratic Party is concerned. Here we have the party that was put into power because during the crisis the Republican Party failed miserably to meet the exigencies of the situation created prior to 1932. I have heard arguments against the WPA. Of course, relief is an unpleasant topic, and it is an unpleasant situation with which we have to deal, needy men and women. We would like to walk away from it and just say, "Let them take care of themselves." Relief and WPA were never intended to restore prosperity to this country. It is not an economic panacea. It is, however, our method of saying that we believe it to be the duty of the Government to give needy men and women whom private industry cannot employ an opportunity to exist and support their dependents until these distressful times have passed.

Throughout the world men and women, through no fault of their own, through no fault of any political party, were thrown out of work. It became a problem for every other nation as well as this country. The totalitarian nations have solved it by putting their

unemployed in as shock troops and putting them to work under direct Government supervision in the Army. England tried to solve it by the dole. From authoritative sources I have read and have been told that the dole system has been demoralizing; that men are growing to middle age now who have never seen their fathers earn a single dollar and who have themselves never earned a dollar, but merely march up once a week and get a pittance from the Government without doing anything for it.

The WPA, with all its faults, and they have been set forth clearly and fully, is a much better method of relief than has yet been brought forth in any nation on the face of the earth today. Of course, there has been criticism. "Swing" Mikado, building world's fairs, and so forth, but there has not been a single word said in its favor about the hospitals, about the schoolhouses, about the sewer and water systems that all of you know have been erected in your districts by WPA. I say, in view of the enormity of this program, Nation-wide in its scope, trying to deal with the misery and suffering of millions and millions of unemployed, it has stood the test of being brought into the light of day. Surely there has been travel pay that has seemed exorbitant. I do not defend that, but even in private industry you have heard salesmen talk about swindle sheets. Of course, there has been waste and extravagance, but there has been much good done, not toward restoring prosperity but toward helping these distressed people and helping to take care of the needy and unemployed. That is all it was meant for. That is all that can happen with WPA.

The Republicans failed. We have put this into effect. The President said, "We need $150,000,000." There are others who said, "We need $100,000,000." Now, where shall we go? We have denied the President $150,000,000. Let me say to you Democrats that I never believed before 1932 that there was any great fundamental difference between Republicans and Democrats, but President Roosevelt breathed meaning into the Democratic Party [applause] and gave it life and made a clear and fundamental difference that enabled a great many liberals and people who believed that the weaker should have some protection in government and who did not care about political ties to join with him. It enabled those north of the Mason and Dixon's line to send Democrats to Congress because of their faith in progressive government and not merely because some of us were born Democrats. I say to you, let us meet on this common ground and not undermine the Democratic Party, which has been instrumental in enacting into law progressive, far-reaching measures that not even the Republicans, if they ever regain power, will dare repeal. [Applause.]

[Here the gavel fell.]

Economy and Service to the People

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. MULTER. Mr. Speaker, we hear so much about economy in Federal expenditure these days that I often wonder whether those who keep up the cry of economy fully realize that by reckless action we may cause the disruption of many important services which our Government is rendering to the people of this country. Without sufficient forethought or exact analyses of the effects of this so-called economy, we may wake up one day to find that we have committed irretrievable harm to these services and that it will then cost us considerably more to reestablish them. Under such circumstances the economy will prove to be very costly.

It must be remembered that besides the promise of economy, we owe the people whom we represent certain elementary governmental services and functions. If we should fail to give them these services, we will not be doing our duties as representatives of the people and we will be weakening the Government and the services it is supposed to administer and perform for the benefit of our citizenry.

In connection with this vital matter, I desire to draw the attention of my colleagues to a brief article by the noted columnist, Ernest Lindley, in the Brooklyn Daily Eagle, May 14, 1950. His article, Congress Deals Frivolously With Nation's Finances, is as follows:

CONGRESS DEALS FRIVOLOUSLY WITH NATION'S FINANCES

(By Ernest Lindley)

The "across-the-board" cuts in Federal expenditures voted by the House were made, of course, in the name of "economy." Actually no one knows precisely what their effects would be. In all probability they would disrupt some services which are now efficiently and economically rendered. Other necessary or useful activities might not be seriously impaired. No one knows. Indeed, even after detailed study, the exact effects may not be predictable.

Obviously, this is not an intelligent way to try to achieve economies. And because it is unintelligent it is likely to be ineffective. Many who voted for the sweeping amendments realize this. They simply thought it was good politics to put themselves on record dramatically in favor of economy. They were acting irresponsibly.

The sweeping amendments were tacked onto an omnibus appropriation bill—the first of its kind—which had been reported after long and careful work by the House Appropriations Committee. The committee had effected economies. The chairman of the committee, Representative CLARENCE CANNON, of Missouri, had fathered the idea of an omnibus bill as a means of attaining a more responsible treatment of the Federal finances by Congress. The result at the moment is a murky mess.

If economy is to be sought by across-the-board cuts such as the House approved, there is no point in having an Appropriations Committee. There is no point in requiring representatives of the various executive agencies to spend their time, or that of the committee members, in explaining or justifying their budget requests.

The other side of the Federal financial problem—income—likewise seems unlikely to receive responsible treatment. The House Ways and Means Committee is still working on a bill. It has agreed tentatively upon cuts of approximately $1,000,000,000 in excise taxes. These appear to have been agreed upon by familiar log-rolling methods. The committee has made no headway as yet in finding alternative sources of income. Yet the Federal Treasury faces a big deficit this year and again next year.

Some excise taxes should be cut and some should be removed altogether. These changes should be made with a view to promoting general prosperity and eliminating taxes which are more annoying than lucrative rather than with a view to pleasing the lobbies which have the most friends on the committee or can put the most pressure on it. But the Government cannot stand the loss of revenue. So other tax increases are necessary. Many Members of Congress are, however, reluctant to approve them. The upshot of this political and frivolous approach is likely to be no change in taxes at this session.

1950 Census Uncovers Serious Unemployment Problem in City

EXTENSION OF REMARKS
OF
HON. WINGATE H. LUCAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. LUCAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Weatherford Democrat by Claud Garner:

1950 CENSUS UNCOVERS SERIOUS UNEMPLOYMENT PROBLEM IN CITY

When the personable young lady census taker started on her rounds to take the 1950 census of Weatherford, Tex., one of her first visits was to see my good friend, Lloyd Doughty. She found Lloyd loafing around the house, keeping his father company.

"What is your profession, Mr. Doughty?" asked the attractive young lady, after she had covered the dining table with her big four-page census form.

"Well, I used to be in business, but at present I am staying here with my father."

"Did you spend any time last week at your regular business?"

"No, I stayed around the house all week."

"How about the week before? Did you spend any time at your regular work?"

Lloyd looked a little shame-faced but answered truthfully, "No."

"Would you consider yourself employed at the present time?"

"No. I guess you would class me as being unemployed."

The young lady failed to ask Lloyd how much time he spent during these 2 weeks counting the money he had received from rents, dividends, and other investments.

The well-mannered young lady finished her work and gathered up her materials and went about her business. Her next stop was to see our world renowned portrait painter Douglas Chandor.

Two weeks before, Douglas had returned home from New York, where he had spent 6 months in his Waldorf Astoria studio painting portraits of only such people as were able to be listed in Who's Who In America. Douglas looked the part of a dirt farmer, he was dressed in his wrinkled work clothes, wearing a pair of old scuffed-up shoes and a slouch hat that looked like one of the old hats Fred Cotten brings out occasionally. The artist was busy inspecting one of the many rare plants in his beautiful and exotic garden, when the census taker found him.

"What is your profession, Mr. Chandor?" asked the attractive young lady as she struggled to hold the oversize Federal form with one hand while she wrote the answers with the other.

"I am a portrait painter."

"Did you work at your profession last week?"

"No, I spent last week working in my garden."

"How about the week before? Did you spend any time working at your regular profession?"

"Practically none. I had just gotten home and spent the week looking over the place."

"Then at the present time, you are not gainfully employed?"

"You are right. Working in my garden doesn't make me money, but it costs me plenty, so I guess you would call me unemployed at the present." Douglas didn't mention the fact that he had painted portraits of the crown heads of England, Franklin Delano Roosevelt, his wife Eleanor, and many other dignitaries. Ina, the wife of the artist, who handles all the bookkeeping wasn't at home and couldn't tell what became of the $25,000 Bernard Baruch paid for one of Chandor's portraits of Winston Churchill.

The census taker asked many questions. She wanted to know how many hogs, sheep, goats, cattle and horses he had on the place. She even asked if he had any hives of bees to help pollenize his flowers. Douglas was glad to help the young lady gather up her armload of census forms and books of instruction so she could be on her way and he could get back to work.

A few calls later the census taker dropped by the home of Douglas Gibbs, but Douglas was out of town on one of his tomcatting jaunts and wasn't there to answer her questions. This was lucky for Weatherford, because Douglas would have added one more to the city's list of unemployed.

It took two trips to the Doss house before she caught J. H. at home. Mr. Doss spends much of his time walking the streets between his home and the bank, because when he gets to the bank he finds that his son, James, has taken over the business and there is nothing for him to do, so he walks back home. The library table wasn't big enough to hold all the various census forms, so the young lady spread them out on the floor and started asking questions.

"What is your business, Mr. Doss?"

"Well, I used to run the bank, but my son took my job, so at present I am unemployed."

Many of the questions asked on the census form seemed a bit foolish to Mr. Doss but he liked the efficient manner the young lady handled her job. When she asked him for the total amount of his 1949 earnings, he had to give her an estimate, since the adding machine he had at home wouldn't add figures in that amount. When she finished her work she gathered up her things and the information contained in the form would indicate another unemployed for Weatherford.

She had no trouble finding Clay Waller at home and proceeded to spread her huge census forms out on the big davenport and started asking for information.

"What is your business, Mr. Waller?"

"I used to be in the grain and feed business but the long hours on my feet made me give up the business."

"Do you have any other business?"

"I used to fool with cattle but since I can't ride horseback I quit that too."

"Did you spend any time during the last 2 weeks working at your business?"

"No, I have spent almost all my time here at home."

"Then at present you are not employed?"

"No, I might be classed as being unemployed," admitted Clay regretfully.

Clay should have told her that those fallen arches came from carrying too heavy a money bag and that he had gotten callouses from riding over his big ranch trying to count all his cattle.

No doubt, when our experts in Washington finish their tabulations of the 1950 census, many of our best citizens will fall in the category of the unemployed. I happen to know that E. A. Frantz has not invented anything new for a long time and I never catch him at work, so he too, will likely be classed among the unemployed.

Fortunately, I live outside the city limits and will not add to Weatherford's growing list of unemployed. In this connection, I want to compliment our census takers, they performed their duty efficiently and did a fine job, and followed the instructions sent them by our Federal Government.

If when the final figures are released and our efficiency experts have finished with their tabulations, we find the number of unemployed running into the millions, do not be alarmed. These census figures may not be accurate, but they will be just about as reliable and accurate as other figures and statements coming out of our Nation's Capital.

Yours for what it is worth.

CLAUD GARNER.

"Country Not Going to Hell" H. T. Tells Cheering Crowds—Boldly Champions Every Fair-Deal Issue; Even Unfriendly Press Concedes Trip Was Success

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 5, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Raymond Lonergan, which appeared in Labor, a national weekly newspaper published in Washington, D. C.:

"COUNTRY NOT GOING TO HELL," H. T. TELLS CHEERING CROWDS—BOLDLY CHAMPIONS EVERY FAIR-DEAL ISSUE; EVEN UNFRIENDLY PRESS CONCEDES TRIP WAS SUCCESS

(By Raymond Lonergan)

"Truman has crowds eating out of his hand." That's a headline in the Sunday edition of the conservative Washington Post. The story is written by Robert C. Albright, whose father was a conductor on the Southern Railroad. Bob is as conservative as his paper. He accompanied the President on his swing to the Northwest and reports the facts as he saw them.

On the same train was Joseph A. Fox of the still more conservative Washington Star. In the Sunday edition of his paper Cox wrote:

"President Truman is pulling them in at the whistle stops. Newsmen with him 2 years ago and again this time see no difference in either the size or the attitude of the crowds; they turn out at all hours of the day and night; they listen with quiet attention to matter-of-fact discussions of the global problems with which the President deals daily and they react with the customary outburst to the homely sallies punctuating his talks.

"If the President has lost ground in the past 2 years, it is not evident in the reception he has received from the Mississippi to the Puget Sound country."

COURAGE IS THE WORD

The American people admire courage. During his long trip, meeting all kinds of people, the President never once pulled his punches. That's why the crowds warmed up to him.

He demanded the repeal of the Taft-Hartley law and the enactment of a substitute, fair alike to labor and management.

At the mighty Coulee Dam he went all-out for public power development, reclamation of arid lands and flood control. The Secretary of the Interior, who accompanied him, described Grand Coulee as an enterprise with a cash register attached.

That meant it was paying for itself. In fact, the demand for power is so great that it cannot be satisfied.

The President ridiculed those who say that the country will be ruined if we buy goods from our friends in Europe and Asia. "We can't sell to them unless we buy from them," Mr. Truman emphasized.

WE'RE NOT GOING TO HELL

Everywhere he pleaded for world peace. America must be strong in order to check the advance of communism.

He advocated more low-rent housing, the Brannan plan to safeguard the farmer and at the same time give consumers cheaper food, broader social security, and every other feature of the New Deal program.

"I don't believe the country is going to hell," he told one laughing crowd.

The Taft-Republicans, after many conferences, worked out a plan to stop Truman. They picked Victor Johnston, a high-pressure publicity man, who once worked for Senator JOE MCCARTHY and was also on the payroll of the Northwest Grain Associates—a polite name for the lobby which represents the grain gamblers and the flour interests—gave him an airplane and instructed him to follow Truman's train, distributing answers as he went.

TOO MANY SLOGAN MAKERS

The President and his lieutenants publicly invited Johnston to stop risking his neck in the air, buy a ticket, and get aboard the presidential train. They even went so far as to get the Secretary of the Interior to help distribute Johnston's releases. The newsmen treated Johnston's performance as a joke.

In the meantime, back in Washington, two or three times a day Republican leaders rallied the newspapermen and told them it was all a part of the President's socialistic program.

Of course, those tactics were not effective. Apparently there is no one at Republican headquarters who is capable of making an effective appeal to the voters.

Chairman Gabrielson has never been in touch with the plain people. He was given his job because he was believed to be a money raiser. He had been a lawyer on Wall Street and knew the men who hated Truman and feared reform of any kind.

He has raised a good deal of money and he has used it to hire a lot of high-pressure publicity men like Johnston, and they are really manufacturing the slogans and planning the campaign of the Republican Party. To one who has observed political battles for many years it doesn't look very smart.

Truman's trip was such an outstanding success that even those newspapers which hate him have been compelled to give him the finest kind of publicity.

Here is a sample of the way President Truman presented his case to the enormous crowds which flocked to hear him:

"The use of the government to achieve a higher living standard and a fair deal for all the people is not statism and it is not socialism. It's part of the American tradition.

"The best over-all measure of a nation's economy is its annual output of goods and services. In the United States the annual output of goods and services has increased in the last 10 years about 60 percent.

THOSE WHO YELL LOUDEST

"Now how does this affect the individual citizen? A favorite theme of the boys who are always trying to run our country down, instead of trying to build it up, is that the Government takes all our gains away by high taxes.

"But the truth is that the annual per capita income of our citizens, after taxes, has increased in the last 10 years by more than 40 percent.

"And some of the people who are doing the loudest yelling are the very people who have got the biggest increases. Most of them are better off than they have ever been before in their lives."

"WIPE OUT OBSTRUCTIONISTS"

The wind up of the Truman tour came in Chicago. Democratic leaders staged a 3-day show, including a meeting of the Cabinet, where the various Secretaries "made reports to the people."

The affair was dragging a little until the President appeared on the scene. It is estimated that half a million watched the parade and, of course, the stadium was packed.

The President had some good things to say about the present Congress, but he appealed to his hearers to "wipe out the obstructionists." He thought it would be a good thing to start in Illinois by reelecting Senator SCOTT LUCAS, Democratic floor leader in the Senate, over former Congressman Dirksen, who is just as reactionary as "BOB" TAFT.

"DREAMING" NOT A BAD THING

"Our sour critics say our hopes for the future are just idle dreams," said the President.

"The Democratic Party would deserve to be retired from office and hustled off to the ash heap of history if it ever stopped dreaming of what we can do to make our country better."

Naturally, the crowd came to its feet to cheer that one, and it continued to cheer as the President added: "I do dream of making our country a better place to live in."

The two biggest jobs, he said, involve lifting the standard of living of the American people and collective action to insure peace of the world.

IT'S "IMMORAL" SAYS TAFT

On Tuesday night TAFT replied to Truman in a Nation-wide broadcast.

The Ohio Senator repeated his charge that Truman is leading us to destruction. In fact, he declared the program put forward by the man in the White House was immoral, as well as socialistic.

My guess is the American people can't be scared by that kind of talk.

United States Customs Reform

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article which appeared in Foreign Commerce Weekly for the week of May 8, 1950, written by Nathan Ostroff, general counsel, Office of International Trade of the United States Department of Commerce:

UNITED STATES CUSTOMS REFORM: CHARACTER AND PURPOSE OF PROPOSED LEGISLATION—H. R. 8304 AIMS AT IMPROVEMENT OF CUSTOMS SERVICE AND MINIMIZING OF COST

Our customs practices and producers are generally agreed to be unnecessarily onerous, and many of them derive from laws long antedating the basic Tariff Act of 1930. It is true that the importer and the foreign exporter are directly concerned with the costs and burden of customs formalities, but it must also be kept in mind that the domestic consumer and the taxpayer ultimately pay the bill for the expense, delays, and uncertainties that are inherent in present practices. It would seem, therefore, to be in the public interest generally that this situation should be changed.

In this connection, it should be noted that the Congress, in 1947, provided a special fund to the Treasury Department for the purpose of making a study of the possibilities of simplifying and reducing the cost of customs operations. In addition to its own specialists from the Customs Bureau, the Treasury employed a nationally known management firm to assist in this work. Also, other Government agencies, notably the Departments of Commerce and State and the Tariff Commission, made suggestions, as did a number of private trade groups familiar with importing problems.

A number of recommendations which could be accomplished by administrative action have already been put into effect, and some are still under study. And now the Secretary of the Treasury has sent to the Congress a proposed bill that would take care of those recommended changes in present practices which require statutory authority. It should be emphasized that this bill would not change the present rate structure. Rather, it is concerned with the mechanics of importing, with the objective of giving improved service to the importer and minimizing its cost to the public. Mention might also be made of the fact that enactment would be in fulfillment of the customs administrative provisions of the proposed charter for an International Trade Organization which is now before the Congress, and likewise would enable the Government to make effective the administrative provisions of the General Agreement on Tariffs and Trade. More important, however, and to repeat, the proposed bill is offered and should be considered on its own merits as being calculated to simplify, improve, and make less costly the customs service of this Nation.

The following is a brief explanation of the major provisions of this bill which are of general interest:

VALUE

Under existing law, the value of imported goods for duty purposes is based upon "foreign value" or "export value," whichever is higher. If these are not ascertainable, then the "United States value" is used, and if that also is unascertainable, "the cost of production" governs. The proposed law would eliminate "foreign value" and rely primarily upon "export value," and where the latter is unascertainable, the standards in order of application would be "United States value," "comparative value" and "constructed value."

Elimination of foreign value and use of export value as the primary method of valuation should expedite customs administration and reduce its cost. It would minimize the need for determining facts and conditions in a foreign country—which is often time-consuming—and, instead, rests upon transactions in our own import trade well known or readily ascertainable by importers and customs officers. It would incidentally eliminate the present arbitrary practice of including in dutiable value internal taxes applicable only to domestic sales within the country of origin.

"Export value" is defined as the market value or price, at the time of exportation to the United States, at which the merchandise is freely sold or offered for sale in the principal markets of the country of exportation in the usual wholesale quantities and in the ordinary course of export trade.

"United States value" is to be determined by reference to the prices, at the time of exportation, at which the merchandise is freely sold or offered for sale in the usual wholesale quantities to the principal United States market for domestic consumption in the ordinary course of trade, with allowances for actual commissions or profits, and general expenses. (Under present law, such allowances are arbitrarily limited, such as 6 percent for commissions and 8 percent for profits.) Inland transportation expenses and import duties or taxes are also allowable. In determining "United States value" of goods in which there is no previously established trade, the proposed law would authorize consideration of actual sales of the merchandise undergoing appraisement or similar merchandise if made within 90 days after importation.

"Comparative value" would be ascertained from sales or offers of other merchandise comparable in construction and size. "Constructed value" is simply a more descriptive term for cost of production, but this new term is further defined so as to eliminate the present minimum limits allowable on general expenses and profits.

All of the significant terms and phrases used in these standards are defined in the proposed law so as to clarify their intended meaning and, incidentally, to override existing inconsistent interpretations. For example, usual wholesale quantities is defined so as to mean the price at which the greatest volume of the particular goods is sold, rather than, as at present, the price at which the greatest number of individual transactions occur. Similarly, the new definition of freely sold or offered for sale would, contrary to existing interpretations, permit reliance upon sales or offers which are unrestricted except for restrictions imposed by law, or which limit the resale price of territory, or else are trivial with respect to the value of the goods to the wholesale purchaser.

REPEAL OF AMERICAN SELLING PRICE; PRESERVATION OF PROTECTION

In a few special cases under present law, dutiable value is based on the American selling price. This standard would be repealed by the proposed law, but provision is made to preserve existing tariff protection by requiring the Tariff Commission to fix new duty rates calculated to produce an equivalent degree of protection to that now afforded to the articles affected by this change.

AMENDMENT OF ENTRIES, AND DUTIES ON UNDERVALUATION

Existing law provides for an undervaluation duty of 1 percent of the final appraised value of merchandise for each 1 percent that such value exceeds the entered value. It also authorizes seizure and forfeiture of the merchandise in cases where the appraised value exceeds the entered value by more than 100 percent, such entries being presumptively fraudulent. Existing law also provides that assessment of duty shall be on the basis of the entered or appraised value, whichever is higher. In effect, therefore, the importer is now in this embarrassing situation: If he enters his goods at too low an amount, he incurs an undervaluation duty; if he enters them too high, he loses the benefit of the lower final appraisement. To relieve the harshness of this situation somewhat, the present law authorizes amendment of entries at any time before appraisement. However, such amendments represent a heavy burden of paper work and are costly and time-consuming to the customs service and the importer.

The proposed law would eliminate such amendments, but at the same time would eliminate or minimize the need for them by providing that the undervaluation duty shall apply only in cases where there is not only an undervaluation but also a willful failure by the importer to furnish the appraiser with all relevant information available to him at the time of entry or within a reasonable time thereafter. The proposed law would also provide for deletion of the presumption of

fraud and requirement of seizure in the case of 100 percent undervaluation and, further, would permit the appraised value to be used when lower than that entered. In effect, under the proposed law the importer would not be penalized if he acted in good faith and furnished all information in his possession and reasonably available to him. It was felt unwise to provide for outright repeal of undervaluation duties, as recommended by the Import Advisory Committee of the Department of Commerce, because of the importance of obtaining the fullest disclosure of value information from importers, without which customs administration would necessarily be more costly and slow.

IMPORTS OF SMALL VALUE; ADMINISTRATIVE EXEMPTIONS

Under existing law, Customs officers are authorized to disregard differences of $1 or less between estimated duties and duties deposited or tentatively assessed and the duties actually due. They may also waive the duty when the expense or inconvenience of collecting it is disproportionate to the amount involved, up to a limit of $5 in the case of articles for personal or household use, or $1 in any other case. The proposed law would increase the first provision mentioned from $1 to $5, and would allow persons to bring with them, or import by mail, up to $10 for their personal use, and otherwise up to $5. Liquor or tobacco products are specifically excluded from the latter provisions.

INFORMAL ENTRIES AND CERTIFIED INVOICES

Under existing law, imports up to $100 in value may be covered by informal entries prepared by Customs officers, and they do not require certified (consular) invoices. The proposed law would raise this amount to $250.

COMMINGLED GOODS

Under existing law, goods subject to different rates of duty, but so packed or mingled that the quantity of each cannot be determined, are dutiable at the highest rate applicable to any part thereof, unless segregated by the importer under customs supervision within 10 days after entry. The proposed law would allow 20 days for such segregation. Where a part of the dutiable portion of the goods is commercially negligible and the commingled goods will not be segregated prior to use, it is further provided that segregation may be waived if it would be too costly and it appears that commingling was not done with intent to evade duty. Such goods would then be considered as a part of the merchandise subject to the next lower rate of duty (including a free rate) with which it is commingled. Segregation might also be waived in those cases where duty is readily determinable by sample, by entry documents, or by means of recognized commercial settlement tests.

DRAWBACK ON REEXPORT OF GOODS NOT ORDERED

Under existing law, drawback of duties paid, less 1 percent, is allowed upon goods not conforming to sample or specification and returned to Customs custody for reexport within 30 days. The proposed law would extend this provision to cover also goods not ordered and would increase the time period to 90 days so as to allow for possible discovery of latent defects or those ascertainable only by test or use.

CURRENCY CONVERSION

As the primary method of conversion, the proposed law would eliminate the present system of quarterly findings by the Director of the Mint of rates of exchange based upon the metal content of coins which, as a matter of fact, has had no practical application since 1934 when the United States departed from the gold standard, and instead it would provide for the use of par values as established by the International Monetary Fund or pursuant to any special exchange agreement. Where multiple rates exist, provision is made for the Secretary to issue regulations relating to their use for customs purposes, or, in the absence thereof, for the Federal Reserve Bank of New York to certify one or more of such rates to the Secretary for such purposes.

CORRECTION OF ERRORS AND MISTAKES

Under existing law, only purely clerical errors are subject to correction. The proposed law would permit correction of clerical errors, mistakes of fact, or any other clear inadvertence (but not involving construction of law) which is adverse to the importer.

REQUIREMENT OF MATERIAL INJURY BEFORE IMPOSING ANTIDUMPING OR COUNTERVAILING DUTY

Under existing law, a finding of injury is a condition precedent to the assessment of special so-called antidumping duties on imported goods found to have been sold at less than their fair value. However, duties to offset foreign subsidization (so-called countervailing) may be imposed without such a finding. Under the proposed law, such duties would be assessed only upon a finding of material (rather than mere) injury to a domestic industry. In addition, the new law would specifically prevent the imposition of both countervailing and antidumping duties in the same case and would not permit the imposition of a countervailing duty based on an exemption from a tax or customs duty by the exporting country.

REPEAL OF SPECIAL MARKING REQUIREMENTS

Under existing law, certain imported articles, principally cutlery, surgical and scientific instruments (including hypodermic needles and thermostatic bottles), must be marked with the name of the manufacturer or the importer as well as the country of origin. These requirements would be repealed by the proposed law, leaving in effect, however, the general mark of country-of-origin requirement applicable to all imported articles.

CUSTOMS SUPERVISION

In cases where customs supervision is required, the proposed law would authorize spot checks when the expense of continuous supervision is disproportionate to the amount of revenue involved. Generally speaking, that is the existing practice, but in some instances—for example, marking of goods after importation—customs supervision has been required to be direct and continuous, which is, of course, quite costly.

FREE-ENTRY PROVISIONS

The proposed law would permit the free entry without bond of nonresident travelers' automobiles or other means of conveyance. Also, up to the value of $200, it would eliminate the present requirement of bonded transportation applicable to articles such as gifts carried by nonresidents in transit through the United States.

The proposed law would provide for cancellation after 5 years of bonds required for articles imported duty-free for noncommercial exhibitions. This would minimize record-keeping by customs made necessary under existing law which requires such bonds to be unlimited in duration. It would also permit free disposition of such articles after 5 years.

Temporary free entry under bond for not more than 1 year is provided under existing law for certain articles, not for sale in the United States. The proposed law recognizes that, in the case of such articles as samples imported into this country for exhibit at trade fairs, the duration of the present bond is insufficient, and, accordingly, it would extend the period to 3 years.

AMERICAN GOODS RETURNED

Reimported American goods are subject to duty equal to the sum of any drawback allowed upon their original exportation plus any applicable internal-revenue tax. The proposed law would simplify the entry of such goods, which at present entails considerable paper work and certain other practical complications, by giving the Secretary of the Treasury and the collectors more administrative authority to determine the applicable duty.

INTERNATIONAL TRAFFIC AND RESCUE WORK

A new provision is included to permit free entry of search, rescue, and salvage aircraft, and the temporary entry of equipment and supplies for fire fighting and disaster relief.

SIGNING AND DELIVERY OF MANIFESTS

The present provisions concerning the entry and clearance of vessels are inconvenient with respect to certain aircraft, because the pilot of a plane is not always able to perform some of the functions of the master of a ship. The proposed law would permit the authorized agent of an air carrier, as well as the pilot, to be responsible for signing and delivering the plane's manifest.

SUPPLIES AND EQUIPMENT FOR VESSELS AND AIRCRAFT

Existing law provides for the free entry of equipment and repair parts for foreign aircraft only, and this would be extended to cover such equipment for foreign vessels as well. In addition, free entry is also extended to ground equipment for foreign aircraft with respect to duties and any other import taxes.

Continuation of the Draft Law—"Yes, But" Men Needed

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. PATTERSON. Mr. Speaker, I desire to insert under an extension of my remarks two editorials from Connecticut newspapers, one on continuation of the draft law is from the May 12 issue of the Bridgeport Telegram; the other very aptly points out that it is not "yes" men needed in Congress; rather it is "yes, but" men contrary to the President's statements on his "nonpolitical" tour.

I commend the staff member of the Ansonia Sentinel responsible for this fine editorial.

[From the Bridgeport (Conn.) Telegram of May 12, 1950]

CONTINUATION OF DRAFT LAW

Perhaps most of us are wrong in thinking of the present as a peacetime period. If we were actually at peace, there would not be so much need for vigilance about what is going on in so many parts of the world. There would not be so much need for defense preparations, not only in our own country, but also in those nations abroad which live in daily fear that they will be invaded.

It is because of the world picture, and because of numerous events which have taken place during the past few weeks and months, that Congress is changing its mind, and inclining toward more preparedness, rather than less.

Only the other day, Representative PATTERSON, Republican of Connecticut, referred in Washington to the change which had come over him personally. "When the Director of Selective Service," he explained, "some months ago called for a further extension of the draft law, I was skeptical, to say the least. Enlistments in every branch of military service had increased; the draft itself was on a stand-by basis; and our relations with Russia, while not improved, seemed no worse than had been the case for some time."

In the view of Representative PATTERSON and of many other capable observers, however, during the past few weeks there has been a distinct change for the worse, so far as world affairs are concerned. Things are not getting better, in fact, it is much easier to draw the opposite conclusion. And it is because of the changed situation, and the warnings of Defense Department officials, that Representative PATTERSON voted with the majority of the House Armed Services Committee for continuation of the draft law.

There is something very significant about some of the developments which have taken place within recent weeks in widely scattered parts of the world. Viewed separately, many of these incidents are apt to be tossed off by the average observer, as of no consequence. Under normal peaceful conditions, trifling incidents can be adjusted or composed to the satisfaction of all parties concerned, without too much difficulty.

But there is something more than normality in many recent events, and when they are put together logically, they invariably form a pattern which assumes threatening proportions. That is why officials of the Defense Department have been emphasizing the need for this country to build up its strength beyond its present proportions.

The continuation of the draft law, with no immediate prospect of its early application, seems to be warranted by threatening conditions which are indisputably beyond our control.

[From the Ansonia (Conn.) Sentinel of May 16, 1950]

DARN RIGHT WE'RE "YES—BUT MEN"

In his Fargo, N. Dak., speech, President Truman said that "fundamentally there is no more reason to be afraid of fair competition from foreign goods than from domestic goods."

He suggested that those who do not see eye to eye with the administration's "experts" on tariff policies are "isolationists" and "yes—but men."

With the reasonableness of fair competition from abroad, a great many will agree, provided the President makes it clear what he means by fair. But is it fair that American industry and American workingmen should compete in our own American market with products of slave labor entering this country from iron-curtain countries under lowered tariffs?

Czechoslovakia has slave labor in the sense that the ursurping Communist minority which rules it has become the employer, and its working people work when and where the Government tells them to; the state fixes their hours of toil, determines what they shall be paid and how much their earnings shall be worth.

Most Americans will be neither flattered nor misled by having the President hang an "isolationist" tag on their vary natural concern about protecting their jobs from this sort of slave-labor competition.

And most Americans will glory in being termed "yes—but men," which merely means that they are not "yes men."

They are "yes—but men" in that they are intelligent enough to see the distinction between "fair competition" from abroad and slave-labor competition from iron-curtain countries, which is manifestly unfair. "Fair competition? Yes. Slave competition? No."

It is quite true, as the President pointed out, that one of the reasons this country became great is that it has had no barriers to trade between its States. But there are many other reasons for that greatness, chief of which is that since the Civil War our laws and economy are those of a free people and do not support the institution of slave labor.

President Truman will find that most of his fellow Americans agree with him in favoring promotion of international trade on a "fair" basis.

But he will also find that great numbers of them do not regard it as "fair" that imports of goods made by slave labor in iron-curtain countries should put them out of a job or on the WPA.

Instead of saying "yes" to letting stooges of Stalin, exploiting their own people, close down American factories, Americans will be proud to be regarded as "yes—but men," with loud and ringing emphasis on the "but—" and what follows it.

"But no subsidizing Stalinist slave labor at the cost of American jobs."

Blood, Sweat, and Tears

EXTENSION OF REMARKS
OF
HON. J. HARDIN PETERSON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. PETERSON. Mr. Speaker, the phrase "blood, sweat, and tears" has come to have historic significance. The following rather interesting article appeared in the Jacksonville Journal, Jacksonville, Fla., on April 5, 1950, which chronicled the use of the phrase by Hon. Frank A. Kennedy, prior to the Prime Minister's speech, May 13, 1940:

WHO COINED THAT PHRASE OR WHO JUST COPPED IT?

(By Tom Logue)

This is the kind of story that may reverberate in two of the great capitals of the world, London and Washington.

But, on the other hand, it may not. You never can tell about these things.

We stumbled on it just a few days ago.

No; that's not right, either. You couldn't call it stumbling. Frank A. Kennedy, the Journal's Washington correspondent, pushed us, or else Winston Churchill pushed us. That's the whole trouble. We can't figure out who that guy up there is.

Breaking the problem down a little, for greater clarity and confusion, here's the setup:

The man who originated the phrase "blood, sweat, and tears" was Winston Churchill.

But Frank A. Kennedy originated the phrase "blood, sweat, and tears."

Therefore, Frank A. Kennedy is Winston Churchill.

Kennedy, or Churchill, as the case may be, did this thing in the Clearwater Sun, 21 years ago, in the final stanza of a piece of doggerel about the tearing down of the old Clearwater Island toll bridge.

To be exact, it was on September 1, 1929, and we have a photostat on hand to prove it. The photostat was furnished by the unknown party in Washington, D. C.

The full poem is entitled "Horatius at the (Clearwater Island Toll) Bridge." It is rather long and we are not about to print the whole thing. Here's the passage in question:

"But quail'd he not, nor duck'd the job—
Of better stuff was he
Than he whose ancient name he bore,
Who only fought, you see,
And shirked the greatest task of old,
The task that no one cheers—
The task of pulling down the bridge,
In blood and sweat and tears."

Of course, it may be that the other fellow, the leader of His Majesty's loyal opposition—Kennedy or Churchill or whatever his name is—picked the thing up from the Clearwater Sun and filed it away for future reference. Significantly enough, he was in this country at about that time, crossing from Canada at Niagara Falls on September 19, 1929. According to the best available statistics, it takes just 19 days for a copy of the Clearwater Sun to get into general circulation in Niagara Falls.

Maybe we'd better start at the beginning and find out what Kennedy did in the Boer War.

Frank Kennedy, referred to therein, is a rather remarkable newspaper man. He has been in Washington for a number of years and has earned acclaim as a reporter. It is with considerable pride that I call attention to the fact that he came to Washington from the great first district of Florida, which I have the honor to represent. The original article referred to by Mr. Logue was published in the Clearwater (Fla.) Sun, on September 1, 1929, and in view of its historic significance, I am including it here:

MARGINALIA

HORATIUS AT THE (CLEARWATER ISLAND TOLL) BRIDGE

(News item:—"Work of demolishing the now unused wooden toll bridge to Clearwater Beach began yesterday. Since the erection of the million dollar causeway, this ancient structure has been in disuse.")

Up rose the brave Horatius,
His hacksaw in his hand,
And march'd him forth upon the bridge.
Perdidoes to disband,
Crumbling piling ring'd him round,
Barnacles tore his side;
And spikes there were, to slash him, too,
And pierce his bleeding hide.
The ugly splinters of the boards
Tore off his fingernails,
And while he labor'd might and main,
The blisters rose in bales.
To irk him in his bloody fight
To clear the channel clean,
The tide began to foam at him
To threaten, low and mean.
And overhead, the broiling sun,
In skies without a fleck,
Beat down in blazing fury on
The hackles of his neck.
And as he pull'd and heav'd and swore,
To pull the pilings up,
The woeful 'skeeters rose in swarms
To overflow his cup.
The ants and bugs and other things
That lived in rotted wood,
Began to swarm upon his back
To hurt him all they could.
As one by one the piling fell,
And boards he split in twain,
Horatius mopped his sweating brow,
And garnered in more pain.
High rose the sun, likewise the tide,
And now to ink him more,
A jellyfish, with fiery touch
Prick'd him in rear and fore.
And as the tide came surging in
To wash him off his feet,

A swordfish thither wander'd, too,
In search of fresh, raw meat.
Horatius, with a mighty lunge
Dispatch'd this fish of prey,
And used the sword he thus came by,
The boards to pry away.
So brave Horatius struggl'd on,
His battle not half o'er;
The mile-long file of piling stood
To snatch out all his gore.
The gnats were there the flies were too,
But Horatius didn't mind;
He clutch'd his crowbar once again,
Another pile to find.
And many were there, yet to fell,
In all that long array,
But brave Horatius raised his ba-
And tore one more away.
The sandflies rambl'd over him,
And set him all afire,
But brave Horatius beat them off,
And forced the fighting higher.
And to these woes Horatius turn'd
A red and blister'd face,
And tore, with scarr'd and blister'd hands,
A piling out of place.
He tore and ripp'd and pounded, too,
The bridge to pull apart;
Impal'd he was on bolt and nail
That pierced him like a dart.
But always brave Horatius dar'd,
With greatness in his heart,
To put his shoulder to the job,
And take another start.
Through weary hours, and tortur'd days,
Horatius toiled in pain;
He toil'd in heat, in blood, in tears—
Next day he came again.
And as the battle wax'd and wag'd
The shrinking piling fled,
With none to mark the gory place
Where brave Horatius bled.
But quailed he not, nor duck'd the job—
Of better stuff was he
Than he whose ancient name he bore,
Who only fought, you see,
And shirked the greater task of old,
The task that no one cheers—
The task of pulling down the bridge
In blood and sweat and tears.

"Simpatico's" one and only fan-mail letter which appeared several days after publication of the "Horatius" poem:

APPRECIATION

EDITOR, CLEARWATER SUN:

Well, "Simpatico" certainly covered himself with glory, and we give him loud acclaim, for his parody on Horatius at the Bridge was a masterpiece and covered the case most excellently and fully, for we had heard of those details so well set forth, and all for 25 cents an hour. The misery of it. To think that any man, no matter what his color, should have to suffer like that. Can you really picture it? And to think a hundred men needed and asked for a job like that.

If it were being done in the winter season, it might have been a trifle less uncomfortable, but hot sun, now and then a shower, heavy timbers to be handled, bugs galore, not to mention mosquitoes. The pity of it, and yet each man was and is just as valuable as any other of our citizens.

We will forgive you all other utterances, "Marginalia," and forget the past, for you have a heart and a soul, when you can see things as they are, and tell us in such a splendid way. We read a short time ago that these days we should be hard-headed, but not hard-hearted, but you are neither, praise be. Tell us some more truths, and may every reader take it all to heart.

"PEN" PENNINGTON.

It will be noted that the Kennedy poem, published 11 years before the Prime Minister's speech, used the expression "He toiled in heat, in blood, in tears," and in another place the expression "In blood and sweat and tears." In Mr. Churchill's book Blood, Sweat, and Tears—Putnam, 1941—the original use of the phrase is quoted as "blood, toil, tears, and sweat," page 276, Prime Minister, May 13, 1940:

I would say to the House, as I said to those who have joined this Government: "I have nothing to offer but blood, toil, tears, and sweat."

It will be noted that the Prime Minister used in the original statement the word "toil" just as the Kennedy poem nearly 11 years before had used the same word.

In view of the fact that my friend and constituent, Frank Kennedy, and the newspaper published in my district first published these historic words, I felt it rather important that we record the facts for the pages of history.

Eulogy at Requiem Mass for Rt. Rev. Walter S. Carroll, D. D.

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. KELLEY of Pennsylvania. Mr. Speaker, at the requiem mass for the Right Reverend Walter S. Carroll, D. D., in St. Matthew's Cathedral, Washington, D. C., on last February 27, the eulogy contained so much beauty and character that I thought it should adorn the pages of the CONGRESSIONAL RECORD. It was delivered by the Most Reverend John H. Wright, D. D., Bishop of Worcester, Mass.

Monsignor Carroll served in the important position of Vatican Secretariat of State, and at his office in Rome he not only carried out duties exclusively of a religious nature within the Catholic Church, but he also was active in the battle against the forces of communism in Europe—a campaign which is of such vital concern to the Members of this Congress. He died at the age of 41, while in the midst of this crusade.

Monsignor Carroll's mother, Mrs. B. Margaret Hogan Carroll, is a resident of Pittsburgh, Pa. His brother, Msgr. Howard J. Carroll, is general secretary of the National Catholic Welfare Conference, with offices in Washington, and another brother, Rev. Dr. Coleman F. Carroll, is pastor of St. Maurice Church in Pittsburgh.

This inspirational sermon by Bishop Wright is a highly deserved tribute to this beloved member of an outstanding American family:

"I have fought the good fight. I have finished the course. I have kept the faith."

It is my sad privilege to speak this morning a few words of fraternal tribute to Msgr. Walter Carroll and of Christian comfort to his loved ones.

I speak as the representative of monsignor's classmates and of his priest friends. However, if I may intrude a personal note, there is a slight reason why I might appropriately be one appointed to serve to interpret the sympathy of all to monsignor's family.

In the first days after our ordination to the priesthood Father Walter Carroll and I offered our masses simultaneously one morning in Saint Ignatius' great Roman church. Father Walter's mother was present at those masses, and afterward, out in the sunshine of a Roman square, we had a reunion which she will remember as lighthearted with the joy of new priests, genial Roman customs and the happiness of first masses.

The mass in Washington this morning is one of requiem—but it is the same mass as rejoiced us that day in Rome. The same Christ is offered. The same priesthood is His instrument. The same Roman faith is expressed. The same God is pleased. The same persons are present for this moment of passing sorrow as were present then on that morning of springtime priesthood.

The mass which Father Walter then offered himself is not less efficacious now that it is offered for him by the representative in America of Christ's vicar on earth. The same Christ with whom Father Walter was then united at the Roman altar is even more intimately his life and his being now that he is united to Him in eternity. Roman faith has been transmuted for him into a yet more perfect form of knowledge in the vision of that divinity of which we saw only the broken reflections when we were students those years ago in holy Rome.

The God who gave joy to our youth and to Walter's mother on that morning 15 years ago, is with us yet, to give us another joy, a joy more subtle, more profoundly spiritual, the joy of resignation to God's will, of confidence in Christ's promise that whosoever believeth in Him, though he be dead, shall live; He shall not die, but shall have life everlasting.

It is easy to see in false perspective the dignities and distinctions which came so early in his life, but perhaps so fatally for the health of Monsignor Carroll. One might be tempted to say: how wonderful that one so young should have honors so great and be entrusted with responsibilities so serious. Yet such a speaker would reveal no understanding of the crushing weight of some honors, the toll that such responsibilities take of those who bear them. On the other hand, another might be tempted to say: how sad that one so young should die, should be taken in the very maturity of his priesthood. Such a speaker would reveal no understanding of what a privilege it is to be worn out in the service of Christ's Vicar and Christ's church, to be quickly, eagerly spent in the service of Christ Himself.

The time of a good priest's death is always in the hands of God and we must never speak of it as premature, however young, however gifted, the priest may be. When Giosue Borsi wrote his spiritual testament in the very springtime of his life, yet the eve of his death, he set forth sentiments which come even more spontaneously to the lips of the good priest, such as Monsignor Carroll most certainly was: "A better end could not have crowned my life, and I feel the pleasure to have made a good and generous use of it. * * * Do not weep, for it was written in Heaven that I should die. Do not mourn, or else you would regret my happiness. I am not to be mourned but envied . . . My daily death shall have come to an end, and I shall be face to face with the Judge whom I have greatly feared, with the Lord whom I have greatly loved."

If the devout Italian soldier so wrote, surely this devoted priest would have spoken in no less patient and joyous resignation to God's Holy Will. Think of how many things, much more difficult than dying, he did out of love and loyalty for Christ and for His church!

Two years ago in a London bookstore I was fingering through the war memoirs of a British Army officer in Africa and Italy. I

was suddenly startled to find in the index the name of my classmate, Walter Carroll. The references were few, but significant. Reading around them and between the lines one could imagine the firmness and fortitude with which Monsignor Carroll, like so many of the representatives of the Holy See and of Christ, was obliged to resist political maneuvers when these would do violence to the law of God or the true welfare of men—to state, simply yet strongly, the position of the church and therefore of God when this might otherwise have been forgotten or neglected or despised.

Reflecting on the priestly career that Monsignor Carroll was destined to have, especially during the recent war, I thought of the words in which St. Paul proclaimed the glory—the hard-earned glory—of his apostolate: What journeys I have undertaken, in danger from robbers, in danger from my own people, in danger from the Gentiles: danger in cities: danger in the wilderness.

Surely the parallel is clear. What journeys Monsignor Carroll undertook on errands for the Holy See and in the service of the church and therefore of Christ. Journeys under wartime conditions and with all the hazards of war. In danger, in a sense, from his own people whenever, as must frequently have been the case, it was necessary in the name of religion and of the church to resist plans or policies conceived in mere political or military convenience, in short-sighted reasons of state, not to say prejudice, irreligion or ignorance. In danger from other nations constantly. In danger in cities as an agent for Christ in the midst of intrigue. In danger in the wilderness as an envoy from Christ to soldiers far from home and far from normal spiritual controls the while they did the brutal work of Caesar.

So Monsignor Carroll can also say now with St. Paul, as he lays down his arms from strenuous service: I have fought the good fight. I have finished the course—Bonum certamen certavi. Cursum consummavi. Fidem servavi.

So we come back to the thought of his journeys, all the journeys from Rome to Africa, to parts of Europe, to America, journeys which were to be the threads out of which was woven his apostolate, an apostolate unique among the priestly careers of our classmates. On each of these journeys friends would see him off as the boat sailed or the plane left the ground. And each time that friends would see him off they thought the thoughts which people have always thought, from the beginning of time, when loved ones go forth on a journey. We stand on the pier, or on the ramps above the airfield, or on the railroad platform. The ship moves slowly away from us; it gains the great ocean. The train slides from its terminal, gently at first, then it gathers speed and rolls rapidly on its way. The plane vibrates, eager to leave the earth; it skims along the field, it is lifted skyward, it recedes further and further into the blue. At length we no longer see the loved ones who have ventured forth on their journey. First they, then the ship, the train, the airplane become mere specks and disappear beyond the horizon where earth and sea and sky all meet and merge with one another.

Then someone always says: "There! He's gone."

Gone where? Gone on his journey—out of our sight, that's all. And even as we say "He's gone," we think to ourselves and we remind one another of those who shall be awaiting at the other end, waiting to meet him, to welcome him, to learn of him the details of the journey.

The ship, the train, the plane—though now they seem mere specks—are as large in dimension, as strong in force, as able to bear their load of living freight as they were when they stood by our sides. Their diminished size as they fade from view is in us, not them. And just at the moment when we cry out: "He's gone!"—other voices, beyond the limit of our sight, are ready to cry: "Lo, he comes!"

So it was with the wartime journeys which constituted so great a part of Monsignor Carroll's apostolate. So must it be with journey by which his journeys end.

We stand by the side of death and, in language like that of the traveler's friends when they see him off, we cry: "There He's gone." Gone where? Gone from our sight—that's all.

Gone on the journey which ends where all journeys must: in God—in Eternity—with Christ. Gone to be welcomed by all those who before him made that same journey—but especially, in the case of Monsignor Carroll, by those who prepared for eternity by doing work like to the work that he did: the unique work of special service to the Holy See.

Surely Christ must have some particular welcome for those who collaborated with His Vicar at the heart's core of His Church. Surely the Holy Apostles, Peter and Paul, must receive with special warmth one who labored so long, so hard in the City that is theirs. Surely all heaven much acknowledge the right of Monsignor Carroll to echo the words of the Apostle even before God's Judgment Seat: I ha fought the good fight. I have finished the course. I have kept the faith.

Eternal rest grant unto him, O Lord. May he rest in peace. May his soul and all the souls of the faithful departed through the mercy of God rest in peace. Amen.

Official Position of District of Columbia Recreation Board on Swimming Pool Controversy

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. KLEIN. Mr. Speaker, under leave, I include here as part of my remarks the report made by Mr. Harry Wender, Chairman of the Recreation Board, to the Board on May 9, 1950, without comment of my own for or against the statements therein, except as they show clearly that the Recreation Board cannot accept operation of the pools at this time, and to applaud Mr. Wender's declaration that he opposes segregation.

This supports my contention that the passage of H. R. 5968 is unnecessary and unwanted.

REPORT OF BOARD CHAIRMAN

Today marks the one hundred and twenty-first stated meeting of this Board, concluding 8 years of unparalleled growth and accomplishment toward the building of an adequate and modern recreation system for the Nation's Capital.

It is significant that Mr. James E. Schwab, vice chairman, and Mrs. Alice C. Hunter, secretary, have served with me as the Board's only officers since its inception. I am truly grateful for the confidence our colleagues have indicated in vesting us with the honor and responsibility of leading the Board through these formative years.

It is extremely fortunate that a majority of the Board's membership has remained constant since our formation, thus insuring a better understanding of our problems and a continuity of sound policies and purposes.

As Mr. Schwab's second 4-year appointment is about to expire, it is incumbent upon me to repeat the tributes I have previously made to his loyal, conscientious, and indefatigable service to this Board and the entire community. Only the Superintendent and your Chairman are fully aware of his tremendous capacity for work and his willingness to accept difficult and time-consuming assignments at great personal sacrifice, physically and financially. Although we have not always agreed, I have always fully respected his independence of thought and vigorously defended his right to express a point of view which is undoubtedly shared by a large percentage of our citizens who are justly entitled to representation on a democratically selected, wholly independent Board such as this. I am personally indebted to him for sharing many of the heavy responsibilities of Board leadership which other members have been unable to assume. Although in previous years he has frequently evidenced a strong desire to resign because of family and business duties, it is a source of gratification to me that he has remained to assist in the solution of problems which still beset the Board. Hence I unhesitatingly acknowledge the tremendous value of Mr. Schwab's uncompensated and little publicized public service. He represents a valuable and tangible asset to our community life, worthy of commendation by all and of further retention in office.

Mrs. Hunter's long Board experience has demonstrated her fine resoluteness of character and outstanding civic virtues. Her Board activities have never been confined to narrow racial representation, while her liberal views have strongly influenced the Board's disposition to assume leadership in the removal of segregation and discriminatory restrictions. Whatever may be our differences of opinion as to the best time and methods to be pursued, I fully endorse her aims and objectives, for her guiding principles are noble and irrefutable.

Mr. Walter L. Fowler, District budget officer, has admirably and ably represented the District Commissioners, giving us invaluable assistance from the beginning by reason of his broad knowledge of District affairs. We are likewise deeply appreciative of the generous support and understanding accorded our policies and our budget requests by the District Commissioners.

Mr. Irving C. Root, Superintendent of National Capital Parks, an ex officio member of the Board from the outset, served the Interior Department with distinction until April 12, 1950. On that date your chairman was advised by letter from Mr. A. E. Demaray, Associate Director of the National Park Service, that Mr. Edward J. Kelly, Special Assistant to the Superintendent of National Capital Parks, would henceforth represent Mr. Root on the Board. Legal precedents justifying this substitution were forwarded by Mr. Demaray. Without any reflection upon Mr. Kelly, intended or implied, your chairman and the superintendent were concerned with the legal problems involved, and on April 18 the Commissioners at my request authorized the corporation counsel, Mr. Vernon E. West, to rule upon Mr. Kelly's appointment. Mr. West informally advised me on Apri 25, confirmed by his letter of May 4, that the issues raised are complex and difficult to determine, involving extensive research which require considerable time to conclude. Since a Board poll, as well as this meeting, were imminent he suggested that I recognize Mr. Kelly's credentials at this time subject to his later findings and opinion which will be binding upon the Board.

Therefore, we welcome Mr. Kelly, with whom we have had a long and pleasant relationship, to the Board on the basis of the foregoing and extend to him our complete

cooperation and the opporunity of full participation in the Board's activities. We recognize that the past 8 years have produced many sharp disagreements between the Board and the Interior Department. Nevertheless we are delighted that virtually all of our differences have been reconciled. We trust that within a short time those that remain will be finally resolved, so that the Board may once again resume a unanimity of action that uniformly obtained during its first 5 years of operation.

Mr. Albert S. Steinem, prominent local attorney, is the present representative of the board of education. He has proven a worthy successor to three eminent predecessors; Dr. Frank W. Ballou; Mr. Robert L. Haycock, former superintendent of schools; and Mr. C. Melvin Sharpe, who served with us most ably until his election as president of the board of education in May 1949. Mr. Steinem's keen interest in our work has brought about an even closer relationship between the two boards than ever before. The effective cooperation and the mutual respect and understanding which have been manifested between these two public agencies have been remarkably satisfying, meriting emulation and approval throughout the country.

Mrs. O. G. Hankins, an outstanding citizen and parent-teacher leader for many years, is the latest appointee to lay membership on the board. On June 24, 1949, she succeeded Mrs. Andrew Saul, who was compelled to resign because of ill health. Mrs. Saul had replaced Mrs. George Garrett when the latter's husband was appointed minister (now ambassador) to Eire. Both ladies rendered distinguished service to our board. Mrs. Hankins, in the comparatively short period of her membership, has acquired extensive knowledge of her duties and of the department's constantly expanding programs and facilities. Despite numerous other important civic responsibilities, she has shown a devoted attention to the board's problems for which we are extremely appreciative.

We have been equally fortunate in the high caliber of alternates who have served at times in place of official representatives on the board. The board of education alternates have included Mr. Haycock, Dr. Robert A. Maurer, Mr. Steinem, and the incumbent, Mrs. Elvira Z. Magdeburger. Mr. Root's alternates have included his able assistants, Messrs. Harry Thompson, Frank Gartside, and Edward Kelly. Mr. Geoffrey Thornett, secretary to the board of commissioners, has been Mr. Fowler's regular alternate since 1942, except when Deputy Budget Officer William Wilding has attended in h[illegible] absence.

Probably the most fortunate circumstance attendant to the Board's successful development has been the acquisition and retention of a loyal and devoted staff, highly skilled and experienced in meeting the changing recreation needs of our community. Every employee has been engaged entirely on the basis of merit and ability without regard to pressure either within or without the Board's membership. The continued wise leadership from the very beginning of Mr. Milo F. Christiansen, our superintendent, one of America's foremost recreation statesmen, and his fine principal assistants, Miss Sibyl Baker and Mr. John L. Young, has proven a constant source of inspiration and comfort to the members of this Board, as well as to their professional colleagues. One cannot help but feel a friendly sense of personal regard for them as a result of our mutual association these many years in an enterprise of such vital importance to every citizen. I know that I speak for each member of the Board in expressing to each member of our staff our deep and abiding thanks for their great loyalty and devotion to duty, ofttimes under trying and difficult circumstances.

Having endeavored to describe and evaluate the Board's past and present personnel, I am impelled to take notice of serious and alarming charges which have emanated in recent weeks from various sources. Because of their grave nature, it is my duty to reply formally at this time.

Despite past criticism by individuals and organizations, the Board has advanced substantially during the past year in liberalizing program and eliminating segregation in many spheres of activity. On June 14, 1949, the Board adopted a policy later incorporated in the bylaws, article II, section 2, as follows:

"The Board will make every possible and realistic effort toward the removal of racial segregation in public recreation in such sequence and at such rate of progression as may be consistent with the public interest, public order, and effective administration. The Board by majority vote of the whole Board at a stated meeting shall from time to time issue necessary orders to the superintendent to implement this policy."

This statement met with universal approval of liberal elements and was endorsed by the Secretary of the Interior, the District Commissioners, and all of our daily newspapers. The Board has striven tirelessly and continuously to carry out this policy. It was rot to be expected that anything we did would meet with the hearty approval of those who sought immediate elimination of all segregation practices. Some 22 specific instances were recently cited to the Secretary of the Interior indicating our progress in implementing the policy. Secretary Chapman has privately and publicly stated his satisfaction with the results of our efforts to date and the evident good faith with which we proceeded.

The sole area of difference between the Secretary and the Board lies with the policy to be pursued in the operation of the six swimming pools now under GSI management. We have never fully operated them in the past, but only during morning periods, 5 days a week. We do not now have funds or personnel to operate them fully. The Secretary offered them to us on the basis of full-time management on a wholly nonsegregated basis. For a variety of factual reasons, including insufficient funds, likelihood of financial loss, inadequacy of trained personnel, the lack of absolute control over our employees, and the possibility of controversies ensuing from an operation by us under the Secretary's terms, your concessions committee agreed with the Secretary that the Board could not accept his offer at this time and that the Department of the Interior should assume responsibility for full operation this year. This conclusion was approved by five members of the Board. We are reliably informed that the Secretary of the Interior has made careful plans to provide for the safe and efficient operation of all pools this summer. Although the Board has requested the Commissioners to seek legislation vesting administrative control in the Board of all swimming pools and lands assigned to the Commissioners by the National Capital Park and Planning Commission, pursuant to the intent of our organic act of 1942, it is generally recognized that no legislation could be adopted in sufficient time to affect 1950 operation.

Nothing that this Board or your chairman has said or done remotely implies (a) that the Department of Interior should not operate the pools in accordance with that Department's announced policies, (b) that the Department cannot be successful in such operation, or (c) that the Board or your chairman are hopeful that incidents will again arise this summer which will fan racial hatred and strife, resulting in the closing of the pools. Nothing can be further from the truth than the fantastic assertion that this Board and your chairman "have a vested interest in violence" and that "we are practically giving the green light to troublemakers to see to it that something does happen."

It is an obvious and reasonable conclusion that the Board's reluctance to accept respcnsibility for the Secretary's swimming-pool policy was because, although it lacked confidence in its own ability to discharge that policy satisfactorily, it could rely upon his assurance that he was prepared to do so with complete safety to the thousands of citizens who need and will use the pools if they are adequately protected in their right to use them.

For myself, I quote from the minutes of the Board's April 11 meeting when the committee report was adopted:

"He (Mr. Wender) stated that he hoped the operation of the pools was going to be successful as well as the education program so that the pools can be used without difficulty.

"The committee feels and the Secretary himself stated he agrees that the Recreation Board is not ready to take over the pools at this time under the terms offered by the Department of Interior."

I have endeavored to demonstrate my personal devotion to democratic principles during half a lifetime of civic activity. I have resolutely tried to drive out segregation and discrimination in all of the many organizations with which I have served. My abhorrence for segregation has been repeated over many years in the press, at public gatherings, and at the Board meetings. My support of the administration's civil-rights program has long been known to those familiar with my activities even though I have stated my opinion that the methods utilized by the President's Committee on Civil Rights in acquiring facts concerning Washington resulted in some unfortunate inaccuracies relating to recreation. I am proud of the progress the Board has made thus far in removing segregation, partly due to my own efforts and convictions. Hence I have no apology to make to anyone for my attitude on this matter even though my views are undoubtedly too liberal for a great many and not progressive enough for others.

This statement is made so that no doubt can remain even in the most prejudiced and distorted minds—I despise violence, disorder, and mob control for any purpose—most of all by those who would deny others their legal freedom of action. I denounce any person or organization who would interfere with the Secretary's determination to make any or all of the six park pools available this summer on an open basis. It is my earnest hope and plea that all citizens will cooperate with the Secretary in making his program successful and that in the deplorable event that any stupid, ill-advised hoodlums should attempt to harm or interfere with the peaceful enjoyment of the pools by those who want to use them, they will be summarily arrested and prosecuted, without pity or consolation from any decent citizen.

In view of the foregoing I have prepared a resolution which I recommend be considered and approved by the Board at this time:

RESOLUTION

"This Board wishes to dispel conclusively any suggestion that it is antagonistic to the Department of the Interior's plan to operate the park swimming pools this year on an open basis. Such unfounded implications are false and without fact. This Board offers its full cooperation to the Secretary and Department insofar as it is able to assist them in their operation and control of the pools. We deplore any suggestion that we are desirous of implementing, aiding, abetting, or in anywise encouraging disorder at the pools or abstention from their use by any person. On the contrary, the Board urges all persons to deport themselves lawfully and with dignity so that no further untoward incident

may occur, resulting in disgrace and shame to the Nation's Capital, and thereby marring the fine reputation for peace and good order which should belong to a community of law-abiding and reputable citizens."

HARRY S. WENDER,
Chairman, District of Columbia Recreation Board.

Restoration of Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. PATTERSON. Mr. Speaker, the New England district, Knights of Lithuania, recently met in annual convention in Waterbury, Conn., and adopted the following resolution which reaffirms the principles to which we all subscribe. Truly, there can be no just peace in the world while people are oppressed by dictatorial rule as is the case in Lithuania.

To: The President of the United States, the Honorable Harry S. Truman; the Secretary of State, the Honorable Dean Acheson; the two Senators from the State of Connecticut the Honorable Brien McMahon and the Honorable William Benton; the House majority leader, the Honorable John W. McCormack, from the Tenth Congressional District of Massachusetts; the Congressman from the Fifth Congressional District of Connecticut, the Honorable James Patterson; the Congressman at Large from Connecticut, the Honorable Anthony Sadlak; and to the press:

The priests, delegates and guests of the annual convention of the New England District of the Knights of Lithuania, congregated at St. Joseph's auditorium, Waterbury, Conn., on May 14, 1950, unanimously passed the following resolutions:

"Whereas members of the Knights of Lithuania, all of whom are Americans of Lithuanian descent and are deeply concerned about the present sad plight of Lithuania, the land of their forebears; and

"Whereas the delegates to the convention realize that the complete and untarnished independence of Lithuania has since been suppressed and is being suppressed by an insidious and Godless Soviet Communist horde and its satellites, now threatening and beating on our shores; and

"Whereas the delegates appreciate the support and assistance given the Lithuanians by the Federal, State and local Governments of these United States, and

"Whereas the delegates are in favor of and desire the continued support and assistance for the independence of Lithuania, now more than ever, of the Federal, State and local Governments of these United States: Now, therefore, be it

"*Resolved*, That the delegates to the Annual New England District Convention representing the following local councils of the Knights of Lithuania: Lewiston, Maine; Brockton, Mass.; Cambridge, Mass.; Waterbury, Conn.; Hartford, Conn.; Lowell, Mass.; Worcester, Mass; Providence, R. I.; Athol, Mass.; Westfield, Mass.; South Boston, Mass.; Lawrence, Mass.; Norwood, Mass.; be on record as favoring and having these United States of America affirmatively assist and take action in regaining and restoring the complete and untarnished independence of Lithuania as well as that of all shackled and suppressed peoples dominated by the Soviet Communist and Godless hordes; be it further

"*Resolved*, That copies of these resolutions be sent to the President of the United States, the Honorable Harry S. Truman; the Secretary of State, the Honorable Dean Acheson; the two Senators from the State of Connecticut, the Honorable Brien McMahon and the Honorable William Benton; the House majority leader, the Honorable John W. McCormack from the Tenth Congressional District; the Congressman from the Fifth Congressional District of Connecticut, the Honorable James Patterson; and to the press."

JOSEPH A. LOLA,
President.
ANGELA MASONIS,
Executive Secretary.

Proposed Transfer of District of Columbia Recreation Areas to Control of Commissioners Is Unnecessary and Should Be Defeated

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. KLEIN. Mr. Speaker, there is a bill pending on the Union Calendar which I hope sincerely will never be called up for consideration in this Congress.

I refer to H. R. 5968, a bill to invest in the Commissioners of the District of Columbia control over all public swimming pools, playgrounds, and parks situated in the District of Columbia.

Fundamentally, my opposition to the bill is based upon democratic principles to which I adhere against all assaults because of the hidden retrogressive purposes of this measure.

I have a deep respect and affection for my chairman of the Committee on the District of Columbia, and I expressly disavow any intent of personal animadversion or controversy. I will not believe that this bill was introduced, as has been charged, with the deliberate intention of putting every Member of Congress, Democrat or Republican, who believes in American principles of democratic action, on a political hot spot, nor will I accept or credit the suggestion that my chairman is attempting to split the Democratic Party in the House by this issue.

PEOPLE WITH AXES TO GRIND

The fact is, of course, that there are people with private axes to grind who are trying to make capital out of this bill, and are industriously sowing rumors and false reports.

To repeat, Mr. Speaker, my fundamental objection to this bill is one of principle. Its real purpose is very much different than its ostensible purpose.

There are, however, sound practical objections to its consideration now or in the future.

First of all, it is totally unnecessary. There is ample existing authority, under legislation which Congress has enacted, whereby the District Recreation Board and the District Commissioners can obtain full utilization, or even jurisdiction, if jurisdiction is necessary, of the pools or any other recreation facilities in the parks. Congress has already enacted legislation enabling such transfers to be made by agreement between the District Commissioners, the Recreation Board, and the Department of the Interior. These acts are the act of April 29, 1942 (56 Stat. 261), the act of May 20, 1932 (47 Stat. 161, 40 U. S. C. sec. 122), and the act of July 1, 1898 (sec. 4, 30 Stat. 570). These statutes fully and completely cover the subject of transfers of land between the District and the Interior Department. There is no need for this bill, if it is intended solely to transfer jurisdiction.

What, then, is the purpose of this bill? H. R. 5968 has only one purpose: It is designed and intended solely to designate the use of the swimming pools on the basis of race and not on the basis of need. It is this matter of racial discrimination, which the Recreation Board has so vigorously sought to impose on the public swimming facilities in this, our Nation's Capital, that has been the only obstacle to an agreement between the Recreation Board and the Department of the Interior. The Secretary of the Interior has frequently and publicly offered to let the Recreation Board operate the swimming pools and other recreation facilities in the park lands, provided only that the Recreation Board admits all law-abiding citizens without regard to race. This the Board has refused to do. It desires to impose racial discrimination on these public facilities which are now administered without regard to race.

Second, it is very ill-timed. The Recreation Board had no money for administration of the recreation areas when the bill was introduced; and if the cuts which the House Appropriations Committee injudiciously imposed just the other day on the District of Columbia appropriation bill are confirmed by the House and the Senate, it seems unlikely that the Recreation Board will be able to carry out its present responsibilities.

Third, the bill is not desired even by the Recreation Board. Just a few days ago the Chairman of the Recreation Board flatly stated that the Recreation Board does not want to have the swimming pools transferred to it. This is what he said:

We do not now have funds or personnel to operate them fully. The Secretary [of the Interior] offered them to us on the basis of full-time management on a wholly nonsegregated basis. For a variety of factual reasons, including insufficient funds, likelihood of financial loss, inadequacy of trained personnel, the lack of absolute control over our employees, and the possibility of controversies ensuing from an operation by us under the Secretary's terms [the Recreation Board's] Concessions Committee agreed with the Secretary that the Board could not accept his offer at this time and that the Department of the Interior should assume responsibility for full operation this year. This conclusion was approved by five members of the Board. We are reliably informed that the Secretary of the Interior has made care-

ful plans to provide for the safe and efficient operation of all pools this summer. * * *

Nothing that this Board or your chairman has said or done remotely implies (a) that the Department of the Interior should not operate the pools in accordance with that Department's announced policies, (b) that the Department cannot be successful in such operation, or (c) that the Board or your chairman are hopeful that incidents will again arise this summer which will fan racial hatred and strife.

Fourth, this bill is wholly inconsistent with the basic principles of the bill for home rule for the District of Columbia (S. 1567) which is now pending in the Committee on the District of Columbia of this House. The home rule bill does not attempt to transfer lands from the Federal Government to the District government. It leaves any such transfers to be accomplished by agreement under the acts of April 29, 1942, May 20, 1932, or July 1, 1898, which I have just referred to. Section 904 (b) of the home rule bill specifically provides that the Federal Government shall remain responsible for the jurisdiction, maintenance and improvement of grounds, buildings and other recreational facilities in the parks; and section 904 (b) further provides that the proposed District of Columbia Department of Recreation may use such park lands and facilities by making agreements with the National Park Service of the Department of the Interior under the act of April 29, 1942 (56 Stat. 261).

OPPOSED BY NEGRO ORGANIZATIONS

Fifth, passage of the bill will be taken by all Negro organizations as a colossal affront to them and to our democratic principles, regardless of political affiliations, because of the hidden purpose of the bill to turn back the clock to antebellum days. It so happens that my political and personal convictions coincide with opposition to this bill; and regardless of its final disposition my opposition to it will meet with the approbation of my constituents and it will help me to live with myself.

Moreover, Mr. Speaker, there are at least three-fourths of the membership of this House who are committed, morally and politically, against the principles of this retrogressive bill. It is highly objectionable to their constituencies. The political reverberations will be powerful and of long duration; a vote for this bill will, in at least 35 States of this Union of ours, call forth the angry protests of the voters.

LET THE BILL DIE ON THE CALENDAR

Mr. Speaker, the kindest thing that can be done with this Trojan horse measure is to allow it to die on the calendar; if its few proponents insist upon bringing it to a vote, then I can only foretell that it will be defeated. And this is a measure upon which a record vote will be demanded.

Aside from the fierce opposition of every Negro organization to this bill, and the fact that its passage would be a dire insult to every Negro citizen, it is strongly opposed by religious and liberal groups as uncharitable and un-American.

I can say that every religious organization of which I have knowledge is strongly opposed to the bill, and I have received many telephone calls and letters expressing that opposition.

The great strength of the Christian churches in America, Catholic and Protestant alike, and of the Jewish synagogs, is united against the measure as immoral and deliberately intended to make a mockery of the indivisible brotherhood of man.

Illustrative of this deep-seated opposition are the following statements and communications which I have received.

MRS. ROOSEVELT AGAINST BILL

I include an extract from the daily column, My Day, written by Mrs. Eleanor Roosevelt, widow of the great wartime President, as published in the Washington Daily News, of Wednesday, May 17:

DISTRICT OF COLUMBIA IS NOT A PLACE WHERE SEGREGATION SHOULD FLOURISH

(By Eleanor Roosevelt)

NEW YORK, Tuesday.—I have just had a letter from the National Committee on Segregation in the Nation's Capital, Inc.

The Capital of the United States is not a place where segregation should flourish. While it is often spoken of as a southern city, it is nevertheless, the Capital of the whole country, and the place where foreigners from all over the world must come to transact much of their business, regardless of their race, color, or religion. They should come to a city where all human beings are equal before the law, and where men and women treat each other in the spirit of brotherhood.

The Interior Department has under its jurisdiction in the District of Columbia certain recreational facilities which it makes available for the benefit of all people without segregation. Repeatedly, the Interior Department has offered to transfer all these facilities to the local Recreation Board provided that the Board will keep them open to all citizens. A bill will shortly come up in Congress, sponsored by Representative JOHN L. MCMILLAN, Democrat, of South Carolina, chairman of the District of Columbia House Committee, which will, if passed, transfer all recreational facilities now operated by the Interior Department to the District Commissioners.

It sounds innocent, but what it really does is to place in the hands of officials the power to enforce racial segregation. This seems a pity in the Nation's Capital.

UNITARIAN ASSOCIATION OPPOSES BILL

I also include in my remarks a letter addressed to me by Mr. Merrill E. Bush, director of adult education and social relations for the American Unitarian Association, Boston:

AMERICAN UNITARIAN ASSOCIATION,
Boston, Mass., May 17, 1950.

The Honorable ARTHUR G. KLEIN,
Representative from New York,
House of Representatives,
Washington, D. C.

DEAR MR. KLEIN: It has been brought to our attention that the House Committee for the District of Columbia has reported out H. R. 5968.

We hoped that any legislation involving jurisdiction of the District of Columbia swimming pools would protect the nonsegregation practices, and it has been brought to our attention that there is considerable question whether H. R. 5968 does offer adequate protection of the nonsegregation principles.

The American Unitarian Association has gone on record as opposed to all practices of segregation, and in October 1947 passed a resolution specifically dealing with the District of Columbia:

"SEGREGATION IN THE DISTRICT OF COLUMBIA

"Whereas segregation is a violation of the principles implicit in the fatherhood of God and the brotherhood of man; and

"Whereas segregation and discrimination are manifest in the businesses and institutions of the District of Columbia, making it impossible for Negro residents and visitors to have equal access to hotels, restaurants, and other public places in the Nation's Capital; and

"Whereas at the one hundred and twenty-second annual meeting of the American Unitarian Association on May 22, 1947, it was resolved to seek to schedule Unitarian conferences, conventions, and other meetings in hotels and other public places which do not discriminate against racial, religious, or national minorities: Be it therefore,

"*Resolved*, That the general conference of the American Unitarian Association assembled in Washington, D. C., on October 15–17, 1947, commends those individuals, businesses, and institutions in the District of Columbia which are eliminating segregation and urges those which are segregating to cease such practices; and be it further

"*Resolved*, That the general conference urges the Congress of the United States early to enact a civil rights statute for the District of Columbia."

Very truly yours,

MERRILL E. BUSH.

COMMUNITY CHURCH OPPOSES BILL

I am next including a letter addressed to me by Mr. Arthur William Randolph, secretary of the social action committee of the Community Church of New York, made famous by its pastor emeritus, John Haynes Holmes, whose tradition is ably carried on by the Reverend Donald Harrington and the Reverend Maurice A. Dawkins:

THE COMMUNITY CHURCH OF NEW YORK,
New York, N. Y., May 17, 1950.

Representative ARTHUR KLEIN,
House Office Building, Washington D. C.

DEAR CONGRESSMAN KLEIN: It has come to the attention of this committee that the House Committee for the District of Columbia has reported out H. R. 5968, and that this bill will be up for action on May 22. This bill, if passed, would transfer jurisdiction over swimming pools in the District of Columbia from the Department of Interior to the Commissioners of the District. Because of its innocent-sounding provision the average Congressman may not be aware of the dangers of such a bill. It is not merely a transfer of jurisdiction but is rather a device to take control of these pools from those who have maintained a policy of nonsegregation, and transfer the power to the Recreation Board of the District, whose officials have over the years maintained a policy of segregation. If they have the least opportunity to do so we may be sure that these officials will then operate the pools on a segregated basis.

The Nation's Capital should be a model of brotherhood, for the impressions that many visiting foreign travelers and diplomats get from Washington are published throughout the world. Also, we may be sure that the Communists will not be slow in realizing how great a propaganda tool will be such proposed action.

The measure will come up for study and discussion on Monday, a day when it is customary for the House to discuss and handle District legislation. This is also a day when

many eastern representatives are not present, and when precisely those who oppose fair civil rights for all are dominant. Therefore, the Social Action Committee of the Community Church of New York urges you to be present on Monday, May 22, in order to vote against this vicious measure.

Sincerely yours,

ARTHUR WM. RUDOLPH,
Secretary, Social Action Committee of Community Church of New York.

INTERIOR DEPARTMENT POLICIES

Next, I insert the press release issued by the Department of the Interior announcing the last offer which Secretary Chapman made to the Recreation Board to operate the pools:

Secretary of the Interior Oscar L. Chapman today offered full operating control of the six National Capital Parks swimming pools to the District of Columbia Recreation Board subject to the condition that they continue to be operated as nonsegregated pools. The offer was made at a conference between the Secretary of the Interior and members of the District of Columbia Recreation Board held in the Interior Building.

Secretary Chapman explained to the Board members that the policy under which these swimming pools are operated was formulated in recognition of the Government's obligation under the Constitution to guarantee equal rights to all citizens. "The President has clearly enunciated a national policy that all public services shall be administered without distinction of race, color, creed, or national origin," Mr. Chapman stated. "I strongly believe that it is imperative that this policy be clearly demonstrated in the District of Columbia. The eyes of the entire world are fixed upon our National Capital. Every act of the officials responsible for the administration of public facilities becomes a symbol of our ability as a Nation to function in strict adherence to the principles of our democracy.

"It is the duty of the Government to provide swimming pools and other recreational facilities which are essential to the public welfare and to make them available to all of the people. By the same token, the Government does not compel people to use these facilities. It is, however, the responsibility of the Government to protect the rights of all of the citizens who choose to use such public services."

Secretary Chapman called the attention of the Board members to a swimming pool operated by the Navy at the training center located in Anacostia Park. The area is on National Capital Park lands, which since 1941 has been used by the Navy under permit. This swimming pool, located in the recreation building, is operated on a nonsegregated basis, naval personnel, both white and colored, and members of their families having access to the facilities on an equal basis. The Interior Secretary said that he had been informed by naval authorities that no racial tension has ever been generated through the nonsegregated use of the pool, thus it would appear that with the cooperation of all concerned the same situation could be obtained at the pools operating in the National Capital parks.

In his discussion with the representatives of the District of Columbia Recreation Board, Secretary Chapman explained that it has been the traditional policy of the Interior Department to cooperate with District of Columbia authorities in the conduct of the recreation program for the National Capital. For many years prior to the establishment of the District of Columbia Recreation Board, the greater part of the program conducted by the former District of Columbia Playground Department, was carried on on lands within the National Capital park system through the cooperation and consent of the National Capital Parks. In an effort to foster unified recreation for the District of Columbia, the Department of the Interior on April 1, 1940, agreed to permit the then existing District of Columbia Community Center and Playground Department to assume operational functions, including the issuance of permits, supervision, and leadership in connection with the program of supervised recreation in the National Capital parks. The facilities involved included an archery green, 4 badminton courts, 18 baseball, and 27 softball diamonds, 2 basketball courts, 7 croquet courts, the Palisades Fieldhouse, 11 football gridirons, 4 hockey courts, 34 horseshoe courts, 4 marble rings, 79 picnic groves, 2 shuffleboard courts, 3 soccer fields, a speedball court, 50 tennis courts, and 5 volleyball courts.

Responsibility for the foregoing facilities previously had been a function of the National Capital Parks Recreation Division.

The District of Columbia Recreation Department succeeded the Community Center and Playground Department in 1942, continuing to operate the afore-mentioned facilities as agents for the National Capital Parks.

On August 29, 1949, a formal agreement between the Department of the Interior and the District of Columbia Recreation Board, as provided by the act of April 29, 1942, which created the Board, gave the Recreation Department permission to conduct a recreational program in Anacostia Park, Archbold Parkway, Barnard Hill Park, Barry Farms Playground, Battery Kemble, Fort Bayard Park, Fort Bunker Hill, Fort Dupont Park, Garfield Park, Glover Parkway, the Mall, Montrose Park, the Washington Monument grounds, Oxon Run Parkway, the President's Park, Rock Creek Park, Rock Creek and Potomac Parkway, West Potomac Park, and Fort Stanton Park.

The recreational facilities within these areas include many which previously had been operated by the District of Columbia recreation authorities by permit.

The agreement of August 29, 1949, also provided that other National Capital Park areas might be made available to the Board from time to time and that the facilities operated by concessioners under contract with the Interior Department would be made a part of the agreement as soon as arrangements could be made with the concessioners. These included golf courses, tennis courts, boating and bicycle concessions. The Department of the Interior regulation specifying that all of the park facilities should be operated upon a basis of nonsegregation was accepted by the Recreation Board and the agreement further provided that the Board would make every possible and realistic effort toward the removal of racial segregation in public recreation with respect to the facilities, public activities, and programs which it now supervises on areas not under the jurisdiction of the Interior Department.

The swimming pools were not included under this agreement because of the unwillingness of the District of Columbia Recreation Board to operate the pools as nonsegregated public services.

The Recreation Board has been in negotiation with the present golf course operator with a view to assuming responsibility for the operation of the golf courses.

The Board has not yet obtained funds to liquidate the claims of the present operator as provided in his contract with the Department of the Interior but is hopeful of doing so in order to take over the golf course operation by January 1, 1951.

The Board has indicated that it will assume operation of bicycle, boating, and tennis facilities now operated by Government Services, Inc., upon the expiration of the contract between the Department of the Interior and Government Services, Inc., in 1951.

Also of interest to the Members of this House is the following summary of the contributions which the Department of the Interior has made to democracy in the Nation's Capital:

PROGRESS IN THE MOVEMENT TO GUARANTEE EQUAL RIGHTS FOR ALL CITIZENS IN THE NATIONAL CAPITAL

For the steady movement toward equal rights for all citizens in the Nation's Capital, no one group or agency can claim exclusive credit. However, the contribution of the Department of the Interior has been clear and sustained. Notwithstanding the pressures of interested groups and timid traditionalists, the Department has moved to implement democratic values and to clarify the role of the public agencies in their administration of tax-supported facilities. The objectives and example of the Interior Department may be briefly summarized in the principle so often stated by the President and the Supreme Court, namely, that the power of government in a democracy must ever be exercised to insure the equal enjoyment by all citizens of publicly supported services and that the government must refrain from using its powers to deny any racial, religious, or ethnic group free access to and enjoyment of such facilities.

The Department of the Interior has been steadfastly mindful of the special significance of Washington as the Nation's Capital and its unique role as the symbol to all the world of America's democratic ideals.

1. PUBLIC RECREATION FACILITIES

The Capital has never had a rigid or complete pattern of enforced segregation in any area of its public or private life. But in the two decades after 1925, the various authorities administering public recreation facilities adhered quite uniformly to the practice of keeping Negroes and whites apart in their use of such facilities. When the Department of the Interior in 1933 was assigned control of the local park system, it inherited practices of compulsory segregation. But in that same year the Superintendent of National Capital Parks announced that "There is no legal way to prevent law-abiding citizens from using the parks, regardless of their race."

This judgment that the Federal Government lacks authority to make distinctions of color in its administration of park lands was reiterated in 1935 by the then Acting Superintendent of the National Capital Parks.

Concrete action to implement this basic policy in the use of park facilities began in 1939, when the Secretary of the Interior ordered the discontinuance of compulsory racial segregation in the use of picnic groves. Permits have since been issued for all picnic areas without regard to the race of applicants. No racial frictions have arisen. On the contrary, the people of Washington have demonstrated that white and Negro groups can picnic harmoniously side by side.

Since 1940, by order of the Secretary of the Interior, the Washington tourist camp, long maintained as an exclusively white facility, has been operated on a basis of availability to all citizens without distinction of color. Here, again, no incidents of racial friction have been reported since that time. Also, in 1940, the Secretary ordered that the lighted tennis courts in West Potomac Park and the 17 courts on the Mall be opened to all applicants without distinction. They had been operated for white players only. Not a single incident of conflict based on race has occurred in 10 years.

In 1941 the Secretary ordered that the federally operated golf courses similarly be opened to all citizens. With the exception of a minor incident associated with the public announcement of this order, both races

have used the golf courses since that time freely and without friction.

The six swimming pools on park lands have also been open to all citizens for a decade. Until 1949 Negroes applied to swim only in two of the pools. In that year colored swimmers used two others. At only one of these—in Anacostia Park—interracial friction developed which resulted in the closing of the pool.

Since 1941, the Department's contracts with concessioners in the national parks have required them to operate in accordance with Interior policies; since 1945 all such contracts have carried provisions explicitly guaranteeing the right of all citizens to receive service from concessioners without distinctions of race, creed, or national origin. Throughout this entire period, the National Capital Parks outdoor nature and history interpretive programs have been open to all citizens.

The Department's basic policy—that it cannot enforce racial segregation in granting the use of public facilities and that it must protect all citizens in their right to use the parks—has now been in successful daily operation for a decade. Because of this record, the Department in recent years has repeatedly urged the District of Columbia Recreation Board to abandon the rigid policy of compulsory segregation under which it has operated since its inception.

In June of 1945, the Recreation Board, which had been created 3 years earlier, incorporated in its by-laws a provision that racial segregation must be enforced in the use of all recreational facilities under its control. The Acting Secretary of the Interior in a letter dated July 10, 1945, reaffirmed the policy of the Department as one calling for the unrestricted use of areas under its jurisdiction, and stated that this policy must prevail in all areas under the control of the deparment even if administered by the recreation board.

Since that time, the Secretary of the Interior has taken every action within his legal authority to require that the recreation board administer facilities on park lands in accordance with the national policy. Thus, in February 1949, the Secretary ordered the recreation board to cease discrimination in the granting of permits to play tennis on 18 courts located on park lands, and to grant them without disinctions of race.

The Department's efforts, however, were greatly hampered by a procedure of the National Capital Parks and Planning Commission whereby it assigned park lands to the District Commissioners who then turned them over to the Recreation Board for operation under its policy of enforced segregation. A cover of legality was provided for this action by the Planning Commission's arbitrary designation of certain areas exclusively for white recreation and others exclusively for Negro recreation. Action instituted by the Assistant Secretary of the Interior on March 15, 1949, led to the removal of such designations from the Commission's maps and plans.

Two months later, the Chairman of the District Recreation Board issued a public report acknowledging that the Board's policy of enforced segregation was out of tune with accepted practices in the community, and that the action of the Planning Commission had removed the last barrier to its modification. Thereupon, the Board (a) for the first time authorized the evening use of public-school buildings by interracial groups, (b) adopted a bylaw under which it is pledged to apply as rapidly as possible a policy of granting to all citizens equal access to all its facilities, and (c) permitted the Society of Friends (Quakers) to operate two playgrounds throughout the summer on a nonracial basis. Both the example and the voice of the Department of the Interior were instrumental in realizing all these advances.

These signs of progress were climaxed in August of 1949 by the signing of a formal agreement under which the Recreation Board is to operate recreation programs on 19 park lands. Additional lands may be made available to the Board from time to time, and facilities operated by concessioners under contract with the Interior Department—golf courses, tennis courts, boating and bicycle concessions—are to be made part of the agreement as soon as arrangements can be made with the concessioners. The crucial significance of this agreement lies in the provision that the Recreation Board shall operate all these facilities in accordance with the Department's policy, i. e., "none of them shall be restricted to use by any people on the basis of their race, creed, color, or national origin."

2. PUBLIC ACCOMMODATION

In recent years the auditoriums in Federal buildings have not enforced segregation in their audiences. But because of its size and ready availability to the public, the Interior Department's auditorium was regarded for several years as almost the only place in which interracial events could be staged. Year after year, the Watergate concerts, ceremonies and celebrations on the Washington Monument Grounds, at the Lincoln Memorial and in other park areas have further demonstrated to Washingtonians the practicality of a policy of nondiscrimination in public entertainment. In particular, Secretary of the Interior Ickes drew national attention to the conflicting patterns of race relations existing in Washington in 1939: Miss Marian Anderson, great Negro contralto, had been denied the use of a private hall and then of a public school auditorium, when the Secretary offered to arrange a concert on the steps of the Lincoln Memorial. Committees on arrangements for all such observances have included Negro representatives. More recently, a nondiscriminating summer theater has been established at Meridian Hill Park. At none of these functions has the racial trouble anticipated by pessimists arisen to frustrate expression of the democratic creed.

The views of Secretary Ickes with respect to the enforcement of racial segregation were so well known in the Department that no specific order was necessary to insure equal access to the cafeterias in the new Interior Building when it opened in 1937. Interior led the way in the trend which soon developed to guarantee free use by all employees of the eating facilities in Government buildings. More recently, in the wake of this development, other Federal agencies have opened to all patrons in the restaurants at the National Airport and National Zoological Gardens.

Over the years the Department's demonstration of the practicability of democracy in recreation and in admission to entertainment and eating places has exerted a steady influence on the practices of private proprietors in the District. In recent years several downtown movie theaters have opened their doors to all comers; Washington's new legitimate theater is operating successfully without enforced segregation; university auditoriums have been opened; a major sports arena has stopped segregating its patrons. Restrictions imposed by local bodies on interracial competition in amateur athletics have been removed. With one major exception, Washington's universities have opened their doors to students of different races. Most recently a large number of downtown restaurants have ended the practice of turning away Negro patrons. While Interior has been only one among many contributing forces in this unmistakable trend, its example and its voice have played a vital part in creating the atmosphere in which progress can occur.

As recently as the autumn of 1947 the policy and practice of the Interior Department were one of the few encouraging signs that the President's Committee on Civil Rights could find to offset the otherwise "intolerable * * * failure of democracy" in the Nation's Capital (To Secure These Rights, pp. 87–95).

3. FAIR EMPLOYMENT PRACTICES

As early as 1934 Secretary Ickes appointed to his staff an advisor on racial matters in the field of public works—the first such appointment in a Federal executive agency. This practice spread widely in the next few years and contributed substantially to the gradual improvement of administrative and personnel practices in the Federal establishment. Thus, Interior was the first agency to insert in all its contracts a clause requiring nondiscriminatory practices in employment by the contractors. Long before the issuance of an Executive order on the subject in 1941, Interior articulated the policy of fair employment in its own operations. The United States Park Police demonstrate the validity of this policy every day in the performance of their duties.

4. OTHER ACTIONS

The Department of the Interior has constantly sought to implement further the President's program of civil rights. It contributed actively to the preparation of the Government brief in the District of Columbia restrictive covenant cases before the Supreme Court. The Department supported Senator NEELY's bill to establish a Human Rights Commission for the District, which the Senate District Committee recently reported favorably to the Senate. Wherever racial discrimination has raised its ugly head in Government affairs, Interior has been in the forefront of those combating it.

CONCLUSION

Much progress has already occurred in the racial practices of the Nation's Capital. More far-reaching developments are just over the horizon. The Department of the Interior has shown by gradual, revolutionary action that democratic principles work in Washington. Events have fully justified our faith in the good sense and decency of the people of the District when forthright leadership is provided. The Department will continue to express the high principles of the Constitution and the Chief Executive; it will continue to work to the end that the Nation's Capital shall be a living symbol of the American democratic faith.

AMERICANS FOR DEMOCRATIC ACTION

The Washington chapter of Americans for Democratic Action has written the following letter and statement to me:

WASHINGTON CHAPTER,
AMERICANS FOR DEMOCRATIC ACTION
Washington, D. C., May 5, 1950.

Congressman ARTHUR G. KLEIN,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN KLEIN: The Washington chapter, Americans for Democratic Action urges you to be on hand when the McMillan bill—H. R. 5968—comes up on Monday, May 8, and to vote against it.

We were shocked that this bill was voted out of the District Committee when only 14 members were present and in spite of the fact that the public hearings which were promised were not held.

H. R. 5968 would vest in the Commissioners of the District of Columbia control over all public swimming pools, playgrounds, and parks situated in the District of Columbia. The effect of this will be to administer the pools on a segregated basis.

We believe that such a bill would set a dangerous precedent and would be detrimental to the District of Columbia. In fact, it seems to us to have been timed to cause the maximum confusion in an already difficult situation.

As you know, the Department of Interior, as a Federal agency, could not possibly turn over facilities of any kind to the District on a discriminatory basis. Federal facilities must be offered on an inclusive basis. This bill would attempt to reverse this well established and accepted principle.

Advocates of the bill will say that a question as controversial as that of the swimming pools should be handled by the local officials. We say that in the first place, we have no local officials in the true sense. These people are appointed and cannot be said to represent the citizens of the District. In the second place, many local officials favor the policy enunciated by the Department of the Interior. We say that in the Nation's Capital, we should not try to bypass the democratic policy established by the Federal Government.

Enclosed is a statement which we have prepared on this subject and also a progress report prepared by the Department of the Interior. We hope that this will be helpful to you in fighting the McMillan bill.

Sincerely yours,

BENJAMIN C. SIGAL.

WASHINGTON CHAPTER ADA STATEMENT ON THE SWIMMING POOL CONTROVERSY

The Washington Chapter of Americans for Democratic Action strongly supports Secretary Chapman and the Department of the Interior in its position regarding the swimming pools. We believe that the Secretary acted in accordance with long-established and democratic practices in insisting that swimming pools turned over to the Board of Recreation be nonsegregated.

It has been an accepted principle that the Federal Government serves all of the people without regard to race, color, or creed. When the Federal Government has turned over such recreational facilities as golf courses, tennis courts, boating, and bicycle concessions in the District during recent years, the Recreation Board has accepted the condition that these facilities should be operated upon a basis of nonsegregation. As far as we know there has been no incident or any kind of trouble as a result of this.

Now when the Department of the Interior has offered to turn over six swimming pools provided that they be operated in this same fashion, the Recreation Board has refused and charges are being made that Secretary Chapman is attempting to impose a policy which the community is not ready to accept. How could a Federal official possibly act in any other way? Secretary Chapman stated the position honestly and precisely in his statement to the press when he said, "It is the duty of the Government to provide swimming pools and other recreational facilities which are essential to the public welfare and to make them available to all of the people. By the same token, the Government does not compel people to use these facilities. It is, however, the responsibility of the Government to protect the rights of all of the citizens who choose to use such public services."

We believe that it is the responsibility of the civic groups and newspapers and radios in the community to help carry out this policy. This can be done in a quiet, orderly way as it has been done in many other communities in the United States.

For its part, the Department of Interior is preparing staff and police for the summer swimming-pool program. We call on responsible elements in the community to support and help carry out this program.

Will All Our Labors Be Lost?

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. GRANT. Mr. Speaker, the distinguished gentleman from Georgia, Hon. STEPHEN PACE, recently addressed the fourth annual convention of the National Association of Soil Conservation Districts, in Atlanta, Ga.

This speech was well received by those present and as it is upon a subject of national interest, I am sure that the Members of Congress as well as those of us who are interested in conservation throughout the Nation will be impressed with it.

Mr. PACE has given much study to this subject and he speaks with authority and sincerity.

His address follows:

WILL ALL OUR LABORS BE LOST?

Mr. President, ladies and gentlemen, I should like to join with other Georgians in welcoming you to our State. I hope your visit to Georgia will be pleasant and of some benefit to you. I am delighted that I could be here tonight for many reasons. I wanted to come and see how you look. But for quite different reasons from that indicated by an Atlanta businessman some months ago. He met on Peachtree Street a beggar in rags. The beggar accosted him and asked him for a dollar. The businessman said, "I am sorry, I am constitutionally opposed to giving beggars money." He then looked at the fellow and said, "I reckon you want money to buy some liquor. Come on down the street and I will buy you a drink." The beggar said, "Thank you, sir, but I don't drink." The businessman looked up surprised and said, "Well, maybe you would like to have a cigar. Come on by the drug store and I will buy you a cigar." The beggar said, "Thank you, sir, I don't smoke." The businessman looked at him rather concerned and said, "Well, maybe you are decent in spite of your clothes. I am going down the street to a vaudeville show, come on and I will take you to the show with me. There are pretty girls in the show." The beggar said, "Thank you, sir, I am not interested in pretty girls." The businessman stepped back and looked at him and said, "My friend, you have stopped me and asked me to do you a favor. Now I want you to do me one. I want you to come to my home tonight and have dinner with us." The beggar appeared surprised and asked, "You want me to come to your home in this condition: Why do you want me to do that?" The businessman said, "Well, my friend, I'll tell you. I want my wife to meet you and see you. I want her to see a man who doesn't drink, a man who doesn't smoke, a man who is not interested in pretty girls, and I want her to see what happens to him." [Laughter and applause.]

No, it was not for that reason that I wanted to see how you looked, but I wanted to come here and look in the eyes and strong faces of those who without compensation, voluntarily, along with eight or nine thousand others across this broad land, are devoting their time and their effort to try and protect and preserve our greatest natural resouces.

My friends, do you have an understanding of your responsibilities, of what rests upon your shoulders, the preservation of the security of the Nation. I doubt that very many people of the Nation realize or have an understanding of the debt they owe to you. May I, in behalf of the millions and millions of people who must receive their food from the land of this Nation, acknowledge our debt to you. I wish I could say something to make you understand the importance of what you are trying to do and what I know you will do.

I want you to excuse me from making a speech tonight. First, I don't feel like it, and second, I do not like speeches. I heard a story not long ago that I am going to carry down through the years with me and which I hope will have a great deal of influence on my talking. The story is about some city like Atlanta. It was having a great businessmen's banquet and there were hundreds of people attending. They had notable speakers, great men from other cities. They had a program and they gave their addresses. It was about time to close when the toastmaster thought of a young man who was present and who had recently graduated from Yale with great honors. He was a credit to the community. So the toastmaster thought as a matter of courtesy he would present the young man for at least a bow and he introduced the young man to the audience as a recent graduate and outstanding graduate of Yale. The young man arose and seized his opportunity. He spoke of his life at Yale. He spoke of what a great university it was. After some 15 or 20 minutes he said the "Y" of Yale stands for youth. And for some time he discussed the virtues and values of youth. Then he said the "A" stood for ambition. Here he went on a long discourse about ambition. Then he said the "L" stands for loyalty. And he gave a great essay on that subject. Then he said the "E" stands for enthusiasm. Finally, after more than an hour he took his seat. The toastmaster realized that he must make amends as quickly as possible and said, "We will be dismissed by Reverend Brown." Reverend Brown arose, lifted his face to the heavens, and said, "Dismiss us without Thy blessings and accept our thanks, O Father, that this young man did not graduate from the Massachusetts Institute of Technology."

For a few minutes I would like to discuss with you some of your business, the situations and some of the problems that face those whom you represent this evening. I should first like to mention something that isn't yet, and I don't think fully appreciated, and that is the rapid and terrific drop in farm income. Do you understand what is going on? I jotted down some figures. I don't want to tire you with figures, but you need to listen to these. Both you supervisors and directors and other businessmen who happen to be present. Listen, my friends. Cash receipts from marketings in 1948 was thirty million five hundred thousand. In 1949 it was twenty-seven million five hundred thousand. That is all cash marketing off the farm. Production costs in 1948 was eighteen million five hundred thousand. Farm income went down three billion and cost of production went up five hundred million in 1949. Net income, that is what pays off. That is what you support your family with. And the net income in 1948 was thirteen billion two hundred million and the new income in 1949 was nine billion and five hundred thousand. The net income estimated for 1950 is seven billion five hundred million. Income at the end of this year will be down over 33⅓ percent. What else has happened? While your income has gone down a third, the per capita nonfarm income, the people not on the farm, it has gone up from 8 to 10 percent. What else has happened? The real estate mortgage debt has increased in the last year 10 percent, to five billion five hundred million. Short term

farm debt has increased another 10 percent, to five billion three hundred million, and to top it all from November 1948 to November 1949, land values have decreased 6 percent. Do you get it? Now to aid you a little better, let me rapidly call off a few commodities, the highest prices since January 1946 and the prices in December 1949, and the percentages in decline. Wheat down from $2.81 to $1.93, 31 percent; corn down from $2.46 to $1.13, 54 percent; oats down from $1.27 to 70 cents, 45 percent; barley, from $2.06 to $1.09, 47 percent; grain sorghums, $3.77 to $1.79, 52 percent; cotton from 37½ to 26¼ cents, 30 percent; cottonseed from $96 a ton to $43, 55 percent; soybeans from $4.11 to $2.09, 49 percent; potatoes from $2.09 to $1.31, 36 percent; hogs from $27.40 to $14.08, 46 percent; cattle, from $25.20 to $19, 25 percent; eggs from 59 to 40 cents, 31 percent. Now do you understand that is one of my and your problems? That is a trend we must stop. No farmer can do a complete job, no farmer can maintain the fertility of his soil and preserve water resources unless there is some profit in farming. It costs money.

Now the next problem is that of surplus. Let me say this is a strange world. Here we have such an abundance and yet throughout this world there are so many people who don't have anything to eat. May I very briefly run through the surplus problem? Last year we produced nearly a billion two hundred million bushels of wheat. January 1 we had a carry-over of 390,000,000. The spring crop estimate was 250 and the winter was 885, more than 1,125,000,000 bushels. I might stop there. Does anybody have any idea what we can do with it? We don't use in this country for food, for feed, for industrial uses, we don't use but 700,000,000 bushels. Yet we are producing a billion two hundred million. This year we started off with a surplus of 390,000,000 and will wind up with a surplus of over 500,000,000.

Some of you maybe don't like ECA, European recovery. Although personally I think it has turned the tide of communism in Europe, whether you like it or not, tell me what are you going to do with agricultural surpluses the day ECA stops. You have been getting rid of 5,500,000,000 bushels of wheat. You have been getting rid of three to five million bales of cotton. ECA will end in 1952.

Corn. Last year we produced 3,400,000,000 bushels of corn. What are you going to do with it. Are you going to feed it to the hogs? You know you don't have any cribs to put it in and if you feed it to the hogs you wouldn't have any pens to put the hogs in. [Laughter.]

Another good crop coming up this year is cotton. We have a supply of 21,000,000 bales and we use only 8,000,000 bales in this country. Through ECA we hope to export 5,000,000 bales and have a carry-over on the 1st of August of 8,000,000 bales.

There is a peanut surplus of over 300,000 tons.

What does that all mean? The farmer in cooperation with the Government is now beginning to limit the production of some of these surplus commodities. The wheat acreage has been cut down to 73,000,000. I think that marketing quotas next year may be around 65,000,000 acres. Let me say in passing that the control programs in 1950 have taken out of production some 30,000,000 acres of land. Next year it may be far in excess of that figure. Corn has come under acreage allotments. We had 27,000,000 acres in cotton last year and it has been cut to 21,000,000 acres this year, and the prospects are it will be cut to 17,000,000 or 18,000,000 next year. Peanut acreage has been cut from 3,300,000 to 2,100,000 acres, and next year will probably be cut to 1,800,000 acres. And rice comes under acreage allotments this year. Does that mean anything? I don't know, but here is what I think: My friends, it seems to me this is the hour. May I repeat that? This is the hour. All across this broad land the farmers of this Nation are now giving consideration to the problems of what shall I do with the land taken out of production. It's made for you. All of the farmers are complaining of what can be done, what can the idle acres be used for now. The old submarginal land that never did produce much, put it in trees. It does two things. Trees are a crop just like wheat and corn, and at the same time it slows down the movement of that water on the hillside. Take other land that is not needed for cultivation of crops and put it in pasture. Put it in pasture, do you understand. I don't know, my friends, but if there was ever a case made for you, if there was ever a time fixed, that is it.

Here in Georgia there will be hundreds of thousands of acres taken out of production of corn, wheat, cotton, peanuts, and all across this broad land of ours.

But what I really want to talk to you about in the few minutes I have is what you need now. The first thing I think you need is a soil conservation type of credit. May I repeat that? I think you need a type of loan that adapts itself to soil conservation. It takes time to convert. I takes time to shift. It takes time to learn new skills. It takes time to build pastures and fence them and fertilize them. It takes time to secure or increase your livestock herd.

Now my friends, here in Georgia, and I presume throughout this broad land of ours, the banks have been most cooperative under this program. But I came here tonight on bended knees to beg that the banks of this Nation immediately adjust their lending policy to take care of a loan for soil conservation farming. [Applause.] I think the banks should do it. I hope the banks will do it, but if that is not done, in my judgment the Congress will provide that type of loan. I introduced a bill 10 days ago for a 7-year loan with the right to waive all payments for the first 2 or 3 years until this shift in planned farming and conservation farming can get under way and then extend it an additional period of 5 years. I want to salute the banks of this Nation for their cooperation and I want to ask them to provide this type of credit for the farmers of this Nation. In all kindness, this may not be done under the bank laws and rules and regulations. I think to do a complete job, to protect the land and water resources, Congress must come in.

The next thing I think you need is a substantial increase in the appropriation for the Soil Conservation Service. [Applause.] My friends, your farm planning is going too slow. You are doing all you can with the help you have, with the technicians you have, but the hour is growing late. For 100 years we have cleared those hillsides and we have permitted that erosion. There should be adequate funds to plan every farm in the United States within the next 3 years. [Applause.] Let me say this now. I was never more serious in my life. Within a few weeks we will appropriate $20,000,000,000 for our armed forces to protect the security of this Nation. My friends, it is just as important, it is just as important that we protect the fertility of our soil and the resources of our country. Listen, my friends, you know this. You know that it is impossible, without great loss and great cost, to build up stockpiles of food to feed our people in time of great wars and distress. But you know what you can do. You can stockpile the fertility of the soil. If the hour of crisis ever comes, the farmers of this Nation can then produce whatever might be needed to feed and clothe, not only the people of this Nation, but our allies as we had to do before. [Applause.]

Now I am not scaring anybody, but I say this to you, nobody knows and you needn't go to Washington and ask because they don't know when, what, or how it may happen. But I know this, I know it is just as vital to the safety and security of this Nation that we protect the fertility of our soil as it is that we appropriate for our armed forces. That's right. [Applause.]

Now the next thing you need—now don't misunderstand me too quickly. The next thing you need is an increase in appropriation for conservation payments. That's right. [Applause.] I don't know how you are out in California or up in Maine and in New Hampshire. Most of the farmers I know can't afford to do a full job and a complete job without some help. We appropriate $250,000,000, and you know it is a funny thing, a lot of these economical businessmen—God bless them—if we didn't have them I don't know where we would be, but you know it costs almost as much—I don't know whether you know it or not—but it costs almost as much in subsidies to keep our ships, those merchant ships on the seas. Do you understand that? We are subsidizing every ship that rides the sea and every plane that rides in the air and every newspaper and magazine that is published. Funny, isn't it? When we provide $250,000,000 to help protect the soil fertility and protect the security of this country, they throw up their hands in horror. I feel I can get somewhat further with you, my friends. I haven't done much in the last 14 years, but I have studied some problems. I think that of the money we appropriate for ACP payments, not one single dime should be paid until it has been approved by the supervisors of the respective soil-conservation districts. [Applause.] Here is a group of men giving their time and their talent to protect our soil without hope of reward. Here is the technical service preparing your farm plan. And here comes another agency that determines what practices we still pay you for and how much, but has absolutely no connection with the farm plans that you and your technicians have approved. You should have that authority, and I am willing to help you get it, that is, for the district supervisors to approve the payments.

You know what I want to be the first payment you approve? It's to the farmer who starts way up yonder at the hill top. You know my friends, it doesn't make sense to to me that most of the money is spent down in the valley. It's up yonder, where the water falls—it's up yonder where the erosion has started. That water dashes down the hillsides so rapidly when the trees and grass are gone. It should be slowed down to seep into the ground, to provide moisture and to prevent erosion. May I repeat that if it was my will there would not be a darn dime paid on the farms of this Nation unless the protection of our soil and water resources started on the high ground.

The fifth and last thing I think we need, and I hope I don't make anybody mad tonight. The fifth thing we need, and I might say we must have it, is better coordination between the Soil Conservation Service, the Production and Marketing Administration, and the Extension Service. [Applause.] Let's talk about my State. I could talk about some other States—but I am going to talk about mine. In most counties there is fine coordination between the respective agencies, but I know where the head of the Soil Conservation Serivce and the head of the Extension Service and the PMA don't even speak. Yes, you can say: "Mr. PACE, you have been in Congress 14 years, why haven't you done something about it?" Well, I want to tell you I tried, but I must tell you that Congress will never do it. There are just too many influences at work. There are only two men living who can do it, one is named Brannan and the other is

named Truman. I think my friends that to be the Secretary of Agriculture would be the last job I would ever apply for, but often I have wished I could be the Secretary of Agriculture for just 1 day. Before the sun went down that day the three great heads of these agencies would be working hand in hand or we would have three new heads for these agencies. I hope you understand. I think the time has come to do some straight talking about this. I think it is outrageous for the Production and Marketing Administration to try and send their men out yonder to do farm planning when we need the technical service of men trained to do that job. [Applause.] The farmers I know—I don't know about the ones you know, but I do know the farmers I know are getting sick and tired of this confliction and overlapping, of having two or three Government agents drive up to their home the same afternoon trying to do the same job. Do you understand?

Now my friends I am about through. I have only one more thing I want to say. Down at the bottom of the program Kent sent to me about a month ago—I don't see one here tonight, but the words went like this, "With the right to own goes the duty to protect." I want to talk to you about this a minute. You know we have a great country, the greatest Government on earth. We want to keep it that way. You and I go out and buy a hundred or a thousand acres of land; we beat our breast and say, "It's mine, from heaven to hell." That's right, and don't you want to keep it that way? I believe we do. I am not going to take your time to tell what has happened to our soil in the last 150 years. The Congress has been very patient. You own some land, but did you go check your titles to see where it came from? It came either from the United States Government or your State government, and you know you can be safe and secure in your possession because the laws of this land protect your title. That's right. But our population is increasing from two to two and a half million every year, and the way things are going now it won't be too long before the question arises of how are we going to feed our own people instead of this abundance. When men stand by and see that rich topsoil wash away to the sea—let's say you are Members of Congress and that you are now in session. I'll ask you, how much longer would you put up with this? How much longer would you stand by and see your greatest natural resource wash away? Is there any responsibility on your Government and on your Congress to look ahead to your children and your children's children that they be provided with food and fiber?

You know my friends, we don't want to go where Mr. Attlee's government has gone. You know over there in England they give a man a farm plan and they say, "Mister, our experts say that this is what is necessary to be done to your farm and, Mister, I want you to understand if you don't do it, we will come and do it for you and send you the bill." We don't want that, do we?

My friends, I want to help you awaken the farmers of this Nation. You know in George Washington's time 95 percent of the population were farmers. Washington was a farmer. Jefferson was a farmer and in his time at least 90 percent of the population were farmers. My friends, do you know who you represent here tonight—only 19 percent. Did you ever stop to think about what the other 81 percent is thinking about? They are paying some of the money for ACP payments. They are paying some of the cost of soil conservation farm planning. When are they going to get tired? When are they going to get concerned? When are they going to get afraid? Is our trusteeship being exercised properly? You know my friends. I think everybody here tonight could repeat after me the opening line of the Twenty-third Psalm, "The Lord is my shepherd, I shall not want." We know that because it was taught us at our mother's knee. How many of you can repeat the opening line of the next psalm, the Twenty-fourth? "The earth is the Lord's and the fullness thereof." My friends, don't you suppose when the Lord gave us this great land, the richest farm land on earth, don't you sort of reckon He thought maybe we would have enough appreciation, we would show enough gratitude to keep it and save it and protect it? Don't you suppose as He watches over us that He too is concerned about the job we are doing and whether or not we shall be in want? My friends, there has been placed in your hands the responsibility, in the hands of the farmers, the people who own the lands of this Nation, the duty to protect and to preserve forever the soil. "The earth is the Lord's and the fullness thereof." Good night. [Applause.]

The New South

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a splendid address by John J. Snyder, Secretary of the Treasury, delivered before the sixtieth annual convention of the Tennessee Bankers' Association, at the Hotel Peabody, Memphis, Tenn., on Thursday, May 18.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a real pleasure for me to join in this annual meeting of the Tennessee Bankers' Association.

As you may know, I spent my early banking days less than 50 miles from Memphis—across the border in your sister State of Arkansas.

Over a span of years, these States have been referred to as part of the old South. But in coming back to this region today, it is with the appreciation that this is no longer the old South but the new South.

The unparalleled prosperity of this section of the country today has come primarily as a result of industrialization. Manufacture has added new wealth, and this, in turn, has made possible ever-increasing standards of living and greater opportunities, both on the farm and in the city.

Tennessee holds a strategic position in this flourishing South and Southwest. The material progress which has come to this State in recent years—by phenomenal industrial expansion and better utilization of your rich agricultural soils—is in many ways typical of what has happened and is happening all over this section of our country.

While Tennessee industry has its roots in colonial days, it is only in recent years that you have attained the position of an industrial area. For, your most impressive gains have come in the past decade.

Since 1939 you have had over a 50-percent increase in number of manufacturing establishments—more than 10 percent over the national average. Values added by Tennessee industries have tripled in the same period. Compared with other major geographic areas of the country, the southern States show the greatest growth in population engaged in manufacturing. The Cotton Belt is rapidly becoming a power-driven industrial area.

I do not mean to infer that agriculture is losing its importance in your State or in the South's economy. On the contrary, it will continue to be one of your most important sources of income. But industry and agriculture are intermeshed. Here is a two-way road in an expanding economy, with both industry and agriculture translating benefits to each other. It brings mechanized farming, soil conservation, more output per acre, greater marketing facilities. Increased industry generates the purchasing power to consume the more abundant products of the soil. On the other hand, with increasing incomes, the farmer is enabled to buy more and more products of industry.

The great strides you have made in both agriculture and industry in recent years have stemmed in large measure from the development of the Tennessee Valley Authority. Here was the proving ground of one of the Nation's greatest coordinated agricultural and industrial deevlopment programs through hydroelectric power.

It ushered in a new era of scientific agriculture. It also attracted many new industries to your State. The availability of low-cost TVA power, for instance, fostered the building of your chemical plants. Today this industry constitutes your State's leading manufacturing group.

The South's industrial expansion was, of course, given tremendous impetus by the urgent needs of all-out war production. Billions of dollars were spent during the war by the Federal Government in the expansion of the South's manufacturing facilities. Close to one-third of a billion dollars was spent in Tennessee alone. And, that excludes the Oak Ridge atomic project—the largest single industrial operation in the world's history. This industrial expansion was a demonstration to the entire Nation of what this region could do.

The close of the war brought serious challenges to our economy. Would America be able to maintain its tremendous production gains? Today—5 years later—we have the answer. We have not only been able to maintain our gains, but our productivity is constantly on the increase. Since the close of the war, I understand that at least 700 new industries have been established in your own State.

Yet it is not the material gains which you have already achieved that have given this region the title of the "New South." It is rather in the realization of the potentialities that lie ahead for still further expansion and progress.

Your State particularly has tremendous potentials for further development. Agriculture should, and is, turning to higher-value crops and products. The advance which you have made in dairying is an instance in point. By "marketing your grasslands" you have become the South's leading dairy State.

In similar fashion, there is great opportunity here for industrial expansion in finished products. Your industrial output is still primarily in the producton of raw materials, of semifinished metals and textiles, and chemical intermediates. By converting your natural resources into finished wares, your annual income can be increased extensively.

You, as bankers, will play a major role in this further expansion of your State's economy. Much of the capital required will be furnished by your institutions. From earliest days banking has supported the growth of your commercial endeavor. The southern banker was a pioneer in the financing of foreign trade. He issued the drafts covering shipments of cotton to far-distant points. The bill of exchange, the controlling medium of the entire foreign-exchange system as we know it today, was part of the daily business of the southern banks over a century ago.

In serving your customers today, however, the problems and responsibilities which face you are far greater than those that faced your predecessors of even a generation ago. For today, you must be specialists in the whole broad field of business analysis. To evaluate the opportunities for growth in your communities and to judge which of those opportunities offer the best prospects for sound development, you must be able to interpret the changes occurring in business conditions not only in your own State but in the Nation and in the world.

In my opinion, there is sound basis for confidence in the business outlook for our Nation. We are well into the second quarter of this year, and it is becoming evident that 1950 will be one of the most profitable business years in our history.

Industrial production is not only back to last year's level, but is now rising, in contrast to the decline last spring. Business profits this year are less likely to be held down by inventory losses since commodity prices have shown a firm trend for nearly a year, and inventories have been greatly reduced.

The renewed upturn in capital goods, now under way, raises the question whether earlier estimates of a substantial reduction in new capital expenditures this year may not have been somewhat exaggerated. New orders for machinery have been rising sharply since the third quarter of 1949. New construction contract awards for nonresidential building were 30 percent higher than in the same quarter last year, and the increase is widening.

I am particularly impressed, as I know you must be, with the construction outlook. New home construction is at the highest level in our history. Moreover, new contracts awarded for future construction of residential units continue at a spectacular pace. New contracts awarded so far this year for public-works construction and public-utility construction likewise show substantial gains over the comparable period last year.

The construction industry is highly important in your own State's economy as well as the Nation's. Currently, construction is giving direct employment to around 32,000 Tennesseans, and indirect employment to an even greater number in your lumber and other construction-related industries.

Automobile production is also one of the strong points in the current business picture, and I am told the demand is far from satisfied. In only one month so far have we exceeded the 1929 peak in our output of passenger automobiles. And again, we must remember that we have 30,000,000 more people today than in 1929.

I know that you are eyeing this industry with considerable interest, for the manufacture of automotive parts is one of the promising fields for future major industrial expansion in this area. Southern ownership of cars and trucks in the 10-year period 1938-48 increased over 44 percent compared with a national average increase of 28 percent. As a result of this growing southern market, many automotive assembly plants have been established in the South. Your local enterprise is taking advantage of the profitable opportunity to supply a considerable part of the requirements of these assembly plants.

In the last analysis, of course, it is the individual consumer who represents the major market for our goods and services. It is not only his ability to buy but his willingness to buy that supports American business.

Ability to buy is evidenced by the current record level of personal incomes, which continues to run well over the $200,000,000,000 mark. In addition, personal savings, which represent potential purchasing power, are higher than ever before. Liquid assets of individuals amount to over $200,000,000,000, in contrast to only $68,000,000,000 when we entered the war in 1941. And this is not the full measure of the improvement in people's financial resources. Their investments in life insurance, homes, and real estate, corporate securities, and other less liquid assets far exceed the prewar total.

Willingness to buy is reflected in the current volume of retail trade and consumer expenditures. Total retail sales, in actual unit volume, are running about 6 percent higher than a year ago. Consumer buying for the country as a whole is currently running at a record annual level of $181,000,000,000.

The fact that last year's business readjustment did not unsettle the economy has created a justifiable feeling of confidence.

Another factor in the business picture—one of the Nation's biggest assets for future progress—is our growing labor force. To realize our full potential for business profits and national income, new jobs must be developed in step with our growing population. In the longer run, as our population grows, new jobs must be created by the initiative and vision of both management and job seekers.

To benefit by our tremendous opportunities, it is essential that we keep our economy strong, healthy, and growing. We must be ever watchful of developments which might tend to throw it out of balance. I am certain that you bankers will continue to be constantly on the alert for any financial trends that might threaten our continued prosperity. For upon America's domestic strength rests not only our own future peace and security but that of all free nations of the world.

Equal Pay for Women

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. LESINSKI. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following address delivered by me over Station WJR, Detroit, Mich., on May 19, 1950:

Ladies and gentlemen of the radio audience, a subcommittee of the House Committee on Education and Labor has today concluded hearings on H. R. 1584 and H. R. 2438, bills providing equal pay for equal work for women.

Price tags have no sex differentials. When the butcher, the baker, the candlestick maker, and all other merchants sell their wares, the asking price is the same to all persons—men and women alike. Yet, when women go out into the business, professional, or industrial world, they often find that a job carries one salary for a man and another for a woman.

According to the Women's Bureau, United States Department of Labor, in many instances, the jobs are identical—in others, the skills required are equal. In such cases, does the woman receive the same rates as the man? Sometimes, but not generally.

Equal pay for women means a rate based on the job—not on the sex of the worker. For many years women's organizations, labor unions, fair-minded employers, and various persons in the Government have worked for the equal-pay principle.

The bills introduced into the present Congress have bipartisan sponsorship. They would prohibit payment of a lower rate to women for work of comparable character on jobs where the performance requires comparable skills.

Our own State, Michigan, is a pioneer in the equal-pay field. We had the first equal-pay law that existed in any of the industrial States. Michigan and Montana were the only two States that had equal pay laws at the beginning of the Second World War.

Back in 1919, the Michigan State legislature enacted a law saying that "any employer of labor in this State, employing both males and females in the manufacture or production of any article, who shall discriminate in any way in the payment of wages as between sexes or who shall pay any female * * * a less wage * * * than is being paid to males similarly employed * * * shall be guilty of a misdemeanor."

As you may remember the Michigan equal-pay law was tied up in the courts for about 5 or 6 years with suits over its constitutionality. In 1940 the Supreme Court declared the law constitutional, making it possible for the State Labor Department to carry on active enforcement.

In the early days of the Second World War, Michigan, through its equal-pay law, did a lot of active work in trying to eliminate wage differentials, because we were aware of the tremendous effect this would ultimately have on war production.

Applying the equal-pay principle removes a great source of irritation during periods when the need for all-out production is critical. It is just as vital when economic forces have swung to the opposite extreme. In times of mass unemployment, men workers may be displaced by women workers because women can be employed at lower rates of pay. It was this practice, as some of us in Michigan well remember, that led to the reenactment of the equal-pay law in 1931. It was the practice in those days to lay off men with heavy family responsibilities who were making 45 to 50 cents an hour and to replace them with women, usually single girls with no family responsibilities, at 25 to 30 cents an hour.

During the depression we had to fight continuously against such efforts to push our wage levels downward. That was the time we really began in earnest to try to make the equal-pay law work. Today, nearly 20 years later, we are, I think, ready to point to our record and say to persons skeptical of the new proposed Federal law, "It can work and it is working in Michigan today."

There have been some interesting cases where our equal-pay law has averted strikes. During the war, an aircraft plant was on the verge of a strike over wage differentials for women. When the Department of Labor pointed out that such differentials were illegal under the State equal-pay law, the strike was avoided. This story definitely shows that the State law has been a stabilizing influence in employment.

Here is an illustration of how our equal-pay law takes away the sting of threatened wage cuts. At a large automobile factory, there was a serious strike several years ago. There they offered the men a choice of taking wage cuts to meet the differential women had been working under or of being laid off. Again the equal-pay law was on the job and this problem was ironed out.

There is an interesting story in connection with this case. This same company had one department that was completely manned by men on the day shift, and almost completely by women on the second shift. The third or swing shift again was an all-male one. The only difference among the three shifts was the 10-cents-an-hour flat differential paid to the women on identical jobs.

Michigan's pioneer efforts toward achieving equal pay for equal work have been outstanding. Today it is one of 12 States that have equal-pay laws. The others are Montana, Washington, New York, Illinois, Massachusetts, Rhode Island, New Hampshire,

Pennsylvania, California, Connecticut, and Maine.

As a result of these State laws, thousands of women are receiving equal pay for their work in private industry. It would be very easy to sit back and point to what has been accomplished and to talk about the many women who receive equal pay under these laws. But I am not going to do this. Some of us in the Congress and elsewhere in Government and many in industry and labor are aware of the great numbers of workers who are not protected by equal-pay laws of any kind.

Equal pay is a basic issue, one of the most important in the whole labor field. It is important to women as a matter of simple justice; it insures women receiving what they are entitled to for their work. It gives men greater wage and job security. It discourages employers from hiring women for less money; and it discourages replacing men with women at lower rates. It protects fair employers from the unfair competition of those who attempt to use women as undercutters of men's wages. It means more economic security for families, for it protects the wages of male heads of the family.

It is unfair to pay women less on the theory that men have dependents whereas women do not. A single man is paid as much as a married man for doing the same job. The level of wages cannot be justified on the basis of need beyond what is necessary for decent adequate survival. In any case, the old argument that women support only themselves or work to give their families luxuries is completely wrong. The Women's Bureau of the United States Department of Labor made a study during the war which showed that 84 percent of the women workers included in this study were working to support themselves and others. Fifteen percent of the women who lived in family groups were the sole wage earners contributing to household expenses. Ninety-two percent of the employed women who lived with their families contributed regularly toward family expenses. Over half of them contributed between 50 and 100 percent of their earnings to the family group.

There are 18,500,000 women workers today. If we are going to leave them in a position where they could undercut men's wages, think what a dangerous competitive factor they could be in our wage structure. Women workers do not want to be in a situation where they can be used as a club to force down wage levels. A Federal equal-pay bill would do much to remove this possibility.

We hear a lot today about the importance of keeping consumer purchasing power at a high level. In plainer language this means that if people have the money to buy goods, then factories will have the money to continue producing goods and to pay labor, and labor will again, in turn, have money to buy goods. This is a reasonable theory.

It is apparent that women's earnings must be considered when we think of consumer purchasing power, because there are so many women workers and they do support dependents. Consequently, equal pay for women is an important aid to maintaining consumer purchasing power.

The proposed Federal bill would cover about 6,000,000 women workers. It would make it unlawful for any covered employer to pay wages to any female employee at a rate less than that he pays to male employees for work of comparable character on jobs where the performance requires comparable skills. The bill also makes it unlawful for any covered employer to lay off, discharge, or otherwise discriminate against any employee for giving assistance in enforcement of the act.

Responsibility for enforcement of the act would be placed with the Secretary of Labor. The bill establishes procedures for hearings on charges of violation. It authorizes the Secretary of Labor to issue "cease and desist" orders, including reinstatement of employees with or without back pay. It provides for court review and enforcement of such orders, and for appeal by any injured party. Penalties are provided, of fine or imprisonment or both, for willful resistance to or interference with the officials administering the act, or for failure to keep required records or to make necessary reports. It prohibits award of a Federal contract to any employer found to have violated the act, during a period of 3 years after the violation, unless otherwise ordered by the Secretary.

Will this Federal bill be effective in eliminating discriminatory wage practices against women? I think it is a good bill and a very necessary one, an important addition to the body of Federal law designed to advance the welfare of workers and to stabilize the economy.

I feel that it is to Michigan's advantage to support a Federal equal-pay bill applying to the entire country. I think also that we must continue to be vigilant about the equal pay situation in our own State. Even though we have a good State law, I still get complaints on unfair wage differentials between men and women workers. Unions and women's organizations too have first-hand information which shows that much remains to be done in Michigan to assure complete application of the equal pay principle. I hope that the people of Michigan will keep on pushing for full and vigorous enforcement of our State law.

Why is equal pay important? To sum up again; (1) It is important to women as a matter of simple justice; it insures their getting what they are entitled to for the work they do. (2) It is important to men because it helps sustain men's wage rates. It discourages the employer from hiring women for less money. (3) It is important to everybody because it will increase consumer purchasing power, stimulate full employment and increase the economic security of workers' families.

"The laborer is worthy of his hire." If women turn out the same quantity and quality of work, they should receive the same compensation.

For these reasons I am supporting the bills now before Congress proposing a Federal law to require equal pay for equal work. I am sure that with our long history of support for the equal pay principle in Michigan, the people of Michigan will urge their Senators and Congressmen to support this Federal legislation.

My sincere thanks to WJR, the good will station, for the opportunity to speak this evening over their facilities.

Thank you and good night.

Writings of Owen Lattimore Reflect Pro-Soviet Views

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Writings of Owen Lattimore Reflect Pro-Soviet Views," by David J. Dallin, from the magazine the New Leader for May 13, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WRITINGS OF OWEN LATTIMORE REFLECT PRO-SOVIET VIEWS

(By David J. Dallin)

A new and highly significant article has come from the pen of Owen Lattimore. In this latest offering, which appears in the March issue of United Nations World (a magazine of limited circulation and expensive format edited by the devious Soviet sympathizer, Louis Dolivet), one almost fancies for an instant that the leopard has changed his pro-Communist spots. The article actually contains a faint breath of noncommunism, a fleeting hint of disapproval of Soviet policies. Comparison of the professor's arguments with the current far eastern line of the Russian press, however, swiftly dispels any illusions.

The official Soviet version of the upheaval in China is as follows: First, the Communist victory is exclusively the product of internal Chinese revolutionary forces, unaided by Moscow; and, second, the Communist regime in Peking is a sovereign government which takes no orders from the Kremlin. The press does not admit the presence in China of Russian advisers.

Now let us see what Mr. Lattimore has to say on the subject. He is certain, to begin with, that Russian intervention was insignificant in China. How can he be sure? If it had been otherwise, he explains, we should have intelligence information. As a matter of fact, the wretched caliber of American intelligence in the Far East is notorious. The U. S. S. R. rendered decisive assistance to the Communists in Manchuria right after the war by turning over massive stocks of captured Japanese arms. There were also Soviet advisers at Communist headquarters.

Again, Mr. Lattimore asserts: "The power of control [in Communist China] has not passed into the hands of Soviet Russia." I do not question Mr. Lattimore's integrity in making this statement, but it is false, biased, and harmful, nevertheless. Indeed, he could not be serving the Kremlin more effectively were he on Stalin's payroll.

Today, Soviet advisers are swarming across China. Some Russians and some Chinese Soviet citizens, they are arriving daily in Tientsin, Shanghai, Canton, and Nanking. The Soviet Ambassador wields vast influence in Peking. Russian military instructors are busy reorganizing the Communist army. Moscow's denials, of course, were expected and discounted in advance. Yet, here we have an American professor echoing the Moscow line under the sheltering mantle of scholarly objectivity and independent judgment.

Mr. Lattimore's views also mesh too closely for comfort with the grand design of Soviet policy on Japan. As the last potentially powerful anti-Communist bastion in Asia, Japan is clearly marked for mounting pressure. The recent Sino-Soviet treaty is actually an alliance against Japan. Moscow knows that the latter's present position is economically untenable: she cannot live without resumption of large-scale trade with the Asiatic Continent, particularly northeast China. The Soviet-Chinese bloc will agree to trade with Japan, but on its own terms only. And these terms will be aimed straight at the American occupation forces, and Japan's ties with this country.

Mr. Lattimore has a simple prescription for Japan in this dilemma. "Japan," he writes, "must negotiate for the raw materials it needs on terms that are acceptable to the suppliers of the raw materials." He then observes, accurately enough, that "the option of rebuilding the power of Japan no longer lies with Japan." Quite true; it obviously lies either with the United States or the

Soviet-Chinese bloc. Evidently, Mr. Lattimore's preference is for the latter.

The Senate subcommittee currently probing Owen Lattimore's attitude toward communism has been driving its plow through a sandy beach. Its failure to produce any proof that he is a Soviet spy or Communist Party member should surprise only uninformed persons like Senator McCarthy.

Mr. Lattimore has declared: "I am neither a Communist nor a fellow traveler." The first part of his statement is correct; the second is false. His most recent article on Asia—pious professions of democratic, anti-Communist convictions coupled with concrete proposals which miraculously coincide with the official line handed down from Moscow—is a splendid new sample of the mentality of the American fellow traveler.

Anthracite Coal

REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. FLOOD. Mr. Speaker, I have just introduced a bill to authorize, for a temporary period, the purchase by the Government of anthracite in amounts sufficient to maintain normal production and employment in the anthracite region, to promote the general national welfare, and for other purposes.

Mr. Speaker, the Federal Government has a great burden of responsibility to the anthracite industry. To a great extent, the major part of the economy of the northeastern United States is dependent upon the mining of anthracite in the anthracite coal fields of Pennsylvania. And my congressional district, centered in the Wilkes-Barre-Hazleton metropolitan area, is the very heart of these coal fields. Here lies the principal source of energy and heat for the most densely populated and most intensely industrialized section of our Nation.

To prevent the loss to the national economy of this vital natural resource and economic disaster to millions of our citizens, Mr. Speaker, I have introduced this bill.

The problems of this vast mining industry are not alone those of economics and technology—preservation, readjustments, improvements—these call for legislative assistance.

Use of abundant supplies of energy resource materials has made the United States of America the great world power it is today. In times of peace and war these materials have multiplied the strength of our manpower to provide for us the highest standard of living in time of peace and the greatest degree of strength in time of war.

A major readjustment in the fuel-energy economy of the country has been taking place during the past several decades. Economic factors and the necessities of international affairs, rather than the sound dictates of industrial prosperity and security have been at work adversely affecting our coal industry.

War and the postwar over-all prosperity for a time mitigated the degree and effects of these changes. Lately, however, the seriousness of the situation has reflected itself so forcibly upon the anthracite industry that it threatens the industrial and civilian economy of an important segment of the country.

Last year anthracite production dropped to a point lower than at any time since 1902. In 1949, the industry supplied only 3.4 percent of the national energy requirements, compared with bituminous coal, petroleum, natural gas, and hydroelectric power, on an equivalent heat-unit basis, as shown in the following table:

National supplies of energy requirements

Source of energy	Percent supplied	
	1949	1948
Anthracite	3.4	4.0
Bituminous coal and lignite	35.9	42.9
Petroleum	36.4	34.0
Natural gas	19.4	15.1
Hydroelectric power	4.9	4.0
Total	100.0	100.0

Within recent years a definite trend has been established toward a petroleum and natural gas economy. Unfortunately, this represents great national dependence upon two fuels of limited reserve, but more importantly, fuels which are of special strategic significance to direct military and security defense.

No authority disputes the ultimate return of the country to an enlarged coal demand. Just how far away this day may be no one accurately knows, but in the two-world pattern of today it is imperative that immediate effort be directed to preserve the anthracite industry and the potential industrial capabilities of this region.

A sudden reduction of the importation of foreign oil or a war emergency would place considerable of the northeastern section of the United States in urgent need for anthracite. Accordingly, something must be done to keep this industry healthy and strong for the job which might be placed upon it while it is readjusting itself.

The production of 42,664,000 tons of anthracite estimated for 1949 is about 20 percent lower than during the depth of the 1933–1936 depression. Employment during the year was approximately 74,000 men.

Total reserves of anthracite are estimated at between 160 and 180 years of expected life. For petroleum and natural gas comparative figures are 12 and 30 years respectively.

In 1947 fuel oil for the first time surpassed anthracite consumption in the primary anthracite market area and in 1948 accounted for 52 percent of the total consumption of fuels there.

The impact of these changes upon the fortunes of anthracite producers, on national security and defense planning strikes heaviest and first on the civilian economy. In the event of a sudden war emergency wherein importations of oil would be restricted and considerable amounts of domestic oil allocated for war purposes, a shift back to coal would put a large burden upon anthracite production.

Improved metallurgical processes, scarcities of important mineral resources, expanded and adjusted transportation routes, and research and development in entirely new fields all point to opportunities for improvement in the industrial economy of the anthracite industry and area in a distant future.

Today, however, the need for preservation of this industry is urgent. It has been and still is the backbone of our national industrial strength and prowess. Its problems and challenges have been many and varied. Out of this industry have come the techniques and industrial solutions which have made some of our greatest industries. Its mass-production methods have been the basic pattern for our automotive industry; its early flame-proof electrical equipment and gas protective apparatus have enabled the development of our oil and gas industries; to say nothing of the industry's contributions against poisonous gases in industry and war.

Now the day has arrived when the country is called upon to preserve this industry for the perpetuation of the over-all national prosperity and security.

Our national security and defense is predicated upon the development of a strong industrial economy. All across the country we endeavor to strengthen our industries. In the international field we spend billions to better the economies of friendly nations. In doing this we purchase their products, some of which come into competition with our industries, such as is presently the case with the importation of foreign fuel oil. These are the things we must do to create a better and safer world. It was not the intent or purpose of those who designed our foreign-aid program that these efforts should redound to the detriment of our own industries. Instead, it was and is intended that our own economy and industries should adjust themselves and rise to greater success and importance.

Under these circumstances, the direction in which the anthracite industry must go to recapture its share of success and position for the betterment of the national economy is clear. But to attain this end it must have a new partnership with the Government. It seeks not a dole but an opportunity to contribute that which is peculiarly its part.

During 1949 production of anthracite fell 25.3 percent below that for 1948; similarly bituminous-coal production dropped 27.4 percent. Production figures for these two fuels during 1948 and 1949 are as follows:

Coal production statistics[1]

Year	Anthracite tons	Bituminous tons
1949	42,664,000	435,000,000
1948	57,140,000	599,518,000

[1] Bureau of Mines Reports W. A. C. R. 652 and W. C. R. 1686.

In 1918 anthracite supplied approximately 12 percent of the national energy requirements, but in 1949 it accounted

for only 3.4 percent, representing a loss of about 70 percent in its relative position. In actual tonnage this was a reduction of from 98,826,084 tons in 1918 to 42,664,000 tons in 1949, or a 57 percent decrease in production.

This slumping off of the anthracite industry is a serious matter to the peacetime economy and security of the country. It has dragged down with it a most important area of the country and a segment of its population which once was industrially and technologically on a pinnacle.

One could argue long and bitterly the reasons why the anthracite industry and area are so distressed today. However, for the job of reconstruction ahead only those points which can set the course for repair and progress need be considered.

The world today has approximately 2,000,000,000 people. Using only rough estimates, it is clearly evident that numerically we have recently moved rapidly into reverse in our race against communism. The Soviet with about 250,000,000 people, China and northern Korea with nearly 500,000,000 people, the satellite and doubtful states with 150,000,000 people, and India, Burma, and other Far East countries already close to communism with another 500,000,000 people, this gives the Communists a potential control of 1,400,000,000 people. It also leaves only a mere 600,000,000 people for us to consolidate for our side. With these odds, and many others already against us, is not the need to spur ourselves great enough? Can we afford the luxury of a blighted fuel industry and its ghost towns?

Hence, the opportunity exists and the occasion demands that a constructive and objective course be set for the rehabilitation of the anthracite industry.

A forward view of the anthracite area envisions a pleasant region of high-level, well-organized, industrial power in the channels of trade and commerce, across the country and seas, again setting the pattern of progress in the production, engineering, construction, and research fields, as it did in the past.

No panacea for anthracite industrial ills exists or can be concocted. Though that is true, certain palliatives can be administered which hold promise of restoration of a high degree of health.

Luckily, for this area it is strategically located where neither those interested in the prosperity of the national economy or security can long avoid giving it appropriate consideration. The area is located where its strength and position is the keystone of our whole national power.

Specifically, the more I study the difficulties of the anthracite region the more sure I am of the theory that its recovery and restoration of health depends upon its integration with other projects, programs and plans possible of being brought to bear on this country's ills by no one person, corporation or industry. The day has arrived when the problems of this industry require the guidance and aid of Government surveys, direction and aid just as surely as it exists today for wheat, potatoes and eggs. Fortunately, however, the correctives to be employed for the anthracite industry are of a type which when properly correlated lend strength and security to the country on a self-paying basis.

In the world of today we tread a difficult road, and we would be unwise to add to our difficulties by neglecting to husband the strength of the various parts of our great industrial economy, or fail to build back into it those things which have made it so great.

Let us not forget that this anthracite area, at the turn of the century, provided approximately 23 percent of the national energy requirements which gave the Nation its present great industrial strength. The country does owe the anthracite area and its people a chance under the sun!

Overloaded Trucks on Our Highways

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of the House some of the persistent violations of State laws regarding the weight of trucks. In this connection, I include an article from Transport Topics of October 24, 1949. This article deals with the sixteenth annual convention of the American Truck Association held in Boston in October 1949. In this article, Mr. H. D. Horton, then president of the American Truck Association, now chairman of the board, called upon his associates for overscrupulous adherence to State weight laws, in the following language:

> In the final analysis, these laws are as much protective of our industry as they are of the public. There is no final profit for anyone in law violation of any kind. To cope with this problem, I believe this industry must dedicate itself to a vigorous, Nationwide program of self-policing. It is not enough for each of us to keep our own company house in order. We stand or fall with the performance of all trucks on the roads and streets. We must indeed, be our brother's keeper.

I also include an article from the Baltimore Evening Sun of April 25, 1950—just 6 months after the ATA convention—listing some 63 truck firms that paid fines for operating overloaded trucks on the highways of Maryland alone during 1 week—April 8 to 15, 1950.

In this list appears the Associated Transport, Inc., of Charlotte, N. C. The drivers of this firm have been convicted in 116 cases in the State of Maryland in a period of 14 months—since February 14, 1949. The president of this firm is the same Mr. H. D. Horton who addressed the American Truck Association 6 months before on the need for obeying State weight laws.

Mr. Henry E. Howell, vice president of the company, "passes the buck" on the great number of offenses by blaming it on "inaccurate weighing by shippers." Regardless of how it comes about, Mr. Horton's firm is not practicing what he preached, and in the meantime, the highways continue to take a beating at the expense of the taxpayers.

The article above referred to follows:

SIXTY-THREE TRUCK FIRMS PAY FINES FOR OVERWEIGHT

The State of Maryland collected fines from 63 transportation firms charged with operating overloaded trucks on highways during the week April 8 to 15.

State roads commission weight checkers arrested another driver of Associated Transport, Inc., Charlotte, N. C., the trucking concern which has been the most persistent violater of Maryland laws regulating the weight of trucks.

During the past 14 months, drivers of this firm have been convicted in 116 cases. Henry E. Howell, vice president of the company, attributed the large number of offenses to inaccurate weighing by shippers.

FOUR QUINN CONVICTIONS

The Quinn Freight Lines, of Brockton, Mass., with four convictions, led other shippers in the number of offenses committed during the week reported. Its total since February 14, 1949, is 27 convictions.

Conviction records for the week were:

Owner	Week's convictions	Week's fines	Convictions since Feb. 14, 1949

The Grant and Roosevelt Memorials

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article by William Fulton:

FD SHRINE A CONTRAST TO GRANT'S TOMB
(By William Fulton)

NEW YORK, May 21.—This is the story of two memorials and how they grew. One is the unfinished, neglected tomb of General Grant here in the city and the other is the plush, well-appointed shrine of the late President Roosevelt at Hyde Park.

New York has failed to live up to its promises to complete the Grant Monument perched on the heights over the Hudson River. Each year the city doles out a pittance to keep three employees there. The Federal Government has never given a nickel toward this memorial for the general who welded his country together on the battlefield.

On the other hand in the last 3 years alone the Federal Government (taxpayers) has shelled out $463,621 for the maintenance of the Franklin D. Roosevelt national historic site and library. It is the only memorial started by a President during his lifetime to perpetuate his name.

MORE THAN 50 EMPLOYEES

More than 50 guards, historians, librarians, and maintenance men are employed at Hyde Park. It takes two different government agencies to run the show. The National Park Service maintains the home and the grave, while the National Archives operates the library of Roosevelt papers with the attached museum of his efforts starting out with a baptismal gown.

Perpetuators of the Roosevelt legend, such as Robert Sherwood, the playwright, point out that $360,629.95 was taken in from the sale of admission tickets at 25 cents per head the first 3 years. Even so the cost to the taxpayers is far outstripping public interest and the gap is expected to widen when the newness wears off.

Superintendent of the Hyde Park administrative force is George A. Palmer, who hails from Columbia City, Ind. Palmer was formerly boss of the Statue of Liberty in New York Harbor.

THREE AT GRANT'S TOMB

Heading the staff of three at Grant's Tomb is the curator, George Burnside. His father's cousin was Gen. Ambrose Burnside, one of Grant's major generals. He has an assistant curator and a maintenance man to clean up inside the memorial.

"Of course, I think it's a shame the memorial has never been completed, said Curator Burnside. "It should have been taken care of a long time ago."

No admission is charged at Grant's Tomb and more than a quarter million visitors, mostly school children, view it each year. Outside of an annual $9,000 handout by the City of New York, the memorial is administered by a private organization, the Grant Monument Association, the president of which is Cornelius W. Wickersham (lieutenant general, New York National Guard, retired).

Farmers Home Administration Has Splendid Record of Achievement—Needs More Funds

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. O'KONSKI. Mr. Speaker, of all Federal Government agencies operating in my District, none has the splendid record of the Farmers Home Administration. Their courteous, efficient, yet business-like operation, has won the hearts of all people as a real friend in need.

Thousands of family farms are in existence today in northern Wisconsin only because of help and guidance from the Farmers Home Administration. Drought stricken farmers found a place of refuge in the FHA. Thousands of veterans were rehabilitated on farms because of help from the FHA.

With so splendid a record at no actual cost to taxpayers in the end, it is tragic that this agency is short of loaning money about six months of the year. One of the greatest things this Congress could do is to appropriate sufficient funds to this agency for full operation the year round.

Mr. Speaker, I include the following tables showing in no uncertain terms the good this agency has done and what its needs are for full-scale operation:

TABLE I.—*Production and subsistence operating loan activities during first 9 months of the 1950 and 1949 fiscal years—10th Congressional District, Wisconsin*

County	Veteran and nonveteran								Veteran only							
	July 1, 1949, to Mar. 31, 1950			July 1, 1948, to Mar. 31, 1949			Estimated requirements from Apr. 1 to June 30, 1950, for which no funds are available		July 1, 1949, to Mar. 31, 1950			July 1, 1948, to Mar. 31, 1949			Estimated requirements from Apr. 1 to June 30, 1950, for which no funds are available	
	Number of applications received	Loans made		Number of applications received	Loans made		Number of applications	Amount funds needed	Number of applications received	Loans made		Number of applications received	Loans made		Number of applications	Amount funds needed
		Number	Amount		Number	Amount				Number	Amount		Number	Amount		
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	(14)	(15)	(16)
Ashland, Iron and Bayfield	110	69	$113,815	79	53	$65,290	62	$103,500	52	40	$69,855	37	27	$38,930	25	$46,000

Protection of the Lace Industry

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

STATE OF RHODE ISLAND
AND PROVIDENCE PLANTATIONS,
Providence, R. I., May 18, 1950.

Hon. JOHN E. FOGARTY,
House Office Building,
Washington, D. C.

DEAR JOHN: Recently I appeared at the forty-eighth anniversary celebration of the Amalgamated Lace Operatives of America at the Narragansett Hotel.

It was quite evident to me from the speeches that were being made that there is a great deal of apprehension among the workers in the lace industry in Rhode Island that the conferences to be held in Torquay, England, in September to discuss the further lowering of tariffs will do irreparable harm to our economy and result in the loss of jobs to lace workers.

There are 5,000 people in Rhode Island who are employed in the lace industry, and while I understand that there must be some reciprocity with reference to imports and exports, I feel that the Federal Government in dealing with the tariff situation should seriously consider the fact that we in Rhode Island have already been classified as a distressed area.

Only the other day a group of the workers called on me and appealed that I appear before the Committee for Reciprocity Information and lay before its members Rhode Island's plight with reference to this situation, which I have promised to do. In the meantime, I am enclosing herewith a photostatic copy of the memorandum that was submitted to me by the representatives of the union locals in the hope that you will do everything within your power to see to it that this industry is protected in every way possible.

Sincerely,

JOHN O. PASTORE,
Governor,

AMALGAMATED LACE OPERATIVES
OF AMERICA,
Philadelphia, Pa., May 17, 1950.

GOV. JOHN O. PASTORE,
State House, Providence, R. I.

YOUR EXCELLENCY: We represent the Rhode Island branches of the Amalgamated Lace Operatives of America, lever section, which is the national union, composed of skilled lace makers throughout the United States.

There are four branches in Rhode Island. Branch No. 6 in Pawtucket and Central Falls, of which I am secretary; branch No. 7, representing union members in the whole Pawtuxet Valley; branch No. 16, representing the workers in Bristol County; and branch No. 19, representing the workers in South County.

We are calling on you, Governor, to take advantage of the offer of help you made us recently when you were kind enough to speak at the forty-eighth anniversary dinner of branch No. 6 in the Narragansett Hotel on April 15.

You were kind enough to say at that time that "the lace industry is very important to the State of Rhode Island and if there is any way that I can help you, my address is Smith Street and I am generally there at 9 o'clock in the morning."

Your past activities have proven to us that you are a man of your word, and that is the reason we feel confident that when we have explained our situation to you, you will be glad to add the strength of your high office to the work which we are trying to do.

We are very much worried that the present program of some persons in Washington to arrange to lower tariffs at conferences which will be held in Torquay, England, in September may result, as it has done before, in depriving us and our associates of the opportunity to work full time at our trade.

During the past year the importation of laces from France, which is our chief competitor, has increased immensely and already the effects of this increase in importations has been seriously felt by our members. Many lace mills in Rhode Island have been on short time during the last few months and we have been reliably informed that a number of the smaller mills in West Warwick will shut down shortly for lack of orders.

You can readily realize what the consequences to us will be if the imports of French and British laces are permitted to increase further over the large amounts that are now coming in. We are informed on good authority that already, in certain types of laces, the market in New York is glutted with lace.

The spokesmen here today represent approximately 5,000 highly skilled workers located in the Pawtuxet Valley, in Pawtucket and Central Falls, West Barrington, Bristol, and the South County. A large majority of us have voted for you in the past and hope to have the pleasure of voting for you again. We are truly your constituents. We seek your aid.

We remember you stating at our dinner that you had heard the statement that "in order to export you had to import" so often that you were getting a little tired of it. We admit that importation is necessary to every country but we feel that foreign countries have a tremendous advantage with devalued currency, low wages, and long hours, and we cannot see why, if they already have these advantages, they should be given any more. We are very certain that we wish to keep our high standard of living and not be forced, as we were in the dark days from 1936 to 1939, to accept reductions in wages so that our employers could sell their goods in competition with France.

The members of our union earn approximately four times as much for a 40-hour week as their English friends and about five times as much as their French competitors.

We have with us today the wage scale paid in the Calais area of France for the same work we do in the United States of America and it is so low we wonder how these people can live. We think the attack on this problem should be for the lacemakers in France and England to endeavor to bring their wages up where they belong instead of dumping the goods which they manufacture in the United States where the prices will only help to force down the American standards which we have fought many years to obtain. We are firm believers in fair competition but we are not at all sure that fair competition exists under the present conditions.

The Amalgamated Lace Operatives of America, lever section, has been in existence for over 50 years. All of the twisthands in the United States belong to it. We were one of the first unions to engage in industry-wide collective bargaining and with one exception, in 1917, there has never been a break in the pleasant relations which have existed between our union and the manufacturers.

Our members are the highest paid and most highly skilled of any persons employed in the textile industry. We have contributed our share to social security and are proud to say that because our people have been steadily employed, we have collected few benefits.

We are proud of our record in the purchase of savings bonds. We have waived our rights in order to help veterans learn a good trade and have permitted many more than the usual number of apprentices to enter the trade.

All of these things we want to continue. We believe our Government should make it easy for us to continue to work and support our families instead of putting obstacles in our way such as tariff cuts which simply means that our Government is making it easier for our competitors abroad to do the work which we are willing and able to do.

Our national president, Mr. Frederick Dixon, has already been in Washington and will be there again presenting before the Committee for Reciprocity Information and other appropriate bodies, the protest of our united membership against any further reductions in tariffs. We feel that if we could have your help it would carry a great deal of

weight and go a long way toward making our protest successful.

On March 15, 1938 the Honorable Robert E. Quinn, at that time Governor of the State of Rhode Island, appeared in Washington as he stated, "On behalf of a great majority of the citizens of Rhode Island" and made a strong and thoughtful attack opposing downward revision of tariffs. Governor Quinn stated at that time that "reductions or concessions in rates will prove harmful to our industry," a statement which we can assure you is as true today as it was then. Governor Quinn ended his plea by stating "surely our Federal Government is not going to do anything which would lower our present standard of living. We have faith in our Federal officers. We believe that they, like us, are determined to build up and not destroy this faith. Our hopes and aspirations are for still more of the better things of life. We fear that any lowering of the present tariff rates would at this time bring about a still further decrease in employment."

Governor Quinn's suggestions were not followed. Tariff cuts on laces went into effect. The French devalued the franc. The only thing that saved the American lace industry from complete dissolution was the advent of the war which came about a year following his remarks.

We feel very sure that our national representatives would welcome your appearance before the Committee for Reciprocity Information where you might repeat your observations made at our dinner on April 15 when you stated in substance that with 43,000 out of work in Rhode Island it was the duty of those persons in Washington bent on further reducing tariffs, to stop and think what effect it might have on employment in industry in this State.

If the pressure of official business makes it impossible for you to make a personal appearance in Washington we feel very sure that you will take other appropriate action to help protect the jobs, the families, and the livelihood of us, your constituents.

Respectfully submitted,

Branch No. 19 (Alton), George L. Noyes, secretary, T. H. Smith, president; Branch No. 16 (West Barrington and Bristol), Edgar J. Wiggin, president; Henry C. Walther, secretary; Branch No. 7 (West Warwick, Coventry, and Washington), Douglas Jackson, president, Raymond Bradley, secretary; Branch No. 6 (Pawtucket and Central Falls), Louis Playe, secretary-treasurer, George Helsens, assistant secretary; for the Rhode Island branches of the Amalgamated Lace Operatives of America, Lever section.

Segregation in Washington Swimming Pools

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun-Times of May 16, 1950:

WATCH FOR H. R. 5963

In Washington, D. C., there are six swimming pools in recreation areas operated by the Federal Government. Prior to 1940 there was a policy of segregation in effect. Since that time, the Government has refrained from using its power to enforce segregation. This policy is based on the belief that the Government should not discriminate against any of its citizens because of their race.

From time to time the Interior Department, which operates the parks, has offered to transfer all of such Washington facilities to the local District recreation board, provided that a policy of nondiscrimination was followed. The local board agreed to allow persons of all races to use such facilities as tennis courts without a pattern of segregation. But it refused to follow the same policy regarding swimming pools.

For that reason the Interior Department has refused to allow the local board to operate the pools. Last year, for the first time, some trouble was experienced at some of the pools. They were closed down. This year the Interior Department is prepared to operate all pools and assign enough police to stop trouble. Anyone who objects to nonsegregated bathing can stay home.

An attempt to get around the Interior Department's position will be made in the House of Representatives next Monday. A bill to transfer all the recreational facilities of the District of Columbia from the Interior Department to the local board will come up for a vote.

The sole object of the bill is to place control in the hands of officials who would enforce racial segregation.

An attempt may be made to sneak it through without much discussion and in the absence of strong "equal rights" Representatives.

Congressmen who believe in the principles of equal rights regardless of race or creed will make a special effort to be present in order to vote the bill down. The number is H. R. 5968.

Federal Aid for Schools

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. McCULLOCH. Mr. Speaker, for several years the schools of America have been confronted with the need for additional funds with which to properly educate our youth.

In most school districts the people recognized the need, promptly accepted the local responsibility and provided the needed funds.

The people in such districts well knew that the funds provided at the local level would be more wisely and economically spent than would be the so-called easy money from Washington. Furthermore, they knew that funds provided at the local level would insure local control of their schools.

In the few school districts where the people failed to accept their local responsibility too many of the people have been looking to Washington for funds.

The Columbus (Ohio) Citizen and the Cleveland (Ohio) Plain Dealer, by way of the editorial page, have clearly and logically pointed out the fallacy and the danger of looking to Washington for funds to finance the schools.

In accordance with permission granted by the House, the editorials follow:

[From the Columbus (Ohio) Citizen of May 18, 1950]

HELPING SCHOOLS

Recently when their schools were in danger of closing for lack of money, the people of Kansas City voted to raise their taxes.

Women played a big role in the campaign. They rang doorbells, called city-wide rallies and preached their cause wherever they went. With other civic-minded citizens, they got the parents out to vote. This meant victory for the schools—which will remain open.

That's the way they should be kept open everywhere. When men and women are really interested in local affairs, those affairs usually are well run. Lethargy follows the rush to Washington for hand-outs.

As the Government takes over our responsibilities, we become less capable of handling them. And gradually the coma of regimentation sets in, and we grow more apathetic about our own business.

The money voted for schools by Kansas Citians will be spent at home. It leaves their pockets and goes directly into school funds. There is no journey to the National Treasury and back, with scores of persons taking their bit along the way. This expense, which in many cases is unnecessary, is one thing that makes our taxes so burdensome.

And the schools never will be well run unless the parents are sincerely concerned about the way they are managed and what they teach. It is not sensible of us to turn such things over to Washington officials, no matter how well-intentioned they may be.

This country is too big to have good centralized Government. And Government is never good when the people are not interested enough in local business to wish to run it to suit themselves.

[From the Cleveland (Ohio) Plain Dealer of May 15, 1950]

FEDERALCRAT PHILOSOPHY

In one of his whistle stop speeches in Montana, President Truman, unwittingly perhaps, revealed the moral bankruptcy of his spendthrift administration.

He was discussing what he described as "a real crisis" faced by the Nation's schools. Congress should remedy that situation, he said, by an appropriation of Federal money to the States.

No doubt there are many people who will see no harm in this philosophy. To them it will seem like a simple proposition—if the schools need money, let the Federal Government provide it.

This philosophy is based on the erroneous assumption that the Federal Government possesses a bottomless cornucopia into which Congress can dip as it pleases, scattering wealth and abundance over the land, relieving this and that situation, satisfying this or that group.

That is the federalcrat philosophy—the philosophy that everyone should turn to the Federal Government for help in times of stress; that the Central Government in Washington should provide aid for all who seek it, even though they have the means to help themselves.

It is a false philosophy because the Federal Government does not possess unlimited resources. In fact, it has no money of its own whatsoever. It can get money only by taking it away from the people in the form of taxes or by engaging in deficit financing, a process which robs the people by causing inflation and depreciating the purchasing power of their savings and earnings.

Now in the case of the schools, the amount of money the Truman administration wants

to give them is not so much, compared with other Government expenditures. But one thing is certain, a $300,000,000 appropriation this year would be followed by demands for $500,000,000 next year and constantly increasing amounts thereafter.

But why should the Federal Government provide any money for local education? The Federal Government already is $256,000,000,000 in debt. This year it is expected to spend from six to eight billion dollars more than it takes in; next year the administration has planned another deficit of more than five billion. Decidedly this is not the time for the Federal Government to undertake any new expenditure that is not necessary to national survival.

In contrast, nearly all the State governments are solvent. Few of them still have the large surpluses they accumulated during the war, but most, if not all, of them are financially stable and capable of supplying the needs of their own schools if they want to. There is no justification whatever for the Federal Government taking more money away from the people, or piling up more debt, in order to give the same money back to the States, less the amount the bureaucrats retain for their own maintenance.

There is another serious aspect to the proposal of Federal aid to schools. That is the issue of Federal control versus State control. Truman said he was "wholeheartedly in favor of continuing State control over education." The Federal Government should give the money to the States and let them decide how to spend it, he said.

The President's assumption that Federal control would not be a concomitant of Federal aid was no more than a pious hope, or an expression of opinion. His assumption is contrary to all the past history of Federal aid programs. In 1938 the Federal Government withheld $1,300,000 from the Ohio old age pension fund because it was not being administered according to Federal regulations. Did anyone ever hear of Federal highway funds being used for projects not approved by the Federal Government? No, Federal control always follows Federal aid, in spite of Truman's attempt to delude himself and others into believing otherwise.

In these whistle-stop remarks, we see the true nature of the federalcrat philosophy—keep giving away the people's money, even though you have to rob them in order to get it.

"The Need To Encourage Our Friends Among the Nations a Compelling Argument for the Extension of the Selective Service Act of 1948"—Speech of the Secretary of Defense at Armed Forces Day Dinner—A Report to the People and the President on a Matter of Legislative Priority

---

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. PRICE. Mr. Speaker, last Saturday, the 20th of May, the people of the United States paid tribute to the Armed Forces of the United States. They paid tribute not to the Army, not to the Navy, not to the Air Force, but to all the Armed Services, united in one defense team. I can imagine no more heartening or significant display of our unity as a Nation and in our determination to establish an adequate defense for our Nation than the expression of that unity that took the form of observances of Armed Forces Day in most of the cities and towns and in all of the States of the Nation.

The Nation-wide observance of the first Armed Forces Day began with a dinner held here in Washington on the eve of Armed Forces Day, at which distinguished representatives of all the services and of the congressional committees charged with military affairs were present. This was a dinner under the joint sponsorship of the Navy League of the United States, the Military Order of the World Wars, and the Air Force Association. Dr. Vannevar Bush, who has contributed so notably to the cooperation of American scientists with the Defense Establishment, was master of ceremonies. The speakers of the occasion were the President of the United States and the Secretary of Defense. What they said at the Armed Forces Day dinner in Washington, D. C., on the night of May 19 will echo for some time to come and we will be hearing the echoes in this legislative chamber.

The address of the Honorable Louis A. Johnson was notable as a report to the Nation by the Secretary of Defense on the state of our defense and the needs of the Defense Establishment. After reviewing his decision to replace the separate celebrations held in other years for each of our Armed Forces with a single day of commemoration, Mr. Johnson reviewed the difficulties encountered in choosing a suitable day. It was the practical and distinguished chairman of the Joint Chiefs of Staff, Gen. Omar Bradley, who made the suggestion that led to the choice of the third Saturday in May, which will henceforth be celebrated.

The creation of such a single day of celebration seemed called for by the fact of unification itself. And just as unification inspired the splendid displays and the magnificent demonstrations of unification that took place on Army posts, Air Force bases, and at Navy installations throughout the country, so unification has produced a healthy state of preparedness, tailored in accordance with our traditional American philosophy of national defense. But even that preparedness must be strengthened.

Ours is a philosophy of defense—

Said Mr. Johnson.

It does require that all the men and all the munitions necessary to conduct an all-out war be ready in full capacity at all times. What we seek first by way of preparedness is a force of sufficient strength to deter aggression and to make impossible the defeat of America by any blitz attack of any dimensions. The lessons of two world wars have shown the world that in a prolonged contest our production, our skill, our organization, and our resources will make us hard to beat What we need, therefore, is a sufficiency of defense of such formidability as to convince a possible aggressor that we also cannot be beaten quickly on a hit-and-run basis.

Our needs have been translated into a defense program which the President has approved. It is now before the Congress. It takes into full account the fiscal position of our Government and the military necessities for our defense. We have asked only for what we absolutely need and can advantageously spend.

Mr. Johnson expressed his confidence of congressional support because of the consistency with which Members of Congress have always supported defense measures, and shown their interest in the needs and comfort of the splendid American men and women who serve in our armed forces.

This support is required now for the extension of the Selective Service Act of 1948, due to expire this year. The President has asked for such an extension in his message on the State of the Union. The measure is now before the Congress. The Department of Defense has urged its adoption. Mr. Johnson advanced four sound arguments for extending the act.

Mr. Speaker, the most compelling of the arguments, in the words of Mr. Johnson, is the psychological one, the need to encourage our friends among other nations who with courage and fortitude are striving to remain calm under the pressure of a potential aggressor.

Those friends of ours overseas—

Said Mr. Johnson—

are stout-hearted men devoted to democracy and peace. So far they have successfully charted their course between the honeyed promises of Utopian communism and the bitter facts of aggressive imperialism. They have held communism at bay. With our support they have gained the economic strength which is the best guaranty to the stability of their Government and to the elimination of the misery and the poverty on which the Communist bacillus thrives. Now we are extending them a helping hand with military aid to make them stronger and even more independent.

To them our continuance of selective service means more than a guaranty of sufficient manpower to keep the ranks of our Armed Forces filled. It symbolizes, beyond that, the readiness of free men to give of themselves. No amount of economic and military aid, important as each of them may be, carries with it the spirit of personal sacrifice that is inherent in a selective-service system, adopted by the free choice of a free people. Money, flour, cotton, machinery, guns, planes, ammunition—these and other items are physical needs, indispensable to economic recovery and military strength. Such requirements we can meet without oppressive hardship out of our economy and out of the rich bounty that a divine providence has granted the American people. Selective service implies a spiritual contribution. It presents the young American giving of himself, his time, his comfort, and his chosen way of life to prepare himself for his military duties as a citizen in defense of his country. Our friends overseas who have given so much and have suffered so much understand that service to be genuine must call for real sacrifice, the kind of sacrifice that is inherent in duty with the colors. Whether we need in fact to employ selective service to fill our ranks or not, the important consideration that we have it on the books and can invoke it when necessary will prove a constant reminder to all that we are conscious of our duty and that we shall remain true to our obligations.

The other arguments for the extension of the Selective Service Act of 1948 can be listed briefly, Mr. Speaker. They are, second, to provide a means to save time

in mobilization; third, to guarantee our retaining the full strength we need in our Armed Forces; and, fourth, to assist in the maintenance of strong Reserve forces.

All of these are valid arguments and in normal times would be sufficient to urge the maintenance of preparedness. But these are not normal times. We are already in a cold war, a war in which we must win and hold allies, for if we do not we shall face the enemy alone.

For that reason, Mr. Speaker, under unanimous consent I include in the Appendix of the RECORD, as an extension of my remarks, the full text of the remarks of the Secretary of Defense, that all Americans can read the report of the man best qualified to know, on what is, in his opinion, our most pressing present need.

The address follows:

We have gathered here at the National Capital, on the eve of America's first Armed Forces Day, to honor all of the men and women who wear the uniform of our country—Army, Navy, Marine Corps, and Air Force Regular, National Guard, and Reserve. Armed Forces Day replaces the separate celebrations held in other years for each of our armed forces. It is a symbol of their unification in the public service.

It is especially appropriate to have with us on such an occasion the one man who is most responsible for the unification of our armed forces—our Commander in Chief, the President of the United States.

History will record that unification was planned and achieved under the leadership of President Truman. Moreover, it will recall that long before he became President, the idea of unification had appealed to his logical mind. It is worth pointing out, that, in August 1944, when he was still United States Senator from Missouri, Mr. Truman had marshaled his arguments into an article which stands out even today as one of the most cogent briefs for unification.

Let me quote a few extracts from this article which appeared in a national magazine 1 year before VJ-day.

"For years," said Senator Truman, "the American Legion, out of the membership's first-hand knowledge of the need, has urged the unification of the country's fighting forces. I helped to frame this Legion policy and endorsed it without reservation. As a Senator, faced daily with the confusions and conflicts inherent in separated commands, what was a belief has grown into a sincere conviction. But if this background had been lacking, what happened on December 7, 1941, would have made me the ardent champion of a single authority over everything that pertains to America's safety."

In this article, Senator Truman then went on to give example after example of indecision, waste, duplication, and extravagance in the conduct of war that unification might have eliminated. He closed his article with a plea for concentration of America's defensive and offensive strength under one command ending the present jangles and jumbles and a return to the single authority inherent in the establishment of 1789 of one War Department over both ground and sea forces.

Mr. Truman meant what he said, and as soon as he was placed at the helm of authority, he set machinery in motion to achieve unification of our armed forces. The first result was the National Security Act of 1947. When that statute failed to achieve adequately the kind of unification he had in mind, he pressed for amendments and got them. Last year we obtained what we further needed by way of legislative authority to make unification work; and today it is working.

A year ago the very concept of unification was still being challenged. Today, it is no longer an issue. It is a fact. We have a national-defense team, in every sense of the word. We have eliminated a great deal of waste and duplication. We have defined roles and missions for the respective services, and each is exerting its full energies to perfect its techniques and its tactics to perform the duties assigned it. The over-all agencies, such as the Joint Chiefs of Staff, the Munitions Board, the Research and Development Board and the others have proved by the efficient and equitable administration of their duties that unification can be fair and just to all three services, that it can save hundreds of millions of dollars of the taxpayers' money, and that it can, at the same time, give America the kind of defense we need in this troubled world of today.

It has been my duty and privilege for the past 14 months as Secretary of Defense to carry out this public mandate to achieve greater unification, as a means toward greater efficiency and greater military strength.

My job has not always been easy, but it has never been dull. It has been challenging and stimulating. We have not even yet attained all the ultimate goals of unfication, but it is becoming easier every day to bring the three Services closer together and have them compose any differences which may arise in an atmosphere of cooperation, without rancor or suspicion on the part of anyone. That kind of spirit of team play took time to develop.

In fact, when I first took over my duties as Secretary of Defense, the simplest projects of unification invariably ran into unexpected snags. As an example, let us take the very matter of the Armed Forces Day itself.

It occurred to me shortly after taking office that it might be a good idea, as a symbol of defense unification, to have one Armed Forces Day instead of each service having a special day of its own. I found that a similar idea had been current for at least 18 months without any action being taken. It appeared that one service wholehcartedly favored it. Another was at first noncommittal but later enthusiastic for it. The third was still unalterably opposed. I read all the studies and all the reports on the subject. They presented a rather healthy volume. I discussed the matter with the three secretaries of the Military Establishment, with the Joint Chiefs of Staff, and with various other members of my staff. I felt that the subject had been under study long enough and warranted a definite decision without further delay. So in the course of the Army Day parade last year I mentioned the matter to President Truman. I did not have to present any arguments to him at all. The idea appealed immediately. Enthusiastically, he approved the project.

I came back to the Pentagon highly pleased with my accomplishment, but only to find that my troubles had just begun.

"Yes, you have authority for an Armed Forces Day, but what day will it be?" asked my staff.

The most obvious day seemed to me to be September 18. That was the day the National Military Establishment had come into existence—but that was also the day the United States Air Force was born, I was reminded. September 18 was therefore ruled out lest it be misconstrued as favoritism to the Air Force. For similar reasons, we immediately had to throw out of consideration Army Day, April 6, and Navy Day, October 27.

Then came the suggestion to combine Armed Forces Day with an already accepted date in American history—Armistice Day, Memorial Day, Independence Day, Constitution Day. After some consideration we concluded that any effort to build up a double commemoration for such a day might detract from its significance for either purpose. So these days, too, were ruled out.

Further suggestions included D-day, VE-day, VJ-day, Pearl Harbor day, and others, but objections arose in each case. D-day, it was said, would appeal only to those who reached Europe across the English Channel. VE-day, it was urged, would commemorate only the achievements of our forces in the European theater. VJ-day, on the other hand, it was argued, was more particularly meaningful for those who had served in the Pacific. Pearl Harbor day was a date of national disaster, totally unfitting for patriotic celebration. And, thus, one day after another had to be ruled out.

Finally, someone suggested March 23. That was the day on which Patrick Henry exclaimed: "Give me liberty or give me death!" That date seemed highly acceptable and some headway had been made, until someone came up with the full text of Patrick Henry's speech, and we found it was a strong appeal for an out-and-out war. Such a theme, we felt, was not consistent with our present concept of national defense which aims to build our forces to deter war, to become strong enough to discourage aggression, to achieve peace through strength and only as a last resort to engage in combat. Other objections arose. March presented an unfavorable weather risk. March was the month for the annual Red Cross drive. March 23 would normally coincide with the Lenten season, if not with Holy Week. So, the date of March 23 had to go into limbo alongside the suggestions that had been made earlier.

At this time I turned the subject over to our practical Chairman of the Joint Chiefs of Staff, Gen. Omar Bradley. He came up with a suggestion of some Saturday in May. Here, too, there were possible conflicts. There was Mother's Day and Memorial Day to consider. The third Saturday in May, however, seemed to present no conflict.

I was at the point of adopting the date when someone reminded me that the third Saturday in May this year is May 20 and May 20 is the anniversary of the Mecklenburg Declaration of Independence. To lend additional authority to the coincidence of dates, I was told that May 20, 1775, appears clearly on the State seal and the State flag of North Carolina to commemorate this event.

There probably is no document in American history that was the subject of greater controversy in the early days of our Republic than the Mecklenburg Declaration of Independence. Its strongest supporters contended that it was the source and inspiration of the Declaration of Independence. At this point I sought the advice of a distinguished son of North Carolina, Gordon Gray, who was then Secretary of the Army. He assured me that May 20, 1775, was a significant day in the history of North Carolina but that it was not unduly celebrated even in that State and would most certainly not interfere with any Armed Forces Day. We had jumped the last hurdle. I approved the date. The White House endorsed it. It was my privilege to announce it at the American Legion convention last fall.

So, tomorrow, accordingly, we shall celebrate Armed Forces Day in a spirit of national unification. Led by military, civic, and veterans' organizations throughout the land the American people will make the day a memorable one. They will use the occasion not only to honor the men and women in the service, but also to take stock of the

state of our readiness to defend ourselves against aggression.

They will find an Army, Navy, and Air Force in a healthy state of preparedness, tailored in accordance with our traditional American philosophy of national defense. Our historic philosophy is opposed to aggression, and consistent with that democratic principle, we are against the maintenance of large bodies of troops in peacetime for immediate offensive action, lest the very size of our forces create unwarranted suspicion of our intentions.

Ours is a philosophy of defense. It does not require that all the men and all the munitions necessary to conduct all-out war, be ready in full capacity at all times. What we seek first by way of preparedness is a force of sufficient strength to deter aggression and to make impossible the defeat of America by any blitz attack of any dimensions. The lessons of two world wars have shown the world that in a prolonged contest our production, our skill, our organization, and our resources will make us hard to beat. What we need, therefore, is a sufficiency of defense of such formidability as to convince a possible aggressor that we also cannot be beaten quickly on a hit-and-run basis.

Our needs have been translated into a defense program which the President has approved. It is now before the Congress. It takes into full account the fiscal position of our Government and the military necessities for our defense. We have asked only for what we absolutely need and can advantageously spend.

We are confident of congressional support because we have learned by experience that when it comes to national defense our representatives in the Senate and in the House are first, last, and always of one mind. As loyal Americans, they think and act only in terms of adequate security in the national interest. No matter how they disagree on other issues, as Republicans and as Democrats, they throw aside their differences and work whole-heartedly when they consider our requirements for the common defense. It gives me great pleasure at this meeting, with so many Members of the Congress in attendance, to acknowledge publicly their enthusiastic support of the national defense, and their interest in the needs and comfort of the splendid American men and women who serve in our armed forces.

The healthy spirit of unification which we have fostered among the Army, Navy, and Air Force has proved contagious. It has spread not only across our regular forces; it has shown itself in the way Congress and the Department of Defense work together. It has manifested itself in the relations between the Regular forces and the Reserves. It has been exhibited in the diplomatic-military team of the State and Defense Departments in the military-aid program, in the North Atlantic Treaty operations, and in all matters jointly affecting the two Departments. The State Department announcement of military aid for French Indochina has the full support of the Department of Defense. Finally, there is this meeting itself. It constitutes to me the very essence of unification, with the Navy League of the United States, the Military Order of the World Wars, and the Air Force Association all working together with a singleness of purpose to make a memorable success of our first Armed Forces Day.

I come now to ask for the whole-hearted support of another worthy national defense project fully deserving of the unified backing of the American people. I refer to the extension of the Selective Service Act of 1948 due to expire this year.

The President has asked for such an extension in his message on the State of the Union. The measure is now before the Congress. The Department of Defense has urged its adoption. I have already made known my own views in the matter and shall merely touch upon them tonight. When I appeared before the Armed Service Committee of the House of Representatives in January I asked for an extension of Selective Service, first, to encourage our friends among the nations; second, to provide a means to save time in mobilization; third, to guarantee our retaining the full strength we need in our armed forces; and fourth, to assist in the maintenance of strong reserve forces. All four are sound arguments for extending the Act.

At the moment the most compelling is the first one, the psychological one, the need to encourage our friends. The shadow of sprawling imperialism creeps dangerously close to their borders. With one hand it beckons them toward a perfect classless society without conflict, with all the land divided, and all the wealth shared. With the other hand, it raises a threatening club with which to beat its neighbors into submission. It takes courage and fortitude for these nations to retain poise and to remain calm under such pressure.

Those friends of ours overseas are stout-hearted men devoted to democracy and peace. So far they have successfully charted their course between the honeyed promises of Utopian communism and the bitter facts of aggressive imperialism. They have held communism at bay. With our support they have gained the economic strength which is the best guaranty to the stability of their government and to the elimination of the misery and the poverty on which the Communist bacillus thrives. Now we are extending them a helping hand with the military aid to make them stronger and even more independent.

To them our continuance of Selective Service means more than a guaranty of sufficient manpower to keep the ranks of our armed forces filled. It symbolizes, beyond that, the readiness of free men to give of themselves. No amount of economic and military aid, important as each of them may be, carries with it the spirit of personal sacrifice that is inherent in a selective service system, adopted by the free choice of a free people. Money, flour, cotton, machinery, guns, planes, ammunition—these and other items are physical needs, indispensable to economic recovery and military strength. Such requirements we can meet without oppressive hardship out of our economy and out of the rich bounty that a divine providence has granted the American people. Selective Service implies a spiritual contribution. It presents the young American giving of himself, his time, his comfort, and his chosen way of life to prepare himself for his military duties as a citizen in defense of his country. Our friends overseas who have given so much and have suffered so much understand that service to be genuine must call for real sacrifice, the kind of sacrifice that is inherent in duty with the colors. Whether we need in fact to employ selective service to fill our ranks or not, the important consideration that we have it on the books and can invoke it when necessary, will prove a constant reminder to all that we are conscious of our duty and that we shall remain true to our obligations.

So let us dedicate this Armed Forces Day not only to recall the gallant sacrifices of past generations of our fighting men, but also to remind our young men of today and their fathers and mothers that they, too, have an obligation to serve, and that by their readiness to serve, they will best help keep America at peace—strong and free—and assure the preservation of our civilization for posterity.

The American Merchant Marine in War and Peace

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. HART. Mr. Speaker, the National Rivers and Harbors Congress recently held its fortieth annual convention in the city of Washington. Among the addresses delivered was that by Mr. John Forney Rudy, director of public relations, National Federation of American Shipping. The subject of his address was the American Merchant Marine in War and Peace. The address follows:

Mr. Chairman, gentlemen, your very good friend, and mine, Bill Webb, asked me to appear before you this morning to talk about our American merchant marine, in peace and in war. He particularly wanted me to make special reference to the relationship of ocean shipping to a subject dear to your hearts, the rivers and harbors of the United States.

To talk about shipping without mentioning rivers and harbors might be compared to a train without a terminal. Without rivers and harbors, and their tremendous development in the United States, our merchant marine would be unable to exist.

As a matter of fact, much of the existence of the merchant marine results primarily because of the facilities of our great natural waterways, not in spite of them.

For example, American steel has long been a very heavy item of export. Much of it is exported due to American methods of mass production and efficiency. There is also a great volume exported due to its carriage from such inland producing centers as Birmingham, Pittsburgh, and other cities by the comparatively inexpensive water transportation available from those centers to our great port areas.

There is no doubt that a great deal of steel made in Pittsburgh is sold in foreign markets largely because it can be transported by barge at half the cost per ton to seaport as by rail carriage.

Today we find many of the harbors on our Gulf coast teeming with activity, handling millions of tons of cargoes they didn't dream they would handle a few decades ago. Why? One need only to look to the development of the great river systems draining what has been called the Mississippi Valley with its tremendous production, and the great rate differentials enjoyed by the natural waterways over other forms of transportation, to understand immediately why our Gulf ports are enjoying unprecedented activity.

The work performed by the National Rivers and Harbors Congress is therefore of great importance to American shipping. Likewise I feel that you should know the importance of American shipping to our harbors and great inland waterways. We have a definite mutuality of interest and concern over both the rivers and harbors and the American merchant marine.

There was a time that, for lack of a large, regularly scheduled American merchant marine, tons and tons of the products of our great inland areas, brought to the seaports over the inland waterways, rested on our docks and jammed or choked our flow of commerce. Foreign ships, seeking higher rates elsewhere in the world due to emergency conditions, had forsaken our ports.

And we had no merchant marine worthy of the name.

There have also been times that, for lack of regularly scheduled American shipping services to the important areas of the world, American business and agriculture have been unable to guarantee prompt delivery of their products. Consequently the transportation companies utilizing our inland waterways and harbors were faced with depressed business activity, even heavy losses in revenue and profits.

Today it is no secret that many an American business is enabled to bid successfully against his foreign competitor for the sale of his products in lands overseas due to two extremely important factors:

(1) His reliance upon the much cheaper inland waterway transportation to get his products to seaboard, and the consequent modern, efficient harbor facilities available to handle his products; and

(2) His dependence upon fast, efficient, regularly scheduled American-flag liners to transport his products safely and reasonably to any area in the world.

Since our American merchant marine is therefore of such great importance to you who deal with our vital rivers and harbors, perhaps a few facts about our American shipping will be of interest:

Today's United States merchant freight fleet is the finest any maritime nation ever had, and outstrips the greatest days of United States historical pride, the clipper-ship era. American shipping organizations have developed qualified executive officers and trained personnel to manage United States shipping at home and abroad. These organizations materially aid United States world trade and foreign commerce.

This situation did not always obtain, however. About 15 years ago American shipping was in a deplorable financial condition. When the Chairman of the then newly created United States Maritime Commission examined an economic survey of the American merchant marine, he is reported to have said that he wouldn't invest a plugged nickel in American shipping.

It was about this time, that many newspapers and columnists editorially bemoaned and deplored this unhealthy condition, and the low ebb to which shipping had sunk.

The Merchant Marine Act of 1936 is today looked upon as the "Magna Carta" of the merchant marine. It was this act which set up conditions by which American shipping could accumulate reserves, which would permit private enterprise to build, operate, and maintain a strong merchant fleet, adequate for our national security and our economic needs.

The net worth of American shipping today is double that of 15 years ago. Unlike the middle and late thirties, most American steamship lines are in sound financial condition. Many look forward to continued operation, building, and maintenance of their services.

Unfortunately there are those today who would have you believe that it has been a crime for American shipping to have made profits, and to have invested since the end of the war upwards of $1,000,000,000 in ships and equipment with which to furnish our American business and agriculture with dependable, efficient, safe, steamship services, and at the same time contribute to the national security of this Nation.

Although the policy of Congress with regard to subsidy to the American merchant marine is abundantly clear, we hear today many snide remarks, and wholly inaccurate and unfair allegations about the administration of such Government aid.

My remarks here this morning cannot set at rest such allegations, but they may at least provide you with accurate facts.

In the past 10 years the Government has spent a considerable sum for construction subsidies, about $338,000,000. That may sound large, but it is less than 2 percent of the 15 billions spent for potatoes, cheddar cheese and a host of subsidies to other business and agriculture. The potatoes, the cheese and the many items subsidized are gone, but we can show you 250 modern, efficient, fast American ships for the money spent by the Government on construction subsidies.

With your indulgence I'd like to explain how this money is spent. No construction subsidy money is paid to American shipowners, but to the American shipbuilder who uses the funds to pay the higher labor and materials costs of United States construction. The shipowner buys his vessel from the United States Maritime Commission at the same price he would have to pay for it were it constructed in a foreign shipyard.

Why do American vessels cost more to build? One item alone is sufficiently illustrative; American shipyard workers average about $60 a week, British shipyard workers about $15 a week.

Likewise there have been some pretty strong statements made about operating subsidies. Again, a few facts. In this same 15-year period when a total of about 15 billions were paid out by the Government for all types of subsidies, the net amount paid to the American shipowner was about one-seventeenth of 1 percent of the total. And operating subsidies, so far as we know, are the only subsidies subject to complete recapture by the Government. Compare the average $1,700,000 a year paid out by the Government for operating subsidies to the same amount paid out every week for potatoes. To my mind ship-operating subsidies are pretty small potatoes.

Ship-operating subsidies do not guarantee a profit for the United States operator, but are used to pay the higher costs of American crew wages, subsistence, maintenance, and insurance. Again one item alone is sufficiently illustrative. The average American A B seamen earns about $300 a month, compared to about $75 a month for his British colleague.

Even with these payments, the shipowners receiving such aid must repay to the government any profits in excess of 10 percent of the capital employed in his business. And in the last 12 years more than 70 percent of all such subsidies have been recaptured by the Government.

I'd like to go one step further. During the period that the United States Maritime Commission was paying out approximately $68,000,000 in operating subsidies, these same recipient steamship lines were paying into the Federal Treasury more than $100,000,000 in taxes. Moreover, the same steamship lines paid back more than 70 percent of the 68 millions granted to them under provisions of the Merchant Marine Act. I am waiting for some Government agency to show an example in another field anywhere near comparable.

But this isn't all. Only recently the United States Maritime Commission made its annual report to the Congress for the fiscal year 1949. The report showed during that year the Commission returned to the Federal Treasury a total of one-third of a billion dollars. This money had been received largely from private American shipping in the form of proceeds from the sales of ships, from recaptures of subsidy moneys it had paid to American steamship lines, and from charter hire received from United States flag shipping for vessels it had rented to them that year. Again, I am waiting for some other Government agency to show a similar example.

Such economic benefits are undoubtedly of great importance. To my mind, however, there are other reasons of transcending importance. They are simply expressed. Either we shall have dependable, regular steamship services for our business and agriculture, or we shall not have such services. And either we shall have, in event of a national emergency, a strong merchant fleet and shipbuilding facilities to serve our military needs, or we shall not have them.

Sometimes it appears almost ludicrous that we in American shipping should have to argue about such things. The record is clear that two world wars were commenced when the United States merchant marine had dropped to its lowest ebb, and the aggressor nations believed the vast resources of men and material of the United States could not be made available because the Nation had no shipping. Captured documents of the German Nazis prove conclusively that Germany egged Japan into her Pearl Harbor attack on the assumption that we had insufficient shipping to move great numbers of troops and supplies to counter-attack.

Even now, I am of the opinion that Russia is far more cognizant of the fact that we are again woefully inadequate in the number of passenger ships that could be used for troop transports than is our own Government. Especially when reports are heard that we should count upon the availability of merchant vessels of friendly foreign nations in event of an emergency. Official Government reports will disclose to anyone seriously concerned that during World War II the United States spent or gave under lend-lease more than four billions in ships and shipping services to nations that happened to be friendly at the time. In addition to this amount, not peanuts even by today's national budget, we transferred to these friendly allies 643 merchant ships, while they made available to us 110 such vessels. And in addition to this largesse, we still had to construct more than 5,000 ships in order to meet the enemy on his soil and defeat him.

Certainly in the face of this record you may well wonder how anyone can place reliance upon the shipping resources of other nations rather than upon a healthy, strong, well-balanced American merchant marine.

Such a fallacy as described strikes at the heart of the problem we have in the American merchant marine today. It is a problem long since licked by the British, that of instilling national pride in and acceptance of what shipping services can do for a nation. Again the record will show back through history that nations which ignored their maritime strength and allowed it to dissipate soon lost both their political and economic influence and power. They became has-beens.

The strength of the United States for 150 years has been inextricably bound up with water, in its enormous system of inland waterways, its many fine harbors, its thousands of miles of seacoast, and a huge foreign trade dependent almost entirely upon ocean shipping. Truly one can say with modesty that the United States is a great maritime power.

It would seem that the bitter historical experiences of two world wars paid for by human lives and tremendous debts, which were necessitated in great degree by our lack of an adequate merchant marine, would be a lesson never forgotten. The development of atomic power and other news events have tended to obscure the slower, but nevertheless relentless, pressure of sea power as a vital component of our national security.

Likewise, the enormous contribution of our ships and maritime industry, and I speak of all segments of the maritime industry, to all phases of our business, industry, and

agriculture, should be proof enough that it is to the public's own selfish interest to demand that we possess a strong American merchant marine. With your understanding and your help, we can accomplish that objective.

Maj. Gen. O. E. Sandman, Great Citizen Soldier, Retires

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. JOHNSON. Mr. Speaker, on June 1, 1950, the name of Maj. Gen. Otto E. Sandman will be placed on the retired list of the Army of the United States by virtue of the provisions of Public Law 810 of the Eightieth Congress.

This is not just another name going on the list. The retired list on which General Sandman's name is being entered was provided for by Public Law 810 of the Eightieth Congress. That is the law that provided modest retirement pay, starting at age 60, for those who had accumulated active and reserve duty of 20 or more years. Here is a man that typifies the kind of men and officers whom Congress, when it passed this law, hoped would grace that list.

It happened that I was the chairman of the subcommittee that conducted the hearings and wrote Public Law 810. I listened to every witness that submitted testimony to our committee. They ranged from enlisted men to five-star generals. All tried to impress on the committee the extreme importance of continuity of service in the Reserve components. Many times we heard the statement in various forms "one man who serves 5 years is worth much more than five men who serve only 1 year." They emphasized that complete readiness was essential to our safety and preparedness for any future conflict. The cushion of time and space which we had had in two big wars was completely gone. Pearl Harbor rudely pointed out how any future war would start. Hiroshima and Nagasaki gave a slight inkling how destructive and devastating one attack, including the first, could be. The importance and absolute necessity for having strong Reserve components, including the National Guard, was emphasized and explained over and over. That group is the one that gave the added strength and size to the Armed Forces to assure victory twice and if we should be so unfortunate as to get into another conflict they would again be the ones required to win.

Consequently, all the witnesses emphasized that we must furnish an incentive for continuous and long service and that this type of legislation furnished it.

General Sandman personifies the type of men we hope will get the benefit of Public Law 810. He took his first military training in 1908 as a member of the University of California Cadets when he was a freshman at the university. When he graduated in 1912—with Gov. Earl Warren—he went to his home town of Stockton, Calif., and there enlisted in Battery C of the California National Guard. He went to the Mexican border in 1916 as a first lieutenant in Battery C of the One Hundred and Forty-fifth Field Artillery. He entered the Federal service in 1917 with his regiment. He took a course in aerial observation and later became a member of the Air Service. At the end of the war he was in command of the One Hundred and Thirty-fifth Aero Squadron, one of the few squadrons that had American planes—DH-4's with Liberty motors.

Following the war the California National Guard was reorganized and Sandman again became a part of it and soon was the colonel of the One Hundred and Forty-third Field Artillery. This regiment became one of the finest in the country. When World War II approached, the Fortieth Division was called into Federal service. The regimental commanders were switched and Sandman became the commanding officer of the One Hundred and Forty-fifth Field Artillery of the Fortieth Division. This regiment embarked for Hawaii—on the way to the Philippines—the night before Pearl Harbor and while at sea got the message of the attack. The ship was unarmed, so at Colonel Sandman's direction it turned back to San Francisco. The regiment and its equipment was loaded on another ship and soon was on its way to Hawaii again.

While there the regiment—One Hundred and Forty-fifth Field Artillery—received a new colonel because it was thought by those in command that "Sandman is too old for combat service." The blow almost broke his heart. The one thing, above all others, that he wanted to do was to take his regiment into action, and what a leader he would have made. Soon he was appointed the commanding officer of Schofield Barracks. This was a stupendous job, as the hundreds of thousands of troops moving out into the Pacific area stopped at Schofield where they received assignments for duty in the various theaters. As usual, he did a magnificent job and with a very small staff. He was decorated with the Legion of Merit. When the war ended he returned again. Again he helped reorganize the California National Guard and quickly stepped up to the rank of major general and the commanding general of the Forty-ninth Infantry Division, which post he is relinquishing on May 31, 1950.

But far more important than the length, volume, and diversity of his military service is the quality of it. I know of no man—and I have known many able and unusual men—that has the capacity to inspire loyalty and devotion in men like he has. When he was the commanding officer of the One Hundred and Forty-third Field Artillery, every man you met always thought of himself as working for and fighting with Sandman. The men had that personal loyalty to their colonel that makes great fighting units. When he was made the commanding officer of the One Hundred and Forty-fifth he went with an entirely new outfit. But it was not long before the men of that outfit soon had the same feeling for him as the men of the One Hundred and Forty-third. Everybody I met from Salt Lake told me how the boys in the One Hundred and Forty-fifth Field Artillery were crazy about Sandman. He had the same knack that General Patton had of making every man believe that he and Sandman—or Patton—were fighting together. He would have made a wonderful division commander, both in training and in combat.

General Sandman's lifetime hobby has been to help keep America prepared and strong. He has given of his time and his extraordinary talents to make and keep America ready for trouble, so no aggression will come our way, because of respect for our strength. He wants peace passionately and is willing to give of his time and ability to make us able to take care of trouble, and thereby perhaps not get it.

This is the kind of men that we of our committee hoped Public Law 810 would furnish an incentive for long and continuous service in the Reserves. But General Sandman did not have that stimulus and did not need it. He will welcome the slight monetary benefit which Public Law 810 will give him but he does not need it and his long and capable service did not contemplate anything of the kind.

Military service may have intrigued General Sandman when he was a young man. But as he went on and continued to serve he had a deeper motive than pure personal interest. He saw through this service a vehicle that enabled him to protect and preserve America through preparedness. In this explosive, small, and shrinking world we must be prepared to protect ourselves. We need more men with this motive, if the world is to be peaceful and Christian. Washington in the early days of the Republic preached the doctrine of preparedness in time of peace and Sandman practiced it for 40 years.

While raising four fine boys, he still found time to help keep America prepared. His wife deserves a medal for not blocking or hindering his desire to be active in the National Guard. Two of his sons are in our Armed Forces. I had the pleasure of appointing one of his boys to the United States Military Academy. He graduated and is now Lt. James G. Sandman of the United States Air Force. My pleasure in appointing him has now turned to pride as I watch him carve out a successful career for himself. His oldest boy I consider one of my personal friends and he is doing splendid work as a major in the United States Air Force and will continue to keep the name "Sandman" respected by the record he will make.

We salute our hero and wish for him many years of good health and happiness. But nothing that anyone can or may say about him and his extraordinary service will give him the satisfaction that is his, knowing that for 42 years he served faithfully and well the country that gave him his chance to become a leader among men.

Youth and the Community

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. MACY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a speech I made at the Southeastern Regional Youth Conference under the auspices of the Long Island YMCA at Huntington, Long Island, N. Y., on Saturday, May 20, 1950:

Mr. Chairman, delegates to this great gathering, and guests, my address tonight will be given in a spirit of deep humility, since I face you from the doubtful eminence of several decades more of living than most of you have experienced. Being with you tonight refreshes my spirit, because you represent the tomorrow in our country that we must work toward today.

I hope, because I have an edge in age over most of you in this room, I haven't degenerated into the mold of the inflexible reactionary who is against everything new merely because it is new, and who wants to fight a last ditch fight for everything old just because it is old, and regardless of whether it may be outmoded. There is a middle ground between the very new and the be-whiskered old that I try to achieve in my official and private thinking on social, economic, and political questions.

My humility stems largely from the fact that here tonight I am talking to tomorrow's leaders in business, professional, and political life in what we know is one of the most important areas in the United States. I understand that you hail from my own county of Suffolk and from the neighboring counties of Nassau, Kings, Queens, Westchester, and the mid-Hudson area, and that you represent the amazing total of 50,000 young men and women—an enormous, uniformed peaceful army for God and country.

You are young adults, already beginning to take an important place in the life of your communities. And bear in mind whatever you do to make your community a better place in which to live strengthens the fabric of our country because the United States of America is in essence but a collection of communities. The measures we adopt as a Nation; the attitudes we have as a collective people grow from our thoughts and our acts in our home towns.

The humility I spoke of in beginning this talk further results from my realization that I am facing in this room the parents-to-be of still another generation, members of which will one day sit, as you are sitting in this audience, hearing your version of Youth and the Community, the topic that has been assigned to me. It is highly complimentary that you and your leaders who have fashioned this up-to-now very interesting program, feel that I may have something to impart that may be interesting or instructive, or both. Frankly, I don't know whether I will be able to. I certainly want to.

I recall, when I was at your age level, I heartily disliked the pontifications of my elders when those pontifications became just categorical "yesses" and "noes" on problems on which I needed real enlightenment. So, although I am a member of the board of regents of the State of New York, a body which, as you know, fixes the educational standards of New York State from the elementary schools right through postgraduate work, I will try to avoid the pedagogic approach in discussing matters with you.

I really believe, as of this hour in our national life, it would be more fitting if the 300 or so of you at this great meeting would tell me what is on your minds. If I could have the benefit of your views it would help me in my duties as a Representative of the First New York District in the Congress of the United States.

Yours is a clean page. But you have lived long enough to acquire the high ideals that go with youth, and you are justifiably anxious to translate those ideas into practical courses of action.

It is to your present advantage that you have not lived long enough to commit the tragic errors of judgment that have made our globe a world of uncertainty, oppression, and terror. My generation will have to accept full responsibility for much of what is wrong with this day. And before my generation there were other oldsters who contributed an oversubscribed quota of mistakes.

You members of this generation—you who are as current as the latest edition of a metropolitan newspaper—must do better than your predecessors have done if this world of ours is to continue to be a habitation for the human race. I literally mean that preceding sentence. Scientific developments have reached such full and destructive flower that some men of high eminence in the field of science and invention believe we may be reaching the point at which the world and most living things on it can be destroyed by man-made implements and scientific devices.

Only yesterday was I, with my colleagues on the board of regents, over for a visit to Brookhaven National Laboratory, which, incidentally, we chartered several years ago. It was the first time that the regents have had a meeting on eastern Long Island, and during this stay we went through the fine Agricultural and Technical Institute nearby at Farmingdale, and the beautiful ornamental horticultural laboratory, the estate of William R. Coe, known as Planting Fields, on the north shore of Nassau County, deeded to the regents at the death of the owner. However, we saw at Brookhaven National Laboratory the strange new mammoth machines and constantly increasing experimental devices for research into nuclear energy which mystified us and left us in wonder and fear of what man, with his inventive genius in this extraordinary age, might bring forth.

It is no longer a question of who will be the winners or losers in the greatly-to-be feared next global war. It is becoming a question of what percentage of total populations, belligerent and nonbelligerent—military and civilian—will survive at all if the atom bomb, the hydrogen bomb, the disease germ and noxious, killing gases are loosed on the world. A wild deer or bird does not know the borders of the states having different protective measures affecting its own continued existence. If they knew the areas of greater safety, they could stay in them. And in another world holocaust who can define, or stay within, definite borders in an all-out killing war that may be started by some military maniac or Godless nation? As always, the innocent will suffer when the dogs of war are loosed. And the next war could be the final war—not the idealistic war to end wars, but the war to end the world as we know it—Armageddon, no less.

But enough of these forebodings. There is no point in underlining them even though we must think of them. We should not dwell tonight at too much length on the terrible things that can happen. It is better that we now examine what we can do to strengthen our community fiber, thereby strengthening our Nation. To do this, it seems obvious that your generation must think clearly, live fearlessly, and walk abroad in the land as free men and women, thus setting an example to the young and old of all races and all nations.

To set this example, to stimulate worldwide emulation of our free American processes, we must begin at home, in our cities, towns, villages, and neighborhoods. We must strengthen our time-tested institutions and make them even more effective.

Our liberties, our institutions represent much sacrifice. Men and women have died that we may inherit them. Major wars have been fought to guarantee their continuance. Youth's blood has been shed for them. We want no more wars, but we must be eternally vigilant to retain those fundamental things in America that have contributed to our spiritual and moral greatness.

In this changing day we must take nothing for granted. Destructive, atheistic forces are ready at all times to capitalize on our indifference.

We must support our churches. We all belong to some church. Too many of us are merely nominal members of a church organization. It isn't enough that we support the church financially. If the churches receive nothing but financial support they will in time become merely monuments to the ideals of another day—mausoleums for precepts preached but not practiced. Now, as never before, we should become active participating members of our church organizations. A church ties in closely with all better phases of community life and welfare. So, when the youth of our land support the church, they enrich the life of the community and strengthen the national character.

I am a great believer in all character-building youth organizations because I believe in an accent on youth and all that pertains to it. Parenthetically I have three children of my own and seven grandchildren.

I could dwell at length on what I know the Young Men's Christian Association has meant in the lives of millions of fellow Americans of yesteryear and what that organization means to hundreds of thousands of young men throughout the land today. I do not need to do that here tonight. You are the living, vibrant examples of the result of the highly beneficial programs of the YMCA. And what I am saying about the YMCA applies equally to the Young Women's Christian Association.

Further, I am happy that we live in a country in which millions of boys and girls belong by free choice to the Boy Scouts, the Girl Scouts, the boys' clubs, the Camp Fire Girls, and similar organizations devoted to the growing boy and girl. Organizations of that kind are not tolerated by dictators. Hitler and Mussolini abolished them by decree. The youth organization, American style, stimulates free thinking and individual action. Such heresies are not tolerated by the Hitlers, the Mussolini's, and yes, the Stalins. It is true that the Russians have a youth organization called the Young Pioneers, but that organization is not comparable to our organizations for the young, because it is entirely an instrument of state and not a voluntary organization of the free young. The Russian Young Pioneer is merely a Soviet soldier in the making.

So, as a part of our community life, as a part of the process of creating an ever-stronger free United States, it is incumbent on us all, young and old, to support our youth organizations. Elders can support youth movements with their money, their time, and their often wise counsel. Boys and girls and young men and women can support them by belonging to them, by being active participants in their programs. As those present pile up the years, my plea to you is not to settle into the quiet groove of complete contentment and feel that the church, the YMCA, the YWCA, and similar

organizations can function without your active continuing interest. If those organizations are to continue to be effective instruments for community and national welfare, they must be supported by you, and have your deep interest, for as long as you are active in the arena of American life.

Youth can do more for youth than age can. Age can sympathize. Age can offer advice, counsel, and financial support. But youth can be reached—truly reached—only by youth. And if youth is reached, its idealism quickened, its feet planted firmly on the solid ground of respect for all religions and informed love of country, then youth will patriotically be serving the community and the country.

All of us, in our spheres, in our own backgrounds must do our utmost to convince the thoughtless and the careless that the paths of rectitude are just as exciting, and more rewarding, than careless, defiant, or immoral living. And we—and by we I really mean you—must convince the great body of youth that careless living is unpatriotic living; that defiance of decent and accepted standards which from our earliest days have contributed more than anything else to the welfare of our country, is not smart, but just "corny," to use present day parlance.

We are potential evangelists for the building of stronger communities and a stronger Nation. It may be that the middle aged and the old, can furnish more know-how in some matters by merely drawing on more experience than their children, but one thing is crystal clear to me and that is that the young man and the young woman will contribute more in the way of idealistic thinking and effort than the oldster. Without idealism our communities will become just dreary places of abode. Without youth, with its shoulders squared and its head thrown back, everlastingly and eternally insisting idealistically on a better community in a better Nation in a better world, there will be no progress. Why is that? I believe it is because age brings caution—too often a dismaying over-supply of that useful quality. Age usually wants status quo. And we must not be content with status quo. Youth must—and does—press ever forward for improvement. And to the credit of youth it must be conceded by the thoughtful and fair-minded that youth is more idealistic than age. Its flaming, resolute idealism is needed more now than ever in our national history. It is needed in our communities to guarantee that we do not become too smug or too self-satisfied with the status quo.

So, if I have any plea to make to you in this room, it is that you, and the 50,000 young contemporaries you represent, who already have your hands to the community and civic plow, keep them there until the programs you have instituted become glorious realities. And when those programs near fruition, by then you will have developed other and equally important programs.

I believe we are all worried about the gangs of young men and women, most of them of adolescent years, that have arisen menacingly in the great world metropolis only a few miles distant from this peaceful and law-abiding community. Shootings, stabbings, sexual immorality and defiance of the law are the modus operandi of these gangs. I believe the gangs can be broken up. There are two ways to break them up. One is through officers of the law with nightsticks and guns taking summary, drastic, bloodletting action—treating these boys and girls as they would treat the Al Capones, the Frankie Yales and other professional gangsters. And, in extreme emergencies such protective action may be necessary. But that isn't the final or desirable answer, is it? Violence breeds violence. Brutality breeds brutality.

No, violence, harshness, and official edicts won't put the gangs in Brooklyn, Manhattan and elsewhere out of business. But you can, you who have no guns, no switchknives, no brass knuckles and no belief in violence as a mode of life.

You can, with helpful design on behalf of your community, if you come from points where these gangs exist, consider the breaking up of these gangs as one of your chief responsibilities. If you are smug in the feeling that you are one of the saved and have no interest in the less enlightened, you should extirpate that smugness from your thinking immediately. Also, you can do more than merely deplore. You can act. You can devise programs calculated to expose and bring these presently wayward boys and girls to your own fine way of life. And after devising these programs, considering each step proposed very carefully, you can effect a union with all agencies, official and unofficial, that are trying to grapple with this problem of juvenile delinquency. But you can take the lead.

Because you are young and know something of the motives and frustrations of the young, your viewpoint—your approach to this problem—will be highly valuable. You may come up with the solutions. I would rather trust in your judgment to effect eventual cures than in the dull thud of a policeman's club.

Mentioning the word "judgment" prompts me to digress for a moment. No one can readily describe "judgment" and it is hardly within the orbit of that which can be taught. Someone said that it is acquired through the experience of exercising bad judgment. It spells the difference between success and failure, and probably the best definition is sound common sense. Then, too, everyone strives for success, but the road is not clearly marked with signs, else everyone would be successful and that we know is not so. The route is a devious one and must be searched for diligently. However, easy accomplishment does not give satisfaction, which really only comes genuinely after hard struggle and the surmounting of difficult obstacles. Nevertheless, what causes us to exert ourselves and put forth our greatest effort is the appeal of just this challenge.

Now, going back to the business of law and order, if in your investigation and research into the reasons for these gangs—and you'll have to find the reasons before you can help invoke a cure—you find their existence results from poor housing, lack of parental interest, a weakness in our public school system, an inadequate number of YMCA and YWCA branches and Boy Scout and Girl Scout troops, your findings will be valuable, wherever they may lead. A fact is one of the greatest things in life. If you can get the facts and properly evaluate them, you are in a position then to move toward curatives and palliatives. As a lawmaker, and one who helps guide our State's educational system, I would like to know the facts. So would you.

Am I recommending too big a program? I can't think so, when I think of the group here as the direct representatives of 50,000 young men and women in your age brackets, imbued with similar enthusiasm for the welfare of the community and Nation and motivated by the highest, finest ideals.

I'll say, somewhat challengingly I'll admit, that unless thoughtful, clear-headed, God-fearing American youth, such as is represented here tonight, analyzes youth's problems fairly and squarely and institutes and works hard at programs calculated to help all youth of our land, regardless of its social and economic strata and environment, it is not facing up to its own citizenship responsibilities. And the young American, as well as his senior, has responsibilities.

Lawlessness on the part of a small segment of our youth, always highly publicized, is seized on eagerly by the Godless materialists behind the iron curtain as a symbol of what they have termed the "fundamental gangsterism of the United States."

We know we are not a gangster Nation. We know, as we who live here should, that the great majority of youth are law-abiding. We sorrowfully and with shame confess the presence of some gangs. It is our job to educate the young gangster out of his present role of mock heroics and into the higher strata of good citizenship. And you can do it. You can do it by your total all-out determination to bend your every effort to accomplish it. By so doing you can do for your communities something that the oldsters have failed to do because they haven't the understanding to enable them to do it.

There is much more I could say, but I am drawing toward the end of the time allotted me.

I have talked about a few of the things that are on my mind. I don't want you to feel that, while presenting some serious aspects of present-day life, that I am insensible to the pleasures of living You like to swim, play baseball, hunt, play tennis, and fish. And I hope I never live so long I won't enjoy doing most of those things or watching others do all of them. Healthy minds grow out of healthy, active, well-conditioned bodies. And let us, while we are young and have the equipment with which to do it, and the stamina and youth to enjoy it to the fullest, be as athletic as our time, circumstances, and environments will permit.

But let us not, as American citizens, young or old, place undue emphasis on the physical. The physical pleasures we derive are satisfying, but momentary. The long-range, permanently satisfying things are the things of the spirit.

Love of God and love of country are things of the spirit. They ennoble us. They set us apart from what we like to term the lower forms of creation. Our love for God and His bounties and blessings keeps us on the high road of decent, honorable living. Our love of country makes us want to do our share to make it a better country. And we can only contribute to the welfare of our country by engaging in the worth-while activities of our community, our neighborhood. By so doing, each of us, no matter how humble or uninfluential we may feel we are, has a beneficial impact on the present and future welfare of our country.

None of us can make too early a start toward becoming conscientious humans, able to think for ourselves, able to meet our own problems, thus equipping ourselves to solve the larger problems of our community and our Nation. By your very presence here, you young men and women, meeting under the auspices of one of the great character-building organizations of our times, prove yourselves conscientious humans. By the grace of God you will find the wisdom and strength in the years ahead to solve your own problems, and in so doing completely equip yourself for patriotic and civic service on behalf of your community and our great Nation.

Being with you tonight has been one of the great pleasures of recent days for me. I thank you for the interest you have taken in my remarks.

Mrs. Leroy Johnson Wins Praise of Sacramento Newspaper

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the

RECORD, I wish to include an editorial which appeared in the Sacramento Bee of May 9 in praise of Mrs. Leroy Johnson, the wife of the distinguished Representative from the Third Congressional District of California.

The editorial is as follows:

PREJUDICED BUT RIGHT

Mrs. Leroy Johnson is here conducting the reelection campaign of her Congressman husband from the third, Sacramento, district while he remains on the job in Washington.

That makes a good deal for everyone concerned, because not only is Mrs. Johnson an effective campaigner but the district can enjoy uninterrupted representation in the National Capital.

Mrs. Johnson, too, can enter wholeheartedly into the campaign activities because she is thoroughly sold on the merits of her candidate. On this subject, she stated:

"I feel the people in this district are darned lucky to have such a good Congressman.

"Roy is a hard worker, he is honest, intelligent, and intensely patriotic and he is conversant with the problems of the district. He knows water law and water problems and that is most important to this district. On top of that I think he's wonderful."

Of course, Mrs. Johnson may be a little prejudiced regaring Congressman JOHNSON. But the interesting thing is that her appraisal is not much more flattering than that of Washington observers who view the work of Congressmen objectively.

The voters must sort of be of that opinion, also, since they have elected him four times.

In Defense of Politicians

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a constructive article—one appropriate at any time—entitled "In Defense of Politicians," written by an outstanding statesman and scholar, Hon. Claude G. Bowers, American Ambassador to Chile and former American Ambassador to Spain. This positive article is worthy of reading by every American.

The article follows:

IN DEFENSE OF POLITICIANS

(By Claude G. Bowers)

Recently I took up for a rereading that charming and illuminating work, The Endless Adventure, the monumental masterpiece of the brilliant Scotch historian and philosopher, Frederick Oliver, dealing with the Walpolean period of English history, and I was startled by something I had missed before—his pages devoted to "praise of politicians."

No doubt my attention was attracted on the second reading because in recent years the tendency in America to sneer at political parties and politicians has seemed to have gained momentum in the popular mind. That, and the fact that in recent years I have been in the storm centers of the attacks on democracy by the Fascist, Nazi, and Falangist forces that set out a few years ago to erect the most autocratic and tyrannical totalitarian governments on the ruins of democratic institutions. I have observed, close hand, that invariably the preliminary campaign has taken the form of a denunciation of political parties and "corrupt politicians." The assumption of the Goebbels propagandists is that a political party not dominated by the state is a faction, and that all politicians are incompetent and corrupt. The effect intended is to destroy the faith of the people in party government and in their political leaders. In view of their records as corruptionists, pillagers of private property, and armed thieves, it ought to be amusing to find men like Hitler and Goering piously denouncing politicians as corrupt. But one only need read the newspapers and books and see the plays, musical comedies, and jugglers of the vaudevile stage in America to reach the conclusion that this Fascist line of attack on democratic institutions has become quite commonplace here.

The effect, if not the purpose, and in most cases I do not think it is the conscious purpose, is to weaken the faith of the American people in the institutions of the founding fathers. For common sense must make it clear that in a nation of 130,000,000 people reaching from coast to coast over thousands of miles of mountain and valley, democracy could not function in orderly fashion without political organizations holding concrete views of national policy to be pressed upon the people through the constitutional instrumentality of the polls.

There certainly are some corrupt politicians, just as there are corrupt financiers, corrupt merchants, corrupt industrialists, and corrupt preachers, but no one is so unfair as to draw a sweeping indictment against these sectors of society because they contain, here and there, a corrupt man. Only in the case of politicians is the charge made general. And that, of course, is a fantastic falsehood. When we reflect that in the case of men engaged politically in the public service the spotlight is constantly thrown upon them and the microscope used in eager search of evidence of wrongdoing, we tremble to think what might be the result if all the other elements of society were subjected to the same constant and intensive scrutiny.

And nothing could be more amusing than the notion that with the elimination of politicians, which could mean the extermination of democracy, corruption would disappear from government. It is common knowledge that the leaders of fascism in Italy and Germany have accumulated vast fortunes through the ungentle art of stealing by force; and in the stealing of the property of the citizens, these nabobs of tyranny also deprive them of their natural rights, their liberties, and their human dignity. This astounding pillaging of the state, and of individuals, by the totalitarian dignitaries would be quite impossible where the people can pass on such crimes through legal and political action.

A few weeks ago an American politician who had resorted to corruption to enrich himself died in miserable isolation and in poverty, despised by his countrymen, after serving a term in prison, but under a Fascist or Nazi regime the corruptionists are the untouchables and there is no limit to the wealth they can accumulate through robbery by force. Yet these are the men—the Hitlers, Mussolinis, and Goerings—who have thundered so righteously against representative democratic government because of the "corrupt politicians."

There are politicians and "politicians," just as there are bankers and embezzlers, and some of the politicians will graft just as some bankers have filched from the depositor. The greater part of the grafting comes from men far down in the scale of politicians, and it was not these petty politicians that the Hitlers and Mussolinis were trying to destroy, but the real leaders of popular government, the men who fought and wrought intelligently for democratic principles. They were the dangerous ones, because they led the people; and therefore the first step in all Fascist movements is to destroy the people's faith in their honest political leaders and to "liquidate" them.

Now the theoretical critic, having in mind the political leaders who have led mankind onward and upward in the democratic way to liberty and opportunity, are prone to describe them as "statesmen," not politicians; and yet almost all of the greatest British and American statesmen have been consummate politicians, and have reached the place where they could serve mankind through political methods. Oliver reminds us that Adam Smith, who was a highminded theorist, an economist, and a man of the closet, refused to discriminate between the politician and the statesman and lumped them together as corrupt. He denounced them as "that insidious and crafty animal vulgarly called a statesman or politician." And that, of course, was stupid in Adam Smith. For without statesmen, there would be no one skilled and trained in the art of government; and without these, society would revert to chaos.

Yet it has become a cheap fashion in America to parrot this propaganda of the Fascist-minded. The villain in the romance is apt to be a "politician," and the guilty in the detective story in which a politician is one of the suspects is almost certain to be. The comedian in the musical comedy can always get the loud laugh that speaks the vacant mind by a fling at "these politicians." Even the more precious element in the academy shrugs its shoulders and exclaims, "Ah, the politicians."

II

Let us call the roll of the greatest of Americans to whom we are indebted for our democratic liberties and institutions, guaranteed by law, for the protection of the citizen against the abuse of power. Who and what were they? They were these very much maligned politicians.

The most consummate of them all, perhaps the most consummate in modern history, was Thomas Jefferson. It was he more than any other man who formulated the way of life known as the American way. He was a businessman, in that he was a successful planter until public service deprived his business of his supervision, but as such he could have done nothing toward placing the imprint of his philosophy on our life. He was a philosopher, but there have been other philosophers with a philosophy making for the good of society, who did not know how to reach the public and put their philosophy into effect. Because he was a practical man, Jefferson did not take refuge in his closet and whine his criticisms of the men in public life. He sallied forth into the political arena with his battle ax and became a politician. He knew that a philosophy tucked away among the cobwebs in the closet will remain a curiosity and never become a reality. And being a politician, he was a realist.

As a politician he was a propagandist with few peers; a practical organizer unsurpassed; a diplomat with an intuitive knowledge of human nature, making it easy to work with and direct the activities of others. Thus during the first 12 years of the Republic he made it definitely a democracy; and through political inspiration and direction from afar, he and they who thought with him, also politicians, forced into the fundamental law the Bill of Rights. Had he not been a skilled and practical politician working for the welfare, the rights, and liberties of the people, our national destiny might have been vastly different from what it became.

There are two majestic memorials on the Mall in Washington to express the appreciation of a Nation for services to country and humanity—and one is to Jefferson, the politician.

The other is to another politician—Lincoln. After Jefferson, it would be hard to find another American so consummate as a politician. He has been so disguised by sentimentalists that few appear to know that in the Illinois of his day where politicians who knew all the answers flourished like the green bay tree, he was the most cunning and skillful of them all. I know of no biography that so perfectly reflects the man and his methods as that of Beveridge, who, being a politician himself, could sense and see the art with which Lincoln advanced to power. He, too, understood the politician's art of propaganda, the politician's science of organization, and he knew how, when necessary, to work under cover and get results. I am sure it is because Beveridge's book so clearly reveals his hero as primarily a politician that the sentimentalists frown upon it. History credits him with the emancipation of the slaves and the preservation of the Union; but never could he have attained the power to render these incalculable services had he not been a clever politician; and even in power, his wisdom, superior to that of others, is manifest in his political methods.

Because of their success as politicians they were hated by their opponents in their day, but there are no national memorials to their critics on the Mall.

To Jefferson and Lincoln we may add Andrew Jackson, who rendered immeasurable service to the people in defeating the machinations of an embryo plutocracy through his genius as a great politician. His greatest battles were fought in the arena of politics, and there he was a master, clever, resourceful, militant, and even ruthless.

To sum up, all the great idols of the British-speaking peoples who have left indelible impressions on the two nations through the policies they sponsored and furthered have been professional politicians—men trained in politics, and that means in statecraft. From Walpole, in England, down through Pitt, Fox, Burke, Palmerston, Gladstone, Disraeli, and now Churchill, and in America from Jefferson and Sam Adams down through Monroe, Jackson, Lincoln, Johnson, Theodore Roosevelt, and now Franklin Roosevelt, the outstanding servants of the public good have been politicians.

At once someone will note the absence of Woodrow Wilson. His position is unique. A colossal figure, he will grow greater with the years. He was that rarest of all things—a statesman who had never been an active, experienced politician, and that makes him unique. But this calls for reservations. From his youth on, his mind was occupied most with the politics of statesmanship. His studies were in this sphere. But it was not until the eve of his elevation to the Presidency that he ever participated in political activities. Until then he had never made even a political speech, or faced the populace on the hustings, or sat in caucus in devising ways and means of political action. He had an incurable distrust of men who had actually worked in politics, born of the cloistered life of the academy, and he thus deprived himself at a critical juncture of the advice of men grown old and wise in political struggles. I have never doubted that with all his genius as a statesman, and his advantage as an idealist, he might have succeeded in defeating the maneuvering of his enemies had he been trained more in the school of practical politics.

III

What is politics? Webster's definition says it is "the science and art of government; the science dealing with organization, regulation, and administration of state * * * the theory or practice of managing or directing the affairs of public policy or of political parties."

Then what is a politician? The same authority says he is "one versed or experienced in the science of government."

There surely is nothing particularly disreputable about that, though Adam Smith might think so. But the sort-sighted scoffers and the Fascist-minded insist that a politician is a mere seeker after office for the sake of the salary. It is true, of course, that among the thousands holding minor offices many, if not most, are motivated partly by the salary. Incidentally, droll as it may seem, it is the salary that draws men into counting rooms and banks and factories. However, if the man who gets the office earns his salary by performing his duties satisfactorily, he is discharging a necessary function in organized society. But in the higher ranks I know scores of men personally who enter politics, become politicians, and take office at a financial sacrifice because they are primarily interested in principles and policies they think for the good of the country; and among these are many who have sacrificed not only money but also health and strength in the service of the state—and all were politicians.

Possibly conceding all this, the critic falls back on the politicians of the lower ranks, the precinct committeemen, often dubbed ward heelers. I am unable to find anything disreputable in serving a party organization in this lowly position—since it is necessary. The statesman who began at the bottom in the organization may be all the better for it. The businessman makes a point of insisting that his men shall learn the business from the bottom up. Only in politics are the good men expected to begin at the top. These generally soon reach the bottom, since they have no real foundation of knowledge.

IV

This brings us to the pet anathema of the theorist and the Fascist-minded—the political parties. Mussolini would have none of them—none but his own; Hitler would have none of them—none but his own; Franco would have none of them—none but his own. None of these could afford a party of opposition. It would interfere with the destruction of human rights, with the suppression of liberty, and might make the liquidation of political opponents through bullet and bludgeon, and the stealing of the hierarchy, dangerous. It is significant of the wise thinking of the English that whatever party may be in power, the opposing party in minority officially is called His Majesty's opposition. And it is recognized that His Majesty's opposition performs a high function in the state. It exposes blunders, demands explanations, keeps those in power on their mettle, and illuminates the political scene for the benefit of the public which has a right to know what is transpiring, since government is their business.

Sad experience has shown that stockholders in a corporation would often have been safer if there had been a party of opposition on the board of directors.

Without parties in a democracy there would be chaos; with but one party maintained by force, there is fascism and tyranny.

Political parties, then, are necessary, but if there are to be parties there must be party leaders, and if there are party leaders, there must be politicians. If these party leaders are worth their salt, they must be trained and experienced politicians. Oliver, philosopher, not politician, but wise with the wisdom of the historian says that "the notion that we can save ourselves without their help is an illusion; for politics is not one of those crafts that can be learned by the light of nature without an apprenticeship."

A democracy must fail without leaders of courage, intelligence, and character. The assumption of Jefferson and Lincoln was that the mass mind can be trusted, or its instinct trusted, if provided with the facts; and but for political parties contending for the mastery, and engaging in polemics, the cause of liberty and human rights would perish because there would be no great organization concerning itself with the dissemination of the facts. Aguirre Cerda, a great Chilean President and statesman, framed an imperishable sentence when he said that "to educate is to govern." And he meant not only education in the schools, but education from the political hustings. That is the reason that the totalitarian cannot tolerate parties, for parties mean the open submission of facts and policies to the arbitrament of debate. The dictator must suppress political parties because he must impose silence. With but one party, and that an organ of the government, the rulers can keep the people in ignorance of the fact that their pockets are being picked and their liberties are being taken away.

If there is any better way to govern a democracy than through the instrumentality of parties, it is still a secret of the gods.

Party government means ballots; Fascist government means surrender or bullets.

V

Experience shows that without organized and capably led parties the most outrageous persecutions of a people cannot be repelled. Look at the record in Italy and Germany. The scattered protests of individuals only result in their instant liquidation. Happily in America we have had little experience in dealing with tyranny because there has been so little of it. But in the one experience we had there is a lesson. The Federalist Party, disdaining democracy, contemptuous of the common lot, and thoroughly organized as a party brilliantly led, resented the creation of a party of opposition, and described it as a faction. Consciously or not, federalism tended toward fascism. Thus the sedition law of the Adams administration, the persecution and imprisonment of editors who dared challenge the pretensions of those in power, was an attempt, through terrorism, to close the mouths of critics. The men singled out for persecution would have been helpless, acting as individuals, just as the victims of tyranny in Italy were helpless in combating the tyranny of Mussolini. But happily, in America, a party of opposition had been created under whose banner all the victims of oppression could constitutionally assemble for concerted, wisely directed, and stubborn action. That attempt to set aside the Bill of Rights was defeated by a political party.

It was after the collapse of the Federalist Party, when an era of good feeling had developed, that some urged the amalgamation of all parties into one and others rejoiced that there was but one party. This amalgamation could not be perfected by governmental decree, as in Italy, Germany, and Spain, but only by consent of the people. Jefferson opposed this idea utterly. "I am no believer in the amalgamation of parties," he wrote, "nor do I consider it as either desirable or useful for the public. * * * They [parties] are censors of the conduct of each other, and useful watchmen for the public." And again he wrote: "In every free and deliberative society there must, from the nature of man, be opposite parties." And again: "The division [into parties] ought to be fostered instead of being amalgamated; for take away this, and some more dangerous principle of division will take its place." And again: "Men have differed in opinion and been divided into parties by these opinions from the first origin of societies, and in all governments where they have been permitted freely to think and to speak."

With a full realization that in the composition of any political party there inevitably will be men who are mere self-seekers, not concerned with principles and policies, except insofar as they may advance them to public station, Jefferson knew that the divi-

sion into parties is based primarily on principles and concepts of government. Thus he wrote: "Both of our political parties, at least the honest part of them, agree conscientiously in the same object—the public good; but they differ essentially in what they deem the means of promoting that good. One side thinks it best done by one composition of the governing powers; the other by a different one. With whatever opinion the body of the Nation concurs, that must prevail."

Thus does Jefferson describe the only practical, if not possible, way in which a democracy in a great country can function. Eliminate parties, and democratic countries, the people unorganized, undirected, undisciplined, would fall into chaos, and thus pave the way for the man with the bludgeon to establish "order"—resting on the buried liberties of the Nation.

But if political parties, so much derided by arm-chair theorists better acquainted with books than with men and more familiar with theories than with realities, are an essential part of the democratic machinery, there must be party leaders—and these are politicians.

VI

Even the most rigid of the critics are driven to admit that leaders in the higher strata of the parties may be of some service to the country; so they fall back on the assumption that the minor party workers down the line are engaged in rather disreputable business. The leader they praise at the top could not be there but for the tireless and usually unrewarded work of the minor politicians at the bottom. An organization, to be effective, must extend down to the lowest political unit—the precinct. The precinct committeeman, to be effective, must have the respect of the people in his precinct where everyone is known. He may be a young lawyer, or the corner grocer, or the village blacksmith, and in 9 cases out of 10 he is not an aspirant for office. He accepts the drudgery of the work because he is good party man, interested, if only instinctively, in the principles and policies it proclaims. "Politics is a duty," said Jefferson; and the precinct committeeman renders a service to the State.

If true of him, it is equally true of every other member of the party hierarchy; for without these local politicians parties would speedily disintegrate, and with their disintegration democracy inevitably would fail in functioning.

In the higher ranks of the hierarchy, the political leaders attain their position through a demonstration of their political capacity. On these devolve the task of formulating the political policies on which the party makes its appeal to the people; and the more consummate they are as politicians, the greater will be the effort to adopt policies in conformity with the public good or the public will. And that is democracy in action.

The sweeping charge of "corruption" against politicians is pure poppycock. Not that there are not corrupt politicians, any more than that there are not corrupt businessmen, corrupt financiers, and immoral preachers. After all, the corrupt action of three shipbuilding companies which, through collusion in bidding, stole millions of dollars from the taxpayers was exposed and stopped by Josephus Daniels—a politician. And the corrupt action of some very respectable oil men in the case of Teapot Dome was exposed and stopped by Senator Tom Walsh—a politician. Cases where corruption among businessmen and financiers have been exposed by politicians acting for the Nation could be multiplied in America innumerable times.

Equally superficial and unfair and untrue is the charge of the theorists that politicians are "incompetent." Too popular is the silly notion that while, of course, a doctor cannot take over the management of a factory, or a banker substitute for a lawyer, or a manufacturer assume the teaching in a studio, the doctor, the banker, and the manufacturer can, by some magic, master the intricate mysteries of government without experience or training. The drawing-room statesman in his library, the dilettante theorist in his study, and the village roustabout in the poolroom are often impatient with the "incompetence of politicians" and "only wish they had a chance" to straighten out the muddle. Such are living in a fool's paradise and suffering from a delusion of grandeur. After all, it was a man who had devoted his life to politics, not the financiers, who snatched the Nation from the edge of the precipice in the spring of 1933.

It is interesting to find that a man of the study, but an historian, like Oliver, shares this impatience with the critics when he says:

"If we eventually escape from our present perplexities, it will not be because theorists have discovered some fine new principle of salvation; or because newspapers have scolded and pointed angry fingers at this one or that; or because we, their readers, have become excited and have demanded that 'something must be done.' It will be because these decent, hard-working, cheerful, valiant, knock-about politicians, whose mysterious business it is to manage our affairs by breaking one another's heads, shall have carried on with their work as if nothing extraordinary was happening * * * and shall have 'jumbled something' out of their contentions that will be of advantage to their country. The notion that we can save ourselves without their help is an illusion; for politics is not one of those crafts that can be learned by the light of nature without an apprenticeship."

VII

It may be possible to lift the average in political life but it never can be done so long as able young men, intellectually and temperamentally fit for public service, are led to believe that there is something rather shameful about it. How different in England where a political career is considered one of service to the state and to society, and where the old nobility are prone to dedicate one of their sons to politics as a patriotic duty. The young man so dedicated begins his preparation at Oxford, concentrating on the studies that may be useful to the state, distinguishing himself perhaps in the debates of the Oxford Union, and passing speedily from the academic halls to Parliament where he makes his career. Nothing in the old nobility of England sets it so much apart from that of other nations as its recognition of an obligation to participate in politics as a patriotic duty. The son is not thought vicious and smearing the family name or lowering its prestige by rendering public service in the halls of Westminster. The political tradition to generation as in the case of Robert Cecil, the Minister of Elizabeth whose descendants have carried on down to Salisbury, Balfour, and Lord Robert Cecil of today. Chatham meticulously trained his son, William Pitt, and Holland found time to drill his son, Charles James Fox, and so, too, Gladstone, Chamberlain, Asquith, MacDonald, and Churchill have carried on the fine family tradition of giving in their sons men of great capacity to the State.

One finds it hard to understand the prejudices of Americans who think of themselves as sensible men, against political ambition in the young. Is it possible, as our enemies say, that we really feel that the only road to real distinction is in the acquisition of money, and that the prejudice against public life is because you can't make money in politics? Is it possible that the average American really feels that the accumulation of wealth is the only career worth while? Or that the American does not compare with the English in feeling any responsibility to organized society? Or does it spring from the fact that newspapers, columnists, the wisecrackers of stage comedies, and even novelists by insinuating that men in politics are fools or crooks have made the impression on half-baked minds that there is something low in public life?

That, I am sure, was not the opinion of Jefferson who urged the young to enter political life, drilled not a few, including Monroe, for public service, and hoped that the University of Virginia he was sponsoring would become a training field for public service.

What we need in America today is not the elimination of politicians but more politicians thoroughly trained for public service. There can be no finer career. But to render such service in the highest sense calls for a preparation beyond that of our forebears. The complications of modern social and business organization present intricate problems requiring special knowledge. Our fathers dealt with fundamental political principles but we of today, within those principles, can and must find solutions for economic and social problems. It is not enough now to saturate oneself in history and political philosophy; one must master the mysteries of economics and of sociology to deal with the political problems of this new day. And since modern invention has wiped out distance and made all nations neighbors, interdependent upon each other, the young man preparing for a political career should make a special study of international relations.

Thus prepared intellectually, he should study political psychology to the end that he may advance his cause intelligently through honest and wise propaganda. And nothing is more vital than a study of the science of political or party organization down to the precinct, for only through victories at the polls can he reach or hold a position in public life in a democracy. In brief, he must study to be a politician.

VIII

To recapitulate: Democracies operate best through political parties.

Political parties function only through politicians.

Eliminate politicians and you wipe out parties.

Wipe out parties and you throw democracies into a state of unorganized, undisciplined chaos.

And when in a democracy the people are unorganized, undirected, undisciplined, the Fascist has his excuse and the tyrant appears to dominate the Nation by brute force.

That is the reason the Mussolinis, Hitlers, and Francos hate and exterminate the politicians; and that is the reason it is so stupid in a democracy to join them in their hue and cry.

And that is the reason why the theorists and scoffers who sneer at representative government, political parties, and politicians are consciously in some cases, and unconsciously, let us hope in most, making their contribution to the Fascist effort to destroy democracy in the United States.

The Hiss Case

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "The Hysteria of the Hisslings," by Norbert Muhlen, from the New Leader.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE HYSTERIA OF THE HISSLINGS

(By Norbert Mahlen)

Memories of public life are notoriously short. Political events not personally experienced are scanned in today's papers and forgotten by the time tomorrow's hit the streets.

Thus many people believe that rowdy congressional investigations are a new invention, a vicious weapon of the cold war. But congressional investigations have been ferreting out undue, illegal, and sometimes criminal group influences on the life and liberty of the Republic for more than three decades.

From 1909 to 1937, the suspicion that big money corrupted national politics led to at least a dozen such investigations of business leaders—from the Pujo Committee To Investigate the Concentration of Money and Credit through Teapot Dome to the Special Committee To Investigate the Munitions Industry (of which Alger Hiss was counsel).

These probes were frankly partisan affairs; for the most part, the Democratic and Bull Moose legislators were out to prove wrongdoings in the Republican administration. The investigating Congressmen and legislators were exempt from libel, and fortunately so. Otherwise they could not have financially withstood the interests they attacked. The fiery accusations and the cheap oratory that went with them often overshot their mark. At the time they certainly seemed to do great harm to business, if not to the community at large. Often grave charges were leveled at innocents and reputations were smeared. But, as we can see today, all the noise did not harm the innocent victims, one of whom was Bernard Baruch.

These partisan investigations publicly aired every shred of suspicion, every conceivable bit of evidence. They led to several court convictions; a few financiers and high Government officials were sent to prison. New laws were drafted which forestalled repetition of the scandals; and the social climate, as well as the economic intercourse of the country was revitalized in a cleaner and healthier way.

In recent years, the attention of congressional committees has been directed toward the infiltration and misuse of government by giant dictatorship rather than by big business. With the battle being run along partisan lines, its tough fighting has unfortunately sometimes clouded the Communist issue itself, which is equally vital for both parties. But the most abused of congressional committees unearthed the treason of Alger Hiss, whose guilt was finally confirmed by a court. And while that committee and other committees did attack presumably innocent people, those people received every opportunity to defend themselves publicly in the press and even in the committee rooms.

The investigation is directed against two groups of fraudulent Communist helpmates in government—first, the agents who are unfit according to law; and second, the fellow-travelers and dupes who seem unfit, according to common sense (for a while at least), to hold positions of political trust. The present probe has followed the course which the prewar investigations of fraudulent big money had healthily taken. Although such investigations start rather late, are sometimes handled in unskilled, silly and worthless ways, and have a lot of regrettable accompaniments, yet few Americans can have any quarrel with their main purpose and effect: to keep this country from being turned into a concentration camp, and to save freedom from being submerged by fear.

What is amazing is the extent to which many well-meaning non-Communists give emotional support to those suspected of Communist collaboration—and even to those who have been found guilty of high crimes. To the same extent, we find widespread hostility against the men, media, congressional committees and courts of law who have been prosecuting those Communist collaborators. The passionate sympathy shown in some quarters for Alger Hiss is the perfect illustration of this attitude.

The excess of tears shed by some people for Mr. Hiss is sometimes explained as genuine charity for a sinner's tragic self-destruction. But why, then, do the same people exhibit such frantic hatred of the confessing and repentant sinner, Whittaker Chambers? A look at the Hiss partisans and Chambers-haters is most revealing. To explain the motives of the majority of Hiss' defenders, let us examine the argument heard most often in his defense. "Hiss," say his sympathizers, "has done only what was very decent and patriotic while he did it—he believed in friendship with the Soviets just like everybody did at the time." Except for the fact that his special usefulness to the Russians led him to a friendship considerably closer than that of the average sympathizer, it is undeniable that Hiss played with communism when playing with communism was most fashionable, from the ambassador down to the last little analyst. And for precisely this reason, the vast mass of former sympathizers and ex-fellow travelers identify themselves—subconsciously at least—with Alger Hiss.

But the conflicts and confusions which turned them into fellow travelers originally are still at work—inside them, now, when they have ceased being full-fledged fellow travelers. They have not yet solved their constant wavering between moral ends and immoral means. Because they "believed" in American democracy as well as in Communist comradeship, they still hold a muddled allegiance to a number of contradictory ideas. Their loyalty to America provokes their bad conscience, because of their past and, to some extent, present allegiance to ideas of the united front and wartime alliance. Identifying themselves with Alger Hiss, they feel that the public judgment on his guilt is a judgment on their own past guilt.

But they are unable to frankly admit their guilt as a thing of the past, which they have got over with and regret. Since, on the other hand, they have moved too far from procommunism to still proudly defend treason, they remain in an emotional quandary.

Chambers was able to do what these former sympathizers could not do. He finally and completely broke with his aberrations. He found a home in a new security. This was enough for the ex-fellow travelers. Having identified part of their selves with Mr. Hiss, they identified the other part with Mr. Chambers, and directed all their resistance against him. This is the psychological mechanism of exteriorizing transference and ensuing aggression, a mechanism which delivered the former sympathizers from their predicament. They could now hate the man who made a clean breast of his guilt—which was their guilt. And they would defend the man who was publicly convicted of his past doings—which were their doings.

There are two archetypes of the former fellow traveler of 1950. There is Mrs. Bleeding-Heart who, in the 1930's joined so many committees for good causes whether they were run by and for Communists or not. Then there was Dr. Win-the-war, in the 1940's, who deliberately repressed his resistance to, and even courted, communism, while the strange alliance between the Babbitt and the Bolshevik lasted. These two are still articulate figures on the American scene when it comes to the defense of the past as an issue of the present. In the conflict between their new anticommunism and their past procommunism, they must, as the psychological textbook predicts, have recourse to rationalizations to defend their contradictory and irrational views.

Few people have the strength to revise their past opinions, even if they directly contradict their present views. So we hear again the old united front and wartime alliance slogans, in lusty discord with the present resistance to tyranny line. And these are fortified by ideas borrowed from the integral pacifists and civil libertarians (a group of watchdogs valiant and useful by themselves, though rather alien to the crowd of Hisslings). To defend the vestiges of procommunism in an anti-Communist society, the Hisslings rationalize that some procommunism—about as much as they themselves have practiced—must be part and parcel of our democracy. This, of course, is nonsense, but it helps political neurotics feel comfortable amid their conflicts and confusions. It also helps the Communist conspirators continue their present work.

Twisting their image of political reality until it fits into and confirms their conflicting political emotions, the Hisslings regard the investigation of suspects as a witch hunt, the prosecution of legally indicted suspects as the persecution of innocent heretics. The guilt of the conspirators for slavery disappears in their minds behind the personal (and therefore incidental) depravity of a few anti-Communists, and the defamation of character and motives of all anti-Communists. The partisan investigation is transformed in their minds into nothing but a free-for-all between two parties for their own sake. In the end, they are completely able to forget that this country is defending itself—so far with restraint—against the agents of the concentration camp state.

To repress the facts which would make a shambles of their carefully constructed defense mechanism, they have been supplied (from Communist Party sources) with a magic word. This word marvelously does away with all irritating insights. The word is "hysteria." Whatever is done in defense against the Communists is hysteria. When a New York teacher who lied about her Communist past is fired, the Hisslings call it persecution of free inquiry. When an applicant for a job with the supersecret Central Intelligence Agency is turned down for unknown reasons, the banal happening is described in a series of pitiful and insinuating articles designed to make the reader indignant over the injustice done his fellow man (as if every non-Communist had a right to be employed as a spy, and as if it were hysteria to pick the best man). A few isolated incidents like these are all the Hisslings need to prate noisily about hysteria in the United States.

Equally repressed in the minds of the Hisslings is the fact that the Communists—by their very doctrine—have to try desperately to get footholds everywhere including the camp of the enemy, including anti-Communists if you will. There is sufficient proof that they have succeded here in this effort. The great amount of pro-Soviet propaganda appearing in conservative and even reactionary newspapers and magazines is ample evidence of this fact. Even Alger Hiss, let it be remembered, never joined a front organization or publicly extolled the politburo. The investigation of Communist auxiliarics becomes hysterical only if one disregards this fact and the facts of the planned Soviet aggression (as the Hisslings and their mentors try to do).

At its summit, the fellow-traveling propaganda for American submission to Moscow had taken in almost a third of our population. Given the tremendous turn-over of sympathizers with Communist aims over the last 20 years, almost one out of two Americans may at one time cr another have been

caught to some degree in the Communist web of lies. While many of them have completely recovered from their one-time mistakes, quite a few others still cling to the petrified ideas of their past, feel guilty about their conflict, and try to save their conscience by a relapse into new delusions. Just as they once clamored for Moscow triumphs leading to Yalta and Potsdam, they now clamor for the rights and privileges of the Communists to conspire in our midst without being hindered by investigations and eventual prosecutions. If they had their way, the consequences of their own present hysteria might be as grave as the consequences of their past delusions are today.

The Hisslings are always ready to yell hysterically about "hysteria," and to rally behind any argument, man, or movement which obstructs the weeding out of Communist agents and influences on our politics. For their own delusions, dreams, and areas of ignorance concerning world communism, as well as present American reality, have not yet been weeded out.

Science Foundation's Goals

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 18, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I am happy to attach an editorial, Science Foundation's Goals, from the Milwaukee Journal of May 12.

It reveals an understanding of the very great importance of this legislation, in whose sponsorship and enactment I was pleased to play an active role.

As a member of the conference committee which reached the compromise agreement on the final version of the measure signed by the President, I hope that its advantages and potentialities will continue to get intelligent exposition of this kind.

The editorial follows:

SCIENCE FOUNDATION'S GOALS

When President Truman signed the bill establishing a national research foundation he called it a major landmark in the history of science in the United States.

The principal features of the bill and its prime purposes have been considerably obscured. This has been largely due to the hubbub raised over the questions of secrecy and of loyalty tests for scientists and scholars who would conduct research under foundation grants. Those collateral issues seem now to have been satisfactorily settled by compromise in the final measure, after 5 years of controversy.

The function of the new foundation is to promote basic research in such fields as medicine, biology, engineering, physics, and the like. Such research is aimed at discovery of basic facts without particular consideration for possible later application, usefulness, or profit. It provides the raw material on which applied science works in the development of all sorts of new machines, materials and techniques, for peace or war.

America has excelled in the field of applied science. America has lagged in the field of basic research and leaned heavily on Europe. Even the atomic bomb was developed on basic research that had been done abroad. War and the iron curtain have dimmed hope that we shall benefit from much new basic scientific research in Europe for some time, however.

For security and progress, our Nation must provide a stockpile of basic knowledge so that applied science and invention may be productive. That is the purpose of the new National Science Foundation.

It will take nearly a year to set up the machinery. After that, the foundation is expected to be ready to distribute some $15,000,000 a year to scholars, scientists, laboratories, and colleges for selected projects in basic research. It will collaborate with the Defense Department and the Atomic Energy Commission, which have their own research programs.

There is no denying that the last war, the cold war, and the possibility of future war provide the most impelling reasons for setting up the new program. A happier aspect is that the results, in the long run, may mean far more in terms of human welfare than in terms of weapons.

The New Threat From Germany

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I am including excerpts from an address delivered by Arthur L. Mayer at the meeting of the executive committee of the American Jewish Committee, April 30, 1950.

Mr. Mayer, who is chairman of the committee on Germany of the American Jewish Committee, served abroad in 1943 and 1944 as assistant to Basil O'Connor, chairman of the American Red Cross. In 1944 and 1945 he was film consultant to the United States Secretary of War, Robert P. Patterson. In 1948 and 1949 Mr. Mayer was chief of the motion-picture branch of military government in Germany.

The remarks of Mr. Mayer are as follows:

The new statute of occupation has recently gone into effect. Under its terms we have returned to the German people a close approximation of complete control over their political and economic affairs and an absolute control over their educational institutions. This will not come as a surprise to anyone who participated in military government, for at all times the task of reconstructing the German mind was deemed secondary to the task of reconstructing German industry and finance.

Under the Army regime only one-third of 1 percent of the total American expenditures in Germany was for educational purposes. We have restored Germany to 100 percent of its prewar industrial strength but left it with 20 percent of its prewar spiritual weaknesses. Of course, the factories had to be reopened, transportation had to be reestablished, the people had to be fed. But they should have been fed not only the vitamins of fresh vegetables and health-giving fruits, but also the vitamins of fresh faiths and health-giving standards of conduct.

In the terrific pressure of the early days of the occupation, these basic needs could understandably be overlooked, but it is inexcusable that at this late date we have completely surrendered to the Kultur ministers of every German state—many of whom, if not ex-Nazis, are rabid nationalists—undisputed authority over curricula, textbooks and the selection of teachers. I do not need to describe to you the inevitable consequences of such a complete surrender of education on our part.

Immediately upon the cessation of fighting, the Russians entered Germany with carefully prepared textbooks. At the end of 2 years they had eight textbooks per child in their zone, while we had only one and one-half. The Bavarian Kultur minister, Dr. Hundhammer, boasted that he had personally blocked spending a mark on new textbooks. When I left Germany 5 months ago, we were still using some textbooks dating back to Nazi days, but a bright military mind had arranged that pages containing harmful material be pasted together. Kids are the same all over the world, and you can guess what pages they read most assiduously. The schools were honeycombed with ex-Nazis. Out of 12,000 teachers dismissed from the Bavarian schools in 1945 for national socialist affiliations, 11,000 were back on the job. We passed a compulsory education law for all boys and girls up to 16 years of age but we failed to build the schools that were necessary to make the law a reality rather than an agreeable dream.

The Russians in their zone may not be making much progress in converting the adults, but they are teaching the kids that communism is the sole answer to their natural craving for more food, better housing and jobs for all, while we are failing utterly to instill in the children of the Western zones any faith or even understanding of the blessings of free speech, representative government, and the protection of minority rights. It is high time in Germany that we spent less energy saying how bad communism is and spent more energy showing how well our system works.

* * * * *

CRITICAL SITUATION

The rationalization for our premature release of power to the Germans over their political, economic and educational life is that democratic principles as well as the acquisition of experience in self-government requires the operation by the Germans of their own affairs. This is much like saying that little Johnny, although he is still an ill-trained, bad boy, should be allowed to decide when to go to bed, whether to go to school and what guns to play with. It assumes that the Germans are prepared for self-government, an assumption which few of us who have actually labored in the vineyard rather than read reports in Berlin headquarters were prepared to accept.

What has happened was exactly what we predicted. The Allies can no longer command; they can only exhort and try to persuade. There has been a tremendous resurgence of reactionary nationalism and militarism with strong Nazi overtones. Democracy in Germany has been utilized to bring National Socialists back into important private and public positions. For instance, in the Bavarian ministry, 60 percent of the employees in the finance department are former Nazis, 77 percent in food and agriculture, and 81 percent in justice. Out of 31 senior members of the embryo foreign service of the new Republic, 14 are reported to be ex-Nazis. The return of power to German hands has meant the restoration of a narrow-minded hierarchical civil service of the traditional German variety, lacking any concept of democratic principles or ideals. It has permitted nationalist parties and neo-Nazi groups to come burgeoning back into existence.

There are at present three major groups of this nature which we estimate represent approximately 6,000,000 people. They have

not yet been able to coalesce and form a united front, but with the inevitable advent of some talented demagogue there is grave likelihood that they will be able to do so, and the German people are as ready today, as they were before Hitler, to sell their souls for assurances of security, race superiority, and plenty of loot. Our hands are tied in great measure by the fact that we must cooperate with the present leading parties in the German Parliament as our only potential democratic bulwark against these intense reactionaries of the right and of the left and, consequently, any Allied rebuke to the government redounds to the benefit of the extremists.

Unfortunately, moreover, not only have the neo-Nazis made progress in recent months, but, even more disquieting, German politicians who had been considered comparatively safe and sound middle-of-the-road conservatives are giving evidence of arrant nationalism. When, in a tactfully worded letter, Mr. McCloy asked for reconsideration of an income tax reduction measure, which would, in the absence of compensating revenues, have added to the financial assistance we are extending Germany, he was accused by the German government of unwarranted interference and an affront to the government's financial experts. Unemployment has been growing steadily—it has now reached close to 2,000,000. German industrialists and businessmen, who are surreptitiously extending credits behind the iron curtain, weep crocodile tears that United States controls are ruining their business with the east while the British and the French stifle German competition in the west. The government is running out of sops to throw to the German population, such as the recent elimination of rationing.

German politicians have not been entirely successful in their efforts to shift all the blame for economic difficulties to the United States. So new diversions are called for. Adenauer is making desperate efforts to rally support on issues of foreign policy; hence the Saar uproar, hence his repeated calls for a united Europe with Germany as an independent equal. Other politicians find it easier to make the good, old-fashioned nationalist appeal: to cry that war guilt is not confined to the Germans alone; to insist that they were always right about the Russian menace. Germans used to say with a wry grin to me, "Germany is always ahead of the United States. We have our ruins 5 years before you have yours."

Actually, we are making our concessions to the Germans and building up their industrial potential, which can easily be converted into a war potential, in the conviction that in any future emergency they will surely be on our side. It is undeniable that the overwhelming majority of Germans are bitterly anti-Communist, but they, like others before them, are victims of the dangerous fallacy that you can use the Communists rather than be used by them. Neither past history nor a careful appraisal of the possibilities for future trade and territorial concessions, which the Soviets can offer in competition with the Western World, justify any certainty that the Germans will surely select us as the more desirable ally. We are making an error for which our children may pay with their lives if we permit any remilitarization of Germany, or a level of steel production in excess of peacetime needs, or any further weakening of our present far too weak controls.

What we are preparing as a bastion may well prove to be a boomerang if we proceed on the assumption, as we seem to be doing, that we can win the support of the German people by cooperating with the small group of cartel-minded industrialists and pork barrel politicians, whose devotion to our institutions is in direct proportion to the amount of our annual appropriations, but whose deep rooted antagonism to a democratic way of life found clear expression during the German election last fall. Concessions on the dismantling of factories, the internationalization of the Ruhr, or the value of the mark, are not interpreted by the Germans as gestures of good will, but as manifestations of apprehension.

If after five brief years we are ready to swap our bitterly bought laurel leaves for an olive branch, let us at least be sure to extend that branch to the right and not to the wrong people. Postwar profiteers and the still wealthy industrialists who financed Hitler are gorging themselves with rich foods in the luxurious restaurants of Frankfurt and Hamburg, while the workers and professional classes and their children are still undernourished.

The Germans, on the basis of the Weimar and Bonn republics, associate democracy with incompetence, insecurity, and human misery. They fully intend by blackmail, cajolery, or double dealing to utilize the American-Russian impasse to reestablish their own European hegemony. They may hate communism even more than they distrust democracy, but in choosing between them they will be guided not by ideological considerations, but solely by motives of self-interest—and by self-interest I do not mean the best interest of the German people but of their politicians, their landed aristocracy, and their militarists who, under the new regime as under the old, are still their undisputed masters.

ANTI-SEMITISM IN GERMANY

Approximately 45,000 Jews still live in Germany in a population of 65,000,000, but the malady of anti-Semitism lingers on. Of those who remain, 20,000 are German Jews and the remainder, displaced persons. Most of them are well advanced in years—34 percent of the Jews in Berlin, for instance, are over 55 years of age. Personally, I think all except those too old or too infirm to emigrate are ill-advised, not to mention lacking in self-respect, to remain in Germany. Anti-Semitism has not yet assumed a definite organizational form but it has become again one of Germany's major "exports." Not only does it penetrate such neighboring countries as Belgium, France, and Switzerland, but it contaminates our occupation troops in Germany. There is complete absence of organized liberalism to combat its spread and to denounce its manifestations adequately.

These manifestations take various forms: the desecration of synagogues and cemeteries, usually ascribed falsely by the police to adolescents; insults to inoffensive, helpless people by housing officials, railroad conductors, restaurant owners; disturbances at public gatherings by hoodlums, who shout: "The trouble with Hitler was he didn't kill enough Jews," actual riots such as I saw in Munich, with mounted police charging unarmed Jewish DP's parading peacefully to protest an anti-Semitic letter in a newspaper; most ominous of all, ovations to men like Veit Harlan, producer of the notorious film, Jew Suess, when he was declared innocent of charges of anti-Semitism; and of the rabble-rouser, Herr Hedler, a member of the Bonn Parliament, against whom an unsuccessful action was instituted when he stated that "Hitler's anti-Jewish laws were all right, although, maybe, gassing was not the right method to enforce them."

A BROAD PROGRAM

The problem of Germany is, however, far more than a threat to Jewish welfare; it is a world problem, and in our effort to cope with it we cannot let it appear for one moment to be a purely Jewish matter. At the first meeting of our committee, which, let me point out, is not entirely a Jewish committee and whose non-Jewish membership we propose to broaden, our purposes were stated as follows:

1. To formuate a specific program to which all liberal-minded men could adhere for the building of a free Germany, which will add strength (moral as well as physical) to European democracy, and reinforce effective opposition to all forms of totalitarianism;

2. To arouse the American public to an awareness of the dangers inherent in the resurgence of extreme German nationalism, the failure of the denazification program, the return of former active Nazis to positions of power, proposals for the reestablishment of a German army and air force, and the neglect of the reeducation program;

3. To cooperate with other organizations similarly minded as our own in obtaining representation in Washington and abroad, and support in the press and on the radio for publicizing and furthering our program.

I should like to emphasize, however, that, in contrast to some other groups in this country, ours is definitely not a fault-finding committee. We have faith in Commissioner McCloy's high ideals and genuine zeal for humanitarian causes. He is in no way responsible for the present German dilemma and is doing everything within his power, in our opinion, to stem the tide of reaction.

No clearer expression of an approach, in the best American tradition, to the German issue has ever been offered than Commissioner McCloy's Stuttgart speech and his recent testimony before the House Appropriations Committee in connection with his proposed budget. This budget proposes to appropriate $18,000,000 for educational purposes and although this is still far from adequate, in our opinion, it is a big advance over previous budgets and probably all that could possibly gain congressional approval at the present time.

Indeed, that battle for congressional approval is the first one into which our committee has thrown itself. A letter recently appeared in the New York Times, prepared by General Taylor and signed by several other members of the committee together with Mr. George Brett, of the Macmillan Co.

We believe that this letter, urging that the full educational appropriation be granted, is a demonstration of the type of support we are seeking to extend and will continue to extend as far as possible to the State Department.

* * * * *

A resolution has been offered in the Senate by Senator GILLETTE, in conjunction with several colleagues including administration stalwarts like Senators LEHMAN, PEPPER, DOUGLAS, and KILGORE, which requests President Truman to create an investigating committee to separate facts from rumor in Germany and to learn how grave is the threat of various conspirational movements in that country.

Mr. Speaker, I sincerely believe that an objective and dispassionate review of the facts and trends in Germany, conducted by a highly qualified nonpartisan group of leaders in American public life, and supported by an expert technical staff, would produce salutary results in the form of statesmanlike recommendations with regard to the future conduct of American policy in Germany. My hope is, therefore, that this constructive proposal for a nonpolitical, fact-finding presidential commission will find favor with both the Congress and the administration. It is a proposal which deserves the support of the American people, and it may prove a major contribution to the democratic effort to win the peace.

ABC Takes Wise Action

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 18, 1950

Mr. BIEMILLER. Mr. Speaker, with permission to extend my remarks in the RECORD, I attach an editorial, "ABC Takes Wise Action," from the Milwaukee Journal of May 16.

It is a matter of justifiable pride that Milwaukee and Wisconsin played an important part in ending long-standing discrimination in the American Bowling Congress. The State's attorney general had pressed the matter vigorously with State ABC officials. Milwaukeans had signified a real interest in seeing that the ABC meeting in 1952, scheduled for the city's new arena, would be free from the discrimination which has marred the event in the past.

We promise an ABC promoting American sportsmanship for all Americans on an equal basis a real welcome in 1952.

The editorial follows:

ABC TAKES WISE ACTION

In a gratifying and almost unanimous vote the American Bowling Congress has opened its membership to all men without regard to race, creed, or color.

It is an act of Americanism and sportsmanship that is welcomed by everyone who has been opposing the ABC race ban, which limited membership in bowling's ruling organization to white males. It is another victory in the war against discrimination in America and an act that cannot fail to benefit the ABC.

They were, as Michael Dunn, ABC attorney, told the recent ABC convention, "sound, practical reasons" for the rule change. The ABC was engaged in costly court battles aimed at its practice of discrimination in at least four States and was expecting similar suits in other States. It had already lost its fight in the State of Illinois, where the ABC was chartered. And, as Dunn said, even if it won all its court fights it would "still lose in the court of public opinion."

But there were moral reasons for the change, too, and opponents of the race ban are willing to assume that those reasons were as compelling as any of the more "practical" reasons. There is reason to hope and believe that the ABC acted not through force but because its members accept the fact that discrimination is not moral, is not good Americanism and is not good sportsmanship. It remains for the future actions of the ABC to justify that hope.

Battles over race problems are never pleasant and almost always bitter. The ABC has taken the major step in healing the scars of the race battle in which it was involved. Its critics in that fight must heal the wounds further by accepting the ABC action in good faith, by congratulating the ABC for its sportsmanship and by hanging out the welcome mat in the cities where the ABC, for the last several years at least, has been something less than welcome.

Milwaukee, where the fight has been heated, can feel greater satisfaction than most communities in the ending of the ABC race ban because this is the organization's headquarters. This community commends the ABC for its straightforward action and will give a warm welcome to the organization's 1952 tournament here.

"Tin Hat" Antique in Civilian Defense

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. PRICE. Mr. Speaker, I commend to my colleagues in the House as profitable reading an article written by the Honorable CHET HOLIFIELD, Representative of California's Nineteenth District, and which appeared in the Washington Post of yesterday, Sunday, May 21.

I have read this splendid article carefully and with much interest, because of my own deep concern over the subject covered by Congressman HOLIFIELD.

No one in Congress is better qualified than our colleague from California to discuss civilian defense. It has been one of his prime interests, beginning with his first term in Congress. Few there are who have given the time and study to this most important problem in these past few years. No one realizes better than Congressman HOLIFIELD that civilian defense planning cannot wait until disaster strikes. He has become a leader in the fight to make certain America does not start too late in this field.

It has been my personal pleasure to serve with the gentleman from California [Mr. HOLIFIELD], first on the former Military Affairs Committee, in 1945 and 1946, and since 1946 he and I have served together as two of the nine House Members on the Joint Committee on Atomic Energy. I, therefore, feel that I know the important role our colleague from California has and is playing in formulating plans for our Nation's security.

Mr. HOLIFIELD's article follows:

"TIN HAT" ANTIQUE IN CIVILIAN DEFENSE

(By CHET HOLIFIELD, Member of Congress, Nineteenth District of California)

In this atomic age, civilian defense is a matter that strikes home to every individual.

The possibility of mass destruction by the most terrible weapons ever devised—with even deadlier ones on the drawing boards—cannot be put aside as a mere fancy. The possibility is real; it hovers about us in the shape of a huge mushroom that could blot out cities and peoples.

And, because everyone is exposed to the potential horror, everyone shares in the responsibility for civilian defense. No longer can we assume that defense is wholly the job of soldiers in uniform. Civilian defense is a pervasive kind of activity that must reach into the community, the neighborhood, and the home.

Civilian defense must also become a new kind of activity. The tin hats and sand buckets of the last war would seem rather pathetic in the awful glare of an atomic blast. New techniques and instruments must be made available for widespread use in the event of an emergency. Radiological monitoring sounds like gobbledygook; the Geiger counter and the dosimeter are gadgets unfamiliar to the ordinary citizen; but these terms will become household words in any adequate program of civilian defense.

It was well stated by a witness before the Congressional Joint Committee on Atomic Energy that the science of protecting and saving people is years behind the laboratory science of killing people. Our military leaders like to boast now and then about how much damage we could inflict on an enemy. More sensible discussion, as this witness pointed out, might well be applied to the matter of protecting ourselves. He estimated that 30 percent of the casualties at Hiroshima and Nagasaki could have been prevented by adequate preparation.

The effective development of a civilian defense program is staggering in its complexity. Not only must the scientific findings of the laboratory be translated into instruments of common use, but intricate problems of Government administration must be solved. All levels of Government are necessarily enmeshed in this program. How shall we coordinate these diverse activities while preserving the basic rights of American citizens and our traditional structure of democratic government?

What responsibilities shall be allocated to the Federal Government, what to State and local governments? How can each complicated network of community facilities and services be adapted to perform in emergencies without impossible burdens of cost? How shall the Federal Government arrange its own administrative organization for efficient civil-defense planning and operations? Is new legislation needed to back up this administrative organization? These are some of the questions which must be answered, and Congress as well as the executive branch is grappling with them now.

While we can agree that the need to take effective measures of civilian defense is urgent, we must realize that the job cannot be finished overnight. Civilian defense is hard and prosaic work; it is continuing work. So long as we live in a world troubled by the prospect of atomic war, we must work at this steady occupation called civilian defense.

Where do we stand today on this whole matter? In the Federal Government, we are mainly in the planning stage. Of course, there are many criticisms that the plans are deficient in one or another respect, and there is an understandable insistence that we talk less and do more. However, the fact that progress is slow should not be taken to mean that the Government is indifferent. Rather, it reflects the magnitude and difficulty of the task.

On the legislative side, we are studying civilian-defense requirements with great care. The Joint Congressional Committee on Atomic Energy, of which I am a member, is conducting hearings, some in executive session, some public, on civilian defense as it relates to atomic attack. The Senate Armed Services Committee is examining military aspects of this matter.

Serious attention is being given to my bill for the creation of a special commission to study the feasibility of an alternate capital for use in case of an attack on Washington. I propose this purely as a precautionary measure. The continuous operation of Government, in the event of devastating atomic attack, is vital to continued national survival.

On the administrative side, the National Security Resources Board, an agency charged with broad responsibilities to advise the President concerning defense and security needs, is heading up civilian defense affairs. This Board is working under a directive from the President to assume leadership in civil-defense planning and to develop an adequate program.

Major departments and agencies of the Government are being assigned different parts of the planning job. For example, the General Services Administration was given the primary responsibility for planning for wartime civilian disaster relief. The GSA says it will develop plans for civilian and military participation in activites designed to minimize the effects of enemy attack upon our civilian population, facilities and services, and for repairing the damage resulting from such attack.

Because civilian defense must be considered largely a matter of atomic defense, the basic information for planning and operating derives largely from the Atomic Energy Commission. The Commission has been assigned the important task of supplying authoritative data concerning the effects of atomic explosion. What happens to people or to buildings or to cities when an atomic explosion occurs, are questions on which the AEC has already provided considerable information in published form.

RUGGED INSTRUMENTS

Detection of radiation is a basic factor in civilian defense. Obviously, we can't train everyone to be an atomic physicist. Therefore, instruments of detection must be developed to withstand hard knocks and to be operated easily after brief instruction. The Commission reports practical results, in the manufacture of low-cost, rugged instruments to detect the danger spots caused by deadly gamma rays after an atomic explosion. The Commission is establishing short training courses in laboratories throughout the country for doctors and radiological monitoring experts.

Private companies also have been stimulated to experiment in producing radiation detection instruments. When the AEC took over the atomic program in 1947, there were about 9 companies manufacturing about 19 different types of instruments. Presently there are about 60 firms in this field, including those that manufacture accessories or components

Follow-up studies on the survivors of Hiroshima and Nagasaki are providing important information on the after effects of exposure to radiation. Although newer and more deadly bombs make these observations dated, there is a note of encouragement in the fact that the survivors of Hiroshima and Nagasaki appear in pretty good shape. No increase has been noted in abnormalities in new-born children. It was found that the lens of the eye is particularly susceptible to radiation, and form of cataract is now afflicting the Japanese survivors.

Efficient methods of decontaminating food and water and objects exposed to radiation are being studied by the commission. New drugs to control infection and to treat bleeding are being developed. Anemia will be controlled by transfusion. And these radiation studies undoubtedly will result in new medical discoveries of far-reaching importance in the treatment of disease.

BASIC PRINCIPLES

In concluding this article, I would like to suggest a few basic principles of civilian defense which seem persuasive, the more I study this problem.

First, the measures must be practical. We cannot allow ourselves to become panicky and resort to fantastic and impossible schemes. America is not about to go underground or become a nation of cave dwellers. We must work within the framework of the existing economy and with the resources and facilities that are or can become available to us without inordinate financial outlays. Civilian defense should proceed by steady, careful, and well-integrated stages, rather than by erratic spurts in all directions at once.

Second, the major part of the work must be done locally. We want no top-heavy bureaucratic control in Washington imposing orders on everybody. The mainspring of civilian defense lies in the initiative and energies of the people themselves and in their local facilities for community service. Of course, the Federal Government has an important responsibility for effective planning, guidance, and assistance. But no Government agency at the top can substitute for the resourcefulness and teamwork that must be applied at the bottom—where civilian defense measures are expected to work. The interest and constructive criticism which municipal officers like Mayor Fletcher Bowron of Los Angeles have brought to bear on civilian-defense planning, indicate that many local units of Government are prepared to assume their rightful share of responsibility in this task.

Third, civilian defense must be managed by civilians. This job is too far reaching in its impact, too close to the daily lives of our citizenry, to be delegated to the military. Indeed, I am convinced that the military authorities do not want the heavy added responsibilities that civil defense entails. They have enough to do in their own sphere of responsibility for national defense.

Some proposals have been made that civilian-defense planning be placed within the Department of Defense. I cannot agree with this line of thinking. All the objections that can be made to the control of civilian defense by a rigid bureaucracy in Washington apply with even greater force to military control. Let the "garrison state" be confined to military life and let it not be extended to American life as a whole.

Fourth, and implicit in the three preceding principles, civilian defense must be carried out in the American, democratic way. With the new possibilities of atomic warfare have come new burdens which strain our resources and our institutions to the utmost. I am confident that America can carry these burdens without losing hold of the ideals and the ideas by which we live. The self-reliance of our people, their common sense, their resiliency, their tremendous capacity for cooperative endeavor at the community level, augur well for the future.

Atlantic Integration

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New York Times of May 22, 1950, entitled "Atlantic Integration":

ATLANTIC INTEGRATION

With the momentous decisions of the London conferences of the Atlantic powers spread upon the record of history, there devolve upon the Atlantic governments and peoples the task and the duty to take speedy and concrete action to transform the paper agreements into living reality. These decisions are the logical and inevitable consequences of the present international situation, in which the only remaining militaristic and aggressive power—Soviet Russia—challenges the rest of the world. But they are also so far-reaching and carry such broad implications, that they break through all traditional thinking and make unprecedented demands upon the statesmanship, the faith, and the realism of all the nations concerned.

For what they do is to carry the concept of the Atlantic community to a point inconceivable a few short years ago. Hitherto, under the Marshall plan, the West-European Union and the Council of Europe, the idea of political, economic, and military integration has been largely confined to Europe, with the United States providing both aid and encouragement in these projects. Even the North Atlantic Pact was originally conceived as a traditional defensive alliance between completely sovereign and independent nations, with each reserving the right to pursue independent policies and to determine the nature of its action in case of attack.

But under the London decisions the concept of economic, military and, at least in foreign policy, political integration has been extended from Europe to the whole North Atlantic community. And of all these projects, the proposed military integration is the most important because it involves and necessitates the other two. This military integration is implied in the project to create balanced collective forces by means of the most economical and effective utilization of the forces and the material at the disposal of the North Atlantic countries, which amounts, in effect, to the creation of a multinational but integrated and virtually supranational military establishment. Under this plan the United States will expand its Air Force and its Navy, rather than its ground force, and assume responsibility for strategic, including atomic, bombing, and, in combination with European naval forces, for keeping the ocean lanes open. The European nations, in contrast, will assume the prior task of forming large ground forces, and Britain and France will also assume the task of developing tactical airpower in support of such forces.

This is quite in keeping with the North Atlantic Treaty, which pledges the pact nations to "unite their efforts for collective defense and for the preservation of peace and security," and for this purpose, "by means of continuous and effective self-help and mutual aid, to maintain and develop their individual and collective capacity to resist armed attack." But it is also self-evident that if the fulfillment of this undertaking is to rest not on the joint action of balanced national forces, as formerly, but on a collective force organized according to national specialization, the effectiveness of the whole will inevitably depend on the effectiveness of any part of it. No chain is stronger than its weakest link, and that maxim, when applied to the integrated collective force of the North Atlantic community, carries with it certain corollary obligations which it is necessary to keep in mind.

One of these obligations is the duty of each and every nation to do its full share toward the development of the military specialty allotted to it. Another is the duty of all pact nations to contribute toward mutual aid according to their best ability, both in the matter of military supplies and in everything essential to economic progress, on which depend both the political stability and military reliability of the individual nations. A further obligation would seem to be for all the pact nations so to concert their foreign policies as to present, at all times, a solid front. But the first and foremost of all these obligations would seem to be that, beyond all previous technical reservations in the North Atlantic Pact, all the nations providing the collective force must be ready to act in concert the instant any one of them is attacked. That does not and cannot abrogate the exclusive right of Congress to declar war—a right which loomed so large during the pact debate. But it does strengthen the moral obligation to use armed force, if necessary, as provided by the pact. For the defection, or even hesitation, of any one nation would immediately and inevitably wreck the whole collective force and expose all to defeat and subjugation. That is a risk which must be avoided at the cost of every sacrifice, including the sacrifice of some measure of national sovereignty which this obligation may involve.

Essays by Barbara Hayes and Sue Bammesberger, Students of North Syracuse Central School, North Syracuse, N. Y., on Democracy Versus Socialism

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. RIEHLMAN. Mr. Speaker, I wish to extend my remarks and include the following essays delivered by Barbara Hayes and Sue Bammesberger. I had the pleasure of hearing these essays delivered. The former won first prize and the latter second. Two hundred and thirty-five boys and girls from the towns of Clay and Cicero participated in the contest conducted by the Lake Shore Republican Club. The gratifying fact to me is that every one of these boys and girls wrote on the subject which is in the minds of every American these days—why they prefer democracy to socialism.

My concern over the Nation's drift toward socialism is somewhat lessened by this youthful demonstration that those who preach absolutism have not pulled the wool over the eyes of our youth. Those who have attempted to call socialism by so many other names have not been able to demonstrate to our younger generation that our hard-earned democracy should be cast away no matter what the blue-sky promises of Fair Dealers may be. I think that a great deal of credit, and our thanks, should be given to Mr. C. R. Robbins and Mrs. Marion Rich, principal and teacher, of North Syracuse Central School for their fine training of these young people. Following are the essays:

WHY I PREFER DEMOCRACY TO SOCIALISM

(By Barbara Hayes)

Did you ever stop to think of how lucky you are to live in a democracy? No, I don't believe very many of us have. Let us compare democracy with some of the dictated forms of government and see just how lucky we are.

A democracy is a representative form of government. The people may govern themselves directly through town meetings, or indirectly through elected representatives in city, State, and national affairs.

The basis of our democratic form of government for a period of over 150 years, has been the Constitution. This document, adopted in 1789, is comprised of our many freedoms and liberties. Even though it was written for the benefit of a nation of 4,000,000, it is expandable enough to serve today a Nation of 150,000,000. The main parts of our Constitution are the preamble, the body (consisting of seven articles), and the amendments. The first 10 amendments are referred to as the Bill of Rights. The importance of the Bill of Rights can scarcely be overrated. It serves as the cornerstone of American democracy. Under its protective freedoms and guaranties, Americans can resist the abuses and injustices which people of dictator nations have been forced to accept. Liberties which the Bill of Rights guarantees are freedom to act, think, believe, speak, write, hear, read, worship, assemble, and possess. The importance of these liberties lies in the fact that they are guaranties to everyone.

In no other country in the world could people live their lives with such an air of independence. Even the youngest school children have had some contact with their Government. They have seen policemen directing traffic at busy corners; they have heard the President of the United States speak on the radio; they have heard of judges, trials, juries; or have seen people stand in line at the polls to vote on election day. However, the heads of all governments do not always report to the people on the affairs of the nation. The people in other nations do not always have the chance to elect the officials who govern them. These privileges are granted only to people in democratic countries.

Socialism, on the other hand, is in an almost direct contrast with democracy. It is quite difficult to define the word socialism in such a way as to include all the shades of meaning which have been given to that word. Some consider it a very dangerous and revolutionary idea. Others believe it to be a desirable way of life and they presume it would bring about a better way of living than any other form of government.

Socialism is often confused with communism. The main difference between them is their viewpoints on government-controlled goods. Socialists believe that the government should control and regulate only producer's goods. They include railroads, machinery, factories, and raw materials. Communists believe that the government should control not only producers' but consumers' goods. Consumers' goods consist of food, clothing and shelter.

The father of modern socialism as well as modern communism is Karl Marx. Marx felt that the only way to overcome the evil struggle between classes was to have only one class—the masses of workers. The Communists believe in bringing about this overthrow quickly through revolution, as has been done in Russia. The Socialists would bring about this change through constitutional means.

In spite of much opposition it is certain that the theories of Marx and his followers have greatly influenced thought in the modern world.

In a totalitarian state the government is the master of the people, who exist for the benefit of the state. While in a democratic state, the state is the servant of the people and exists for their good. This principle is based on the great faith placed in the individual in a democratic state. Also, in a socialist state all reading and culture is dictated by the government. This is due to the fact that everything is led by one party and the people are powerless.

However, even if the defects of capitalism are admitted, capitalism has brought about a much higher standard of living for a larger number of people than any other system. This has been due to two very powerful factors—individual initiative and the right to private property. These are the forces which develop individual responsibility, energy, inventive skill and a progressive spirit. Although socialism would not crush out all private property and initiative, most Americans feel that freedom in these things has been the driving force that has made America great.

WHY I PREFER DEMOCRACY TO SOCIALISM

(By Sue Bammesberger)

America, our country and our people—we are a great Nation. But are we great enough to overcome the problems of the day that swirl about us? It depends upon whether we look at the whole fruit of the work of free men or see only the blemishes. We know we have not reached every one of our high ideals, but we are still trying. Today we face the problems much the same as our forefathers did. There has always been a struggle, but we didn't quit; we have kept on working and striving.

Today there are two theories of government competing with each other in the world—Communist ideas against democratic ideas. The split-up of the world into two rival blocs is the most serious single problem facing us today. The solution of specific problems, such as the control of atomic energy, conclusion of peace terms, reconstruction of devastated areas and others, is affected by the rivalry between the United States and Russia. Soviet determination to expand its sphere of influence is matched by American determination to "make the world safe for democracy."

As the leading spokesman for the democratic nations we oppose the spread of communism by other than lawful means. If a nation of its own free will chooses to accept communism, our policy is not to interfere in what we consider basically a domestic matter. But if communism is forced on weaker countries by outside military pressure or infiltration of foreign agents, our policy is to oppose such aggressive expansion.

So much is said against communism, just what is it and why are we the people of America so intent on keeping it out of our country and the countries of our allies? It is hard to give one single definition because it means so many things. Often it means one thing in theory and another in practice. Communism is a complicated web of ideas, many of which have come from the past. In the 1800's there was a strong Socialist movement under the leadership of Karl Marx. In France in 1870 this movement split into the Socialist and Communist branches, the latter being more radical. Only in Russia and its satellite countries did it result in the establishment of "a dictatorship of the proletariat" when the czarist regime was overthrown by the Communist revolution in 1917. Communism has since spread in varying degrees to many countries. One principle all Communists, or Socialists, agree upon is that governments or the representatives as a whole, should own all the means of production, such as factories, machines, farm land, banks and should operate them for the benefit of all rather than the profits for the few.

When the Communists speak of democracy they obviously do not mean our version of the Bill of Rights. They believe that the state is omnipotent and that individual human beings are unimportant. This belief is exactly the opposite of the democratic idea which has been the basis of our democracy; of our freedom, of our educational system, and our social customs; an idea which not only has made possible our way of life but has been largely responsible for economic progress and our wealth as a Nation. What is this idea? It is faith in the possibilities of human personality, that given the opportunity, men and women have the ability to take charge of their own lives. Proof of this idea is our United States Constitution which has served as the basis of our Government for over 150 years. The Communists say that their new Russian constitution is an excellent one. They point to the civil rights it promises—freedom of speech, of the press, of assembly, of street processions. The Communists call these pledges of freedom, but if anyone took them seriously he would not last long. These civil rights may be used only to strengthen the Communist system. They were not granted to give the people liberty. The preamble of our Constitution states as one of its clauses that the Constitution was established in order to secure the blessings of liberty to curselves and our posterity. In a real democracy, freedom means liberty to

criticize and oppose, as well as to support. Our Government was set up to guarantee these liberties to us and it actually tries to carry out this guaranty. Most of us believe it does so to an extent never before equaled in the whole world. And we also believe that any form of censorship of creative ability or of criticism is dangerous. A democracy cannot flourish without criticism.

Also, according to the Communist constitution of Russia, the citizen is given the right to rest and leisure. So the Government sees that he gets it. And he gets it through organizations that control his leisure from the time he is 8 years of age. Plays, songs, and movies in Russia are used for more than entertainment. Their primary purpose is propaganda—to glorify the state. We Americans are free in our leisure time. How good or how bad our neighborhood becomes depends on each of us—individually.

Some critics of our democracy say that because the world is so complex now, the individual citizen ought not to have a voice in his own government. In Russia there are what they term "free elections," but there is only one party—the Communist Party. Voters are allowed to vote only "yes" or "no." In America the people exercise their sovereignty by voting for candidates on either of two major parties or from several minority parties. Voting is a privilege conferred on the people by the state—it is not a right of citizenship. All those who are qualified to vote may use the privilege or not, as they choose, but it is generally understood to be the duty of citizens to exercise the privilege if our democracy is to function in the interest of the majority.

After thoughtfully comparing life in a democracy with that in a Communist dominated country, I am proud to proclaim that I am a part of a government of the people, by the people, for the people. On every horizon new frontiers beckon to the young people of America who are now in school or college. In an atmosphere of freedom of thought, word, and deed, the growth and development of human character is made possible, giving boys and girls a chance to dream dreams and make those dreams come true. That is why I prefer democracy to socialism.

Rent Control

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement by Richard J. Gray, president, Building and Construction Trades Department, American Federation of Labor, before the House Committee on Banking and Currency:

I appreciate this opportunity to testify because I feel that the subject of rent control is vitally important, not only to the 8,000,000 members of the American Federation of Labor, but to the lives and welfare of all American families.

We are very pleased that a number of Congressmen have introduced bills to extend rent control, and we particularly appreciate the tremendous interest which the chairman of this committee has shown in this important problem.

It would seem appropriate in presenting this testimony to discuss briefly a few of the chief arguments that have been advanced by the real estate interests in their effort to prove that there is no need for extending Federal rent control beyond June 30, 1950.

The first point which real estate people emphasize is that there is no longer any shortage of housing. They point to the record volume of home building last year when the building industry began the construction of over a million homes, and to the continuing high level of construction during the first 4 months of this year. In their opinion, this makes unnecessary any continuation of Federal rent control.

However, this analysis overlooks several important points. It overlooks the fact that last year's volume of housing construction was not very much higher than 1925, a year when there were 35,000,000 fewer people in this country. It also overlooks the fact that the overwhelming proportion of the housing built during the past year has been for sale and not for rent.

More fundamentally, the analysis of the real estate interests underestimates the character and extent of the desperate housing shortage this country has been facing in the postwar period. Even with the record volume of new construction, the housing shortage is still very much with us. Its existence cannot be denied. The Bureau of Labor Statistics recently conducted a survey of vacancies in 25 metropolitan areas in all parts of the country. Some of the vacancy rates disclosed by this survey are as follows:

	Percent
Atlanta, Ga	1.1
Buffalo, N. Y	1.2
Chicago, Ill	.8
Indianapolis, Ind	1.1
Minneapolis and St. Paul, Minn	1.0
New York City, N. Y	.8
Pittsburgh, Pa	.9
St. Louis, Mo	1.3

Of the 25 cities surveyed, only two had vacancy rates of over 3 percent and only 5 others had vacancy rates between 2 and 3 percent. In all of the remainder, the vacancy rate was less than 2 percent. This compares with a normal rate of 5 to 6 percent. Moreover, it is important to remember that the figures cited represent the over-all vacancy rate. They do not indicate that this percentage of dwelling units were actually available for rent. As a matter of fact, the habitable rental vacancy rate in these 25 cities was 1 percent or less for all except two of the areas. These figures certainly show that the housing shortage is still very much with us.

A second argument which the real-estate interests use against rent control is that it is unfair to the Nation's landlords. Yet, the facts are that today's rent-control law permits the landlords to obtain all increases in rents to which they would be entitled in a normal rental market.

Rent increases can be obtained for any of the following:

1. For any major improvement which the landlord makes in the dwelling unit.

2. For increases in the price of fuel or any other operating cost which the landlord has to pay.

3. For cases in which the landlord was unexpectedly faced with a very low rent on the maximum rent date.

4. For cases in which the landlord is not receiving an adequate return for his property.

During the past year the Housing Expediter has had to interpret the formula for "fair net operating income" written into the law last year. Under the law the Housing Expediter ruled that this requirement would not be met unless the landlord was obtaining a net income equal to 30 percent of his gross income for small buildings and 25 percent for large buildings. I want you to know that the A. F. of L. felt that these requirements were unduly liberal, and when this procedure was announced a public protest was issued. Under the circumstances it is difficult to see how anyone can argue that the landlords are being treated unfairly by the provisions of the present law.

Another argument which opponents of rent control are using concerns what is described as a "vast groundswell of public opinion" against rent control. According to this theory, it is only the heavy hand of the Washington bureaucrats which has forced rent control upon the unwilling American people.

Let us examine this argument more closely. We must realize that there is included in the present rent-control law a very liberal section providing for decontrol of rents by the "local option" method.

If opponents of rent control are correct, the American people would have acted to take advantage of these local-option decontrol provisions of the 1949 rent-control law. The facts are directly the opposite. Only a very few cities have utilized these provisions to remove rent controls. Despite intense pressure from the real-estate interests, the city councils of only 262 cities—only 7 percent of communities under rent control today—had elected to remove rent control by May 10 of this year. This total includes only 11 cities with more than 100,000 population and 14 others with over 50,000.

It might be desirable for me to point out how these decontrolled actions have affected members of the American Federation of Labor. Recently we have made a special survey of all communities throughout the country in which there are A. F. of L. central labor unions. The following table indicates how many of these areas have been decontrolled and how many are still under rent control:

Status of rent control in communities where there are A. F. of L. central labor unions, May 1950

	Number	Percent
Total central labor unions in United States and Alaska	791	
Communities never under rent control	100	
Total communities under rent control	691	100.0
Decontrolled by local option	89	12.9
Decontrolled by Housing Expediter	80	11.6
Decontrolled by recommendation of local rent advisory board	13	1.9
Decontrolled by State action	22	3.2
Decontrolled by Emergency Court of Appeals	1	.1
Under State rent controls	65	9.4
Still under Federal controls	421	60.9

You will note from the total that more than three-fifths of the communities (421 out of a total of 691 which have ever been under rent control) are still operating under Federal rent control. It is significant that only 87 or less than 13 percent have been decontrolled by the local option method.

These are the over-all Nation-wide statistics. When we examine the figures for particular States, it is easy to see how any sudden decontrol would fall with catastrophic impact upon A. F. of L. members. In Illinois, for example, there are 53 communities in which there are A. F. of L. central labor unions. None of these communities have been decontrolled by local option, and only nine of the smallest areas have been decontrolled by the Housing Expediter. In Minnesota, where there are 17 central labor unions, only 2 of its communities have been decontrolled, neither as a result of local option. In Michigan, Ohio, Pennsylvania, Minnesota, New Jersey, Missouri, North Carolina, Washington, and West Virginia, only a handful of communities have

been decontrolled. In fact, there are 10 States in which not a single community with a central labor union has been decontrolled.

This information very clearly refutes the contention of the real estate interests. Although there have been the most liberal arrangements for decontrol under the present law, only a very few cities have decontrolled rents under the local option method. The vast ground swell of public opinion which the real estate interests have tried to create simply does not exist.

When your committee was considering the question of rent control last year, very few communities had as yet been decontrolled. Many of us felt then that decontrol would have a very serious effect on rent levels, but the actual facts in decontrolled communities have turned out to be even worse than our fears.

We no longer have to guess about what happens when a community has been decontrolled. Within the past few months the Department of Labor has surveyed 14 communities where Federal rent controls have been removed to determine the effect on rent levels. In 12 of the communities there are no longer rent controls of any kind while two of them, Milwaukee and Madison, Wis., are under a very weak State rent control law. The Department of Labor found that rent increases in these communities for those units for which rents were raised ranged from more than 12 percent in Madison, Wis., to nearly 41 percent in Beverly Hills, Calif. The survey also showed that from 17 to 64 percent of all the tenants in those cities were affected by rent increases.

These facts have received support from a survey made by an organization which is thoroughly opposed to rent control, the National Association of Real Estate Boards. The NAREB recently made a survey of 100 decontrolled cities in 30 States. It was found that rents increased for one-half of the tenants in decontrolled communities with a population of over 50,000 and for 55 percent in cities of 100,000 or more. The average increase for tenants who were forced to pay rent increases was 22 percent. Interestingly enough, the survey showed that rent increases were higher in the smaller cities than in the larger cities. The NAREB survey points unmistakably to two conclusions: (1) Nationwide decontrol would result in rent increases for millions of families. (2) Rent control is just as much a problem in many small areas as it is in the large cities.

Thus far, I have been citing overall figures covering tenants in all income groups. I want to stress the fact, however, that the removal of rent controls would have the most serious effect on families in the lower income brackets because rent payments loom as a larger proportion of family income for low-income groups than for higher-income groups. This is indicated by a survey made by the Federal Reserve Board indicating that in 1948 rent constituted 23 percent of family income for families with incomes under $2,000 as compared with 12 percent for all families and only 9 percent for high income families with incomes of $5,000 or over.

However, even this is not the whole story as to the particularly severe effect that rent decontrol has on low-income families. The Department of Labor surveys previously mentioned show very clearly that in a clear majority of the cities where income data were obtained, a larger percentage of families in the low-income groups were affected by rent increases than the higher-income families. For example, in Topeka, Kans., 48 percent of families with incomes under $2,000 had their rents increased after decontrol as compared with only 22 percent of the families with $4,000 or more.

Knowing the significance of housing costs in the budgets of union members, the A. F. of L. has been deeply concerned with the problem of rent control. This has been evidenced in a number of official actions which the A. F. of L. has taken during the past year. I would like to briefly mention these statements.

The sixty-eighth convention of the A. F. of L., which met last October in St. Paul, Minn., urged without a dissenting vote that "until the supply of low-price housing units can be equalized with the demand, effective rent control must be maintained so that families will not be faced with exorbitant increases in rents."

This action by the most recent A. F. of L. convention has been supplemented by statements issued by the executive council at the two meetings it has held since the convention. At its January meeting the executive council issued a statement urging the need for continuance of the rent-control program until there is a large increase in the housing supply for families in the low- and middle-income groups. At its meeting held only 2 weeks ago the executive council again emphasized the need for continuance of rent control. At that time the council said: "* * * as long as the housing shortage exists, Federal rent control will be needed to prevent exorbitant increases in rents."

I can assure you that these official actions which the A. F. of L. has taken in support of rent control have not been intended to sustain any theory of Government control over our economy. On the contrary, the A. F. of L. has never been in favor of Government controls unless they were absolutely necessary. It is only because we are convinced of the extremely harmful effect which would result from the sudden removal of all Federal rent controls that we are now urging the extension of rent controls for another year.

The cold facts are that the removal of rent controls at the present time would have the same effect on millions of workers as a Nation-wide pay cut. This is what might be expected to happen. The average factory worker today doesn't make much more than $50 a week. A worker with a weekly income of $50 spends 20 percent of his income for rent. That amounts to about $10 a week. A rent increase of only 25 percent would be about $2.50 a week, and bear in mind that 25 percent is much less than the average increase in many of the communities surveyed by the Department of Labor. A $2.50 a week increase would represent 5 percent of his weekly income, and if it is assumed that he works 40 hours a week, it is the equivalent of a pay cut of 6 cents an hour.

You gentlemen are certainly familiar enough with the history of the labor movement in this country to know that American workers simply will not take that kind of treatment without protest. If rents are decontrolled on a Nation-wide basis, I am absolutely certain that unions all over the country will demand an increase in wages in order to maintain the current purchasing power of their members.

We can reach only one conclusion and that is that Federal rent controls must be extended for another year. While the A. F. of L. has criticized the present rent control law, we think that it does constitute a minimum basis for an effective rent control program. We are, therefore, recommending only one change in the present law.

We believe that the local option provisions in the present law should be changed so that local option could be made a two-way street. Under the present law a community has no means of restoring rent controls once it has used the local option method to decontrol rents in its area. We believe that this should be changed so that communities could bring about recontrol by local option in the same way that they are now able to accomplish decontrol. We think that they should have this right to recontrol by local option regardless of whether the decontrol was by previous local action, State action, or upon the initiative of the Housing Expediter.

I should like to state briefly our position on the provision in H. R. 8276 which would remove Federal rent controls in any local community which failed to declare prior to December 31, 1950, by resolution of its governing body or by popular referendum, "that a shortage of rental housing accommodations exists which requires the continuance of rent control." In view of the very simple method of obtaining decontrol available to every community through the local option method, we are frankly at a loss to understand why it is necessary to consider a proposal of this kind. Moreover, there is grave danger that unless such a proposal is surrounded with adequate safeguards, rent control will go by default in many communities even though a majority of the citizens recognize a continued need for it. A lethargic city council or one in which real estate interests were heavily represented might fail to take the necessary action required to retain rent controls in its community. We feel, therefore, that the present local option method is sufficiently flexible to permit any community where rent controls are no longer necessary to take the necessary action to remove Federal rent controls. This is no time to take chances with the welfare and prosperity of the American people.

We, in the American Federation of Labor, believe that the issue is clear. Federal rent controls must be extended beyond June 30, 1950. The failure to extend rent controls would mean sudden, large, and widespread increases in rents for millions of families who would be completely unprepared for such a blow. This must not be allowed to happen. We, therefore, urge that you recommend to the Congress that Federal rent controls be continued for another year.

Political "Medicine Show"

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an editorial which appeared in the Racine Journal Times, of Racine, Wis., on Tuesday, May 16, 1950, apropos the President's political junket across the United States at an expense of $250,000 of the American taxpayers' money:

POLITICAL "MEDICINE SHOW"

President Trumans' tour, which ended at Chicago last night in a blaze of fireworks, real and political, has been called various things. He labeled it "nonpolitical." His critics marked it down as a "barnstorming junket" to get votes for his party. But the Indianapolis News has picked another name for it—a "medicine show.'

We don't like to mention a President of the United States in the same breath as one of those old-time shows, with "the doctor" selling a "matchless remedy good for all the ills of man or beast," under gas lights in a tent between and after performances by second rate jugglers, comedians, singers, banjo players and other artists. But the News, it seems to us, has put the thing rather neatly, in this fashion:

"In his opening speech Monday night at Lincoln, Nebr., and in two of three addresses

Tuesday in Wyoming, the President played politics of the most obvious sort. His strategy is simple: To make at least one speech pink with promises for each of the economic or regional groups in the Nation.

"Before a farm audience at Lincoln, he vowed that farm income would be raised even higher, mainly through that economic nightmare, the Brannan plan. At Casper, he employed the ancient political trick of playing off one region against another. The East, home of the selfish and shortsighted, is against the development of the natural resources of the West, he said. The Government, he assured the westerners, is the best means 'for development of power, navigation, and irrigation.'

"Since Cheyenne is a fairly sizable community, the President brought out his panacea for small business. The little merchant, he maintained—like the farmers and the ranchers—needs only to put his trust in the administration and Harry Truman. There was no mention of the real troubles of small and big business alike—the confiscatory taxes made necessary by his supergovernment and wild-spending administration.

"The President could answer a very real need on this trip if he would only discuss the issues that worry every citizen these days—the staggering size of the national debt, the growing inflation stoked by deficit spending, revision of the Taft-Hartley Act, the seemingly endless strikes, the Communist threat, both at home and abroad. The people of the Nation want to hear these problems discussed clearly and honestly. The man who should take the lead in presenting them is the President of the United States.

"Instead, he is putting on a medicine show. And implicit in all his talks is the dangerous medicine that you don't have any troubles that the Government can't cure. Individual responsibility, personal initiative and enterprise are played down for the universal palliative of a supergovernment. Even more alarming, it appears that Mr. Truman is personally convinced that the Government can run people's lives better than they can run their own. Such a man does not belong at the head of what is still a Nation of free people, for people are no longer free who look to government, not themselves, for salvation."

Excise Taxes

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over station WMEX, Boston, Mass., Monday, May 22, 1950:

REPEAL EXCISE TAXES

Ladies and gentlemen of the radio audience, broadly speaking, business is booming at most levels, with the exception of some retail outlets on Main Street, U. S. A.

The housewives of the Nation who, by instinct and necessity, will not pay more for any article than it is worth, are staging a quiet but effective buyers' strike. This is hurting many small-business enterprises through no fault of the operators themselves.

Why?

In definite protest against excessive taxation.

As responsible citizens they recognize the need for a Federal income tax, a corporation tax, for gift, estate, and other direct taxes to pay for those public programs which they approve.

This money is spent for the purposes of general government, to pay the interest on the public debt, for public works, education, housing, labor, to develop our natural resources, for military preparedness, foreign aid, help to veterans, social security, and aid to farmers.

The average American, however, does balk against the now-you-see-it-and-now-you-don't taxes variously referred to as hidden, wartime, luxury, or excise.

Excise means: "An inland tax imposed on certain commodities of home production and consumption as tobacco, spirits, etc."

What we are mainly concerned about is this et cetera business, under which so many items have been added that the total result is a jigsaw puzzle that no one can put together coherently.

It has been proposed by the President that a number of these nuisance taxes be eliminated to the extent that the resulting loss in revenue is replaced by revenue obtained from closing loopholes in the present tax laws.

Without getting lost in the dense jungle of those tax laws, whose loopholes the average American can't seem to find, I wish to say that the Congress will go the President one better and do a real bulldozing clearance on excise taxes. If the President should veto such savings, I believe that the Congress will override his blockade.

Originally excise taxes were supposed to be regulatory. We remember the taxes on tobacco and liquors, even before we had a Federal income tax. Of course in wartime they must be placed on all so-called civilian goods, so that the raw materials and the productive energies of these industries shall be channeled into the war effort.

In peacetime there is no justification for such regulatory taxes except to provide extra money to play around with, for those in Government who want to spend over and above the needs for special programs.

For our own information and guidance, it is a pity that every article that is sold in the United States does not have affixed to it a stamp showing the total percentage of Federal taxes represented in the cost of each item. Then we would react promptly to the true score and as a Nation, we would not spend beyond our means.

Where the excise take is clearly stated as in the purchase of fur coats, leather goods, and that et cetera business again, the consumer rightly gets up on his high horse and refuses to buy these penalties.

When it comes to a loaf of bread or an egg or powder for the baby, the Government hasn't got the nerve to tell people what it is taking from them for these basic necessities of life. The trick is to keep these taxes hidden. But I say that we should bring these out into the open so that public resentment will demand elimination or at least reduction of all consumer levies.

Hold on to your pocketbook as you hear these facts, revealed by a private research organization known as the Tax Foundation.

That loaf of bread on the table contains something besides wheat. You can't see but maybe you can feel the 151 different taxes that inflate its price. "The Egg and I" is not as simple as all that. One hundred anonymous taxes are also wrapped up in that little shell.

Or the house in which you are now living. If it is a fairly new one, it has from 700 to 1,000 invisible rat holes through which your money has run out in taxation and is still running out.

Perhaps you have a martini or a glass of beer in your hand. Don't drop it when you hear that Uncle Sam gets a real flick out of taking each year well over $2,000,000,000 in taxes on liquor.

The lady in the house together with her sisters throughout the Nation pay out in taxes each year $210,000,000 on jewelry, $34,000,000 on cosmestics and toilet articles, $32,000,000 on furs, and $82,000,000 on luggage. And that is only the beginning of a long line of other confiscations.

No wonder its so hard to make both ends meet in our family budget, when Uncle Sam, our problem relative, picks up so much unguarded change around the house when we're not looking.

Sometimes we wonder what the baby is crying about. Maybe its the pinch of taxation that is bothering him, and, even though he doesn't understand what its all about, he's being hurt and he's letting us know about it.

Perhaps we, who are grown up, and can trace the origin of our financial anemia, will also complain, and insist that this excise blood-letting be stopped, so that economic health and purchasing power will be restored, to us, and the Nation.

American housewives, who do most of the purchasing for 150 million people are holding back until these wartime levies are crossed off the books and prices come down. They expect this to be done and they are waiting until it is done, before they will buy freely. Their common sense is far ahead of the lawmakers.

These unrealistic levies slow down trade. Shrinking demand from retail outlets, reaching back to the factories, curtails production and causes unemployment that is wholly unnecessary.

As an example, let us look at the fur and leather goods industries because of seasonal factors affecting them, and because their products are an important item in the average woman's budget.

At the present time there is a 20 percent wartime excise tax on fur- and leather-luggage products.

Summer is usually the busy season in the fur industry, and if any relief is to be provided, it should be done without further delay.

In the summer of 1949, one-third of the workers were unemployed, one-third were working part-time, and only one-third had steady jobs.

This industry employs over 100,000 persons, not counting the hundreds of thousands of farmers who serve as suppliers for the industry during the winter months. There are over 5,000 small firms engaged in fur dressing and dyeing, manufacturing, and retailing. Last year they suffered from a drastic 30 percent drop in sales.

Tax receipts went down accordingly. From the fiscal years 1947 to 1949, inclusive, they receded from $97,000,000 to $79,000,000 to $53,000,000.

The effect on the labor force in this trade is tragic. Most of the workers are middle-aged or over, having devoted their best years in acquiring a highly specialized skill. It is impossible for them to get employment elsewhere. The burden of maintaining them is an added expense to Government which would not be necessary if they were given an opportunity for productive employment.

The unfair competition in the present tax law is dramatically revealed by the fact that a $200-cloth coat with fur trimming is tax-free, but a fur coat costing $100 has $20 added to the price to pay for the Federal tax.

In the northern half of the United States where extra-warm coats are a necessity, an office girl or mill worker in order to buy a relatively cheap fur coat costing two to three hundred dollars would have to work an extra 2 weeks just to pay the tax. This is a mighty high tariff to impose on our own working people.

The luggage industry is also stricken by the excise taxes which discourage buying. Winter and summer, the American woman must have a durable leather handbag. In it she carries and protects a wonderful assortment of articles necessary to her morale,

from assorted keys to beauty aids to charge cards and checkbooks, without it an American woman would be lost, and so would retail business which puts so much merchandise into that handbag and takes so much money out of it.

But the Government insists on a prior claim to its purchasing power, leaving less and less to the merchant who would give far greater value in return. It not only taxes the contents but the leather container itself. As a result, there was a 30 to 40 percent curtailment in production last year in those plants manufacturing handbags, luggage, suitcases, and personal leather goods.

Even the Government's cut went down, which does not seem to be a successful result, even from a tax viewpoint. When it takes too much the source dries up.

But when it comes to classifying oils, creams, and powders that are necessary for a baby's health and comfort as luxuries, with a 20 percent tax added, we cannot find words to express our exasperation. The taxation without representation against which our forefathers rebelled was nothing compared with this all-time low. Unless we reverse the tax trend, some ingenious tax spender may yet come up with the idea that we should tax babies for being born.

Even the poor man's entertainment, the movies, are saddled with a tax bite that makes a young fellow reach for a $2 bill before he can think of taking his best girl to the neighborhood theater.

But, you ask, how is the Federal Government going to get by if these special levies are canceled?

There are some obligations which cannot be repudiated. In other fields some economies could be effected through elimination of duplicating functions. This could be done gradually in some agencies without causing harm to anyone, by a go-slow policy in filling vacancies.

How much revenue would the Government lose if the wartime excise taxes are repealed? About one and one-half billion dollars.

Where will the Government get the money to replace this loss, assuming that there is no reduction in Government expenditures?

Let's take a look at the budget.

It now includes the sum of one billion, nine hundred and twenty million to make loans and to purchase certain assets, many of which are already guaranteed by Government agencies. Guaranteed mortgages and loans comprise a major part of this item.

What does this mean?

In this case the Government is counting loans, as money spent beyond recall. But this is a recoverable asset. Most, if not all of this so-called expenditure will be paid back.

Therefore, the actual expenditures in the budget can be reduced by this amount. And this sum alone is greater than the net loss of all wartime excise taxes. Therefore, we can eliminate these nuisance taxes without putting the Government further into the red.

There is one other important point which the tax gatherers overlook.

Tax reduction stimulates business activity. It enables manufacturers, merchants and operators of service establishments to offer the public lower prices. This encourages people to buy. The volume of economic activity rises.

And the Government is happily surprised to find that the larger turn-over of goods and services, thus inspired, increases the revenue it gets through normal income tax channels.

This relief for a Nation can be accomplished without any sacrifice of essential Government services.

We have only to look at England, where everyone is so burdened down by ever-present regulations and taxes that they have all they can do to get by without getting ahead, to learn that such a system is not the way for us.

Excise taxes in the United States must be cleaned out.

So that the housewife can buy, so that her husband may have satisfying employment, so that business may prosper, so that the United States which means all of us, can enjoy the incentives that make for genuine progress.

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the twenty-sixth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

The natural imbecility of communism was never more clearly demonstrated to the world than in the matter of seeking diplomatic recognition for the Soviet regime in Russia. It wanted status, yet its acts every day were a warning to all against it.

Here was a government which, in blood and terror, had seized power by revolution against the majority will of the people, had abolished all rights of property and individual freedom and had set up as its diplomatic weapon, an international Communist conspiracy to sovietize the whole world.

And as soon as possible, it had begun using Communist branches in every country possible, actually to precipitate those revolutions.

In the United States of America, those early acts of terrorism involved bombs in the mail, wholesale strikes that wrecked the unions involved and cost the industries irreparable harm, and the general public much more.

In Germany, already shaken and rattled by defeat and the abdication of the Hohenzollern monarchy, the Communists were even more violent. Their Spartacus Bund drove police out of station houses, threatened the control of the cities, and came very near indeed to tearing the very foundations of organized government apart.

As a matter of fact, the German Communists of the period immediately at the end of World War I, not only came very near to taking over Germany but also the international Communist movement itself.

They were defeated only by the narrowest margin simply because the Russians had a head start on prestige in the central agency, the Communist International.

And so there developed the first big fracture in Communist international solidarity. What Tito did to Stalin in the period 1945–49, the Germans foreshadowed in 1919–22, and the Communists of America repeated in a few years more. A chapter on this American episode follows in a few days.

These internal fights demonstrated that communism's international power plays would sooner or later have to be operated for the gain of one country against all the rest and that for all the big talk of Lenin, Trotsky and the others about the "international brotherhood of man." Communists, like everybody else, would have to choose between nations.

Nothing was ever more important than this early disclosure of difference between Communist theory and Communist fact.

For in the theory of Karl Marx's socialistic science, nations and national interest were supposed to fade out in the face of communism. The "oppressed workers of the world" would join with one another, irrespective of national identity, and all of mankind would be equal.

But when fact collided with theory in the years following, it was theory that took a licking.

International communism quickly degenerated to a weapon of national foreign policy for the government of just one nation, Russia.

Thus, a Klaus Fuchs, stealing an atom bomb, did so not for the international brotherhood, but merely as a Russian spy.

Three United States Secretaries of State refused to be fooled by the Soviet appeal for diplomatic status here. First, Robert Lansing, who warned caution to American businessmen against extending credit or taking Soviet promises to pay.

Lansing found it impossible to get along with Woodrow Wilson, then sinking into his last illness, and was succeeded by Bainbridge Colby. The first really analytical review of Soviet activities I have come across in my time was Colby's letter to the Italian ambassador, on August 10, 1920.

Colby pointed out that the United States of America had been the first nation in the world to recognize the parliamentary government set up in Russia after the abdication of the czar, Nicholas II, and that our interest was wholly for a Russian republic on western lines. The Bolsheviks, he emphasized, had taken by force and after two and a half years still had not allowed a popular election.

Still, England, France, and European nations were, after their custom, inclining to go along. True, the utopian story was already falling apart. Decrees were being issued for punishment of workers who were 10 minutes late for work. The 10-hour day was extended to 12 hours. Eggs were nationalized.

But in England a Socialist government took office in 1924 and that broke the last ice. The mere de facto trade agreement that had been executed in 1921, became a formal exchange of diplomatic envoys. It was this same Socialist government, too, that put Russia's friend, Hewlett Johnson in office as dean of Canterbury. A sketch of this odd character will be given later.

The presidential election of 1920 came and went. In the course of it, the State Department let its polished foot slip and tried to smear Harding by releasing a little story to the effect that a Mr. Washington D. Vanderlip had been rummaging around Russia trying to talk, in Harding's name, about Russia buying a lot of railroad engines here and thus warming American inclinations toward diplomatic recognition.

But that bit of inexcusable mud didn't stick.

Harding was elected, Charles Evans Hughes became Secretary of State and Samuel Gompers, head of the American Federation of Labor, asked him what the outlook would be for Soviet recognition.

On April 18, 1921, Hughes wrote Gompers his famous letter setting forth the common sense and more than that, the moral basis of judgment to be applied. Hughes stuck to that position against propaganda from all sides.

One Alton B. Parker, on behalf of the National Civil Federation, and the Women's International League for Peace and Freedom—familiar sounding titles?—each tried him and got the same answer. So did various committees of Congress.

Hughes laid it down that the Soviet regime was built on involuntary servitude—slavery—and that it represented not an advance toward the light but a retreat toward worse darkness than before. His doctrine fixed a course for the United States of America, that had Stalin backed in a corner,

Tuesday in Wyoming, the President played politics of the most obvious sort. His strategy is simple: To make at least one speech pink with promises for each of the economic or regional groups in the Nation.

"Before a farm audience at Lincoln, he vowed that farm income would be raised even higher, mainly through that economic nightmare, the Brannan plan. At Casper, he employed the ancient political trick of playing off one region against another. The East, home of the selfish and shortsighted, is against the development of the natural resources of the West, he said. The Government, he assured the westerners, is the best means 'for development of power, navigation, and irrigation.'

"Since Cheyenne is a fairly sizable community, the President brought out his panacea for small business. The little merchant, he maintained—like the farmers and the ranchers—needs only to put his trust in the administration and Harry Truman. There was no mention of the real troubles of small and big business alike—the confiscatory taxes made necessary by his supergovernment and wild-spending administration.

"The President could answer a very real need on this trip if he would only discuss the issues that worry every citizen these days—the staggering size of the national debt, the growing inflation stoked by deficit spending, revision of the Taft-Hartley Act, the seemingly endless strikes, the Communist threat, both at home and abroad. The people of the Nation want to hear these problems discussed clearly and honestly. The man who should take the lead in presenting them is the President of the United States.

"Instead, he is putting on a medicine show. And implicit in all his talks is the dangerous medicine that you don't have any troubles that the Government can't cure. Individual responsibility, personal initiative and enterprise are played down for the universal palliative of a supergovernment. Even more alarming, it appears that Mr. Truman is personally convinced that the Government can run people's lives better than they can run their own. Such a man does not belong at the head of what is still a Nation of free people, for people are no longer free who look to government, not themselves, for salvation."

Excise Taxes

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over station WMEX, Boston, Mass., Monday, May 22, 1950:

REPEAL EXCISE TAXES

Ladies and gentlemen of the radio audience, broadly speaking, business is booming at most levels, with the exception of some retail outlets on Main Street, U. S. A.

The housewives of the Nation who, by instinct and necessity, will not pay more for any article than it is worth, are staging a quiet but effective buyers' strike. This is hurting many small-business enterprises through no fault of the operators themselves.

Why?

In definite protest against excessive taxation.

As responsible citizens they recognize the need for a Federal income tax, a corporation tax, for gift, estate, and other direct taxes to pay for those public programs which they approve.

This money is spent for the purposes of general government, to pay the interest on the public debt, for public works, education, housing, labor, to develop our natural resources, for military preparedness, foreign aid, help to veterans, social security, and aid to farmers.

The average American, however, does balk against the now-you-see-it-and-now-you-don't taxes variously referred to as hidden, wartime, luxury, or excise.

Excise means: "An inland tax imposed on certain commodities of home production and consumption as tobacco, spirits, etc."

What we are mainly concerned about is this et cetera business, under which so many items have been added that the total result is a jigsaw puzzle that no one can put together coherently.

It has been proposed by the President that a number of these nuisance taxes be eliminated to the extent that the resulting loss in revenue is replaced by revenue obtained from closing loopholes in the present tax laws.

Without getting lost in the dense jungle of those tax laws, whose loopholes the average American can't seem to find, I wish to say that the Congress will go the President one better and do a real bulldozing clearance on excise taxes. If the President should veto such savings, I believe that the Congress will override his blockade.

Originally excise taxes were supposed to be regulatory. We remember the taxes on tobacco and liquors, even before we had a Federal income tax. Of course in wartime they must be placed on all so-called civilian goods, so that the raw materials and the productive energies of these industries shall be channeled into the war effort.

In peacetime there is no justification for such regulatory taxes except to provide extra money to play around with, for those in Government who want to spend over and above the needs for special programs.

For our own information and guidance, it is a pity that every article that is sold in the United States does not have affixed to it a stamp showing the total percentage of Federal taxes represented in the cost of each item. Then we would react promptly to the true score and as a Nation, we would not spend beyond our means.

Where the excise take is clearly stated as in the purchase of fur coats, leather goods, and that et cetera business again, the consumer rightly gets up on his high horse and refuses to buy these penalties.

When it comes to a loaf of bread or an egg or powder for the baby, the Government hasn't got the nerve to tell people what it is taking from them for these basic necessities of life. The trick is to keep these taxes hidden. But I say that we should bring these out into the open so that public resentment will demand elimination or at least reduction of all consumer levies.

Hold on to your pocketbook as you hear these facts, revealed by a private research organization known as the Tax Foundation.

That loaf of bread on the table contains something besides wheat. You can't see but maybe you can feel the 151 different taxes that inflate its price. "The Egg and I" is not as simple as all that. One hundred anonymous taxes are also wrapped up in that little shell.

Or the house in which you are now living. If it is a fairly new one, it has from 700 to 1,000 invisible rat holes through which your money has run out in taxation and is still running out.

Perhaps you have a martini or a glass of beer in your hand. Don't drop it when you hear that Uncle Sam gets a real flick out of taking each year well over $2,000,000,000 in taxes on liquor.

The lady in the house together with her sisters throughout the Nation pay out in taxes each year $210,000,000 on jewelry, $34,000,000 on cosmestics and toilet articles, $32,000,000 on furs, and $82,000,000 on luggage. And that is only the beginning of a long line of other confiscations.

No wonder its so hard to make both ends meet in our family budget, when Uncle Sam, our problem relative, picks up so much unguarded change around the house when we're not looking.

Sometimes we wonder what the baby is crying about. Maybe its the pinch of taxation that is bothering him, and, even though he doesn't understand what its all about, he's being hurt and he's letting us know about it.

Perhaps we, who are grown up, and can trace the origin of our financial anemia, will also complain, and insist that this excise blood-letting be stopped, so that economic health and purchasing power will be restored, to us, and the Nation.

American housewives, who do most of the purchasing for 150 million people are holding back until these wartime levies are crossed off the books and prices come down. They expect this to be done and they are waiting until it is done, before they will buy freely. Their common sense is far ahead of the lawmakers.

These unrealistic levies slow down trade. Shrinking demand from retail outlets, reaching back to the factories, curtails production and causes unemployment that is wholly unnecessary.

As an example, let us look at the fur and leather goods industries because of seasonal factors affecting them, and because their products are an important item in the average woman's budget.

At the present time there is a 20 percent wartime excise tax on fur- and leather-luggage products.

Summer is usually the busy season in the fur industry, and if any relief is to be provided, it should be done without further delay.

In the summer of 1949, one-third of the workers were unemployed, one-third were working part-time, and only one-third had steady jobs.

This industry employs over 100,000 persons, not counting the hundreds of thousands of farmers who serve as suppliers for the industry during the winter months. There are over 5,000 small firms engaged in fur dressing and dyeing, manufacturing, and retailing. Last year they suffered from a drastic 30 percent drop in sales.

Tax receipts went down accordingly. From the fiscal years 1947 to 1949, inclusive, they receded from $97,000,000 to $79,000,000 to $53,000,000.

The effect on the labor force in this trade is tragic. Most of the workers are middle-aged or over, having devoted their best years in acquiring a highly specialized skill. It is impossible for them to get employment elsewhere. The burden of maintaining them is an added expense to Government which would not be necessary if they were given an opportunity for productive employment.

The unfair competition in the present tax law is dramatically revealed by the fact that a $200-cloth coat with fur trimming is tax-free, but a fur coat costing $100 has $20 added to the price to pay for the Federal tax.

In the northern half of the United States where extra-warm coats are a necessity, an office girl or mill worker in order to buy a relatively cheap fur coat costing two to three hundred dollars would have to work an extra 2 weeks just to pay the tax. This is a mighty high tariff to impose on our own working people.

The luggage industry is also stricken by the excise taxes which discourage buying. Winter and summer, the American woman must have a durable leather handbag. In it she carries and protects a wonderful assortment of articles necessary to her morale,

from assorted keys to beauty aids to charge cards and checkbooks, without it an American woman would be lost, and so would retail business which puts so much merchandise into that handbag and takes so much money out of it.

But the Government insists on a prior claim to its purchasing power, leaving less and less to the merchant who would give far greater value in return. It not only taxes the contents but the leather container itself. As a result, there was a 30 to 40 percent curtailment in production last year in those plants manufacturing handbags, luggage, suitcases, and personal leather goods.

Even the Government's cut went down, which does not seem to be a successful result, even from a tax viewpoint. When it takes too much the source dries up.

But when it comes to classifying oils, creams, and powders that are necessary for a baby's health and comfort as luxuries, with a 20 percent tax added, we cannot find words to express our exasperation. The taxation without representation against which our forefathers rebelled was nothing compared with this all-time low. Unless we reverse the tax trend, some ingenious tax spender may yet come up with the idea that we should tax babies for being born.

Even the poor man's entertainment, the movies, are saddled with a tax bite that makes a young fellow reach for a $2 bill before he can think of taking his best girl to the neighborhood theater.

But, you ask, how is the Federal Government going to get by if these special levies are canceled?

There are some obligations which cannot be repudiated. In other fields some economies could be effected through elimination of duplicating functions. This could be done gradually in some agencies without causing harm to anyone, by a go-slow policy in filling vacancies.

How much revenue would the Government lose if the wartime excise taxes are repealed? About one and one-half billion dollars.

Where will the Government get the money to replace this loss, assuming that there is no reduction in Government expenditures?

Let's take a look at the budget.

It now includes the sum of one billion, nine hundred and twenty million to make loans and to purchase certain assets, many of which are already guaranteed by Government agencies. Guaranteed mortgages and loans comprise a major part of this item.

What does this mean?

In this case the Government is counting loans, as money spent beyond recall. But this is a recoverable asset. Most, if not all of this so-called expenditure will be paid back.

Therefore, the actual expenditures in the budget can be reduced by this amount. And this sum alone is greater than the net loss of all wartime excise taxes. Therefore, we can eliminate these nuisance taxes without putting the Government further into the red.

There is one other important point which the tax gatherers overlook.

Tax reduction stimulates business activity. It enables manufacturers, merchants and operators of service establishments to offer the public lower prices. This encourages people to buy. The volume of economic activity rises.

And the Government is happily surprised to find that the larger turn-over of goods and services, thus inspired, increases the revenue it gets through normal income tax channels.

This relief for a Nation can be accomplished without any sacrifice of essential Government services.

We have only to look at England, where everyone is so burdened down by ever-present regulations and taxes that they have all they can do to get by without getting ahead, to learn that such a system is not the way for us.

Excise taxes in the United States must be cleaned out.

So that the housewife can buy, so that her husband may have satisfying employment, so that business may prosper, so that the United States which means all of us, can enjoy the incentives that make for genuine progress.

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the twenty-sixth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

The natural imbecility of communism was never more clearly demonstrated to the world than in the matter of seeking diplomatic recognition for the Soviet regime in Russia. It wanted status, yet its acts every day were a warning to all against it.

Here was a government which, in blood and terror, had seized power by revolution against the majority will of the people, had abolished all rights of property and individual freedom and had set up as its diplomatic weapon, an international Communist conspiracy to sovietize the whole world.

And as soon as possible, it had begun using Communist branches in every country possible, actually to precipitate those revolutions.

In the United States of America, those early acts of terrorism involved bombs in the mail, wholesale strikes that wrecked the unions involved and cost the industries irreparable harm, and the general public much more.

In Germany, already shaken and rattled by defeat and the abdication of the Hohenzollern monarchy, the Communists were even more violent. Their Spartacus Bund drove police out of station houses, threatened the control of the cities, and came very near indeed to tearing the very foundations of organized government apart.

As a matter of fact, the German Communists of the period immediately at the end of World War I, not only came very near to taking over Germany but also the international Communist movement itself.

They were defeated only by the narrowest margin simply because the Russians had a head start on prestige in the central agency, the Communist International.

And so there developed the first big fracture in Communist international solidarity. What Tito did to Stalin in the period 1945–49, the Germans foreshadowed in 1919–22, and the Communists of America repeated in a few years more. A chapter on this American episode follows in a few days.

These internal fights demonstrated that communism's international power plays would sooner or later have to be operated for the gain of one country against all the rest and that for all the big talk of Lenin, Trotsky and the others about the "international brotherhood of man." Communists, like everybody else, would have to choose between nations.

Nothing was ever more important than this early disclosure of difference between Communist theory and Communist fact.

For in the theory of Karl Marx's socialistic science, nations and national interest were supposed to fade out in the face of communism. The "oppressed workers of the world" would join with one another, irrespective of national identity, and all of mankind would be equal.

But when fact collided with theory in the years following, it was theory that took a licking.

International communism quickly degenerated to a weapon of national foreign policy for the government of just one nation, Russia.

Thus, a Klaus Fuchs, stealing an atom bomb, did so not for the international brotherhood, but merely as a Russian spy.

Three United States Secretaries of State refused to be fooled by the Soviet appeal for diplomatic status here. First, Robert Lansing, who warned caution to American businessmen against extending credit or taking Soviet promises to pay.

Lansing found it impossible to get along with Woodrow Wilson, then sinking into his last illness, and was succeeded by Bainbridge Colby. The first really analytical review of Soviet activities I have come across in my time was Colby's letter to the Italian ambassador, on August 10, 1920.

Colby pointed out that the United States of America had been the first nation in the world to recognize the parliamentary government set up in Russia after the abdication of the czar, Nicholas II, and that our interest was wholly for a Russian republic on western lines. The Bolsheviks, he emphasized, had taken by force and after two and a half years still had not allowed a popular election.

Still, England, France, and European nations were, after their custom, inclining to go along. True, the utopian story was already falling apart. Decrees were being issued for punishment of workers who were 10 minutes late for work. The 10-hour day was extended to 12 hours. Eggs were nationalized.

But in England a Socialist government took office in 1924 and that broke the last ice. The mere de facto trade agreement that had been executed in 1921, became a formal exchange of diplomatic envoys. It was this same Socialist government, too, that put Russia's friend, Hewlett Johnson in office as dean of Canterbury. A sketch of this odd character will be given later.

The presidential election of 1920 came and went. In the course of it, the State Department let its polished foot slip and tried to smear Harding by releasing a little story to the effect that a Mr. Washington D. Vanderlip had been rummaging around Russia trying to talk, in Harding's name, about Russia buying a lot of railroad engines here and thus warming American inclinations toward diplomatic recognition.

But that bit of inexcusable mud didn't stick.

Harding was elected, Charles Evans Hughes became Secretary of State and Samuel Gompers, head of the American Federation of Labor, asked him what the outlook would be for Soviet recognition.

On April 18, 1921, Hughes wrote Gompers his famous letter setting forth the common sense and more than that, the moral basis of judgment to be applied. Hughes stuck to that position against propaganda from all sides.

One Alton B. Parker, on behalf of the National Civil Federation, and the Women's International League for Peace and Freedom—familiar sounding titles?—each tried him and got the same answer. So did various committees of Congress.

Hughes laid it down that the Soviet regime was built on involuntary servitude—slavery—and that it represented not an advance toward the light but a retreat toward worse darkness than before. His doctrine fixed a course for the United States of America, that had Stalin backed in a corner,

by 1933, for without United States recognition, the Soviet world operation was fatally crippled.

F. D. Roosevelt changed the course.

And here is one little bit of history never before disclosed. The man who wrote Hughes' first draft brief on the Communist issue was J. Edgar Hoover, now head of the FBI.

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the twenty-seventh article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

A fish peddler, a shoemaker, and a Harvard professor can best be thanked for the worst that happened to the United States of America in 1920.

The first two were Niccolo Sacco and Bartolomeo Vanzetti. The Harvard professor was Felix Frankfurter.

Sacco and Vanzetti were typical anarchists of that time, simple-minded believers that killing and robbing in the name of revolution would bring the United States to its knees.

Frankfurter—well, someday I hope to get back to a study of this interesting gentleman's career that I started some years ago. Those who are interested in the work thus far can read in the Times-Herald of November 1, 1942, the article The New Deal Richelieu, Justice Felix Frankfurter.

At any rate, Frankfurter in World War I was rummaging around Washington at works that have never been sufficiently well examined.

And by 1920, he had run out of other things to do except to run around Boston admiring himself in the shadow of Mr. Justice O. W. Holmes.

The Russian explosion and its echoes in Europe and in the United States were undertaken without anybody getting Prof. Narcissus Frankfurter's consent.

And then on April 15, 1920, in South Braintree, Mass., somebody held up and shot dead Paymaster Fred Parmenter and Alex Berardelli, his helper, and made off with two cash boxes.

Vanzetti was already under indictment for another hold-up in Bridgewater. And all this happened, you must remember, in the period of bombs in the United States mails, in Wall Street, and general violence.

The minds of professors were unsettled, all around. They couldn't explain what had happened to the celebrated democracy the United States of America was supposed to have made the world free for, in the just-ended war.

Woodrow Wilson, their immaculate ideal, the fellow who had made it from the halls of ivy to the hall of fame, was running out of gas.

He had got the United States into a war it didn't want, but he couldn't get it to swallow either his Treaty of Versailles or his League of Nations.

The biggest victory won out of the war of 1914–18, except for communism, was the imposition of prohibition on the American Nation.

Even that wouldn't have been possible if the brewers of the United States of America had been Irish, French, or British, instead of having such names as Fleiglehammer, Bosch, and Schtinkel.

About the only game left in town, therefore, was the Communist development, but it had room only for professionals. And the American intelligentsia were still pretty much under the influence of the genteel tradition.

An outfit that openly mocked at God Almighty, had just set up to destroy all vestige of private property, that was allowing people to marry by mere application at one desk and to divorce by equally simple application at another, had little enough charm for most.

But then came Sacco, Vanzetti, and Frankfurter.

The first two were nailed by the cops in short order after the shooting in South Braintree. And when it was discovered they were not only hold-up suspects but also anarchists, people in and around Boston got good and excited.

Their case fit in with the May Day bombs and the strikes and the stories everybody remembered about revolutionary "expropriations," polite word for murder and robbery in prewar Russia.

Arguments broke out as to whether Sacco and Vanzetti were guilty of anarchy or of murder and armed robbery. Just the kind of dish for a Frankfurter, as see his appearance 29 years later in defense of Alger Hiss, the Harvard traitor and Russian spy.

In no time at all, the American intelligentsia had a cause. They could escape the embarrassments of Wilson and his peace by fixing on the martyrdom of Sacco and Vanzetti. They jumped in and built a $50,000 defense fund for the "martyrs."

The case came on before one Webster Thayer, of Massachusetts Superior court, on May 31, 1921. On July 14, after a horse opera at least as wild and emotional as the Hiss case, both were found solidly guilty.

Behind the yells and screams and campus ragings that attended all this the hand of Frankfurter was everywhere.

The eminent poetess, Edna St. Vincent Millay, shed tears in public. The notoriously clear-thinking and accurate journalist, Heywood Broun, even managed to get himself arrested as thousands cheered.

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the twenty-eighth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

What gave communism the emotional horsepower that sent it whirling across the American college campus in the happy years, 1920–30? What made it fashionable to talk the radical jargon?

I suppose one explanation involves the mere novelty of it.

But the more visible, potent influence was the celebrated trial of Niccolo Sacco and Bartolomeo Vanzetti, two anarchists charged with the hold-up and murder of a payroll clerk and his helper at South Braintree, Mass., April 15, 1920.

Many a word has been written about that case, just as many a word will undoubtedly be written about the modern instance of Alger Hiss. And as in his, the arguments revolve around a claim that the accused was tried not for his acts but for his politics.

That, of course, is not a novel claim, nor is it always a false one. Men have been tried and sentenced and shot for what they believe, rather than for anything they have ever done.

Joseph Stalin has had more people killed just for wrong thoughts, than any tyrant in modern times. Hitler was a piker, beside him.

As to the case of Hiss, that is fresh enough for everybody to remember that he was given as fair a chance against the evidence as any man can ask, and yet he lost.

The Sacco-Vanzetti evidence has long since faded from public memory and it is too intricate and protracted to review here. The main thing is that the record was all made in public before Judge Webster Thayer of the Massachusetts Superior Court and the defendants had ample funds and defense counsel. And that they were held guilty.

But that was not enough for Prof. Felix Frankfurter of the Harvard law school. Here was a chance for him to become a campus hero, to draw the scandalized criticism of established, settled adult Boston and be Achilles with the sophomores.

There is one like that on every campus, and at Harvard there have always been young men with more money than brains, ready for any kind of idea or action that will express emotional revolt.

The campus radicals adopted the Sacco-Vanzetti case as their own. It had everything. There was opportunity to hiss and boo established authority. A full professor of law was in charge of the phrase making, and the silly rich could blubber in their prohibition hooch about the persecuted fish peddler and the downtrodden cobbler.

The fact that Sacco was not only a fish peddler, but also a believer in anarchy and that Vanzetti's shoemaking was just a cover for his attachment to violent revolution, meant nothing.

And so, when the brace of them were found guilty, the campus cry was "frame-up." As the appeals against the verdict hammered against the doors of the court, the Sacco-Vanzetti trial became a world cause among radicals of all kinds in all countries.

Frankfurter wrote a dissenting opinion on the opinions of the established courts—though nobody asked him to—and things got so noisy that the Governor of Massachusetts finally had the case reviewed.

He assigned it to the president of Harvard university, the president of the Massachusetts Institute of Technology and a respected retired judge. They said the trial was fair and the record sound.

Sacco and Vanzetti finally went to the chair, on August 23, 1927, in the midst of an international uproar.

American embassies were assaulted in several countries.

Crowds moaned in the streets of Boston. Bombs were set off in New York and Philadelphia—and finally somebody was thoughtful enough also to blow up the home of Judge Thayer.

And still the case remained a perennial Harvard cause. When the college celebrated its three hundredth anniversary in 1936, up popped some Sacco-Vanzetti clubmen with a memorial entitled "Walled In This Tomb."

All in all, Frankfurter had managed to get himself thoroughly publicized. Sacco and Vanzetti had enjoyed 7 years of magnificent attention from romantics of all kinds, debutantes to millionaires.

And the Communists had just what they wanted—some fashionable martyrs.

Who, as it happened, were not Communists at all, but their mortal revolutionary enemies, anarchists. But that didn't matter at all. As in the Hiss case, today, it wasn't the facts but the fancy, that counted.

It was not the facts of the Sacco-Vanzetti case that made it one of the most powerful of all weapons ever to fall into the hands of Communist boob-snatchers on these shores.

It was simply that the collegiate glory-hunters such as Frankfurter charged it with such emotional high voltage and thereby attracted the class of person—such as we always have with us—who so easily identifies one set of facts with another set of feelings.

To challenge the record of the Sacco-Vanzetti trial was to show your colors in revolt against the Babbitts and the stuffed shirts—whom we also always have with us—and in a matter of two pints of Prohibition rye, to be singing the Internationale.

Discouraging Thrift

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edson B. Smith in a recent issue of the Boston (Mass.) Herald:

DISCOURAGING THRIFT

The House Ways and Means Committee tentatively has decided to impose the corporation tax at the existing rate (now 38 percent) on the retained income of mutual savings banks and savings and loan associations.

This, in our opinion, would be thoroughly bad legislation. Savings banks and savings and loan associations are not profit institutions. In the case of a savings bank most States compel the transferrence of a certain percentage of income to reserves to build up a fund for the protection of depositors. It seems ironical that the Commonwealth of Massachusetts tell a savings bank that it must set aside a certain percentage of its income as a reserve and then the Federal Government come along and slap a tax on it.

If the undistributed earnings of savings banks are taxed it will mean inevitably that either dividends will have to be reduced or the amount transferred to surplus be cut. The first would reduce the incentive to save and the second would weaken the condition of the banks.

It ought to be pointed out that the money deposited in savings banks already has been taxed.

If the Federal Government really wants to discourage thrift, we can think of no better means to accomplish this end than by this proposed legislation.

A Historic Week

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article taken from the New York Times of May 21, 1950:

A HISTORIC WEEK

This has been a memorable week for the Western World. Insofar as the great accomplishments of these days are due to any one man, our Secretary of State, Dean Acheson, deserves the most credit, and it is especially gratifying to be able to note this at a time when small men, constricted by partisanship and isolationism, have been doing their best to discredit him and the State Department. Americans have reasons for deep satisfaction in these recent developments, but it should be a sober satisfaction, leavened by a large dose of caution. As we consider the present situation in the light of the past we see how far the United States has traveled toward a leadership by participation in world affairs. As we contemplate the future we can know that the road still to be traveled is long, hard and dangerous.

The opportunity that was lost by the United States at the end of the First World War, to the immense cost of every man, woman, and child in the world, has been grasped brilliantly and forcefully, if somewhat erratically and fitfully, in these last 5 years. Woodrow Wilson and the League of Nations were repudiated in 1919. Our tariff walls, our isolation, our neutrality as Germany, Italy, and Japan rose to their baleful power, were simply high lights in the sin of washing our hands while crimes against humanity were committed by Hitler, Mussolini, Franco, and the Japanese militarists. Under our Neutrality Act we would not sell a rifle to be put into the hands of those fighting for freedom—and it was our freedom, too. We sold scrap iron to Japan, and it was not until the bombs and shells made from it fell on our fleet at Pearl Harbor that the call to greatness was answered.

How different a Nation this has been since that rude awakening. No country did more to make the United Nations possible. UNRRA was, in large part, ours. The Marshall plan saved western Europe from economic collapse. With the Rio de Janeiro Treaty of Reciprocal Assistance we joined in the mutual defense of the Western Hemisphere; with the North Atlantic Pact we left behind us, no doubt forever, the illusion that we can live in peace and freedom if even one country of western Europe is invaded and enslaved. We helped to save Greece and Iran from Communist domination; we strengthened Turkey; we have pledged our aid to Indochina and the other free states of southeast Asia.

And today? As he was leaving London on Friday amid the plaudits, heard and unheard, of the democratic world, Secretary Acheson could truly say: "I have used this occasion to inform the other governments that the United States has a continuing interest and stake in European affairs which will not end with the termination of the European recovery program." He went on to reaffirm our deep interest in, and the determination to help Greece, Turkey, Iran, and Indochina.

The series of conferences that had just ended saw the thrilling offer of the French to pool their coal and steel industries with Germany's, the series of measures pointing toward a greater participation of western Germany in European affairs, the North Atlantic Treaty conference with its decision to create a permanent board of strategy, the invitation to the United States and Canada to engage in a working relationship with the Organization for European Economic Cooperation, agreements on Austria and on shipping. Western Europe and the United States had truly made a marked advance, as the final communique put it, toward genuine collective security and economic integration.

One cannot point to any postwar period of a week or 10 days in which so much was accomplished. Yet all this and more will be lost if we do not realize how much remains to be done. No meeting, no decisions, no plans can by themselves bring strength and peace to the democracies. They can only plot the paths to be followed and give a pledge of the determination to carry on to the journey's end. The events of this week would prove a tragic delusion if Americans or any of the peoples involved thought that by giving expression to worthy goals those goals had already been reached. The President, the Secretary of State, and all their advisers will need public support and understanding more than ever in the months to come.

What Americans have to understand most of all is the tremendous strength and complexity of the forces that we are fighting. They are not to be overcome in weeks or months; they cannot be solved by brilliant improvisations or daring maneuvers. They are world-wide in scope; they reach deeply into the fields of economics, politics, military defense, social security, and spiritual and cultural relations from the handful of rice that a coolie must gather in the paddy-fields of Indochina to the hydrogen bomb. A feat of organization unparalleled in world history faces us all.

The United States has been called by destiny to bear the largest burden, but we would all fail without the support of the other free nations of the Western World. It is because this week has seen real progress toward the organization of the Atlantic community that one is entitled to call it an historic week.

I Am an American Day

EXTENSION OF REMARKS
OF
HON. NEIL J. LINEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. LINEHAN. Mr. Speaker, it is indeed unfortunate that in our day and time the idea of freedom has been taken for granted by Americans. The recent war did awaken us to the realization that our freedom is a priceless treasure; but once again we are lapsing back into our old indifferent stupor. Freedom is not always clearly understood; it is not an unrestrained liberty to do anything, anytime and anywhere. It is a controlled privilege where individuals must respect their fellow man's rights and desires. Our restrictions and controls, after all, were established not by one person but by all of us. As a basis for our belief in freedom, we must establish two things: that our freedom is largely the right to choose and decide, and secondly, that man is capable of continuing improvement.

These two ideas are firmly entrenched in our political system of democracy. Our entire Government is built on the idea that men are capable of making decisions. And our way of life proves that men may continue to grow and improve. Our democratic society is concerned with the development of people. Compare that with the aim of a totalitarian society—to build up the powers of the state. Is there any wonder that freedom in such a situation is practically nonexistent?

It is with pride and humility that I recall that this country is also willing to fight for freedom in those totalitarian

countries. In our short history, the Nation has fought repeatedly to defend human rights, to preserve our freedom, and to help other countries obtain or preserve theirs.

But why all this talk about freedom, you ask? We have it; that is enough. But it is not enough; we must respect it, we must practice it, we must be aware of it.

We are here today to celebrate I Am an American Day. This recognition of new citizens has occurred in some form or another for many years. In 1940, however, President Roosevelt issued a proclamation to the effect that the third Sunday in May of each year should be set aside as Citizenship Day and it be designated as I Am an American Day. He further suggested that, at an appropriate ceremony, someone address the new citizens on the privileges and responsibilities of citizenship. So that, today, is my task.

In welcoming new citizens to our fold, I am addressing two groups. The larger group consists of native-born Americans who have attained their full rights of citizenship, having reached the age of 21. Thus they have shed their status as minors and are ready to accept the responsibilities of adulthood.

The second group of citizens is composed of men and women born outside the United States. These people did not automatically become citizens when they arrived in our country. They had to go out and seek it. First they were obliged to prove their fitness for assuming the responsibilities of citizenship. Practically all of them have attended naturalization schools, where they studied the Constitution and history of the United States. Only after proving themselves qualified, were they granted full citizenship rights.

Now that you have become citizens of this Nation, do you realize what is entailed? Some of the privileges you will enjoy are actually basic principles of our Government. We have freedom and equality before the law. This does not mean that all of us are born free and equal. It does mean, though, that there is opportunity for growth and development if the individual wants it. In this country we have supremacy of the law—we are governed by laws which we have helped to make. We know that the Constitution is a living document, that it is a charter of human rights. There is religious freedom here—complete freedom exists in our religious thinking. The press has absolutely no fetters and everyone in our country has complete liberty to say what he wishes. In addition, groups may assemble for meetings without fear or censorship. Privacy of one's home and property is respected; individuals are protected. The right to a fair trial is granted each man or woman; but a person cannot be brought to trial unless he has been charged with some offense by another person and indicted by a grand jury.

These are some of your new privileges, but now let us see what America expects in return. America is as strong as its citizens; therefore, America expects citizens to offer a strong personal character. Certainly, a sense of values is demanded. Values wise enough that you place duty above privileges, wisdom above cleverness, quality above quantity, and truth above mere phrases. Unity, too, is required. America expects unqualified allegiance to this country; you must leave political conflicts, age-old feuds and hatreds behind you. Your new country expects knowledge—of our history, our literature, our language, and our ideals. Faith in our form of government and also faith in your ability to be a part of that Government. This involves your right to vote—a right which you should definitely exercise wisely. Remember, the right to vote is the right to rule. Effort is next. Our freedom of opportunity is interwoven with effort, or work. Above all, your new country expects patriotism. Not just on certain holidays such as today and July 4—but every day. It expects you to live so that America may grow and be a better place. It expects you to attest an unswerving devotion to America.

When we say our country is a democracy, we mean more than the form of government. We mean a way of life—an attitude that is quite religious. We see something divine in man; that quality makes us tolerant, understanding, reasonable, and proud. Proud that even though America is a Nation of people composed from different lands and origins, we are united. United in a determined effort to keep democratic principles alive—those same concepts upon which our Nation was founded and has since thrived and prospered.

This is not a perfect country but it is good; it is kind; and it offers a good deal. Remember that you have a job in running our Government and building our Nation.

Making Child Desertion a Federal Offense

REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. STEED. Mr. Speaker, the following statement was made by me before the Hobbs subcommittee on the House Committee on the Judiciary in support of legislation proposing to make the crime of child desertion a Federal offense when such deserting parent crosses a State line.

I am gratified at the growing interest, not only in Congress but throughout the country, in this important subject. I hope the information I have presented in this statement will be of value and interest to the Members.

The statement follows:

Mr. Chairman, this opportunity to testify on behalf of my bill, H. R. 5974, and similar bills now pending before this subcommittee on the general subject of child abandonment is a happy one, and one which I appreciate very much.

In my opinion, this legislation is of unusual importance for several very outstanding reasons.

First, it is important because it proposes to put the force of the Federal Government behind the enforcement of laws against those who commit the crime of child desertion.

Second, it is important because it offers one more means by which the constantly growing demands upon Federal and State tax funds to meet the child welfare problem can be curbed, if not actually reduced.

Third, it is important because anything we do to curb the crime of child abandonment is a most worthy contribution in a moral sense to better American home life.

With your indulgence, Mr. Chairman, I desire to outline briefly some facts which prove these assertions.

Looking at the record, we find the aid to dependent children rolls, under the social-security program, carrying the names of around 600,000 children and costing a total of around $140,000,000 during the comparatively unprofitable year of 1941. Today, these rolls have grown to an estimated 1,658,000 children, costing upwards of $400,000,000.

Obviously, economic conditions are not as bad now, nor have they been as bad in any year since, as they were in 1941. It is safe to assume, then, that this increase of 1,000,000 children on these ADC rolls cannot be attributed entirely to economic conditions. Basic laws governing this program have not been changed since 1941, so it also follows that a more liberal law has not opened the door to a greater child case load.

As we study the trends, we find that the impact of demand for funds under the ADC program has not yet been completed—in fact, the demand is growing instead of decreasing. To prove this more clearly than my own words, I desire to quote a better authority, Miss Jane Hoey, Director of the Bureau of Public Assistance, testifying before the Fogarty subcommittee of the House Committee on Appropriations, earlier this session. On page 792 of these hearings Miss Hoey made this statement, and I quote:

"It is estimated that the average number of recipients per month of old-age assistance in 1951 will be 2,860,000, an increase of 130,000, or 4.8 percent over the revised estimates for 1950; in aid to dependent children, the number of children to be aided is 1,658,000, an increase of 188,000, or almost 13 percent more than in the preceding year; and in aid to the blind the number of 78,500, an increase of almost 7 percent, or 5,000."

This same statement showed an estimated need of $250,500,000 in Federal funds for dependent children for the 1951 fiscal year, which does not of course include any State funds for this same purpose.

By examining these figures on the assistance program we see that in the most recent months, the dependent children rolls have been growing at an alarming rate—13 percent in a year, an unprecedented gain. How can this classification increase at a percent of approximately twice the gain for the dependent blind and nearly three times the rate for old-age assistance?

There is only one answer, Mr. Chairman, that I have been able to find. I shall turn to reports and surveys made in my own State of Oklahoma to substantiate my view in this regard. At my request, some extensive research on this subject has been carried out by the Oklahoma Public Expenditures Council. I have here a report issued by that organization dated April 1950, which contains some startling figures:

On page 34 of that report, the subject of dependent children is dealt with. This report shows that Oklahoma has the greatest percentage of its child population depending upon the welfare rolls than any other State in the Union, the percentage being 7.8 as compared to the national total of 2.9 percent. Kansas to the north of Oklahoma has 2.4 percent, Texas to the south has 1.8 per-

cent, Arkansas to the east has 3.9 percent. States supposedly much less favored economically than Oklahoma such as Mississippi are far below the Oklahoma average. Mississippi has 2.5 percent of its children on the rolls, etc. This research organization has made a continuing and intensive study of the situation in Oklahoma. As a result, it estimates that, conservatively speaking, at least 35 percent of the children on the rolls in Oklahoma are there because they have been abandoned by able-bodied parents who could and should support them. This survey also reveals that an overwhelming majority of these deserting parents have fled to California and other States, beyond the reach of the law enforcement officers of Oklahoma counties. Even in those cases where an effort is made by these counties to return these offenders against State law, the county all too often is without sufficient funds to pay for the return of the criminals.

There are other reasons, of course, for part of this case load, such as bastardy and deliberate divorce maneuvers on the part of parents to become eligible for aid under the law. Some of this problem obviously cannot be dealt with by Congress.

But it seems to me that Congress can and should do something about the largest contributing group to this chiseling of public funds—those able-bodied parents who desert their children and escape across State lines to avoid criminal prosecution. I am convinced that a precedent for this sort of law is found in the auto theft law and the livestock theft law. Surely, it is as much a Federal offense to steal the home from a dependent child and cross a State line as it is automobiles and livestock. I think it is a greater crime, because in the case of the dependent child the taxpayers are compelled to take up a burden of supporting the child.

Until and unless Congress can give State and local authorities some help in curbing this rapidly growing crime of child desertion by such a law as is proposed here, I think it is safe to say that the burden of supporting these children at public expense will continue to increase. More parents are tempted to walk off and leave their children when they see the first offenders escape any kind of criminal prosecution.

If time would permit, I could read to the committee scores of letters from citizens throughout this Nation on this problem. I have here letters from judges, prosecuting attorneys, bar associations, welfare organizations, educators and many others endorsing this kind of law because these citizens are fully aware of this growing and unprincipled practice.

This is something more than a mere matter of dollars, Mr. Chairman. It is bad enough, I'll admit, to see the American taxpayer digging deeper and deeper every year to carry the load of dependent children, thousands of whom have parents who could and should support them. To me, it is even worse for a program as worthy and as commendable as our aid to dependent children program becoming an instrument through which we are actually subsidizing the breaking up of homes.

We have made it so easy for a parent to walk off and leave his children for the public to support that we have created a temptation. I cannot understand a parent who has so little regard for his own flesh and blood, but the facts cannot be denied and we must face the fact that we do have countless thousands of such sorry and worthless citizens among us.

We may not be able to instill any common decency or responsibility in this type of parent, and we may be compelled because of our Christian spirit to take care of needy children, regardless of how worthless their parents may be. But certainly, if we pass this law proposed here, we can make sure that a major percentage of such persons will languish in jail while we do take care of their children. By so doing, we can at least cut off the source of supply which is now producing so many children in this category.

I am not going to burden the committee or the record with a recitation of individual case histories. I do assure you gentlemen, however, that I have made a rather extensive survey in my own State and district—and I have been supplied information from almost every State by those who share my views—and I state here with as much emphasis as I can command that we are faced with a dangerous and despicable evil in this country. The time is long since passed when we should have done something about this mess. To delay further is, it seems to me, a thing we simply must not contemplate.

Mr. Chairman, I want to emphasize that I favor giving every needy child in this country all the help it needs, regardless of its parents. But I also want to make sure that every parent guilty of criminal neglect of his children is punished to the full extent of the law. In the interest of common sense, common decency, national economy and Christianity, I appeal to you to act favorably upon this legislation. Let's enact a law that will help purify these child dependency rolls and that will punish the sorriest citizens among us—deserting parents.

Unification

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Lynn Telegram-News, Lynn, Mass., Friday, May 19, 1950:

STEEL FRAMEWORK FOR PEACE

The French Government has proposed a program which could be made the basis for a real start toward an economic United States of Europe.

The proposal calls for the governments of France and Germany to place their coal and steel production under unified direction and a single system of regulations.

The French Government's statement on the proposal is imbued with the spirit of unity and concord, yet is aware of the realities:

"A united Europe will not be achieved all at once, nor in a single framework. It will be formed by concrete measures which first of all create a solidarity in fact. The uniting of the European nations requires that the age-old opposition between France and Germany be culminated: The action to be taken must first of all concern France and Germany.

"To that end, the French Government proposes that immediate action be concentrated on one limited, but decisive point: The entire French-German production of coal and steel be placed under a joint authority, within an organization open to the other European nations."

These words should be most welcome to all who want to see an end to the perilous division of Europe into competitive, suspicious and warring national states.

Along with the hope and the promise, however, one must not overlook the very great difficulties that stand in the path of the proposal.

Powerful vested interests in western Europe will fight it. The proposal depends for success on free convertibility of money in Europe. Prices and labor costs will present knotty problems.

The unification does not of itself guarantee increased efficiency in production methods. Nor does it automatically assure more steel products and lower prices for them for the masses of people in Europe. Consumers ought to have a voice in the new authority.

It will take a lot of thought and work and planning to achieve real benefits for consumers.

Such benefits should be a chief aim of unification. If they cannot be achieved, the unification will itself become a super-cartel instead of what it should be—an agency to block the rebirth of the old steel and coal cartels which were a cancer on European economic and political progress.

Obviously an immense amount of enlightened self-interest on the part of many nations will be required to form the combine. Britain, at this point, seems cool. Here's a chance for John Bull to show his willingness to go along on a concrete proposition for European unification.

American support should be generous and firm. We, too, probably will need to resist vested interests. Certainly we share with forward-loking Europeans a vision of an effective European federation which, as French Foreign Minister Schuman says is indispensable for the preservation of peace." (Chicago Sun-Times.)

The St. Lawrence Seaway—In Support of House Joint Resolution 271

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement which I made before the House Committee on Public Works on May 10, 1950, as follows:

Mr. Chairman, I wish to state briefly the principal reasons why I feel that your committee and the Congress should act favorably upon the Canadian-American agreement for the construction of St. Lawrence seaway and power project the earliest opportune moment.

The record of hearing before the Committee on Public Works as well as other congressional committees on previous occasions has amply proved the following points:

1. From an engineering point of view, the highest authorities in the United States and Canada, including United States Army Engineer officers, have approved the feasibility and have perfected their plans so that from 60 days after appropriations are made available, contracts may be let for the construction of the project.

2. From an economic point of view, repeated surveys have indicated the availability of traffic and the economic advantages of direct shipping via the Great Lakes and the St. Lawrence River. Beginning with the International Joint Commission in 1920–21, the Department of Commerce under Herbert Hoover in 1926, the Corps of Engineers in 1933, the Department of Commerce under Hon. Jesse Jones in 1941 and under Hon. Charles Sawyer in 1947 and 1949, have all proved that substantial traffic is available to justify the construction of the seaway.

3. From a national defense viewpoint, it has been repeatedly asserted by the War Department when Henry Stimson and Robert

Patterson were Secretary; by the Navy Department under Frank Knox and James Forrestal; by the National Defense Establishment under James Forrestal; and the present incumbent, Secretary Johnson; by the Joint Chiefs of Staff when Admiral Leahy, General Eisenhower, Admiral Nimitz, and General Arnold were members; by the present Joint Chiefs of Staff and the National Defense Security Resources Board, that the construction of the seaway will make an important contribution to the national security of the United States by (a) providing an additional transportation route, (b) permitting ship construction in the Great Lakes, (c) making new sources for raw materials, particularly iron ore, available to the war industries in the Middle West, and (d) supplying large quantities of low cost electric power in an area which has been short of such power for over a decade.

4. From a political point of view it is a matter of record that leaders of both parties and party platforms have endorsed the St. Lawrence seaway project. Every President of both parties in the past 30 years has been strongly in support of this essential undertaking.

In the light of the irrefutable case for the construction of the seaway one must wonder why this project is delayed from year to year, particularly when the Congress has been so free-handed in approving many other public works in the East and South and the West.

The answer, Mr. Chairman, is in the fact that the few opponents wield such economic power that they are able to propagandize throughout the country in a manner which neither government nor the proponents, although they have the merits of the project on their side, are able to match. The opponents are mainly located in Boston, New York, Philadelphia, Baltimore, and New Orleans. Their interest is centered in the railroad lines which serve from Chicago to these cities, and in the power companies which serve New York and New England. They are the parties at interest and they are the ones that agitate the opposition throughout the country.
